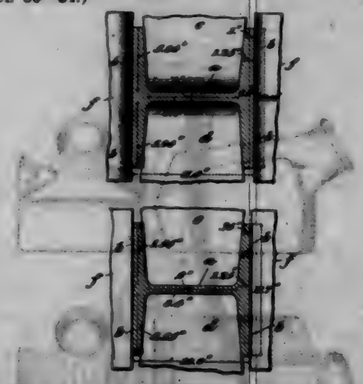
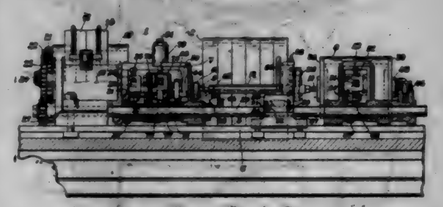
REISSUES



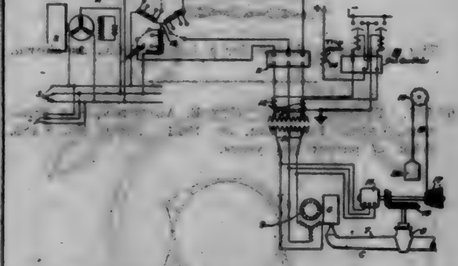
JUNE 16, 1925.

16,096. ROLLING MILL. FLORENCE C. BIGGERT, Jr., Pittsburgh, Pa., assignor to United Engineering & Foundry Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Dec. 6, 1924. Serial No. 754,443. Original No. 1,487,067, dated Mar. 18, 1924, Serial No. 586,914, filed Sept. 8, 1922. 9 Claims. (Cl. 80—54.)



1. In a rolling mill, a two-high roughing stand, a two-high finishing stand, said stands being side by side in end-to-end relationship, a floating housing intermediate said stands, a spindle carried by said housing and connecting the lower roll of one stand with the lower roll of the other stand, and means for driving the upper roll of one of the stands from said spindle, substantially as described.

16,097. ROLLING FLANGED METAL BEAM OR BAR. HENRY GREY, deceased, late of New York, N. Y.; by American Universal Mill Company, Scranton, Pa., assignee. Filed Apr. 16, 1925. Serial No. 24,236. Original No. 1,064,361, dated July 30, 1912, Serial No. 199,630, filed Mar. 23, 1904. 5 Claims. (Cl. 80—34.)

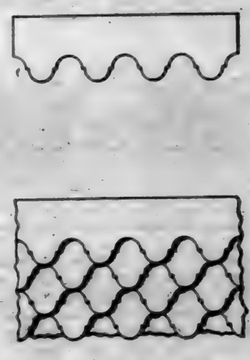


1. The process of rolling flanged shapes which consists in subjecting a blank having web and flange portions, and the web portion of which is substantially of the same width as that of the finished bar, to successive rolling operations on the sides of said web portion and on the outer faces of the flange portions simultaneously, each of which operations successively reduces the cross sectional area of the shape in its web and flanges in substantially the same proportion from the blank to the finished product and rolling the flange edges between said rolling operations.

16,098. GRINDING MACHINE AND METHOD OF GRINDING. FRIEDRICH MÜLLER, Hartford, Conn., assignor to Pratt & Whitney Company, Hartford, Conn., a Corporation of New Jersey. Filed Oct. 19, 1921. Serial No. 508,890. Original No. 1,365,337, dated Jan. 11, 1921, Serial No. 144,923, filed Jan. 27, 1917. 68 Claims. (Cl. 51—225.)

1. The combination in a mechanism for grinding, of a reamer holding means, means for bodily reciprocating the reamer along lines perpendicular to its axis, and means for simultaneously turning the reamer to present successive teeth for grinding and relieving at successive reciprocations, the last said means serving to turn the reamer while it is being ground thus providing each tooth with a convex relief surface.

16,099. APPARATUS FOR ADDING TO THE OUTPUT OF A MAIN POWER STATION THE OUTPUT OF ONE OR MORE DISTANT SOURCES. SEVERN D. SPROUL, Brooklyn, N. Y., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 14, 1921. Serial No. 500,670. Original No. 1,329,276, dated Jan. 27, 1920, Serial No. 228,078, filed Apr. 12, 1918. 29 Claims. (Cl. 290—4.)



17. In a power distributing system, the combination with a main source of energy, of an auxiliary generator, a water-wheel therefor, a gate-valve for controlling the flow of water to the water-wheel, a motor for controlling the position of the gate-valve, means controlled in accordance with the direction of rotation of the motor for controlling the operation of the valve, and means, operative through the main power conductors of the distributing system, for controlling the operation of the motor.

26. The method of connecting a generator to a transmission line which comprises starting the generator from rest and accelerating it to substantially synchronous speed by imparting to the generator both mechanical energy through a prime mover for the generator and electrical energy of approximately normal frequency from the line.

DESIGNS

JUNE 16, 1925.

67,565. SHINGLE STRIP. ALBERT W. ABBEY and CHARLES W. DOHM, Baltimore, Md., assignors to the Continental Roofing and Manufacturing Company, Baltimore, Md., a Corporation of Maryland. Filed Jan. 15, 1925. Serial No. 12,055. Term of patent 14 years.

The ornamental design for a shingle strip, as shown.

67,566. LADY'S GIRDLE. FREDY ALLMENDINGER, New York, N. Y. Filed Feb. 20, 1925. Serial No. 12,481. Term of patent 3½ years.

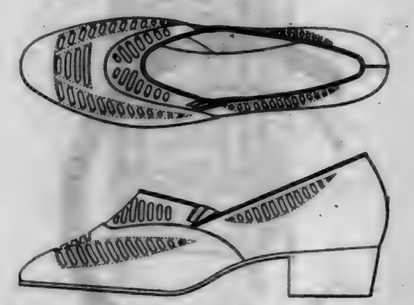
The ornamental design for a bottle substantially as shown.

67,570. WAFFLE IRON OR SIMILAR ARTICLE. ALFRED BERSTEIN and MARTIN BERSTEIN, Chicago, Ill. Filed Nov. 22, 1924. Serial No. 11,524. Term of patent 14 years.

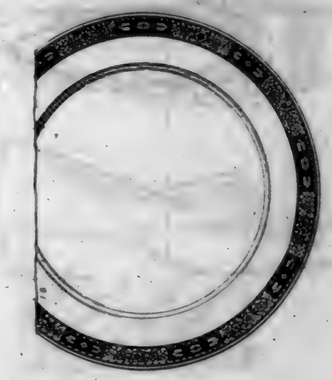


The ornamental design for a waffle iron or similar article, as shown.

67,571. OVERSHOE. GEORGE W. BLAIR, Mishawaka, Ind., assignor to Mishawaka Rubber and Woolen Manufacturing Company, Mishawaka, Ind., a Corporation of Indiana. Filed Mar. 15, 1924. Serial No. 8,940. Term of patent 14 years.

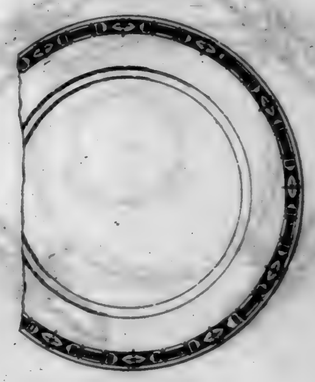
The ornamental design for an overshoe, substantially as shown.

67,572. SHOE. FRANK M. BOHR, Boston, Mass. Filed Mar. 19, 1925. Serial No. 12,774. Term of patent 7 years.



The ornamental design for a shoe, as shown.

67,573. PLATE OR SIMILAR ARTICLE. LEWIS H. BOWN, East Aurora, N. Y., assignor to Buffalo Pottery, Buffalo, N. Y. Filed Mar. 28, 1925. Serial No. 12,943. Term of patent 7 years.



The ornamental design for a plate or similar article, as shown.

67,574. PLATE OR SIMILAR ARTICLE. Lewis H. Bown, East Aurora, N. Y., assignor to Buffalo Pottery, Buffalo, N. Y. Filed Mar. 28, 1925. Serial No. 12,944. Term of patent 7 years.

The ornamental design for a plate or similar article, as shown.

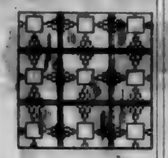
67,575. PLATE OR SIMILAR ARTICLE. Lewis H. Bown, East Aurora, N. Y., assignor to Buffalo Pottery, Buffalo, N. Y. Filed Mar. 28, 1925. Serial No. 12,945. Term of patent 7 years.

The ornamental design for a plate or similar article, as shown.

67,576. PLATE OR SIMILAR ARTICLE. Lewis H. Bown, East Aurora, N. Y., assignor to Buffalo Pottery, Buffalo, N. Y. Filed Mar. 28, 1925. Serial No. 13,105. Term of patent 7 years.

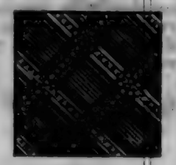
The ornamental design for a plate or similar article, as shown.

67,577. GOBLET OR SIMILAR ARTICLE. Gustave S. Carlson, St. Paul, Minn. Filed Jan. 28, 1924. Serial No. 8,465. Term of patent 8½ years.



The ornamental design for a goblet or similar article, as shown.

67,578. PORTABLE ELECTRIC HEATER. Walter Clark, Toronto, Ontario, Canada. Filed Mar. 15, 1924. Serial No. 8,947. Term of patent 14 years.

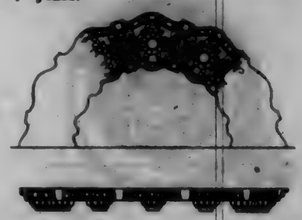


The ornamental design for a portable electric heater, as shown.

67,579. TEXTILE FABRIC. Richard Cocking, Waltham, Mass. Filed April 23, 1925. Serial No. 13,198. Term of patent 3½ years.

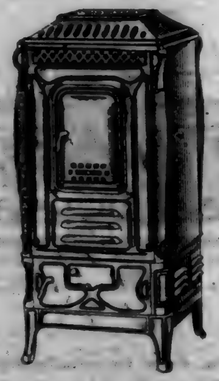
The ornamental design for a textile fabric as shown.

67,580. TEXTILE FABRIC. Richard Cocking, Waltham, Mass. Filed Apr. 23, 1925. Serial No. 13,199. Term of patent 3½ years.



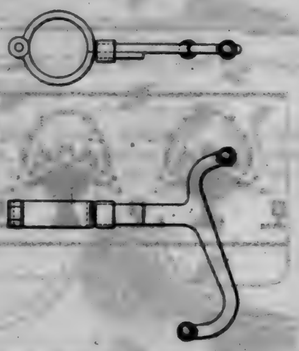
The ornamental design for a textile fabric as shown.

67,581. KNITTED BLOUSE. Isaa P. Cohen, New York, N. Y. Filed Mar. 20, 1925. Serial No. 12,781. Term of patent 3½ years.



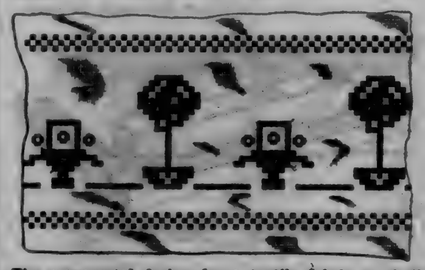
The ornamental design for a knitted blouse as shown.

67,582. RING FOR LIGHTING FIXTURES. Frank S. Crowell, Toledo, Ohio, assignor to The Edward N. Riddle Company, Toledo, Ohio, a Corporation of Ohio. Filed Mar. 10, 1925. Serial No. 12,671. Term of patent 7 years.



The ornamental design for a ring for lighting fixtures, as shown.

67,583. HEATER. Houston Dudley, Nashville, Tenn., assignor to Gray & Dudley Company, Nashville, Tenn., a Corporation of Tennessee. Filed Feb. 26, 1925. Serial No. 12,494. Term of patent 14 years.

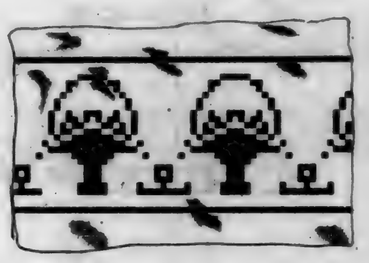


The ornamental design for a heater as shown.

67,584. HANDLE FOR PERCOLATORS. William W. Dunn, Malden, Mass., assignor to Silex Company, Malden, Mass., a Corporation of Connecticut. Filed Mar. 19, 1925. Serial No. 12,773. Term of patent 7 years.

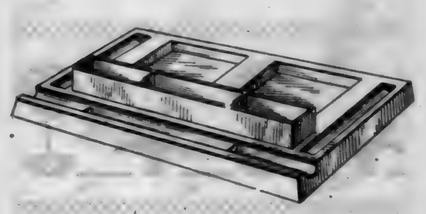
The ornamental design for a handle for percolators, as shown.

67,585. TEXTILE FABRIC OR SIMILAR ARTICLE. Jerome Everett Emerson, Lockport, N. Y., assignor to Niagara Textile Company, Lockport, N. Y. Filed Dec. 19, 1924. Serial No. 11,741. Term of patent 3½ years.



The ornamental design for a textile fabric or similar article, as shown.

67,586. TEXTILE FABRIC OR SIMILAR ARTICLE. JEROME EVERETT EMERSON, Lockport, N. Y., assignor to Niagara Textile Company, Lockport, N. Y. Filed Dec. 19, 1924. Serial No. 11,742. Term of patent 3½ years.



The ornamental design for a textile fabric or similar article, as shown.

67,587. TEXTILE FABRIC OR SIMILAR ARTICLE. JEROME EVERETT EMERSON, Lockport, N. Y., assignor to Niagara Textile Company, Lockport, N. Y. Filed Dec. 19, 1924. Serial No. 11,743. Term of patent 3½ years.

The ornamental design for a textile fabric or similar article, as shown.

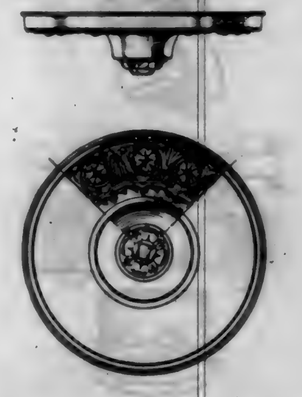
67,588. INKWELL BASE. SIMON N. FALDER, Los Angeles, Calif. Filed Mar. 13, 1924. Serial No. 8,913. Term of patent 14 years.

The ornamental design for an inkwell base as shown.

67,589. FINGER RING. ZORNKO FREUND, Newark, N. J. Filed May 2, 1925. Serial No. 13,300. Term of patent 3½ years.

The ornamental design for a finger ring, as shown.

67,590. BOBECHE FOR LIGHTING FIXTURES. RUTH L. GERTH, Minneapolis, Minn., assignor to Alfred Vester Sons, Inc., Providence, R. I., a Corporation of Rhode Island. Filed Mar. 19, 1925. Serial No. 12,761. Term of patent 14 years.



The ornamental design for a bobeche for lighting fixtures, as shown.

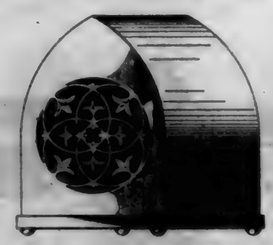
67,591. CANOPY FOR LIGHTING FIXTURES. RUTH L. GERTH, Minneapolis, Minn., assignor to Alfred Vester Sons, Inc., Providence, R. I., a Corporation of Rhode Island. Filed Mar. 19, 1925. Serial No. 12,762. Term of patent 14 years.

The ornamental design for a canopy for lighting fixtures, as shown.

67,592. PLATE FOR LIGHTING FIXTURES. RUTH L. GERTH, Minneapolis, Minn., assignor to Alfred Vester Sons, Inc., Providence, R. I., a Corporation of Rhode Island. Filed Mar. 19, 1925. Serial No. 12,766. Term of patent 14 years.

The ornamental design for a plate for lighting fixtures, as shown.

67,593. TRAFFIC GUIDEPOST. SYLVESTER CLEVON GOODRICH, Wellston, Ohio. Filed Mar. 9, 1925. Serial No. 12,642. Term of patent 3½ years.

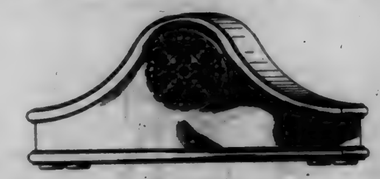


The ornamental design for a traffic guidepost, as shown.

67,594. RADIO LOUD SPEAKER. OTTO HEINEMAN, New York, N. Y., assignor to General Phonograph Corporation, a Corporation of New York. Filed Feb. 20, 1925. Serial No. 12,488. Term of patent 7 years.

The ornamental design for a radio loud speaker, substantially as shown.

67,595. RADIO LOUD SPEAKER. OTTO HEINEMAN, New York, N. Y., assignor to General Phonograph Corporation, a Corporation of New York. Filed Feb. 20, 1925. Serial No. 12,489. Term of patent 7 years.

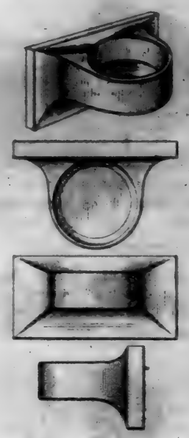


The ornamental design for a radio loud speaker substantially as shown.

67,596. RADIO LOUD SPEAKER. OTTO HEINEMAN, New York, N. Y., assignor to General Phonograph Corporation, a Corporation of New York. Filed Mar. 2, 1925. Serial No. 12,530. Term of patent 7 years.

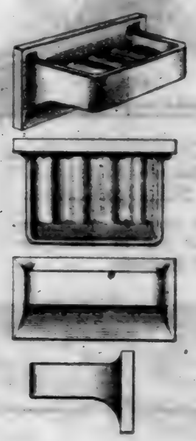
The ornamental design for a radio loud speaker substantially as shown.

67,597. RADIO LOUD SPEAKER. OTTO HEINEMAN, New York, N. Y., assignor to General Phonograph Corporation, a Corporation of New York. Filed Mar. 2, 1925. Serial No. 12,531. Term of patent 7 years.



The ornamental design for a radio loud speaker substantially as shown.

67,598. BREAST WATCH. ALEXANDER HORVATH, Chicago, Ill. Filed Aug. 31, 1921. Serial No. 497,391. Term of patent 3½ years.



The ornamental design for a breast watch, as shown.

67,599. PROJECTING TUMBLER HOLDER. ROY E. JORDAN, Newark, N. J., assignor to The Mosaic Tile Company, a Corporation of Ohio. Filed Mar. 4, 1924. Serial No. 8,819. Term of patent 14 years.

The ornamental design for a projecting tumbler holder, as shown.

67,600. PROJECTING SOAP DISH. ROY E. JORDAN, Newark, N. J., assignor to The Mosaic Tile Company, a Corporation of Ohio. Filed Mar. 4, 1924. Serial No. 8,820. Term of patent 14 years.

The ornamental design for a projecting soap dish, as shown.

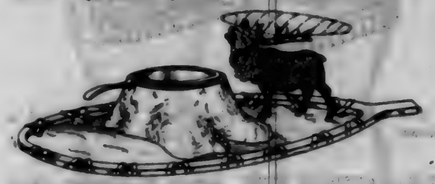
67,601. COMBINATION SOAP HOLDER AND GRAB RAIL. ROY E. JORDAN, Newark, N. J., assignor to The Mosaic Tile Company, a Corporation of Ohio. Filed Mar. 4, 1924. Serial No. 8,821. Term of patent 14 years.

The ornamental design for a combination soap holder and grab rail, as shown.

67,602. TEXTILE FABRIC. MAX KLEIN, New York, N. Y., assignor to Mosse, Incorporated, New York, N. Y. Filed Mar. 26, 1925. Serial No. 12,885. Term of patent 7 years.

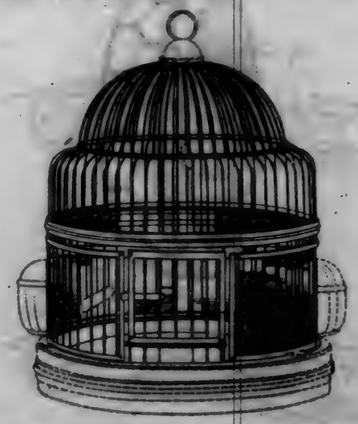
The ornamental design for a textile fabric, as shown.

67,603. COMBINATION FLOWERPOT, LAMP, AND SMOKING STAND. CHARLES R. KISKADDEN, Sheboygan, Wis. Filed Oct. 30, 1924. Serial No. 11,231. Term of patent 3½ years.



The ornamental design for a combination flowerpot, lamp, and smoking stand, as shown.

67,604. MIRROR BRACKET. WILLIAM LA HOONY, Buffalo, N. Y., assignor to Standard Mirror Co., Inc., Buffalo, N. Y., a Corporation of New York. Filed Apr. 15, 1924. Serial No. 9,285. Term of patent 7 years.



The ornamental design for a mirror bracket, as shown.

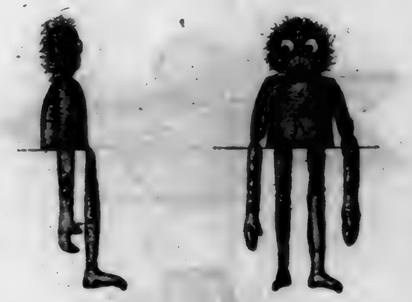
67,605. SMOKER'S SET. CALVIN H. LEHMAN, Johnstown, Pa. Filed Apr. 16, 1925. Serial No. 13,140. Term of patent 14 years.

The ornamental design for a smoker's set as shown.

67,606. BIRD-CAGE BODY. LEWICKI J. LEON, Chicago, Ill. Filed Mar. 23, 1925. Serial No. 12,825. Term of patent 14 years.

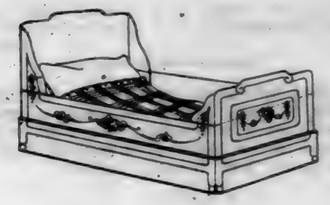
The ornamental design for a bird cage body, as shown.

67,607. DIRECTING SIGNAL FOR AN AUTOMOBILE. CHARLES LEMPERSON, Wilmington, Del. Filed Jan. 28, 1925. Serial No. 12,164. Term of patent 3½ years.



The ornamental design for a directing signal for an automobile, as shown.

67,608. LOUD-SPEAKING TELEPHONE RECEIVER. GEORGE E. LUM, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 27, 1922. Serial No. 3,833. Term of patent 14 years.

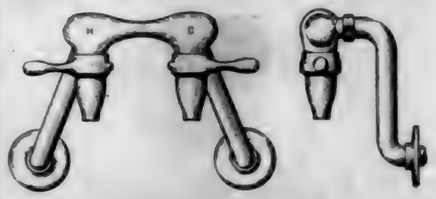


The ornamental design for a loud speaking telephone receiver, as shown.

67,609. DOLL. FLORENCE L. MEYER, San Francisco, Calif. Filed Mar. 3, 1924. Serial No. 3,804. Term of patent 3½ years.

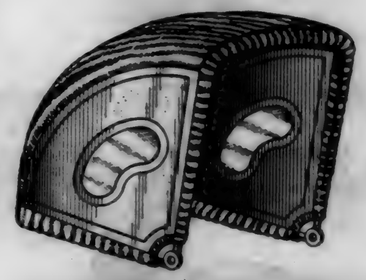
The ornamental design for a doll as shown.

67,610. TOY BED OR ARTICLE OF SIMILAR NATURE. HANS BRUNO MEYER, New York, N. Y. Filed Jan. 27, 1922. Serial No. 383. Term of patent 3½ years.



The ornamental design for a toy bed or article of similar nature as shown.

67,611. TEXTILE FABRIC USED FOR DRAPERIES. JOHN W. MONTAGUE, New York, N. Y. Filed Nov. 22, 1924. Serial No. 11,449. Term of patent 3½ years.

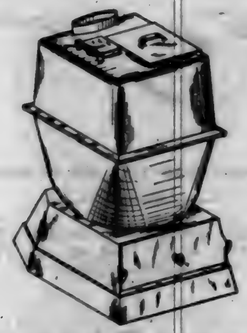


The ornamental design for textile fabric used for draperies as shown.

67,612. PLUMBER'S BIB. WILLIAM WINT MORGAN, Philadelphia, Pa. Filed Oct. 18, 1923. Serial No. 7,530. Term of patent 3½ years.

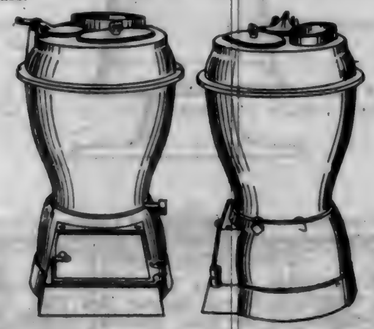
The ornamental design for a plumber's bib as shown.

67,613. BABY-CARRIAGE HOOD. STEPHEN MORRIS, New York, N. Y. Filed Apr. 24, 1925. Serial No. 13,214. Term of patent 7 years.



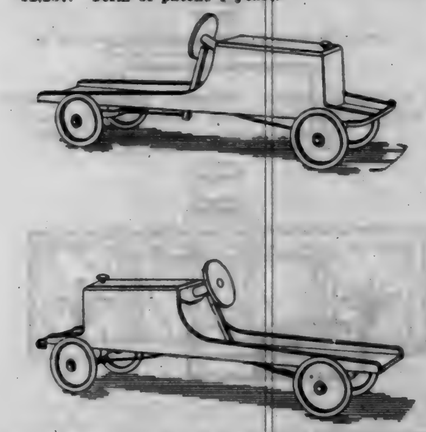
The ornamental design for a baby carriage hood as shown.

67,614. CUSHION TIRE. ROBERT M. PIERSON, Akron Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Sept. 10, 1923. Serial No. 7,170. Term of patent 3½ years.



The ornamental design for a cushion tire as shown.

67,615. BROODER STOVE. PAUL W. RUNYAN, Springfield, Ohio, assignor to The National Brooder Company, Springfield, Ohio, a Corporation of Ohio. Filed Apr. 21, 1924. Serial No. 9,335. Term of patent 14 years.

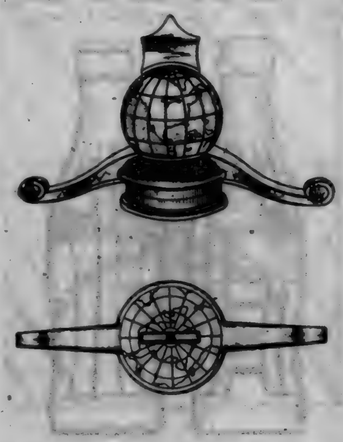


The ornamental design for a brooder stove as shown.

67,616. BROODER STOVE. PAUL W. RUNYAN, Springfield, Ohio, assignor to The National Brooder Company, Springfield, Ohio, a Corporation of Ohio. Filed Aug. 4, 1924. Serial No. 10,372. Term of patent 14 years.

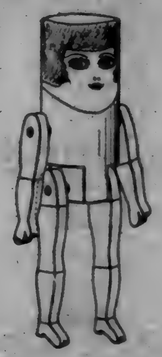
The ornamental design for a brooder stove, as shown.

67,617. TOY AUTOMOBILE. PEDRO G. SALOM, Jr., Philadelphia, Pa. Filed Feb. 6, 1925. Serial No. 12,287. Term of patent 7 years.



The ornamental design for a toy automobile substantially as shown.

67,618. CANOPY FOR LIGHTING FIXTURES. JOSEPH A. SCHNEIDER, Buffalo, N. Y., assignor to Alfred Vester Sons, Inc., Providence, R. I., a Corporation of Rhode Island. Filed Mar. 19, 1925. Serial No. 12,769. Term of patent 14 years.

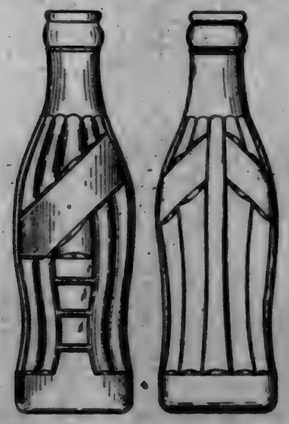


The ornamental design for a canopy for lighting fixtures, as shown.

67,619. RADIATOR CAP. WILLIAM SCHNELL, Detroit, Mich., assignor to Ternstedt Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 8, 1925. Serial No. 11,066. Term of patent 3½ years.

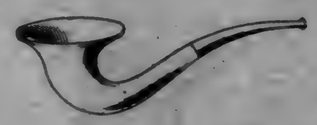
The ornamental design for a radiator cap, as shown.

67,620. DOLL. JACOB SCOLL, Evanston, Ill. Filed Aug. 22, 1923. Serial No. 7,061. Term of patent 3½ years.



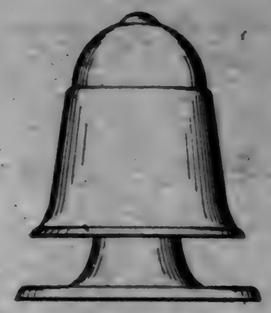
The ornamental design for a doll, as shown.

67,621. KNITTED BLOUSE. GEORGE SHAIB, Brooklyn, N. Y. Filed Apr. 13, 1925. Serial No. 13,109. Term of patent 3½ years.



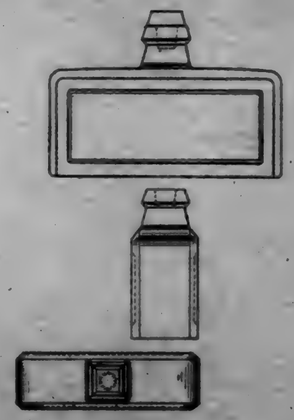
The ornamental design for a knitted blouse substantially as shown.

67,622. BOTTLE. GAYLE D. STEWART, Toledo, Ohio, assignor to The American Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Dec. 26, 1924. Serial No. 11,798. Term of patent 14 years.



The ornamental design for a bottle, substantially as shown.

67,623. PIPE. DAVID L. STRONACH, Columbia, S. C. Filed Apr. 18, 1925. Serial No. 13,159. Term of patent 14 years.



The ornamental design for a pipe as shown.

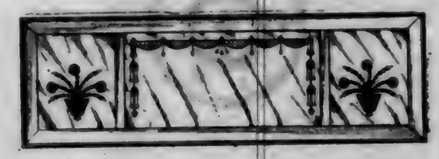
67,624. SOUND AMPLIFIER. CHARLES W. TAYLOR, Salt Lake City, Utah. Filed Apr. 27, 1925. Serial No. 13,224. Term of patent 7 years.

The ornamental design for a sound amplifier, as shown.

67,625. BOTTLE. HARRY LINCOLN TERRY, Chicago, Ill., assignor to Forhan Company, New York, N. Y., a Corporation of New York. Filed Oct. 31, 1924. Serial No. 11,242. Term of patent 3½ years.

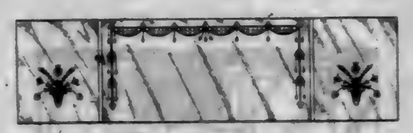
The ornamental design for a bottle as shown.

67,626. BEVERAGE-DISPENSING FIXTURE. JOHN M. TRAVIS, St. Louis, Mo. Filed Jan. 2, 1925. Serial No. 11,854. Term of patent 7 years.



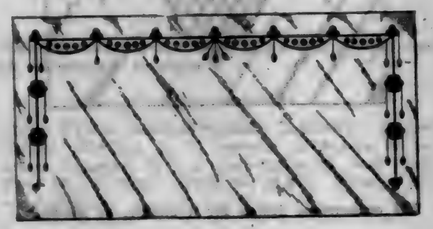
The ornamental design for a beverage dispensing fixture, as shown.

67,627. MIRROR. ANTHONY TRIPPI, Buffalo, N. Y. Filed Apr. 23, 1925. Serial No. 13,189. Term of patent 7 years.



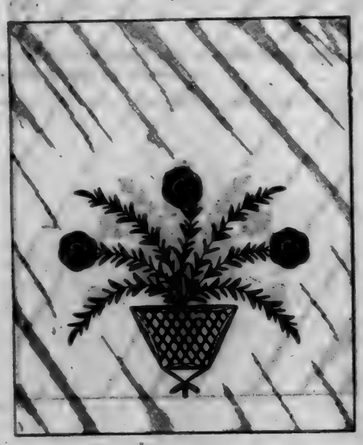
The ornamental design for a mirror, as shown.

67,628. MIRROR. ANTHONY TRIPPI, Buffalo, N. Y. Filed Apr. 23, 1925. Serial No. 13,190. Term of patent 7 years.



The ornamental design for a mirror, as shown.

67,629. MIRROR. ANTHONY TRIPPI, Buffalo, N. Y. Filed Apr. 23, 1925. Serial No. 13,191. Term of patent 7 years.



The ornamental design for a mirror, as shown.

67,630. MIRROR. ANTHONY TRIPPI, Buffalo, N. Y. Filed Apr. 23, 1925. Serial No. 13,192. Term of patent 7 years.

The ornamental design for a mirror, as shown.

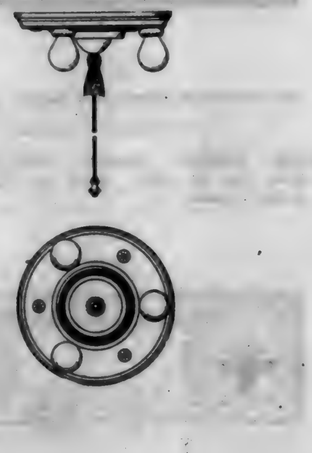
67,631. MIRROR. ANTHONY TRIPPI, Buffalo, N. Y. Filed Apr. 23, 1925. Serial No. 13,193. Term of patent 7 years.

The ornamental design for a mirror, as shown.

67,632. MIRROR. ANTHONY TRIPPI, Buffalo, N. Y. Filed Apr. 23, 1925. Serial No. 13,194. Term of patent 7 years.

The ornamental design for a mirror, as shown.

67,633. MIRROR. ANTHONY TRIPPI, Buffalo, N. Y. Filed Apr. 23, 1925. Serial No. 13,195. Term of patent 7 years.

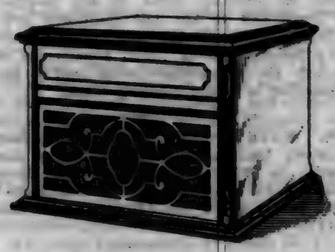


The ornamental design for a mirror, as shown.

67,634. GLASS BOTTLE. HERMAN TURTLETAUB, Perth Amboy, N. J. Filed Apr. 15, 1925. Serial No. 13,138. Term of patent 7 years.

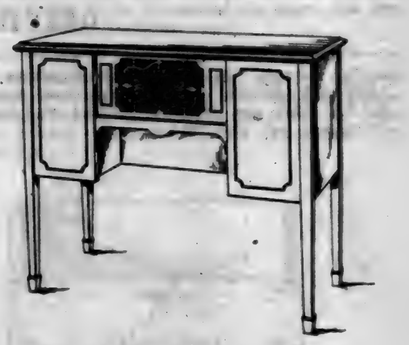
The ornamental design for a glass bottle, as shown.

67,635. LIGHTING FIXTURE. ALLYN B. WALTON, Lorain, Ohio. Filed Feb. 26, 1924. Serial No. 8,741. Term of patent 3½ years.



The ornamental design for a lighting fixture, as shown.

67,636. HAT. MARGARET M. WILLIAMS, Campbell, Calif. Filed Nov. 29, 1922. Serial No. 4,448. Term of patent 3½ years.



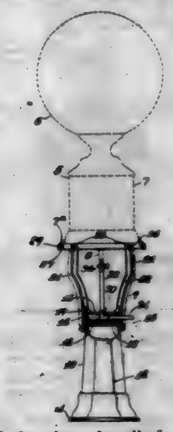
The ornamental design for a hat as shown.

67,637. CABINET FOR SOUND-PRODUCING DEVICES. JOSEPH WOLFF, Brooklyn, N. Y., assignor to Sonora Phonograph Company, Inc., a Corporation of New York. Filed Mar. 5, 1925. Serial No. 12,610. Term of patent 7 years.

The ornamental design for a cabinet for sound producing devices, substantially as shown.

67,638. RADIO LOUD-SPEAKER CABINET. JOSEPH WOLFF, Brooklyn, N. Y., assignor to Sonora Phonograph Company, Inc., a Corporation of New York. Filed Mar. 5, 1925. Serial No. 12,611. Term of patent 7 years.

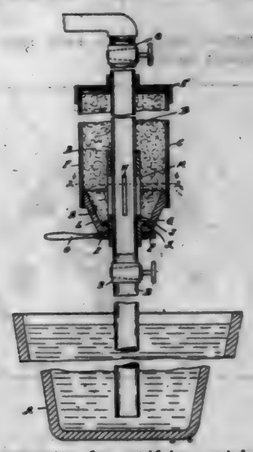
The ornamental design for a radio loud speaker cabinet, substantially as shown.



67,639. RADIO LOUD-SPEAKER CABINET. JOSEPH WOLFF, Brooklyn, N. Y., assignor to Sonora Phonograph Company, Inc., a Corporation of New York. Filed Mar. 5, 1925. Serial No. 12,612. Term of patent 7 years.

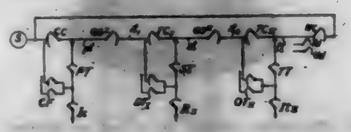
The ornamental design for a radio loud speaker cabinet, substantially as shown.

PATENTS



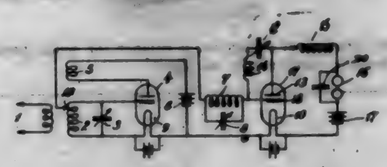
GRANTED JUNE 16, 1925.

1,541,777. BASE FOR TOWEL STERILIZERS AND LIKE APPARATUS. GAETANO ALBANESE, Brooklyn, N. Y. Filed Apr. 30, 1924. Serial No. 710,137. 10 Claims. (Cl. 126—361.)



1. A base of the class described comprising a standard, a crosshead at the top of said standard, a plate mounted in connection with the crosshead of the standard, said plate being provided with a plurality of radially projecting arms, a plurality of frame members detachably mounted in connection with said arms, and projecting above said standard.

1,541,778. APPARATUS FOR REFINING METAL. RICHARD F. AGRICOLA, Saginaw, Mich., assignor of one-third to Karl A. Agricola and one-third to William L. Agricola, both of Detroit, Mich. Filed Nov. 17, 1923. Serial No. 675,394. 5 Claims. (Cl. 266—34.)



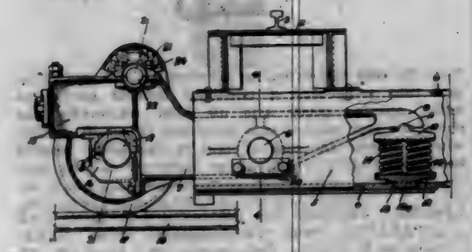
1. In an apparatus for purifying metals, the combination with a receptacle for holding molten metal, of a container for the purifying material, a conduit passing through said container and extending into said molten mass for conveying a gaseous current thereinto, and means for introducing said purifying material into said conduit in a finely divided state.

1,541,779. ELECTROMECHANICAL TELEPHONE SYSTEM. FRITZ ALDENDORFF, Berlin-Wilmersdorf, Germany, assignor to Paul Kollasch, New York, N. Y. Filed Nov. 16, 1922. Serial No. 601,899. 12 Claims. (Cl. 179—18.)

1. In an electro-mechanical telephone system, groups of subscribers' lines, primary talking trunks, secondary talking trunks, intermediate trunks between the primary and secondary trunks, a numeral selector associated with each said primary talking trunk, a non-numerical switch associated with each said secondary trunk, auxiliary trunks, auxiliary non-numerical switches adapted to connect an auxiliary trunk to any selected intermediate trunk and to any idle secondary trunk, and means for extending a call from a subscriber's line through a primary talking trunk, a numerical selector, and through an intermediate trunk and a secondary trunk connected to a said auxiliary trunk.

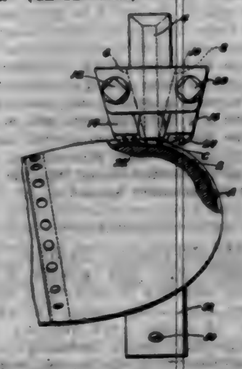
1,541,780. WAVE SIGNALING SYSTEM. EDWIN H. ARMSTRONG, Yonkers, N. Y., assignor, by mesne assignments, to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 8, 1922. Serial No. 566,681. 4 Claims. (Cl. 179—171.)

1. An electric regenerative system adapted to produce super-regenerative action, including a feed-back circuit having a certain degree of damping and means for periodically varying the relation between the amount of feed-back and the degree of damping of the system comprising a generator of electrical oscillations adapted to supply an auxiliary frequency to the regenerative system and a capacity in said generator for controlling and maintaining the oscillations in said oscillating system.



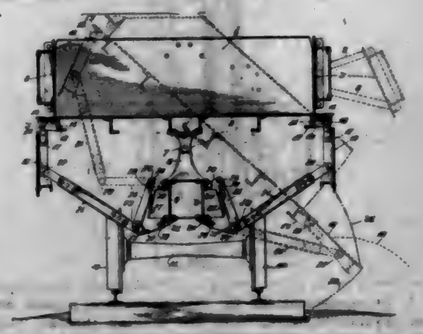
1,541,781. LOBSTER TRAP. ANTHONY A. AXIOTES, Newport, R. I. Filed Feb. 2, 1925. Serial No. 6,287. 4 Claims. (Cl. 43—66.)

2. In a lobster trap, a case provided with an opening, posts mounted upon the case at the margins of the opening, inwardly converging doors pivotally supported upon the posts with their adjacent portions normally spaced from each other, laterally projecting portions



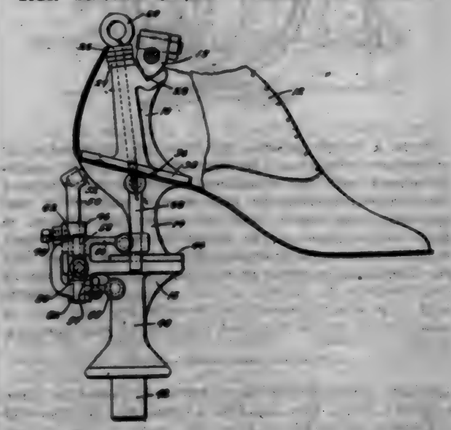
upon the lower portions of the doors overlapping each other, and spring arms supported by the case engaging the doors.

1,541,782. SPRING SUSPENSION FOR TRAVELING CRANES. HUBERT E. BAKER, Muskegon Heights, Mich., assignor to Manning, Maxwell & Moore, Inc., New York, N. Y., a Corporation of New Jersey. Filed Dec. 10, 1924. Serial No. 754,920. 17 Claims. (Cl. 105—163.)



1. In a traveling crane, a bridge, a beam secured at each end of the bridge, wheel carrying members pivotally mounted one at each end of each beam, a wheel carried by each wheel carrying member, and spring means interposed between each wheel carrying member and the beam designed to withstand and absorb shocks and vibrations to which the crane is subjected, substantially as described.

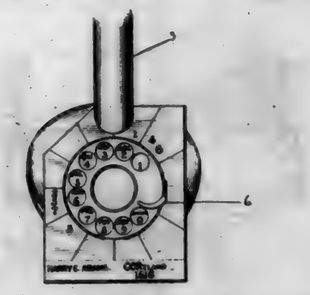
1,541,783. METHOD OF ATTACHING UPPERS TO SOLES IN THE MANUFACTURE OF SHOES. ARTHUR BATES, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed Oct. 25, 1917, Serial No. 198,406. Divided and this application filed Jan. 25, 1922. Serial No. 531,682. 12 Claims. (Cl. 12—145.)



1. The method of attaching uppers to soles in the manufacture of shoes which consists in inserting a fastening through the margin of an upper into the edge face of a sole, effecting a relative movement in the line of the fastenings between the sole and the portion of the upper adjacent to the inserted fastening on the side of said fastening where the next fastening is to be inserted in such manner as to cause that fastening and said portion of the upper to approach each other to take up a part of the fullness of the upper, and then inserting a second fastening.

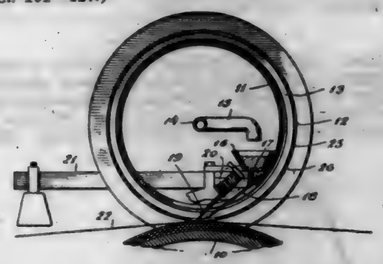
1,541,784. RAILWAY DUMP CAR. JAMES D. BENBOW, Aurora, Ill., assignor to Western Wheeled Scraper Company, Aurora, Ill., a Corporation of Illinois. Filed July 3, 1924. Serial No. 723,959. 16 Claims. (Cl. 105—277.)

10. In a dump car, the combination with a car bed mounted to tilt laterally to discharge its load, of a side apron pivotally suspended along a side margin of the bed and adapted to be projected into position to form a lateral extension of the floor thereof, and a vertically swinging thrust bar pivotally connected with the under body of the car and with said apron between the side margins thereof to cause the lower margin of the apron to move initially inwardly relatively to the upper margin thereof when righting.



1,541,785. APPARATUS FOR USE IN ATTACHING HEELS. FREDERIC E. BERTRAND, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 25, 1923. Serial No. 614,903. 9 Claims. (Cl. 12—125.)

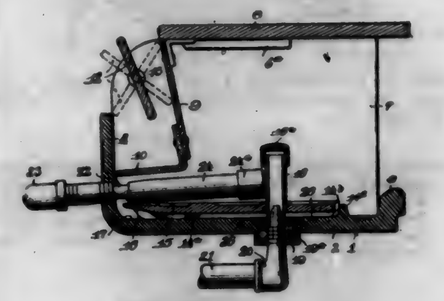
1. A unitary block for use in attaching heels to shoes from which the last has been withdrawn having a surface shaped to engage and transmit pressure to the inside bottom surface of a shoe at the heel end only, a



portion to receive pressure from a clamp member arranged substantially perpendicularly above the central part of said surface, and a fastening-receiving perforation opening at one side of the pressure-receiving portion at one end and substantially at the center of said surface at the other end, the block being shaped to provide ample clearance between the block and the shoe upper at all points above the bottom of the shoe.

1,541,786. DIAL-TELEPHONE ATTACHMENT. JAMES KENDALL BURGESS, Montclair, N. J. Filed Jan. 17, 1925. Serial No. 3,088. 8 Claims. (Cl. 179—90.)

1. In an attachment for dial telephones, a card having spaces registering with the opening through which are shown the letters and numbers on the dial and having a telephone number shown thereon in a sequence of numerals only.



1,541,787. METHOD AND APPARATUS FOR PRINTING TEXTILE FABRICS. ERNEST CADORNE, Englewood Cliffs, and GEORGE DUPONT, Paterson, N. J. Filed Dec. 29, 1923. Serial No. 683,817. 6 Claims. (Cl. 101—127.)

1. In a textile printing machine, the combination of a pressure roller, an apertured floating stencil capable of contact with said roller and being driven thereby, a foraminated covering for said stencil, portions of said covering being coated with an impervious material to form the outlines of the design to be printed, which outlines register with the apertures in said stencil, and the remaining portions of said covering being uncoated and forming the figures of said design, and means to feed a printing composition through the apertures in said stencil to the uncoated portions of said covering.

1,541,788. OIL BURNER. GEORGE J. CARLISLE, Niles, Mich. Filed July 2, 1924. Serial No. 723,669. 15 Claims. (Cl. 158—92.)

13. An oil burner comprising a casing open at its forward end toward the space to be heated, the opposite end being located exterior said space and provided at its rear end with an air inlet having a damper therein, a baffle plate depending from the top of said casing forwardly of said air inlet, a plate supported on the bottom wall of said casing, a burner extending through said plate and communicating with the space between said plate and bottom wall, means for injecting air into said burner, a fuel inlet tube entering said casing

from the rear and extending forwardly above said plate, said tube comprising a telescopic member having an outlet opening below said air inlet rearwardly and above the rear edge of said plate and adjustable lengthwise to direct the flow of fuel to the space beneath said plate.

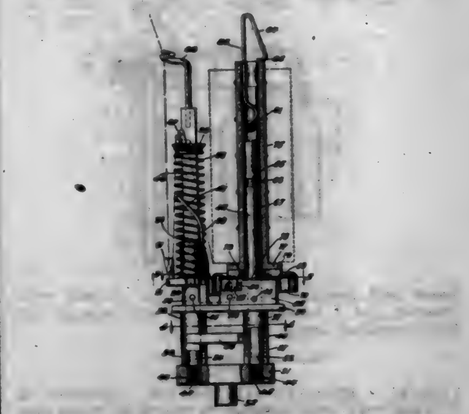
1,541,789. PROCESS OF DEALCOHOLIZATION AND APPARATUS FOR PERFORMING THE SAME. CHARLES H. CASPAR, Philadelphia, Pa. Filed Oct. 22, 1920. Serial No. 418,787. 9 Claims. (Cl. 196—1.)

1. The process of dealcoholizing a liquid and recovering the alcohol therefrom which consists in discharging the liquid in such manner as to present an extended surface, bringing a relatively colder gas or vapor into contact with the liquid to absorb alcohol therefrom and then bringing the gas or vapor into contact with a relatively colder finely divided liquod for the purpose of condensing out the absorbed alcohol.

1,541,790. WELL-EXPLODING DEVICE. WILLIAM J. CHELBY, Casper, Wyo., and WARREN F. BLEECKER, Boulder, Colo., assignors to Zero Hour Torpedo Company, Casper, Wyo. Filed Sept. 11, 1924. Serial No. 737,178. 15 Claims. (Cl. 102—4.)

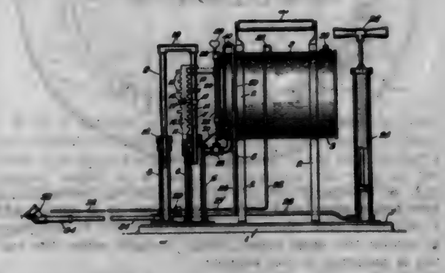
11. A well shooting device including an electrical timer unit comprising a casing formed with two compartments, a battery fitted removably within one compartment, a chronometer mounted upon and carried by one terminal of the battery, and having a crystal and a movable hand, a contact wire projecting through the crystal into the path of the movable hand, lead wires extending from the other battery terminal and the con-

tact wire to the other compartment of the casing, and an initial exploder arranged within the said other compartment and connected to the lead wires.



1,541,791. ANTIFRICTION PIPE CARRIER. CHRISTIAN A. CHRISTOFFERSON, St. Paul, Minn. Filed Apr. 22, 1921. Serial No. 463,535. 1 Claim. (Cl. 308—7.)

A device for operating a switch or signal, comprising a substantially horizontally disposed stationary pipe; and a power transmitting member extending through said pipe consisting of a number of pipe sections, intermediate members, each comprising a bar with comparatively long tang ends inserted in the ends of the adjacent pipe sections, connecting sleeves enclosing and threaded upon the adjoining ends of the bar and pipe section, a pair of pins at substantially right angles to each other secured through each pipe section and the tang therein, the bar having slots extending therethrough at substantially right angles to one another, and rollers mounted in said slots having treads curved transversely to correspond with the curvature of the inner wall of said stationary pipe and diameters approximately the internal diameter of the said pipe with sufficient clearance only to permit longitudinal movement of said power transmitting member while preventing bending of the same within said pipe.

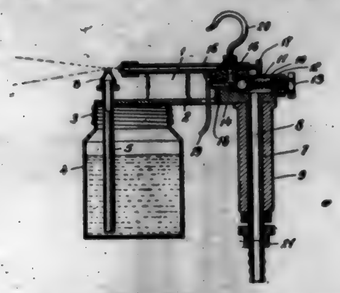


1,541,792. BRAIDING MACHINE. JAMES H. CONNOLLY, Pawtucket, R. I. Filed Oct. 5, 1922. Serial No. 592,534. 5 Claims. (Cl. 66—11.)

1. In a braiding machine, a guide plate unit provided with sinuous intersecting channels, and with peripheral grooves opening into the channels, and a carrier base comprising posts slidably mounted in the channels,

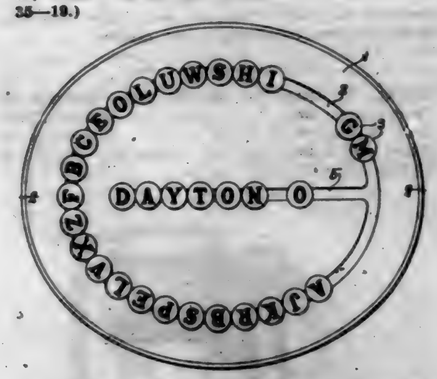
plates upon the ends of the posts, and a guide plate carried by the posts registering in the grooves.

1,541,793. FUMIGATING APPARATUS. KENNETH F. COOPER, Great Neck, N. Y., assignor to American Cyanamid Company, New York, N. Y., a Corporation of Maine. Filed Dec. 29, 1920. Serial No. 433,876. 9 Claims. (Cl. 299—96.)



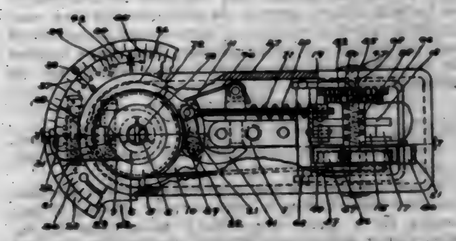
1. In an apparatus for delivering a measured quantity of a liquid fumigant, the combination of a container; a constant volume receiver; an adjustable outlet for said receiver comprising a slidable U-shaped pipe member; connections between said container and said receiver for delivering a quantity of said fumigant from said container to said receiver; a spray nozzle connected to said outlet; and a vent pipe leading from said container to the location of said spray nozzle, substantially as described.

1,541,794. SPRAYING DEVICE. ARMANDO COSTA, Great Kills, N. Y. Filed Mar. 17, 1923. Serial No. 625,685. 1 Claim. (Cl. 91—45.)



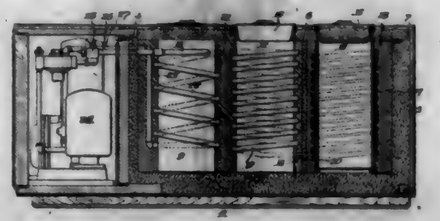
In an apparatus of the class described, the combination of a main casting, a connection at one end of said casting for a paint receptacle, a valve block at the other end of said casting, a valve chamber bored in said casting, said valve chamber having an extension of lesser diameter than the valve chamber, forming a valve seat therein, a valve working in said chamber against said

seat, plunger for said valve in said extension, an air passage bored in said casting adjacent said valve chamber, a communicating bore in said casting extending



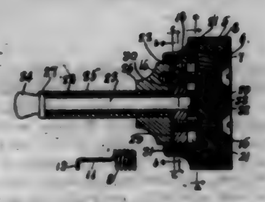
across said passage into the extension of said valve chamber, and a regulating valve in said passage, said valve extending across said bore.

1,541,795. EDUCATIONAL DEVICE. HORATIO G. CRESS, Troy, Ohio, assignor to The H. G. Cress Company, Troy, Ohio, a Corporation of Ohio. Filed June 14, 1924. Serial No. 719,956. 2 Claims. (Cl. 35—19.)



1. A button for an educational device consisting of two heads chamfered from their edges to a shank, and a relatively thin connecting shank cutaway at the edges to render the same substantially invisible when the button is mounted in the support.

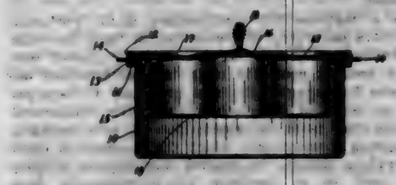
1,541,796. MICROMETER CALIPER. PHILIP J. DARLINGTON, Boston, Mass. Filed Feb. 8, 1922. Serial No. 535,010. 25 Claims. (Cl. 33—147.)



2. A micrometer-caliper comprising a frame provided with graduations, a set of interchangeable scale members differently graduated and adapted to be applied to the frame with their graduations reading with the graduations on the frame, a micrometer member supported by the frame and having a rotatable and longitudinal movement with relation thereto, and a pointer adjustably mounted on and movable with said micrometer member and readable with the graduations on the scale member applied to the frame.

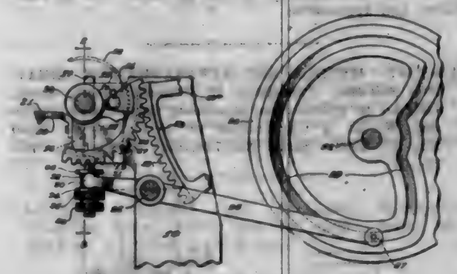
1,541,797. REFRIGERATING CABINET. FRENCH E. DENNISON, Beloit, Wis., assignor to Lipman Refrigeration Company, Beloit, Wis., a Corporation of Delaware. Filed May 12, 1924. Serial No. 712,511. 10 Claims. (Cl. 62—95.)

9. A refrigerating cabinet, comprising a frame structure, an open top food container disposed therein, a refrigerating coil arranged in contiguous relation to said food container, and solid non-porous material possessing low heat conductivity and high thermal capacity in which said containers and coils are imbedded.



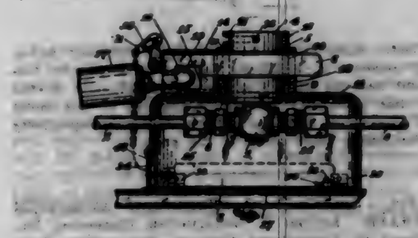
1,541,798. RADIOPHONE PLUG. CHARLES W. DENNY, WILLIAM E. MCLAUGHLIN, and GEORGE HELWIG, Middletown, Ohio, assignors to The Barkeley Electric Manufacturing Company, Middletown, Ohio, a Corporation of Ohio. Filed Aug. 13, 1923. Serial No. 657,210. 10 Claims. (Cl. 173—334.)

2. In a phone plug, a holding ring, a cap plate in one face thereof having a plurality of phone tip apertures, a plurality of yielding members arranged in said cap plate adjacent said apertures, retaining members for securing said cap plate on said holding ring, and adapted to contact each with one of said yielding members, contact members associated with said holding ring, said contact members being insulated from one another and being connected to the respective retaining members.



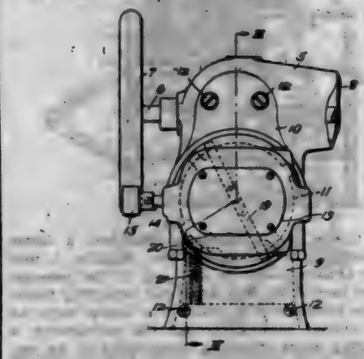
1,541,799. COMPARTMENT STEAM COOKER. ETHEL C. DODGE, East Greenwich, R. I. Filed Feb. 8, 1924. Serial No. 691,402. 1 Claim. (Cl. 53—1.)

A cooking utensil comprising a body portion, a plate supported by the body portion, a plurality of cups affixed to the plate and extending downwardly into the body portion, and a lid having a plurality of depressions



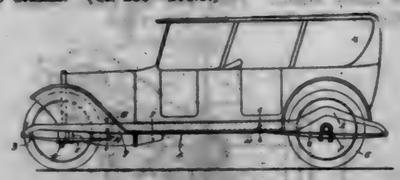
formed integrally thereon and adapted to extend into the tops of the cups and effectively close them.

1,541,800. AWL-SHIFTING AND STITCH-REGULATING MECHANISM FOR LEATHER-STITCHING MACHINES. LEO J. DU MAIS and FLOYD E. MINER, Chicago, Ill., assignors to Chicago Shoe Machinery Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 3, 1923. Serial No. 666,237. 5 Claims. (Cl. 112—48.)



1. The combination with a shaft mounted for reciprocation transversely on a sewing machine and provided with a vertically inclined opening, of an awl mounted for oscillation on said shaft, a bar mounted for vertical movement below said shaft and having at its upper portion an inclined cam located in and slidably co-operating with said opening in said shaft, means for oscillating the awl to cause it to penetrate the work, and means for actuating said bar to cause the awl to feed the work laterally.

1,541,801. VALVE LOCK. ROBERT E. DURNING, Bellevue, Pa. Filed Aug. 2, 1924. Serial No. 729,835. 8 Claims. (Cl. 251—6.)

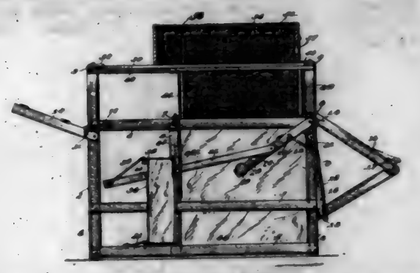


1. In a valve lock, a valve, an enclosing casing having an upwardly disposed neck, and a U-shaped member formed thereon provided with transverse perforations, a valve stem drum rotatably mounted in the casing neck, a locking key having a recess formed complementary to the U-shaped member perforations, and locking means passing through said key, and U-shaped member for holding the key in locked position.

1,541,802. MOUNTING FOR SEWING-MACHINE MOTORS. RALPH EBERSFELD, East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 14, 1921. Serial No. 453,089. 12 Claims. (Cl. 74—26.)

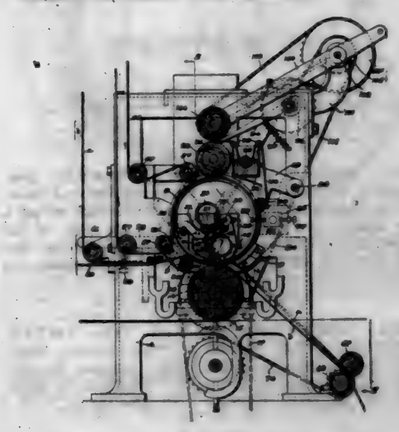
1. In combination, a sewing-machine head comprising an upright standard, an auxiliary casing member mounted adjacent to said upright standard and provided with an opening therein and an electric motor mounted at least partially within said opening.

1,541,803. MOTOR VEHICLE. EDWIN R. EVANS, Detroit, Mich. Filed Mar. 5, 1923. Serial No. 623,947. 8 Claims. (Cl. 280—106.5.)



2. In a vehicle, a frame having a downwardly opening channel sill with vertically extending legs and transverse foot flanges upon the legs, one of the legs having a greater height at a point intermediate the ends of the sill than at the ends thereof and the other of the legs having portions of different height longitudinally of the sill.

1,541,804. BRUSH ATTACHMENT FOR VACUUM CLEANING TOOLS. EGBERT R. FIELD, Detroit, Mich., assignor to Eureka Vacuum Cleaner Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 13, 1922. Serial No. 536,022. 1 Claim. (Cl. 15—168.)

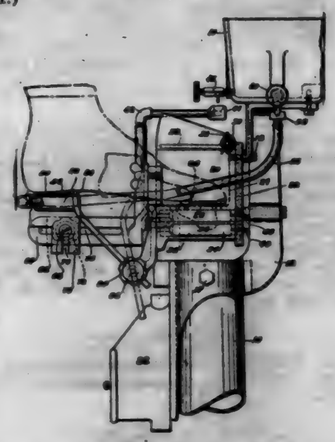


In a vacuum cleaner, the combination with a suction foot having a mouth, of a brush attachment including a clip having an inverted substantially U-shaped portion extending upwardly into said mouth to permit a portion of the article being cleaned to be drawn upwardly into said mouth, and having portions at the ends of the U-shaped portion aforesaid embracing opposite sides of said mouth, and a brush upon one side of the mouth secured to one of the last-mentioned portions of said clip.

1,541,805. FLYTRAP. CLIFFORD A. FLEMING, Huntsville, Mo. Filed Jan. 22, 1924. Serial No. 687,815. 10 Claims. (Cl. 119—156.)

10. In a device of the character described, a frame structure providing a passageway for animals, a pair of swinging arms adjacent to one end of the passageway, a roller carried by said arms and extending transversely of the passageway in position to engage with the back of an animal passing through the passageway, a pair of swinging doors extending transversely of the passageway and positioned in spaced relation to said roller, and pitmen connecting said arms and said doors, said doors being spring pressed toward closed position, and a flexible spring pressed curtain adapted to cooperate with said doors to close said passageway.

1,541,806. MACHINE FOR ORNAMENTING FABRICS. LORENS FLICK, Providence, R. I., assignor to Sayles Finishing Plants, Inc., Saylesville, R. I., a Corporation of Rhode Island. Filed July 30, 1923. Serial No. 654,597. 23 Claims. (Cl. 101—114.)



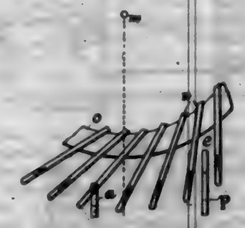
1. In a machine for ornamenting cloth, the combination of a stenciling cylinder, a container for the ornamenting material within the cylinder having an inclined wall resting upon the inner surface of the cylinder, means for bodily adjusting the container horizontally within the cylinder to vary its position therein, means for regulating the flow of ornamenting material from the container and delivering it between the inner surface of the cylinder and the inclined wall, and means for rotating the stenciling cylinder.

8. In a machine of the character described, the combination of a stenciling cylinder, a supporting surface between which and the stenciling cylinder the cloth is passed, a receptacle for the ornamenting material within the cylinder, means for governing at will the flow of material from the receptacle to the inner surface of the cylinder including a doctor, a supply pipe within the cylinder, and means for heating the several parts within the cylinder.

15. In a machine for ornamenting cloth, the combination of a back grey of greater width than the cloth to be ornamented, means for depositing a phenol condensation product upon the cloth in predetermined design, means for engaging the back grey only at its edges outside the edges of the cloth to carry the ornamented cloth from the point of application of said product, and a heating chamber into which the ornamented cloth is delivered to change the partial condensation product on the cloth to an insoluble non-thermoplastic final product.

19. In a machine for ornamenting cloth, the combination of a stenciling cylinder, means within the cylinder for applying a plastic condensation product to the inner face of the cylinder to pass through the stencil opening in the cylinder, means for advancing a sheet of cloth to be ornamented and for pressing it against said cylinder to receive the plastic deposits, and means for subjecting the cloth with the deposits thereon to a heat treatment of a character to permanently secure the ornamentation to the cloth and render them hard and insoluble so that they resemble glass beads in durability and appearance.

1,541,807. METHOD AND APPARATUS FOR TREATING SHOES. FREDERICK M. FURBER, Revere, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 27, 1924. Serial No. 716,169. 13 Claims. (Cl. 12—1.)



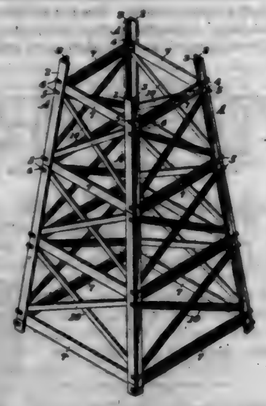
1. That improvement in methods of treating shoes, which consists in supplying radiant heat to the toe-end and heel-end of a shoe simultaneously and at the same time generating individual supplies of hot moist vapor adjacent to said toe-end and heel-end respectively and furnishing said vapor to the shoe.

1,541,808. PROCESS OF PRODUCING AMMONIUM NITRATE. LUCIEN H. GREATHOUSE, Clarendon, Va., assignor to Atmospheric Nitrogen Corporation, Syracuse, N. Y., a Corporation of New York. Filed Sept. 6, 1923. Serial No. 661,150. 12 Claims. (Cl. 23—105.)

12. The process of producing ammonium nitrate which consists in preparing a gas containing nitrogen oxides, absorbing a portion of said oxides in water to produce nitric acid, bringing the remaining nitrogen oxides into absorbing contact with ammonium carbonate to produce a mixture of ammonium nitrate and ammonium nitrate until no material quantity of nitrogen oxides remain in the gas, then oxidizing the nitrite content of the solution produced by the nitric acid first produced and passing air through the solution and then reintroducing the resultant nitrogen oxides into the flow of the nitrogen oxides first mentioned.

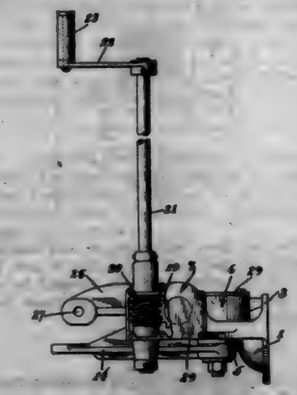
1,541,809. CIRCULAR-KNITTING FRAME. EMIL HAAGA, Stuttgart, Germany. Filed June 28, 1920. Serial No. 392,462. 6 Claims. (Cl. 66—20.)

1. In a circular knitting frame, a circular needle carrier, a circle of needles horizontally disposed on said carrier in such a manner that their axes form tangents of a smaller circle concentric with said carrier and a circle of sinkers disposed at right angles to the frame axis.



1,541,810. BATHING CAP. MARGARET HAMILTON, Memphis, Tenn. Filed Aug. 29, 1922. Serial No. 585,026. 2 Claims. (Cl. 2—68.)

1. In a bathing cap, the combination with a flat body portion devoid of a preformed head or hat-receiving pocket, of a strip of a length to encircle the head of a wearer, and having a central portion secured to the body portion at the forehead portion thereof, said central portion being of a width and length approximating only the height and width of a wearer's forehead, the end portions of the strip beyond the said central portion being of less width than said central portion and being free from the body portion to thereby form tying strips.

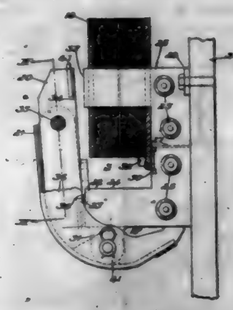


1,541,811. OIL-WELL DERRICK. CHARLES M. HEETER, Butler, Pa. Filed Mar. 2, 1922. Serial No. 540,482. 2 Claims. (Cl. 20—0.5.)

2. A derrick having a plurality of supporting columns, each column being formed of two members at an angle to each other, each member being formed of a plurality of sections, the joints between the sections of one member being staggered relative to the joints between the sections of the other member, a plurality of sets of girts connecting the columns to each other, each joint of the

column sections being overlapped by a girt, and a U clamp on each side of each girt connecting the column members to each other.

1,541,812. HORIZONTAL AND VERTICAL TRACTOR HITCH. JOSEPH M. HIGHDUCHECK, Greensburg, Pa., assignor to Greensburg Tool and Machine Company, Greensburg, Pa. Filed Sept. 17, 1923. Serial No. 663,280. 4 Claims. (Cl. 240—33.10.)

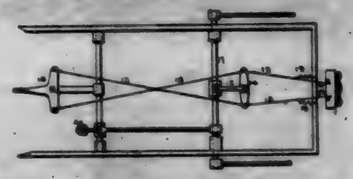


1. A horizontal and vertical sweep hitch for tractors including a support adapted to be attached to the rear portion of the tractor, said support comprising a main body portion and an attaching portion, inner and outer housings formed on the body portion and provided with bearing openings, all of said parts being cast in a single piece, a main shaft journaled horizontally of the support, a secondary vertically arranged shaft journaled in the support and operably connected to the main shaft, an arm adapted for lateral swinging movement connected to the lower end of the secondary shaft and arranged beneath and projecting beyond the support, a manually actuated shaft arranged in a vertical position and having its lower portion journaled in the outer portion of the support and operably connected with the main shaft, another arm mounted loosely about the main shaft, and means for releasably clamping the last mentioned arm to the main shaft so that it will swing vertically upon the operation of the manually operable shaft when desired, substantially as and for the purposes set forth.

1,541,813. SAFETY CIRCUIT CUT-OUT. MARTIN HÖCHSTÄDTER, 's Gravenhage, Netherlands, assignor to N. V. Lijn Protectie, 's Gravenhage, Netherlands, a Corporation of the Netherlands. Filed Aug. 24, 1921. Serial No. 494,833. 7 Claims. (Cl. 175—294.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

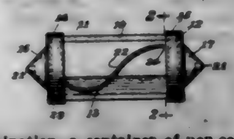
1. In an automatic safety circuit cut-out system for line sections of the character described, having a main line and an auxiliary line in each line section and transformers at the ends of each line section for coupling the auxiliary line to the main line, and adapted to cause the cut-out operation in case of line disturbance, the transformer ratio of at least one of said coupling transformers being smaller than the impedance ratio between the main and the auxiliary line.

1,541,814. ELECTROMAGNET CONTACTOR. CHARLES H. HODGKINS and WALTER C. GOODWIN, Pittsburgh, Pa., assignors to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 20, 1920. Serial No. 360,202. 13 Claims. (Cl. 175—338.)



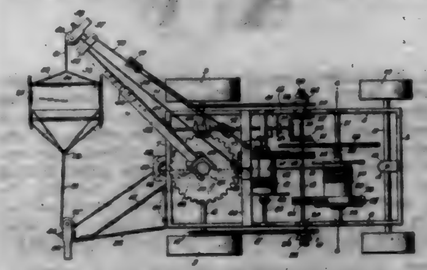
1. An electromagnet comprising a core member having an interposed air gap and a plurality of pole faces, and a magnetically balanced armature adapted to coact with said pole faces, said faces being positioned in substantially parallel planes.

1,541,815. METHOD OF SHAPING SHOE-UPPER MATERIALS. ERIC A. HOLMGREN, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 3, 1922. Serial No. 526,599. 10 Claims. (Cl. 12—97.)



1. That improvement in methods of shaping shoe upper materials including an upper and a lining and stiffening material which is capable of flowing under the application of pressure, which consists in providing a portion of the upper materials which is to be subjected to upper shaping pressure with one or more openings to receive said stiffening material, and by the application of pressure in shaping the upper materials to the desired shoe contour causing the stiffening material to flow into said opening or openings to assist in holding the materials in shape.

1,541,816. AUTOMOBILE SIGNAL. BURTT J. HUBBARD, Kokomo, Ind. Filed Jan. 13, 1917. Serial No. 142,295. 11 Claims. (Cl. 116—45.)

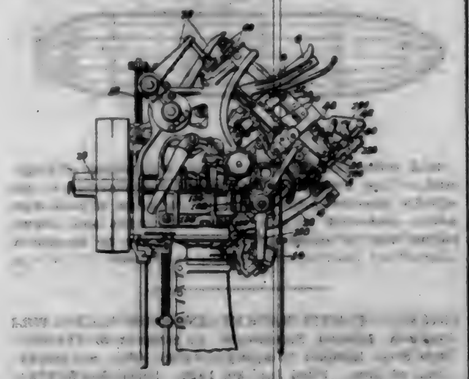


1. The combination with a vehicle, of a casing secured thereto having right and left signaling compartments, a source of illumination for each of said compartments, means whereby the driver of said vehicle can selectively illuminate said compartments to indicate an intended change in direction, and additional means whereby both of said compartments may be illuminated simultaneously to indicate that the vehicle is stopping.

1,541,817. VARIABLE-RESISTANCE GRID LEAK FOR RADIO APPARATUS. GEORGE H. HUMM, Fairfield, Conn., assignor to Radio Foundation, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Feb. 11, 1924. Serial No. 692,049. 7 Claims. (Cl. 204—57.)

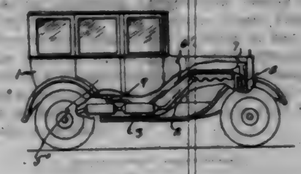
5. In combination, a container of non-conducting material, a fluid mass within the container and constituting a high resistance conductor, and a conductor wire adapted to vary the resistance of the fluid by being more or less submerged therein, said wire being spaced from the sides of the container throughout the length of the wire.

1,541,818. TRENCH MACHINE. WALTER G. HUMPHREYS and OMAR R. HUMPHREYS, Omaha, Nebr. Filed Dec. 8, 1924. Serial No. 754,660. 6 Claims. (Cl. 37—144.)



1. A trench filling machine comprising a frame adapted to straddle a trench, an outrigger secured to the frame and arranged to extend therefrom, a scoop, a cable attached to the scoop and passing over the outrigger for operating the scoop in one direction, a boom on the frame adapted for vertical adjustment, and a second cable connected to the scoop and to the boom for elevating the scoop and carrying it laterally away from said outrigger.

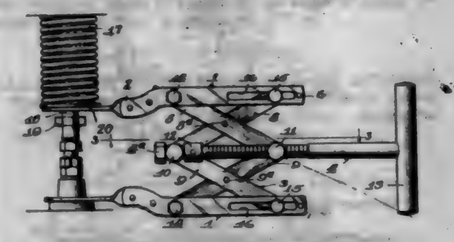
1,541,819. METHOD OF AND LIQUOR FOR PRODUCING TANNED LEATHER. DANIEL DANA JACKSON and ALLEN ROGERS, Brooklyn, and TE-PANG HOU, New York, N. Y. Filed Sept. 2, 1921. Serial No. 498,049. 5 Claims. (Cl. 149—4.)



1. A method of tanning, comprising oxidizing a ferrous salt solution to the ferric state, and adding an alkali to produce a basicity between ratios of 5 to 6 and 3 to 4 equivalents of the mineral acid radical to the ferric ion, and treating the pelt in said oxidized solution.

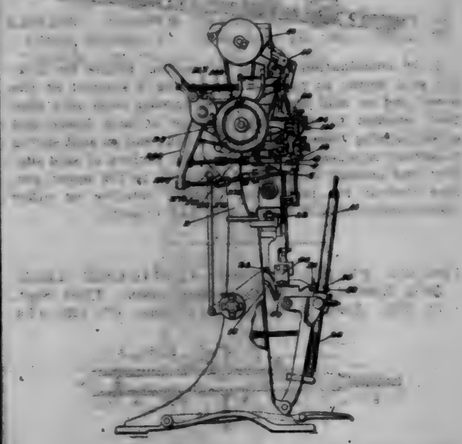
1,541,820. MACHINE FOR WORKING UPPERS OVER LASTS. BERNHARDT JORGENSEN, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed June 24, 1920, Serial No. 391,485. Renewed Aug. 21, 1924. 101 Claims. (Cl. 12—10.)

1. A machine of the class described having, in combination, means for pulling an upper over a last, an overlaying device for the toe end of the shoe, side overlaying devices mounted for movements laterally of the shoe at opposite sides of the forepart and toward which said toe overlaying device is movable in its operation on the shoe, different mechanisms for effecting respectively different movements of said toe and side overlaying devices, comprising first a movement along the plane of the sole and then a movement toward said plane to bend the margin of the pulled upper inwardly over the sole and to press it against the bottom face of the sole, and means operative in time relation to said overlaying devices to cause the upper pulling means to release the upper.



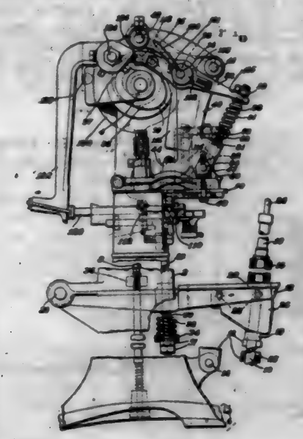
1,541,821. HEATER FOR AUTOMOBILES. JAMES W. KELCH, JAMES J. SUNDAY, and FREDERICK SCHLUSTER, Detroit, Mich. Filed Feb. 12, 1925. Serial No. 8,779. 6 Claims. (Cl. 257—241.)

1. A heater for motor vehicles including a shell having inlet and outlet ports for the exhaust gases of the motor, a plurality of tubes extending between said inlet and outlet ports, and means opposite to and in rear of the inlet port for directing the exhaust gases into the tubes, said means being so constructed as to eliminate back pressure on the motor.



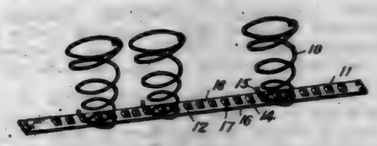
6. In a heater for motor vehicles, the combination with a tubular shell having inlet and outlet ports for the exhaust gases of the motor at the opposite ends thereof, and an inwardly flared portion immediately in rear of the inlet port, a core having tubes extending longitudinally of the shell between said inlet and outlet ports, and a header for the tubes having a concave portion opposite to the flared portion aforesaid for directing the exhaust gases into the tubes so that the said gases will flow freely in substantially a straight line from the inlet port through the tubes to the outlet port.

1,541,822. VALVE LIFTER. ANDREW A. KERCH, Chicago, Ill. Filed June 11, 1921. Serial No. 476,685. 2 Claims. (Cl. 29—96.3.)



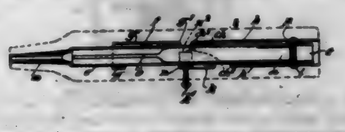
1. A valve spring lifter comprising a pair of parallel arms provided with spring engaging members at one end thereof, an extensible linkage comprising pairs of links each pivotally connected together midway of their ends, and with each other at their adjacent ends, and having pivotal and endwise sliding connection with said arms, and a screw shaft journalled at one point of connection between said pair of links and having threaded engagement at the other point of connection.

1,541,823. ASSEMBLING MACHINE. NORWOOD H. KNOWLTON, Rockport, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Feb. 7, 1918. Serial No. 215,774. 59 Claims. (Cl. 12—4.)



1. In a machine of the class described, the combination of a wiper movable over a shoe bottom, a tacker movable in a direction opposite to that of the wiper, and means for moving the wiper and tacker to do their work.

1,541,824. MACHINE FOR TREATING SHOE UPPERS. NORWOOD H. KNOWLTON, Rockport, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 17, 1922. Serial No. 544,581. 56 Claims. (Cl. 12—51.)



1. In a machine for assembling an upper upon a last having a sole attached thereto, the combination of means for pressing an upper and counter against the side faces of the last, means for effecting relative movement between the last and the pressing means to work the upper toward the sole, and means for securing the upper to the last.

1,541,825. SELF-LOCKING SPRING. ABRAHAM KRAKAUER, Brooklyn, N. Y. Filed Feb. 6, 1924. Serial No. 690,896. 4 Claims. (Cl. 5—264.)

1. In combination with a coil spring, means for locking said spring in position comprising a support at the lower end of said spring, means pressed from said support adapted to allow the passage of said lower end of said spring therethrough, and a bent end on said spring in sprung engagement with the under surface of said support and passing through said support to the upper surface thereof for preventing relative rotative or other displacement of said spring and said support.

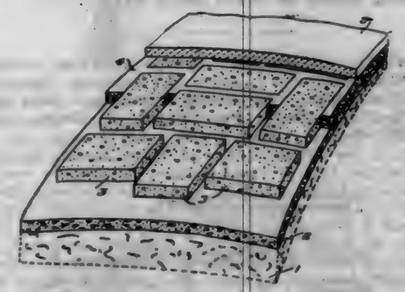
1,541,826. PENCIL HAVING A SLIDABLE LEAD. EMIL KROUTIL, Budweis, Czechoslovakia. Filed Sept. 14, 1922. Serial No. 588,110. 4 Claims. (Cl. 120—17.)

1. A pencil having a slidable lead comprising in combination an inner case provided with a longitudinally extending slot, an outer case encasing the inner case, the two cases being adapted to slide within one another, a longitudinally adjustable toothed rack in the inner case for feeding forwardly the slidable lead, the teeth of said rack projecting into and being freely accessible by means of the longitudinal slot in the inner case, a locking catch on the inner case adapted to engage and lock the rack against sliding backwardly, a feed catch on the outer case adapted to engage and feed forwardly the rack in case the two cases are moved towards each other, and a spring lever attached to one of the cases and operated by pressure for raising the catches and interrupting the engagement between the said catches and the rack.

1,541,827. COLLAPSIBLE FORM. OSCAR J. LAISY, Cleveland, Ohio. Filed Apr. 20, 1921, Serial No. 462,805. Renewed Dec. 26, 1924. 14 Claims. (Cl. 244—6.)

1. A collapsible frame comprising a plurality of longitudinal ribs, certain of said ribs being movable in an opposite direction with respect to the other of said ribs, means connected to and adapted to space said longitudinal ribs to cause said spacing means to assume a longitudinal position and collapse said frame.

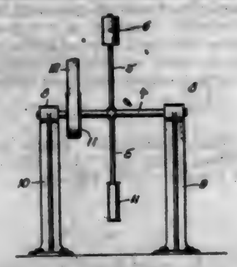
1,541,828. TENNIS RACKET AND THE LIKE. WILLIAM A. LARNED, Summit, N. J., assignor to The Dayton Steel Racquet Company, Dayton, Ohio, a Corporation of Ohio. Filed Jan. 30, 1922. Serial No. 532,754. 3 Claims. (Cl. 273—73.)



1. A tennis racket comprising a tubular metal frame, a tubular metal bridge-piece connected to said frame at its throat portion, and a stringing for said frame, said tubular bridge-piece and tubular frame containing large registering holes in their meeting walls to permit the passage of the stringing therethrough without injury to the same.

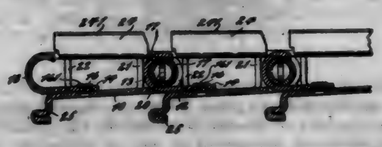
1,541,829. TENNIS RACKET AND THE LIKE. WILLIAM A. LARNED, Summit, N. J., assignor to The Dayton Steel Racquet Company, Dayton, Ohio, a Corporation of Ohio. Filed Feb. 13, 1922. Serial No. 536,186. 3 Claims. (Cl. 273—73.)

1. The combination with a metallic tennis racket frame, legs on the latter, of a handle applied to the legs thereof, and a ferrule fitted on the inner end of the handle, said ferrule having over the inner end of the handle, a top containing holes which tightly receive the legs of the frame.



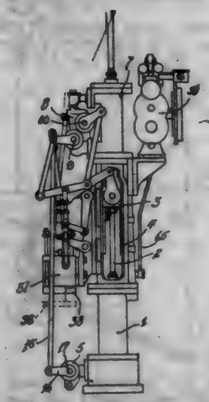
1,541,830. CONSTRUCTION OF ROADS AND WAYS. PETER JOHN MANUEL LARRAÑAGA, London, England. Filed Sept. 9, 1922. Serial No. 587,201. 6 Claims. (Cl. 94—22.)

6. A paving consisting of a bottom course of flexible resilient material, an intermediate course supported by said bottom course and having a layer of flat relatively rigid slabs forming pressure and shock distributing elements and free to have slight relative movement, and a top wearing surface course of flexible material resiliently supported by said intermediate course so that the paving as a whole is flexible.



1,541,831. PROCESS OF MAKING MOLDED ARTICLES. OSCAR LINDER, Chicago, Ill., assignor to Ideal Roller & Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Nov. 5, 1921. Serial No. 512,989. 3 Claims. (Cl. 18—58.)

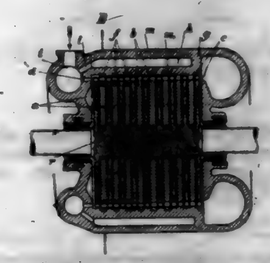
1. The process of molding resilient printers' or lithographers' roller under pressure which consists in obtaining the pressure to which the material to be molded is to be subjected by submitting the roller to a centrifugal force,



the center of which is outside of the mold in which the roller to be molded is contained.

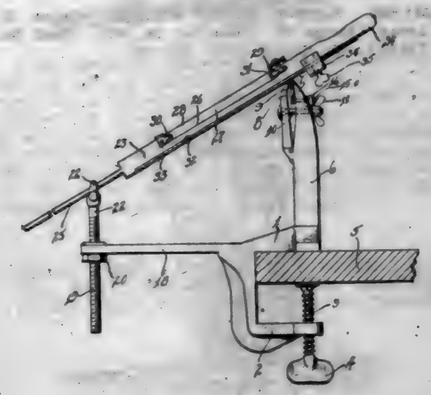
1,541,832. PORTABLE FLEXIBLE TRACK AND PROCESS FOR MAKING THE SAME. SYLVANUS D. LOCKE, Bridgeport, Conn. Filed Feb. 3, 1920. Serial No. 356,110. 29 Claims. (Cl. 305—10.)

2. A chain comprising a plurality of links and connecting pins, each link comprising a single piece of sheet metal having a base portion and a top portion spaced apart and connected by curved portions at each end, the curved portion at one end being cut away at each end and the curved portion at the other end being cut away whereby the curved portion of one link will have a space to accommodate the curved portion of the adjacent link, and sheet metal circular connecting pins each extending through the curved portions of a pair of adjacent links, each pin having a pair of projecting wings adapted to engage between the top and base portions of a link to prevent the pin from turning in the link.



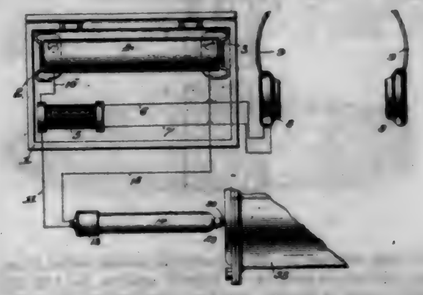
1,541,833. SAFETY BRAKE ENGINE. HENRY H. LOGAN, Chicago, Ill. Filed July 24, 1924. Serial No. 728,013. 10 Claims. (Cl. 303—49.)

1. A brake engine of the type described having a power cylinder, a piston in said power cylinder, an oil cylinder, a piston for said oil cylinder connected with



the piston in said power cylinder, a valve for said power cylinder, a valve for said oil cylinder to permit the flow of oil from one side of said oil piston to the other side, means for manually actuating said valves, and other means associated with said pistons and said oil cylinder for permitting the quick movement of said pistons during the first part of their travel when said valves are open.

1,541,834. AXIAL TURBINE. FRANZ LÖSEL, Brunn, Czechoslovakia. Filed Apr. 21, 1924. Serial No. 708,081. 4 Claims. (Cl. 253—69.)



1. An elastic fluid turbine of the axial flow multistage type comprising a cylindrical carrier for the stator elements which are surrounded as well as carried by said carrier, an outer casing spaced from the cylindrical carrier and cast integral therewith at both the front and rear ends, said carrier and outer casing forming therebetween a continuous chamber surrounding the carrier over the whole length thereof, and means to supply elastic fluid to said continuous chamber including a direct connection at the high pressure end with the high pressure supply.

1,541,835. SHEARS SHARPENER. JOHN EDGAR MCKINLEY, Oakland, Nebr., assignor of one-fourth to Roy Bowen, Oakland, Nebr. Filed Feb. 24, 1925. Serial No. 11,282. 2 Claims. (Cl. 76—82.)

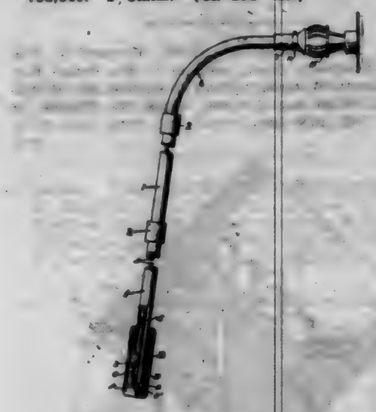
1. A device of the character described comprising a vise adapted to grip and support the blade of a pair of shears, an adjustable guide member disposed at a predetermined distance from said vise and being adjustable as to height, said member having a horizontal supporting surface greater in length than the length of the shears blade and having upturned stop members at each end thereof, and an abradant supporting member having a handle portion for manual actuation, whereby the abradant may be moved across said cutting blade and the member may bear at one end upon and be guided by said guide member.

1,541,836. SOUND-LOCATING DEVICE. ALEXANDER MCNAB, Bridgeport, Conn. Filed Jan. 21, 1920. Serial No. 352,981. 2 Claims. (Cl. 179—122.)

1. In a microphone for use in sound locating devices the combination of a body; a resistance mounted therein and adapted to be included in a circuit with the primary windings of a coil; a plunger extending forwardly from the resistance; a spring bearing against the forward end of the plunger; a second plunger mounted in the body and bearing on the opposite end of the spring; a cup piece mounted on the outer end of the body; a felt nose piece mounted in the cup; and a finger guided and supported by the nose piece, said finger at its inner end bearing against the second named rod.

1,541,837. THRESHOLD. HERMAN C. MAISE, Detroit, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed July 23, 1923. Serial No. 653,231. 9 Claims. (Cl. 296—28.)

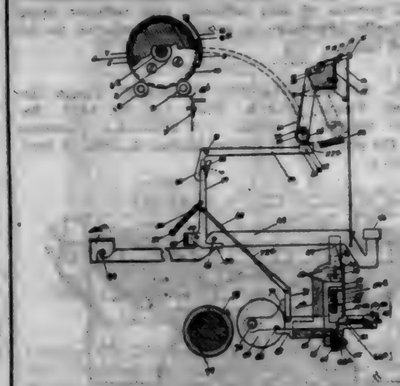
6. The combination with a vehicle body having a sill and side panels provided with spaced door openings above the sill, of a seprate threshold member extending across said spaced openings and secured to said sill.



1,541,838. FOLDING TABLE. WILLARD E. MARSH, Memphis, Tenn. Filed Apr. 27, 1922. Serial No. 556,921. 6 Claims. (Cl. 45—11.)

4. A folding table comprising a top, cleats transversely disposed across near opposite ends of the said top, legs each comprising a single piece having its top end bifurcated and spread apart, a hinge for each of said leg sections, fastened to said top section, adjacent said cleats, whereby the ends of said leg sections will each

abut and clamp against said cleats at two separated places when said legs are fully opened and means for bracing said legs in such opened position.

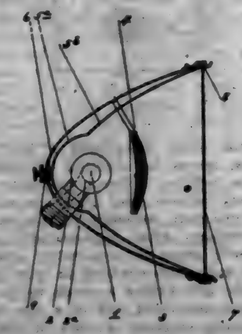


1,541,839. ELECTRIC-LAMP-MAINTENANCE DEVICE. LAWRENCE W. METZLER and WALTER L. METZLER, Topeka, Kans. Filed Nov. 28, 1924. Serial No. 752,640. 1 Claim. (Cl. 294—20.)

In an electric lamp maintenance device, a hollow staff having a rotatably mounted sleeve over the end thereof, on the opposite end a hollow curved member rigidly mounted thereon, a ferrule screwed on the end of said curved member, an annular flange in said ferrule, a socket rotatably mounted on the end of said ferrule and a stud fastened to said socket by means of a pin so that said socket will rotate with said stud, a flange on said stud engaging said annular flange in said ferrule on the opposite side from said socket so that the socket and stud are rotatably mounted relative to said ferrule, a rubber flexible grip having a plurality of grooves in the side, and in close proximity to each other so that the remaining, intervening, flexible portion will yield spirally, gripping the lamp bulb, a torque transmitting cable connected to the extreme outer end of said sleeve, the said outer end being detachable, but sufficiently rigid to rotate said cable, the opposite end of said cable extending into an aperture in said stud and rigidly fastened therein so that said cable will transmit torque to said socket.

1,541,840. WRITING MACHINE. CHARLES B. MORGAN and ROBERT A. CROOKS, Kansas City, Mo. Filed Nov. 9, 1923. Serial No. 673,719. 6 Claims. Cl. 197—17.)

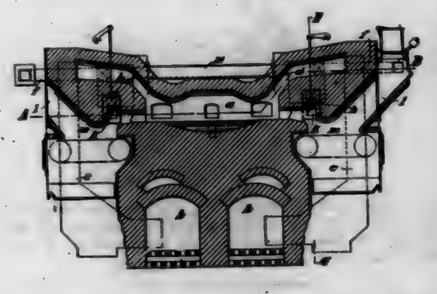
1. In a machine of the character described printing mechanism, a key lever, a rotary driving member, a plunger, mechanism controlled by the key lever for releasing said plunger and permitting the same to move towards the rotary member, an eccentric which on being carried by the plunger against the rotary member retracts said plunger, a rod connected to the printing mechanism, a link pivotally secured to said rod and



the plunger and a shoulder on the plunger which co-acts with said link in effecting the operation of the printing mechanism through the intermediacy of the rod on backward movement of the plunger.

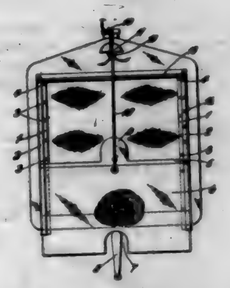
1,541,841. CIGAR EXTINGUISHER. JACOB E. NEAHR, Hartsdale, N. Y. Filed Apr. 1, 1924. Serial No. 703,898. 10 Claims. (Cl. 131—51.)

1. A cover for an ash-receptacle, said cover provided with a cigar-tray or rest which is pivotally mounted to form a pinching jaw, to enable the cigar-rest and cover to co-operate to pinch and extinguish a cigar.



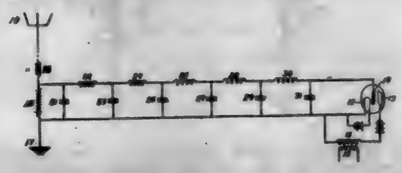
1,541,842. LIGHT PROJECTOR. PHILIP S. OSGOOD, Cleveland, Ohio. Filed May 25, 1921. Serial No. 472,433. 1 Claim. (Cl. 240—41.)

In a lamp for the purpose set forth, an outer casing, a reflector, provided with a semi-spherical portion and a parabolic portion, a source of light and an astigmatic



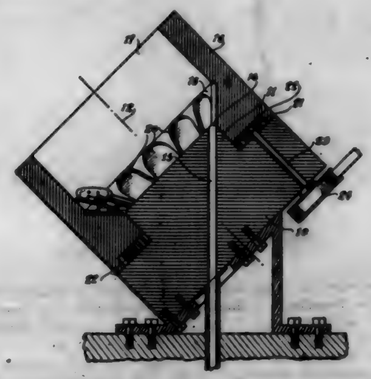
lens spaced therefrom, said source of light and lens being rigidly secured to said casing within said reflector, said source of light being at the focal point of said semi-spherical portion of said reflector, said reflector being longitudinally adjustable in said casing relative to the source of light.

1,541,843. SIEMENS-MARTIN FURNACE. PETER OSTENDORF, Vienna, Austria. Filed Aug. 29, 1921. Serial No. 496,688. 1 Claim. (Cl. 263—15.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



An open hearth furnace comprising in combination, a melting room, a gas generator adjacent said melting room, the wall between said melting room and said generator having only two superposed channels extending therethrough, one of said channels connecting the lower part of said generator with the lower part of said melting room, while the other channel extends obliquely downwards into the upper part of the melting room.

1,541,844. RADIATOR COVER. ROBERT L. PATE, Springfield, Mo. Filed Jan. 24, 1924. Serial No. 688,337. 4 Claims. (Cl. 257—132.)



2. A radiator cover, comprising a pair of vertical guide channels, means for securing the guide channels in front of the radiator, a lower stationary cover plate having its ends between said guide channels and the radiator, an upwardly extended portion in connection with said stationary plate approximately midway between said guide channels, a movable cover plate operative within said guide channels in front of the lower stationary plate and having a notch in its lower edge for the purpose mentioned and of a size to be closed by said upwardly extended portion of the stationary plate when the movable plate is in its upper adjustment, and means for supporting the movable plate in its various selected adjustments in said guide channels.

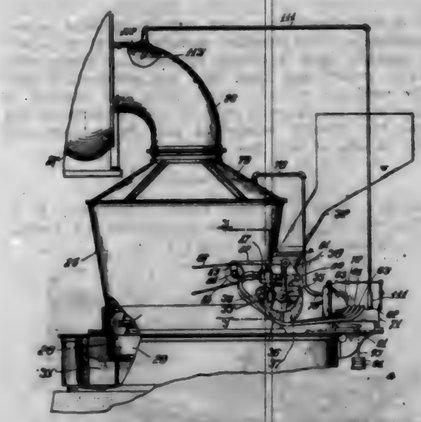
1,541,845. ELECTRICAL WAVE TRANSMISSION. MICHAEL I. PUPIN, Norfolk, Conn., assignor to Westinghouse Electric and Manufacturing Company, East Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Dec. 11, 1915, Serial No. 430,995. Renewed Dec. 15, 1920. 19 Claims. (Cl. 250—20.)

19. A transmission system comprising a unidirectionally conducting element and a second unidirectionally conducting element and a second unidirectionally conducting element and a band filter between said unidirectionally conducting elements, said band filter having a natural period of oscillation which is outside of the frequencies which it efficiently transmits.

1,541,846. FEEDING MECHANISM. FORREST G. PURINTON, Waterbury, Conn., assignor to The Patent Button Company, Waterbury, Conn., a Corporation of Connecticut. Filed Aug. 1, 1924. Serial No. 729,564. 3 Claims. (Cl. 218—12.)

1. A feeding mechanism for button heads comprising an angularly disposed rotatable hopper having inclined side walls, and a stationary bottom wall for said hopper provided with an edge projecting beyond the said inclined side walls of the hopper so that the side walls of the hopper and the edge will support a button head in substantially a vertical position, said bottom wall having an opening extending therein from the elevated portion of said ledge forming a substantially vertical delivery chute for the button heads brought there in front by the rotation of said hopper.

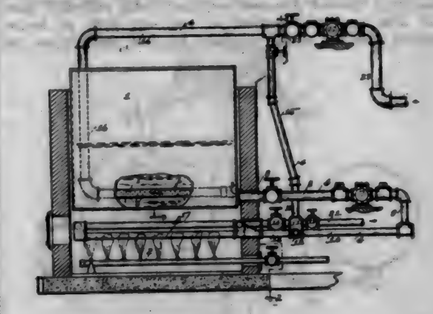
1,541,847. GRIPPER. CHARLES F. PYM, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed Feb. 1, 1917, Serial No. 146,028. Divided and this application filed Nov. 12, 1920. Serial No. 423,588. 13 Claims. (Cl. 12—11.)



1. A gripper mechanism comprising a fixed lower jaw having an upwardly extending shank, an operating plunger guided in and extending upwardly of said shank and having an outwardly offset lower end, an upper movable jaw having a shank portion pivotally connected at its upper end to the offset lower end of said plunger,

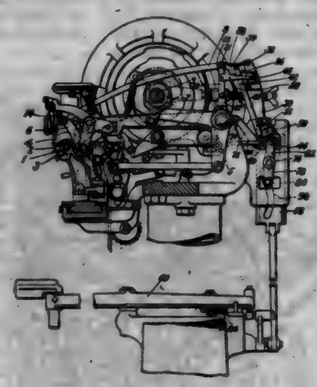
a link having its rear end pivotally attached to the lower fixed jaw at a point rearwardly of the pivot point on said offset end and having its forward end

pivoted to said movable jaw at a point intermediate of its ends, and means for reciprocating said plunger to move said upper jaw toward and from the lower fixed jaw.



1,541,848. FEED-REGULATING MECHANISM. FRED I. RAYMOND, Evanston, Ill., assignor to Raymond Brothers Impact Pulverizer Company, Chicago, Ill., a Corporation of Illinois. Filed June 26, 1923. Serial No. 647,774. 32 Claims. (Cl. 83—44.)

1. In combination with a pulverizing mill, exhausting apparatus for removing the pulverized material therefrom, a feeder, a pneumatic for controlling the feeder, and a device responsive to pressure changes in the mill for actuating said pneumatic only when pressure changes of predetermined magnitude take place.

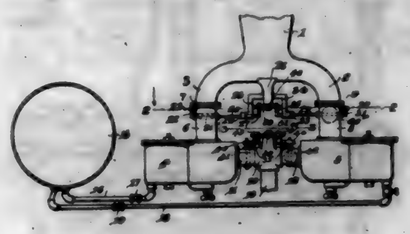


1,541,849. MEANS FOR HEATING AND CIRCULATING LIQUID IN A HEATING TANK. HARRY M. REYNOLDS, Grand Rapids, Mich., assignor to H. M. Reynolds Shingle Company, Grand Rapids, Mich., a Corporation of Michigan. Filed Dec. 4, 1922. Serial No. 604,954. 2 Claims. (Cl. 126—343.5.)

1. A tank adapted to contain a heated liquid, and having a vent below the level of the liquid; means for heating the tank and the liquid therein; a pipe extending into the tank and having a plurality of perforations

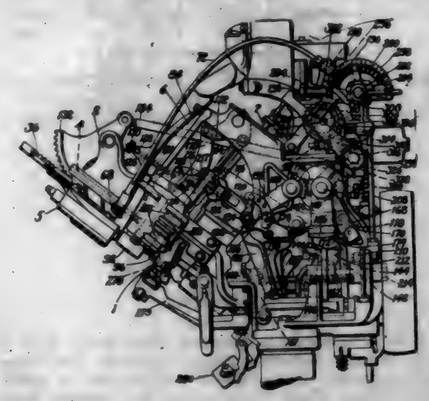
opening into the liquid therein below its level; means for circulating the liquid through the pipe and its perforations into the tank and out through its vent.

1,541,850. LASTING AND SEWING MACHINE. FRED RICKS and REGINALD BOYD WOODCOCK, Leicester, England, assignors to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 1, 1921. Serial No. 519,162. 15 Claims. (Cl. 12—4.)



1. In a machine for operating progressively upon a shoe through successive cycles, auxiliary positioning means arranged for movement into and out of operative position, means for actuating the auxiliary positioning means when in operative position toward and from the shoe in each cycle, and means under control of the operator during operation of the machine for moving the auxiliary positioning means to its inoperative position and beyond the path of its movement when in operative position.

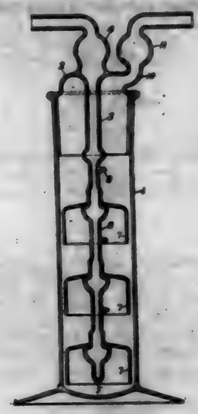
1,541,851. DUAL FUEL-SUPPLY SYSTEM. WILHELM M. RISTAU, Jr., Fredericksburg, Tex. Filed Aug. 5, 1924. Serial No. 730,237. 8 Claims. (Cl. 123—127.)



8. A dual fuel supply system comprising a pair of caburetors, each provided with an air inlet pipe and a fuel supply pipe and means to independently and detachably connect it to the intake manifold of a motor, a spring controlled pivoted throttle valve mounted in each of said supply pipes, with the pivot of each of said valves extending horizontally and projecting from

a supply pipe and having its inner end formed with a crank arm, a pivoted spring controlled air controlling valve mounted in each of said inlet pipes and having the pivot thereof disposed vertically and extended from the inlet pipe and formed at one end with an angle-shaped member, means common to said crank arms for

operating one of said throttle valves independently of the other, means common to said angle-shaped members for operating one of said air controlling valves independently of the other, and means connected with the intake manifold of an engine for supporting said crank arm operating means.

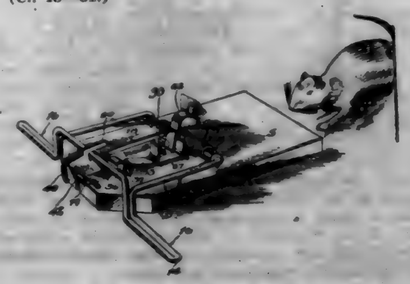


1,541,852. MACHINE FOR WORKING UPPERS OVER LASTS. WILLIAM THOMAS BUCKINGHAM ROBERTS, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 15, 1921. Serial No 507,900. 87 Claims. (Cl. 12—4.)

1. A machine of the class described having, in combination, means for pulling an upper at the sides of the forepart to stretch it transversely over a last to substantially its final tension before the upper is pulled at the end of the toe, and means for pulling the upper at the end of the toe to stretch it lengthwise of the last after the transverse pull has been substantially completed.

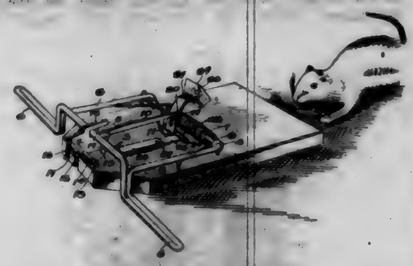
1,541,853. ABSORPTION BULB. CLARENCE J. ROTTMANN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 9, 1919. Serial No. 302,737. 6 Claims. (Cl. 261—121.)

2. An absorption bulb comprising a container and closure therefor, discharge means leading from the closure, a gas-supply pipe leading through the closure, with one end disposed adjacent the bottom of the con-



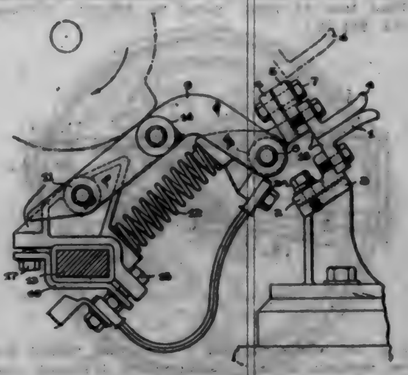
tainer, and baffle members carried by the supply pipe within the container.

1,541,854. BOX WITH OPENING DEVICE. DANIEL E. SALVUCCI, Philadelphia, Pa. Filed Jan. 14, 1924. Serial No. 685,940. 3 Claims. (Cl. 220—43.)



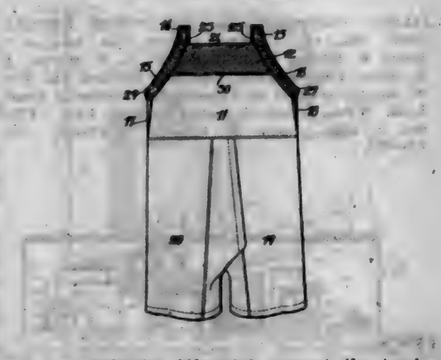
1. A box comprising a body member having a lateral projection, a cover member engaging with said body and provided with a lateral projection, a finger piece movable toward and from said box members, a split wedge arranged on said finger piece and adapted to engage with the opposing sides of said projections, and means for movably supporting said finger piece and wedge on one of said box members.

1,541,855. TRAP. ERNEST SANDS, Charleston, S. C. Filed Dec. 7, 1923. Serial No. 679,143. 7 Claims. (Cl. 43—81.)



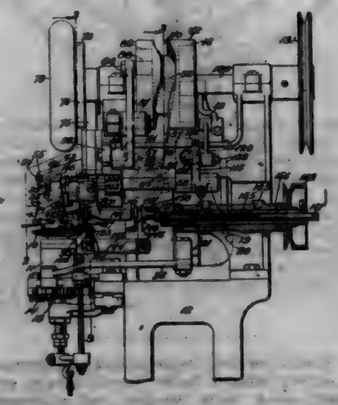
1. A trap comprising a base, a jaw pivotally secured to the base and formed from a single length of wire arranged in U-shaped formation, said length of wire being provided with oppositely located laterally projecting portions constituting gripping members, and a trigger for holding the jaw in set position, said gripping members projecting outwardly from the jaw whereby the arms are spaced from the rodent striking portion of the jaw.

1,541,856. TRAP. ERNEST SANDS, Charleston, S. C. Filed Jan. 22, 1924. Serial No. 687,801. 3 Claims. (Cl. 43—81.)



1. A trap comprising a base, a spring-pressed pivoted jaw carried thereby, a pivoted member carried by the base and adapted to engage with said jaw to releasably hold the jaw in "set" position, said jaw engaging member having an integral elongated trigger portion, a pivoted bait carrier carried by said base, said bait carrier having an aperture formed therein for receiving the free end portion of said trigger when the bait carrier is in a certain position and the jaw-engaging member is engaged with said jaw, a weighted arm integral with said bait carrier and urged by gravity to position to hold said bait carrier in engagement with said trigger, and a lateral striker on said trigger adapted to engage said weighted arm just before the free end portion of said trigger enters the aperture in said bait carrier, said striker arm being adapted to force the weighted arm to position to hold said bait carrier in engagement with said trigger.

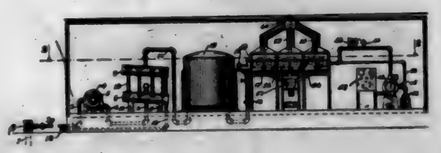
1,541,857. CONTROL APPARATUS. OTTO P. SCHUSTER, North Irwin, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 12, 1922. Serial No. 581,321. 5 Claims. (Cl. 200—170.)



5. A switch comprising a movable contact member having a serrated surface and a similarly surfaced rotatable supporting member, of an operating lever for mounting the supporting member, a bearing bracket for said lever, an insulated shaft for supporting the bearing bracket, a stationary contact member and a supporting bracket therefor, each having co-operating serrated surfaces in mutual engagement, means for adjusting said members from tooth to tooth along said serrated surfaces and means for maintaining said bearing bracket in alinement with said contact members.

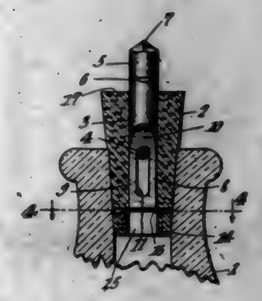
1,541,858. COMBINATION GARMENT. JOHN F. SCOTT, Cohoes, N. Y., assignor, by mesne assignments, to Arnold S. Hatch, Albany, N. Y. Filed Sept. 3, 1924. Serial No. 735,555. 2 Claims. (Cl. 2—78.)

2. A combination bifurcated garment the trunk or body portion and the leg portions of which are constructed of a non-elastic fabric, said fabric extending around the sides and under the arms, borders of elastic material about the arm holes of said body portion and extending upwardly therefrom to form shoulder straps, and an insert of laternally elastic vertically ribbed material in the upper portion of the back of said body extending downwardly from the neck opening between said arm hole borders and secured thereto, said fabric being doubled with the doubled edge at the upper portion bordering the neck opening at the upper portions of said border portions and having the upper edge of the relatively inelastic material inserted between the lower edges and joined thereto on a straight, substantially horizontal, seam extending between said arm hole borders, the upper edge of said insert forming a neck opening border lying above the lower edges of the arm hole.



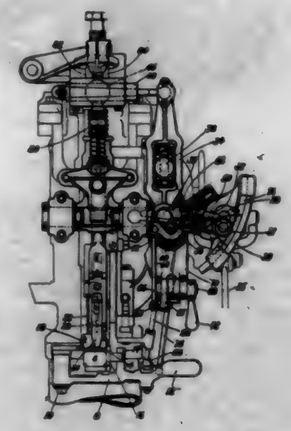
1,541,859. INSOLE-REENFORCING MACHINE. THOMAS H. SEELY, Malden, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed July 23, 1919. Serial No. 312,662. 35 Claims. (Cl. 12—20.)

18. Trimming mechanism for reenforced insoles comprising a disc knife, means for continuously rotating said knife, means for imparting to said knife chopping



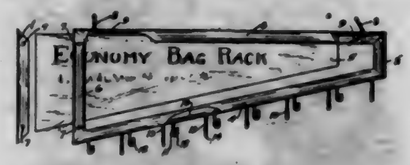
strokes in a plane normal to the surface of the reenforce and through the reenforce to trim it and means for feeding the insole in a direction substantially parallel to said plane.

1,541,860. CARBON-BLACK AND POWER GENERATOR. WILLIAM A. SHARPE, Denver, Colo., assignor to Harry R. Rogers, Fred. B. Rogers, L. T. Martin, A. L. Miller, Lon Galbreath, Lawrence Johnson, and Wm. A. Sharpe, trustees of Consolidated Producers Trust, Lusk, Wyo., Organized Under Common Law. Filed Oct. 9, 1923. Serial No. 667,562. 3 Claims. (Cl. 134—65.)



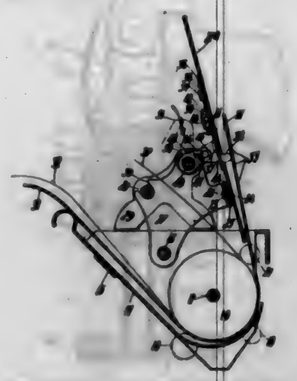
1. A carbon-black retort comprising a pair of parallel cylindrical boilers rotatable on their central axes, means for rotating said boilers in opposite directions and towards each other at the top, a pair of scrapers, one cooperating with each boiler, said scrapers contacting with the adjacent sides of the boilers at a point between the vertical and horizontal diameters of the boilers, a screw conveyor located underneath each pair of brushes, pipes connected to the boilers for introducing water thereinto, means comprising pipes for conducting steam from the boilers, and a series of gas jets underneath each boiler.

1,541,861. DISPENSING STOPPER. WILLIAM F. SHAW, Denver, Colo. Filed July 11, 1924. Serial No. 725,453. 2 Claims. (Cl. 215—47.)



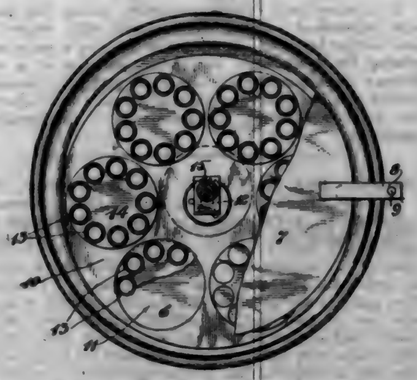
1. In a device of the class described, a stopper having a bore, a valve slidable in the bore, the valve comprising a part which closes the bore, and a reduced end which closes the bore but partially when the valve is partly withdrawn, the reduced end of the valve having an elongated slot, and a pin engaged at its ends with the stopper and passing through the slot of the valve.

1,541,862. LASTING MACHINE. ROBERT HENRY SILVESTER, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 1, 1921. Serial No. 510,141. 20 Claims. (Cl. 12—2.)



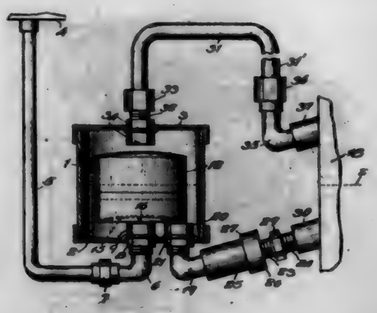
1. In a machine of the class described, means for inserting a plurality of tacks, a gripper, and means for locating the gripper in front of the point of insertion of either tack.

1,541,863. BAG RACK. HARLOW M. SIMPSON, Fort Morgan, Colo., assignor to Simpson Specialty Company, Fort Morgan, Colo., a Corporation of Colorado. Filed Mar. 22, 1924. Serial No. 701,054. 4 Claims. (Cl. 211—2.)



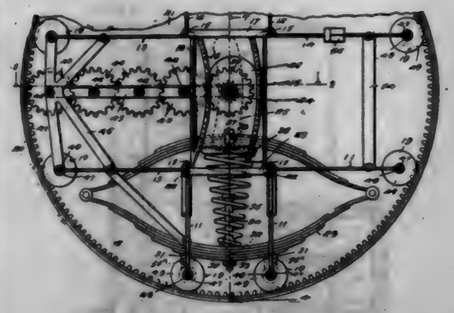
4. A bag rack comprising a framework formed from metal members having a substantially U-shaped cross-section adapted to hold a display card, one side member of said frame being provided with openings for the reception of hangers, said hangers comprising a wire having a central straight portion adapted to lie within the channel of one frame member and to be held in place by the card, the ends of the hanger being bent at an angle to the central portion and project through the openings, one end of each hanger being formed into a hook and the other being formed into an eyelet, the hook being in a plane passing through the straight portion and the eyelet in a plane perpendicular to the straight portion.

1,541,864. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 21, 1923. Serial No. 633,573. 17 Claims. (Cl. 197—127.)



1. In a typewriting machine, the combination with a revoluble platen, of a collating table, arranged at the delivery side of the platen and disposed to support the leading ends of work-sheets on the platen, sheet-holding pins carried by said table and projecting through a slot in said table from the rear thereof, positioned to enter perforations provided in the margins of a work-sheet, carried on the platen and said table, and carriers for said pins mounted at the rear of said table and adjustable thereon toward and from the platen.

1,541,865. LAPPING MACHINE. JOHN W. SMITH, New Britain, Conn., assignor to The Fafnir Bearing Company, New Britain, Conn., a Corporation of Connecticut. Filed Apr. 3, 1923. Serial No. 629,554. 8 Claims. (Cl. 51—161.)

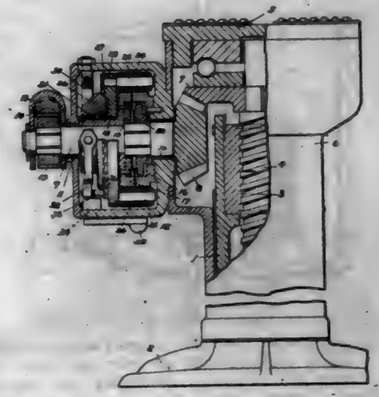


1. In a lapping machine, a pair of opposed flat lapping discs, a main work carrier plate between said discs, means for circularly moving one of said parts with reference to the other, the main work carrier having a plurality of openings therein, a secondary work carrier plate for one or more of said openings, said secondary carrier plate having a plurality of pockets for holding articles to be lapped, said secondary carrier being positioned so as to cause articles held therein to lie within the opening of the main work carrier.

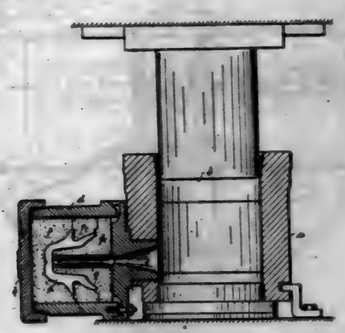
1,541,866. AUTOMATIC OIL-FEEDING APPARATUS. MARTIN SORENSEN, Chicago, Ill. Filed Oct. 15, 1920. Serial No. 417,124. 3 Claims. (Cl. 184—103.)

1. In a device of the kind described and in combination, a casing provided with an inlet and outlet, and with a third port, means for connecting said inlet with a source of supply, means for connecting said outlet with an oil container, conduit means between said third port and said container in free communication with both and forming an air seal therebetween, and means in said casing for automatically controlling the admission of fluid from said source of supply through said inlet.

1,541,867. VEHICLE WHEEL. JOHN HENRY SPARKS, Westville, N. J. Filed Jan. 17, 1925. Serial No. 3,182. 17 Claims. (Cl. 305—5.)



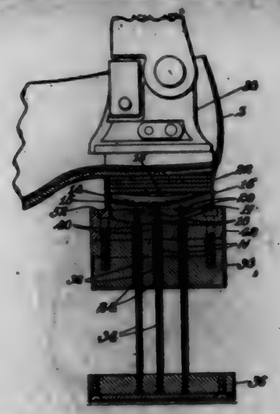
14. A wheel of the class described having spokes, a rim movable with respect to the spokes, means of engagement between the rim and spokes, stationary hub plates, means to secure said hub plates and spokes together, a movable hub plate associated with the first mentioned hub plates, an axle engaging said movable hub plate, cushioning means for said movable hub plate, and means driven by said axle to move said rim comprising a train of gearing, certain gears of said train being carried by a bearing pivoted on said axle and from means supported by said spokes.



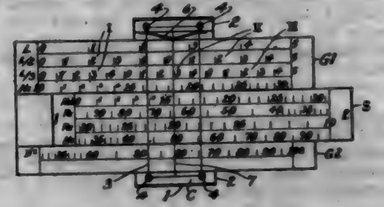
1,541,868. SELF-LOWERING LIFTING JACK. WALTER A. SPEAR, Dayton, Ohio, assignor to The Joyce-Cridland Company, Dayton, Ohio, a Corporation of Ohio. Filed Jan. 12, 1924. Serial No. 685,725. 19 Claims. (Cl. 254—103.)

1. In a lifting jack, a standard, a lifting element supported by said standard, a shaft connected with said

lifting element for rotation thereby when said lifting element is moved downwardly, a device to resist the rotation of said shaft by said lifting element, and planetary gearing interposed between said device and said shaft.



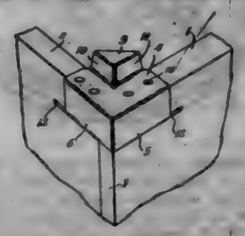
1,541,869. PROCESS FOR THE PRODUCTION OF CERAMIC WARE. RICHARD SPRENGER, Berlin-Heningsdorf, Germany. Filed Apr. 4, 1921. Serial No. 458,619. 3 Claims. (Cl. 25—156.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. A process for the manufacture of ware from ceramic material and especially porcelain, consisting in applying pressure upon a mass of ceramic material within a container while the said material is in a plastic and non-fluid condition, extruding thereby a portion of the said mass from the container through an inlet into a mould, which inlet extends through a part of the mould into a position when the extended material is distributed to fill the moulding space, substantially as described.

1,541,870. ART OF ATTACHING HEELS. JOHN F. STANDISH, Winthrop, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 12, 1922. Serial No. 528,686. 12 Claims. (Cl. 12—147.)

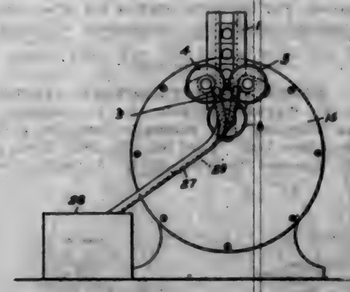
1. The method of attaching yieldable concave heels, which consists in relatively positioning a heel and the receiving surface of a shoe, applying pressure to bring a portion only of the inner surface of the heel and said receiving surface into contact, driving nails to attach the heel to the shoe, and bringing more of the inner surface of the heel into contact with the receiving surface.



1,541,871. LOGARITHMIC CALCULATING DEVICE. FREDERICK O. STILLMAN, Melrose, Mass. Filed Apr. 17, 1922. Serial No. 554,348. 1 Claim. (Cl. 235—70.)

In a logarithmic calculating device having two members capable of parallel reciprocation with respect to one another, each of said members carrying a scale comprising two consecutive superposed portions of a continuous logarithmic scale, either of said two members having indicia to indicate which of the said two logarithmic portions contains the answer of a mathematical operation.

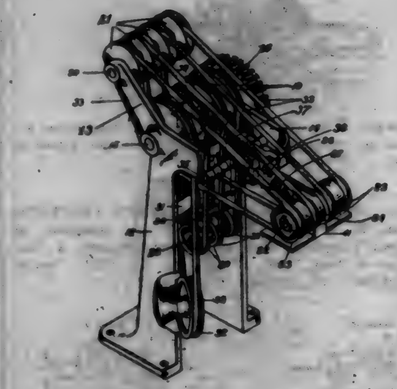
1,541,872. BOX OR CRATE. ROBERT STODDARD, Chicago, Ill., assignor to Milk Bottle Crate Company, Chicago, Ill., a Corporation of Illinois. Filed July 28, 1924. Serial No. 728,170. 6 Claims. (Cl. 217—69.)



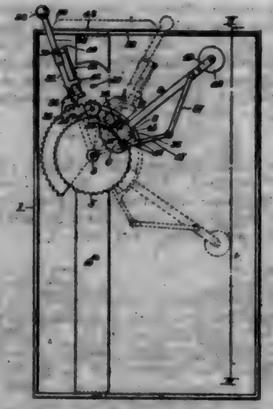
1. A device of the class described comprising a horizontal top adapted to contact with the top edge of a box or crate, and a vertical side adapted to contact with a side of said box or crate, said side terminating in a bent-in lug adapted to engage in a slot in said box.

1,541,873. WEATHER STRIP FOR WINDOWS. HENRY A. TAYLOR, Morris, Ill., assignor of one-half to William R. Allen, Morris, Ill. Filed June 21, 1922. Serial No. 570,026. 3 Claims. (Cl. 20—69.)

1. A weather strip comprising a body portion apertured to fit over a sash pulley, the portion extending along one side of said aperture being cut through for letting the sash cord in laterally when installing the strip.



1,541,874. NUT AND BOLT ASSEMBLING MACHINE. CHARLES C. THOMSON and JAMES CRAIG, Butler, Pa. Filed Mar. 1, 1924. Serial No. 696,189. 11 Claims. (Cl. 10—155.)

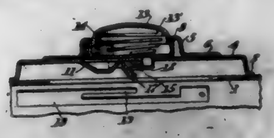


4. In a nut-and-bolt assembling machine the combination with a seat for a nut, of a pair of rotatable rollers borne on parallel axes and adapted to be held yieldingly to position for engaging a bolt advancing to a nut in place within said seat, means for rotating said rollers, and a third roller idly mounted on an axis parallel with the axes of the pair of rollers first named and adapted to cooperate with the said first-named pair of rollers, to sustain a bolt in position between the pair and in alignment with a nut in place on said seat.

1,541,875. MACHINE FOR AND METHOD OF LASTING SHOES. EVERETT W. VARNEY, Newton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 21, 1920. Serial No. 404,983. 56 Claims. (Cl. 12—12.)

1. That improvement in the art of working shoe uppers over lasts which consists in simultaneously and uninterruptedly rubbing an upper at one side of a last at a plurality of adjacent locations, and then simultaneously and uninterruptedly overwiping upon an inner sole the upper on the same side of the last at a plurality of adjacent locations.

1,541,876. MOTOR RESETTER. MORRIS VICTORSOHN, Brooklyn, N. Y. Filed Apr. 17, 1922. Serial No. 554,278. 18 Claims. (Cl. 185—39.)



1. The combination with a member to be rotated, of a ratchet carried thereby, an arm carrying a pawl to engage said ratchet, a weight on the arm for actuating said member, a resetting lever pivoted concentrically to said member, and means of connection between said lever and arm for raising the latter.

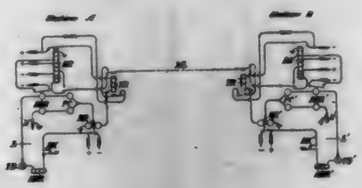
1,541,877. ELECTRICAL SWITCH. LEE J. VOORHEES, Binghamton, N. Y., assignor to National Carbon Company, Inc., a Corporation of New York. Filed May 27, 1921. Serial No. 473,216. 8 Claims. (Cl. 200—60.)

1. A switch mechanism comprising a contact arranged to be depressed and to be moved laterally, a spring

member separate from the contact and adapted to support the same, means for depressing the contact when

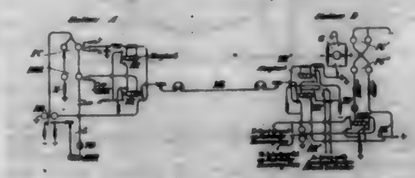
said contact is moved laterally, and a conductor arranged to be engaged by the contact when the latter is depressed.

1,541,878. SINGLE POLAR TELEGRAPH CIRCUITS. EDWARD F. WATSON, Yonkers, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Nov. 21, 1921. Serial No. 516,868. 20 Claims. (Cl. 178—2.)



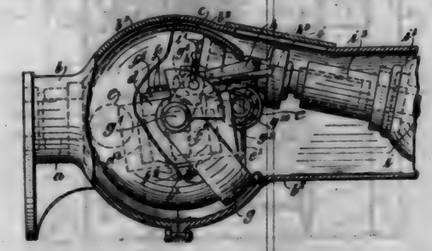
1. In a signaling system, a line circuit, terminal stations, transmitting apparatus and receiving apparatus at each terminal station, switching means connecting the line circuit to the transmitting apparatus at one station and the receiving apparatus at the other station during non-signaling condition so that signals may be transmitted in one direction, means for normally maintaining said connections during times that no signals are being transmitted in either direction and means whereby said switching means may connect the line to the transmitting apparatus at said last mentioned station and to the receiving apparatus at said first mentioned station for transmitting signals in the opposite direction in response to the actuation of the transmitting apparatus at said second station.

1,541,879. SINGLE POLAR TELEGRAPH CIRCUITS. EDWARD F. WATSON, Yonkers, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Nov. 21, 1921. Serial No. 516,869. 12 Claims. (Cl. 178—2.)



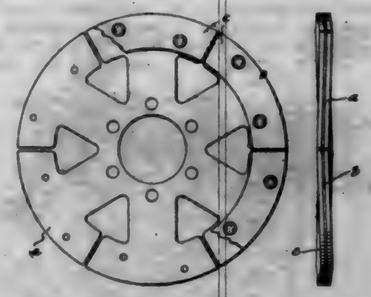
1. In a signaling system, a line circuit, terminal stations at each end of said line circuit, each terminal station having transmitting apparatus and receiving apparatus thereat, switching devices at each station for connecting the transmitting apparatus to the line at one station and the receiving apparatus to the line at the second station, so that signaling currents may be transmitted over the line in one direction, said switching devices also functioning to connect the transmitting apparatus to the line at the second station, and the receiving apparatus to the line at the first station to transmit signaling currents over the line in the opposite direction and polar relays at each station for controlling said switching devices, said polar relays being unresponsive to normal signaling currents but being responsive to abnormal signaling conditions produced by the transmitting apparatus.

1,541,880. SINGLE POLAR TELEGRAPH CIRCUITS. EDWARD F. WATSON, Yonkers, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Nov. 21, 1921. Serial No. 516,870. 7 Claims. (Cl. 178—2.)



1. In a signaling system, a line circuit, terminal stations at each end of said line circuit, each terminal station having transmitting apparatus and receiving apparatus thereat, switching devices at each station for connecting the transmitting apparatus to the line at one station and the receiving apparatus to the line at the second station during non-signaling condition, so that signaling current may be transmitted over the line to one station, means for normally maintaining said connections during times that no signals are being transmitted in either direction, means controlling said switching devices to connect the transmitting apparatus to the line at the second station and the receiving apparatus to the line at the first station in response to the actuation of said transmitting apparatus at said second station to transmit signaling currents to the other station, said means comprising break relays at each station for controlling such switching devices, the break relay at one station being maintained energized by ordinary signaling currents, and the break relay at the other station being deenergized during the transmission of signaling currents.

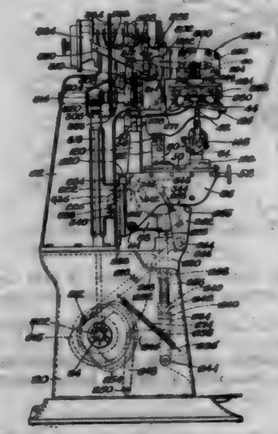
1,541,881. SINGLE POLAR TELEGRAPH CIRCUITS. EDWARD F. WATSON, Yonkers, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Nov. 21, 1921, Serial No. 516,871. Renewed Oct. 22, 1924. 3 Claims. (Cl. 178—2.)



1. In a signaling system, a line circuit, terminal stations at each end of said line circuit, transmitting apparatus and receiving apparatus at each terminal station, a local subscriber's loop extending from one of said terminal stations to a subscriber station, telegraph apparatus at the subscriber station whereby the transmitting apparatus at the corresponding terminal station may be controlled from the subscriber station over the loop and whereby the telegraph apparatus will respond to the receiving apparatus at the terminal station, telegraph apparatus at the other terminal station directly controlled by the transmitting and receiving apparatus thereat, and means whereby during non-signaling condition the transmitting apparatus at one terminal station will be associated with the line, and the receiving apparatus at the other terminal station will be associated with the line for transmission in one direction, and for transmission in the opposite direction the connections will be reversed.

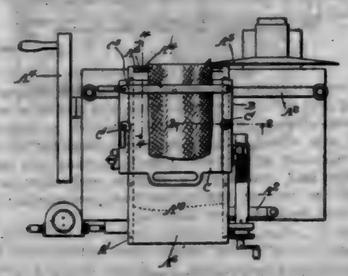
1,541,882. TRANSMISSION DEVICE. CARL W. WEIMS, Brooklyn, N. Y., assignor of one-half to Clarence B. Sturges, Fairfield, Conn. Filed May 31, 1922. Serial No. 564,700. 16 Claims. (Cl. 74—26.)

1. A power transmission device comprising a support, a rotating body having a spherical bearing surface supported in fixed relation to said support, a main frame supported on an axis transverse to the axis of the rotating body and capable of being rocked on said axis, a secondary frame hinged on the main frame, a second rotating body supported by the secondary frame and having a driving engagement with said spherical bearing surface, a transmission shaft supported by the secondary frame, and co-acting gears carried by said second named rotating body and the transmission shaft respectively.



1,541,883. CLUTCH DISK. ERNEST E. WEMP, Detroit, Mich. Filed Feb. 15, 1924. Serial No. 693,054. 9 Claims. (Cl. 192—107.)

3. A clutch disk, comprising a plate divided into spokes by slots enlarging from the center outward, each of the spokes being permanently twisted along a radial line.

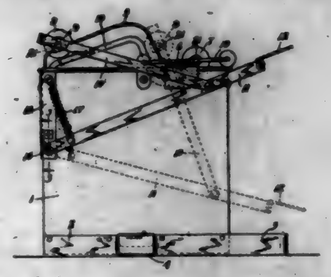


1,541,884. MACHINE FOR USE IN THE MANUFACTURE OF SHOES. ERASTUS B. WINSLEY, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 22, 1919. Serial No. 319,272. 39 Claims. (Cl. 12—17.)

3. A machine for use in the manufacture of shoes provided with short outsoles having a concavity between a tongue and the main body at the heel seat end thereof, having, in combination, a shoe supporting jack, a gaging device having a lug constructed and arranged to enter the said concavity in the outsole of a shoe supported on

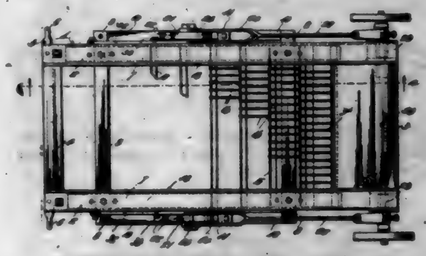
the jack to locate the sole in its own plane relatively to the shoe, and a nailing device for securing the sole to the shoe.

1,541,885. SLICING MACHINE. WALLACE B. WOLFF, Chicago, Ill. Filed Aug. 25, 1924. Serial No. 733,894. 6 claims. (Cl. 146—102.)



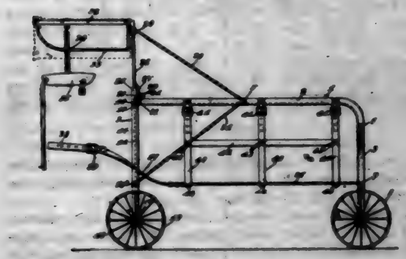
6. In a slicing machine comprising a cutting element, a meat carriage and a meat support mounted thereupon, and adapted to be moved forwardly thereupon, a cover for said meat carriage comprising a single plate covering the entire top of the carriage, said plate extending forwardly above and beyond the front of the carriage frame and being downwardly turned about the rear edge of the carriage, its forward edge being upwardly off-set from the body of the plate, the off-set portion being corrugated.

1,541,886. MOP PAIL AND WRINGER. FERDINAND R. WOLTER, Minneapolis, Minn. Filed June 8, 1922. Serial No. 566,688. 5 Claims. (Cl. 15—262.)



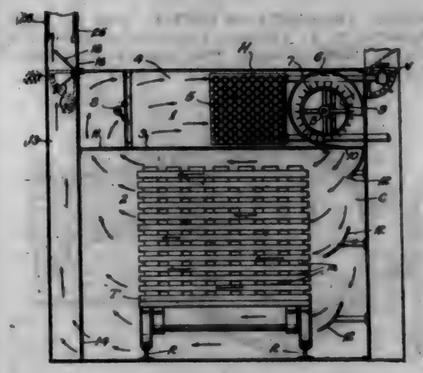
1. A mop pail and wringer device having in combination, a pail, a local roller journaled at the top edge thereof adjacent one side of the pail, spaced parallel rails extending substantially horizontally from said local roller then upwardly and then downwardly to the opposite side of said pail, a movable roller, axially extending journals at the ends thereof, an arm extending across the end of each of said journals at one side of said rails and having its ends bent parallel to said arm and apertured to

receive each of said journals at the other side of each of said rails, U-shaped clips secured to said journals and extending under said rails, and means including a



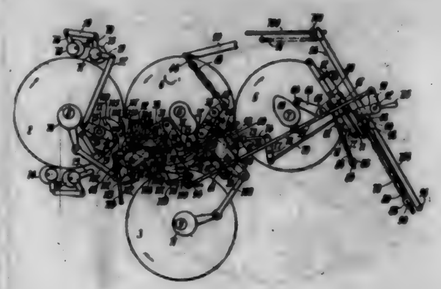
treadle bail to which the free ends of said arms are connected for moving said movable roller and clips along said rails.

1,541,887. SCREEN. HERMAN F. WULLSTEIN, Salt Lake City, Utah. Filed Feb. 1, 1924. Serial No. 690,046. 16 Claims. (Cl. 83—56.)



1. A screening device comprising a screen, means for thrusting said screen upwardly when said means is moved to a predetermined position and released, a rotatably mounted cam wheel having peripheral cams for so moving and releasing said screen thrusting means, and means for turning said cam wheel a distance equivalent to the length of one cam at spaced intervals, permitting it to remain inert between such intervals.

1,541,888. COTTON-PICKER'S TRUCK. JOHN L. AERILL, Lexington, Tenn., assignor of one-half to J. W. Roberts, Lexington, Tenn. Filed Jan. 22, 1923. Serial No. 614,243. 9 Claims. (Cl. 280—29.)

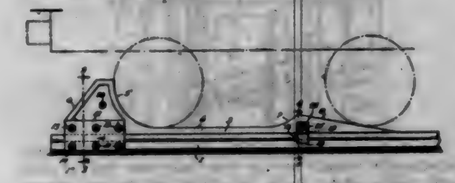


1. In a device of the class described, a truck comprising a wheel-mounted frame; a steering means for the truck, including an elevated part; and means assembled with said part for aiding in supporting the body of an operator whilst the operator is standing on the ground.

1,541,889. DRYING APPARATUS. HENRY BAKER, St. Louis, Mo. Filed Sept. 25, 1922. Serial No. 590,477. 9 Claims. (Cl. 34—46.)

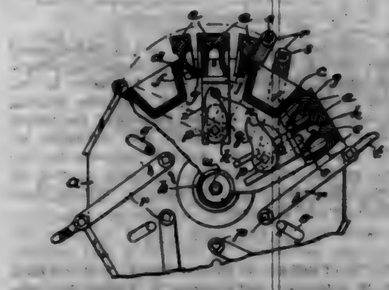
1. A drier comprising a suitable casing or chamber, said chamber being divided longitudinally into a series of juxtaposed sections, each of said sections being divided into a fan compartment and a drying compartment in superposed relation, a fan in each fan compartment operating to circulate air through the drying compartment of the section, and means for causing the air to circulate through the drying compartment in substantially horizontal paths.

1,541,890. PRINTING-PRESS-TRIPPING MECHANISM. WILLIAM H. BANNETT, Bergenfield, N. J., assignor to American Lithographic Company, New York, N. Y., a Corporation of New York. Filed Sept. 11, 1923. Serial No. 662,043. 16 Claims. (Cl. 101—140.)



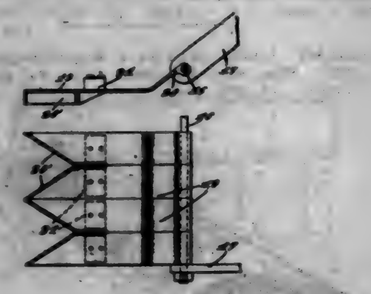
1. In tripping mechanism for a printing press in which a form cylinder is mounted in eccentric bearings for movement toward and from an impression cylinder, the combination of a rocking yoke, pawls pivotally mounted in opposite ends respectively of said yoke, a trip block mounted for reciprocation between said pawls and having means for engaging said pawls for rocking said yoke, a movable cam in coacting relation with said pawls, said cam being adapted for governing the operative relation of said pawls and trip block, means for urging said pawls to engagement with said cam and trip block, means for reciprocating said trip block, means operatively connecting said yoke and said eccentric bearings, and means for actuating said cam.

1,541,891. CIGAR AND CIGARETTE HOLDER. JOHN F. BECKER, Dubuque, Iowa. Filed Oct. 31, 1924. Serial No. 747,004. 8 Claims. (Cl. 131—51.)



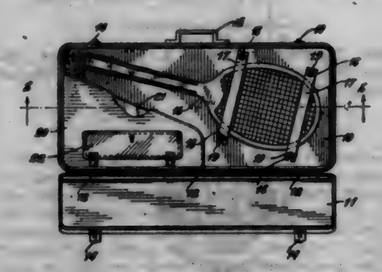
1. In a device of the character described, a mouthpiece, and a casing carried thereby, said casing having its end turned in to provide an outwardly flared opening of less diameter than the diameter of the casing.

1,541,892. CAR STOP. GEORGE H. BEIN, Cleveland, Ohio. Filed Mar. 25, 1925. Serial No. 18,113. 4 Claims. (Cl. 104—260.)



1. A car stop of the character set forth comprising a pair of stop members adapted to be fastened one to each rail of a railway track at opposite points, each stop member having at one end an arcuate portion adapted to receive a car wheel and at the opposite end an inclined portion rising from the top of said rail, one end of each of said members having a recess adapted to receive the top and side of said rail, a clamping plate having a recess adapted to receive the opposite side of said rail, means for fastening said plate and member together about said rails, and means for fastening the opposite end of each of said members to its respective rail.

1,541,893. ICE-CREAM-CONE-BAKING MACHINE. LOUIS BERSON, Philadelphia, Pa., assignor, by direct and mesne assignments, to Philadelphia Ice Cream Cone Machinery Company, a Corporation of Pennsylvania. Filed Feb. 21, 1923. Serial No. 620,333. 3 Claims. (Cl. 107—58.)



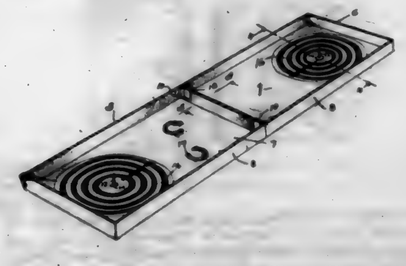
3. In an ice cream cone baking machine, the combination with a pair of frame members, spacing blocks supported by said members, female mold members supported by said spacing blocks, a cam pivotally supported by each of said frame members adjacent the ends of said mold members, a crank in operative connection with each of said cams and extending above said mold members, and a rod extending above said mold members and affording a connection between said cranks whereby said cranks may be operated to operate said cams simultaneously to lift said mold members.

1,541,894. CULTIVATOR BLADE. CLAIBOURN BEVILL, Bushnell, Fla. Filed Oct. 27, 1922. Serial No. 597,359. 1 Claim. (Cl. 97—201.)

A cultivator including a plurality of blades, each of the blades having a diagonally disposed rear end, and flanges extending at right angles to the blades and formed along one edge thereof and along the diagonally disposed rear end.

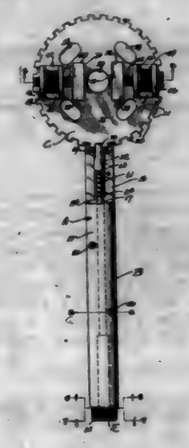
1,541,895. CONTAINER FOR TENNIS RACKETS AND THE LIKE. ROBERT S. BLAIR, Stamford, Conn. Filed Oct. 19, 1922. Serial No. 595,534. 5 Claims. (Cl. 273—74.)

2. A container for tennis rackets comprising in combination, a substantially tight casing, means therein adapted to support a tennis racket, a compartment within said casing adapted to receive a moisture absorbtive material, and means separating the interior of said compartment from the remainder of the interior of said casing adapted to permit access to said absorptive material of the air about said tennis racket and adapted to prevent exit of said material from said compartment toward said tennis racket.



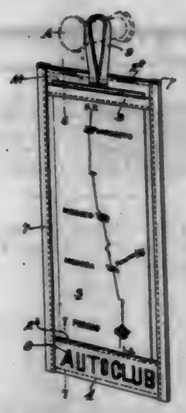
1,541,896. FORM CLAMP. GEORGE B. BOSCO, Chicago, Ill. Filed Nov. 26, 1923. Serial No. 677,041. 8 Claims. (Cl. 24—19.)

2. A clamp comprising a flexible tie element, a collar mounted on said element and adapted for adjustment along said element, a locking dog pivotally mounted on said collar and adapted to coact with said tie element



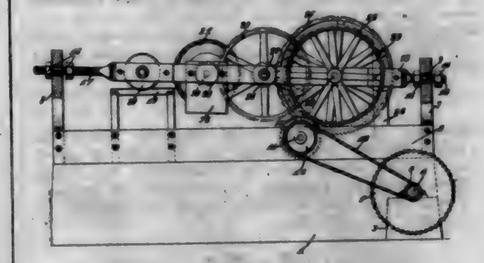
for clamping said collar thereto, and a detachable tool arranged to grip said tie element and being adapted to be fulcrumed on said locking dog for pulling said element relative to said collar.

1,541,897. GAME. WILLIAM L. BUEDINGEN, Milwaukee, Wis. Filed Sept. 10, 1923. Serial No. 661,977. 1 Claim. (Cl. 273—100.)



A game of the class described comprising a pair of telescopic container sections adapted to form a unitary parcel when not in use, a pin arranged vertically within one end portion of each section and to which playing members are thrown, and said sections adapted to be secured end to end when in use to position the pin of one section a distance from the other, said distance being dependable upon the length of each section.

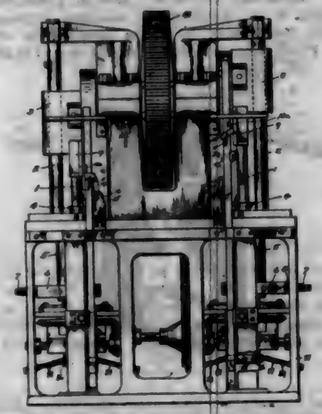
1,541,898. WRENCH. GEORGE J. CHAMBERLAIN, Milwaukee, Wis. Filed Feb. 5, 1924. Serial No. 690,820. 2 Claims. (Cl. 81—62.)



1. In a wrench construction the combination of a supporting member, jaws slidably carried by said supporting member in a fixed path of travel, screw threaded shanks carried by said jaws, frames carried by said supporting member providing spaced walls, having apertures therethrough for receiving the screw threaded shanks of the jaws therethrough, and units carried in the frames between the walls thereof having screw threaded bores therein for adjustably receiving the screw threaded shanks of said jaws whereby upon rotation of said nuts the jaws will be independently adjusted with respect to each other.

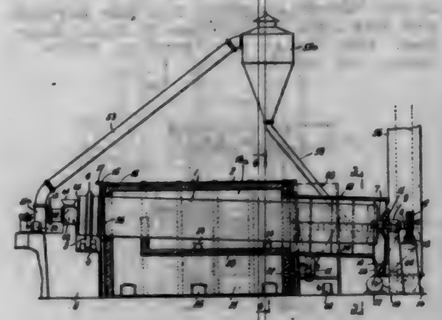
1,541,899. VISIBLE-MAP CONTAINER. GEORGE P. CHAPMAN, Long Beach, Calif. Filed May 26, 1924. Serial No. 716,929. 5 Claims. (Cl. 40—16.)

1. A map-sack for tourists' maps, having an open unobstructed mouth at its top end; one lip of the mouth being off-set above the other and having a suspending loop, the map-sack having a transparent panel through which a map in the sack is visible.



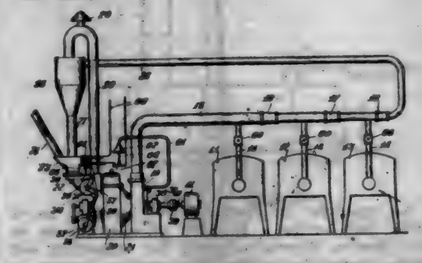
1,541,900. MOTOR. CALVIN F. CHRISTOPHER, Canton, N. C. Filed Aug. 29, 1924. Serial No. 735,020. 4 Claims. (Cl. 74—7.)

1. The combination with a shaft, gears thereon, and an element driven by said shaft, of supporting shoes, a movable frame, a transverse shaft journaled in the frame, wheels secured thereto and normally bearing upon the shoes to support one end portion of the frame, driving gears secured to the shaft and normally engaging the first named gears, movable supports for the other end portion of the frame, a motor carried by the frame, and means for transmitting motion from the motor to the driving gears.



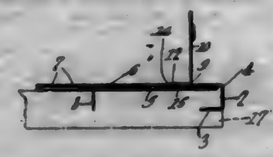
1,541,901. MATERIAL-COMPRESSING MACHINE. ROBERT B. COLEMAN and GEORGE C. HUMPHREY, Los Angeles, Calif., assignors, by direct and mesne assignments, of one-twentieth to Dade D. Sayer, one-twentieth to Dade D. Sayer, trustee, and two-twentieths to John B. Dawson, all of Los Angeles, Calif., and sixteen-twentieths to By-Products Fuel Machine Co., Los Angeles, Calif., a Corporation of California. Filed Sept. 26, 1922, Serial No. 590,708. Renewed Dec. 26, 1924. 9 Claims. (Cl. 100—20.)

1. In a machine of the character referred to, the combination with a reciprocating element, and means for operating the same, of a trip bar, a latch thereon adapted to be moved into the path of said reciprocating element to be engaged thereby for moving said bar, means for moving said latch member, when released, into operative position, a holding member engaging said latch member and holding it in inoperative position, a pivoted member for moving the same to release said



latch member, means for hooking onto said pivoted member for operating it intermittently to release said latch member, and means on said bar adapted to be engaged by said reciprocating element for returning said bar to its normal position.

1,541,902. DRIER. HARRY RAYMOND COLLINS, Allentown, Pa., assignor to Fuller-Lehigh Company, a Corporation of Pennsylvania. Filed Apr. 26, 1922. Serial No. 556,679. 18 Claims. (Cl. 34—6.)

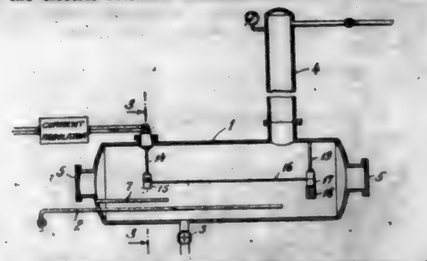


1. A drier including a tubular casing or shell which is rotatably mounted and is constructed and arranged to receive material to be dried at one end thereof and to carry it to the other end of the casing for discharge, and a furnace for supplying heat to dry the material in the casing as it passes therethrough, the furnace having a combustion chamber and a passage for the gases of combustion, and the shell being mounted to extend through said passage and to project outside the furnace at both ends thereof, an extension casing connected to the furnace and communicating with said passage by which the discharge end of the shell is housed, the passage and extension casing being constructed and arranged to constrain circulation of the gases of combustion about the exterior surface of the shell from its feed end throughout to its discharge end, around the latter, thence through the shell to the feed end thereof, and means for causing circulation of the heating gases, substantially as described.

1,541,903. MEANS FOR PULVERIZING, FEEDING, AND BURNING FUEL. JOB CRITES, Evanston, Ill., assignor to Raymond Brothers Impact Pulverizer Co., Chicago, Ill., a Corporation of Illinois. Filed Apr. 25, 1924. Serial No. 708,908. 12 Claims. (Cl. 110—106.)

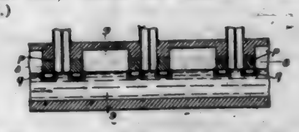
1. A system of the class described, comprising a pulverizing mill, a conduit leading directly from the mill to a furnace for carrying pulverized fuel to the furnace by air flotation, means for conducting back to the mill the surplus air and fuel, and means controlled by the air pressure in the mill for regulating the feed of fuel to the mill.

1,541,904. WINDOW SHADE AND CURTAIN FIXTURE. EDWIN C. CURTIS, Kingston, and GEORGE H. REYNOLDS, Wyoming, Pa. Filed Aug. 20, 1924. Serial No. 733,191. 1 Claim. (Cl. 156—24.)



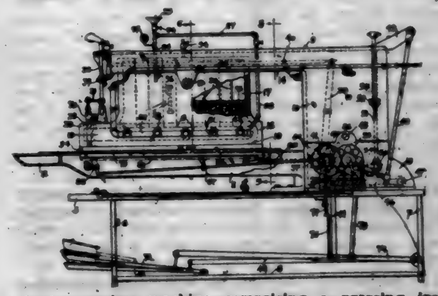
A window shade and curtain fixture comprising a body in the form of a plate, the constituent material of the body being distorted to form raised flanges along the longitudinal edges of the body and to form an inwardly extended longitudinal rib located between the flanges, there being an inwardly extended prong struck from the rib and disposed approximately at right angles to the rib, the body being supplied at one end with a flange disposed approximately at right angles to the body, the last-specified flange being provided with an inwardly extended prong disposed about at right angles to the prong of the rib and about parallel to the rib, there being notches at the point of juncture between the body and the last-specified flange, transverse seats being formed in the outer surfaces of the first-specified flanges; and a bracket comprising a wing and a base, the base being supplied at its free end with a pawl which is adapted to engage in the seats of the first-specified flanges, the base of the bracket being mounted to slide on the outer surfaces of the first-specified flanges of the body, the base having underlying fingers engaged beneath the first-specified flanges of the body, on opposite sides of the rib, the fingers being adapted to pass through the notches when the bracket is mounted on the body and when the bracket is disengaged from the body.

1,541,905. METHOD AND APPARATUS FOR CRACKING OILS. JOSEPH GEORGE DAVIDSON, Pittsburgh, Pa., assignor to C. H. Conner, New York, N. Y. Filed Nov. 30, 1921. Serial No. 518,786. 6 Claims. (Cl. 196—121.)



1. The method of cracking oils with internal electrical heating of the oil which comprises supplying the current initially through nuclei resistors and causing the resistors to build up by carbon deposits thereon during

the cracking operation, regulating the electric current and decreasing the voltage as the cross sectional area of the electric resistors increases.

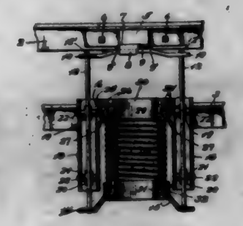


6. An apparatus for cracking oils comprising an oil cracking still having a plurality of small nuclei resistors therein, detachable means for supporting said resistors, means for supplying alternating current to said resistors comprising a plurality of insulated leads introduced through a single opening in the still, and said resistors being spaced apart to permit the building up of carbon thereon progressively during the cracking operation until large massive resistors are formed by such deposit.

1,541,906. FURNACE FOR USE IN THE MANUFACTURE OF SHEET GLASS BY VERTICAL DRAWING. ERNEST DELACUVELLERIE, Dampremy, Belgium, assignor to Société Anonyme "Brevets Fourcault," Dampremy, Belgium, a Corporation of Belgium. Filed Apr. 16, 1923. Serial No. 632,500. 1 Claim. (Cl. 49—17.)

An improvement in furnaces for use in the manufacture of glass sheets by vertical drawing and consisting essentially in the addition of a homogeneous piece of refractory material of suitable section which is placed directly under the bridge pieces proper which exist in this type of furnace, the injurious corrosion of the joints of the usual bridge pieces being avoided and the particles or grains which become detached from the walls collecting on the said under additional pieces, the replacement of which additional pieces being effected without complete stoppage of the furnace and their protection assures perfect manufacture of the glass sheet without striations or cords.

1,541,907. PRESSING MACHINE. JACOB DENEMARK, Trenton, N. J. Filed Nov. 22, 1923. Serial No. 676,229. 8 Claims. (Cl. 68—9.)

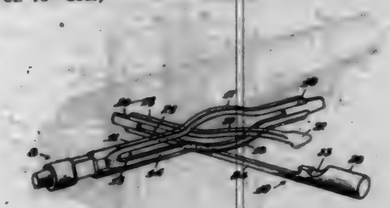


1. A pressing machine comprising a pressing iron, means for generating steam, a material feeding element beneath the iron, means for operating the feeding element, means for periodically introducing the generated steam to the material to be pressed, said means being operated by the feeding element operating means.

1,541,908. DISPLAY DEVICE. ADOLPH DIETSCHE, Jr., New York, N. Y., assignor to American Lithographic Company, New York, N. Y., a Corporation of New York. Filed Sept. 8, 1924. Serial No. 736,391. 5 Claims. (Cl. 40—7.)

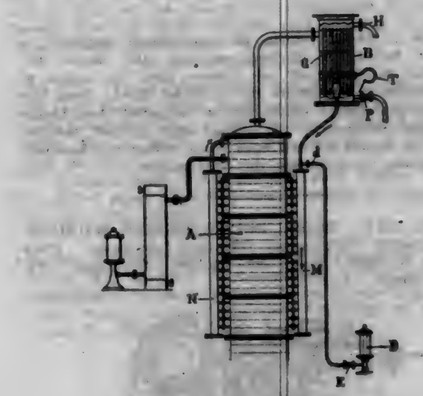
1. In a device of the character described the combination of a front, the upper portion of which extends transversely from the lower portion thereof, a top member articulated to and extending rearwardly from the lower edge of said upper portion of the front, a base member articulated to the lower edge of said front and extending rearwardly therefrom, said base member having a transversely extending ear at its rear, a back member articulated at its lower edge to an edge of the ear of said base member and at its upper edge to the rear edge of said top member.

1,541,909. SHOCK ABSORBER FOR BED BOTTOMS AND THE LIKE. BARTHOLOMEW F. EARLY, Boston, Mass. Filed July 14, 1923. Serial No. 651,561. 6 Claims. (Cl. 267—60.)



1. In combination, a supporting member comprising parallel members, a body member supported on said members, a coil spring having its upper end connected with said body member, guideways depending from said body member on opposite sides of said spring, a supported member, a pair of parallel guide rods depending from said supported member, and means connecting the lower ends of said rods with the lower end of said spring.

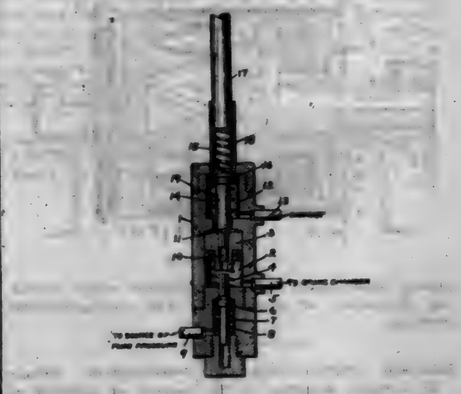
1,541,910. BROMINE SOLUTION. HANS FRIEDENTHAL, Berlin-Charlottenburg, Germany, assignor to Industrie-Verwaltung-Aktiengesellschaft, Berlin, Germany, a Stock Company of Germany. Filed May 10, 1924. Serial No. 712,429. 11 Claims. (Cl. 23—216.)



1. The process of dissolving bromine, which consists in dissolving the same in aqueous solutions of sulphocyanic acid combinations.

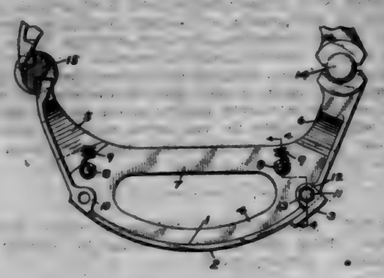
1,541,911. DRILL JAR AND THE METHOD OF MAKING SAME. RICHARD ARMOUR, Los Angeles, Calif. Filed Oct. 4, 1923. Serial No. 666,464. 2 Claims. (Cl. 76—101.)

1. In a drill jar, a rein having a pair of side members and joined together at one end thereof and adapted to be separated at their other ends, the separable end portions of the side members being scarfed to provide an interlocking joint, and said scarfed end portions being welded together along the interlocking joint.



1,541,912. CONDENSING ARRANGEMENT OF RECTIFYING APPARATUS. EMILE AUGUSTIN BARBET, Paris, France. Filed Feb. 2, 1920. Serial No. 355,548. 4 Claims. (Cl. 196—13.)

1. In combination with a rectifying column, a tubular condensing and cooling apparatus, means for withdrawing a portion of the cooled condensate from said apparatus elements in contact with the liquid within the column, means for leading the remainder of the cooled condensate from said apparatus to said elements, and means for feeding said condensate after passage through said elements to the head of the rectifying column.

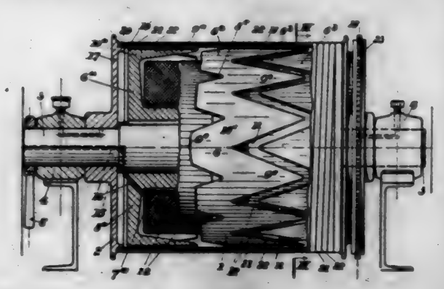


1,541,913. AUTOMOTIVE BRAKE-CONTROL VALVE. JOHN R. BARTHOLOMEW, Berkeley, Calif., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Apr. 11, 1922. Serial No. 551,713. 1 Claim. (Cl. 303—54.)

In an automotive fluid pressure brake, a controlling valve device comprising a valve for controlling the supply of fluid under pressure for applying the brakes, an exhaust valve, a piston intermediate said valves for

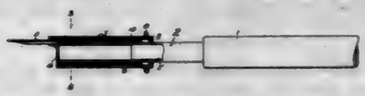
operating the supply valve, and a manually operated push rod for operating said exhaust valve and piston.

1,541,914. BRAKE-SHOE HEAD. JOHN R. BARTHOLOMEW, Berkeley, Calif., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Feb. 3, 1923. Serial No. 616,848. 3 Claims. (Cl. 188—236.)



2. The combination with a brake shoe provided with a depending side lug at each end, of a brake head having an arcuate face for receiving said shoe and screw threaded studs carried by said head for securing said lugs to the brake head.

1,541,915. ELECTROMAGNETIC SEPARATOR. JULIUS BINO, Eisenach, Germany, assignor to the Firm Magnet-Werk G. m. b. H. Eisenach Spezialfabrik für Elektromagnet-Apparate, Eisenach, Thuringia, Germany. Filed Nov. 10, 1924. Serial No. 749,060. 23 Claims. (Cl. 83—71.)



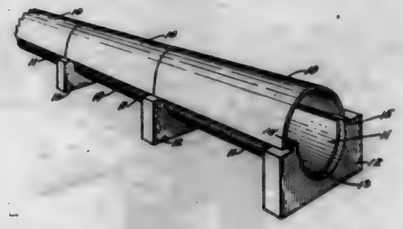
1. Electro-magnetic separator comprising: a magnet system; a drum enclosing said magnet system and rotatable relatively to it; the magnet poles of said system

lying substantially in a cylindrical surface coaxial to said drum and having edges lying obliquely to the generatrix of said cylindrical surface; said drum com-

prising substantially helically arranged strips consisting alternately of magnetizable and nonmagnetizable material.

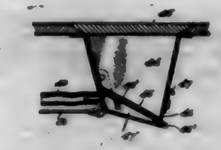
1,541,916. PENHOLDER AND PROTECTOR. PHILIP M. BIONDO, Brooklyn, N. Y., assignor of one-third to Joseph Messina and one-third to Charles Ciravola, both of Brooklyn, N. Y. Filed Dec. 8, 1923. Serial No. 679,871. 2 Claims. (Cl. 120—98.)

1. A pen holder and protector, comprising a handle, a tubular member extending from one end of the handle, a tubular pen guard secured to the front end of said tubular member and surrounding the tubular member for an appreciable part of its length, a pen sleeve surrounding said tubular member and positioned to reciprocate in said guard, said sleeve having an overlapping portion presenting clamping members for a pen, and a hand operated member connected to one end of said pen sleeve, said hand operated member being formed with means readily grasped whereby the sleeve and pen carried thereby may be moved so that the pen pen will be beneath the pen guard when the parts are in one position and projecting therefrom when the parts are in a second position.



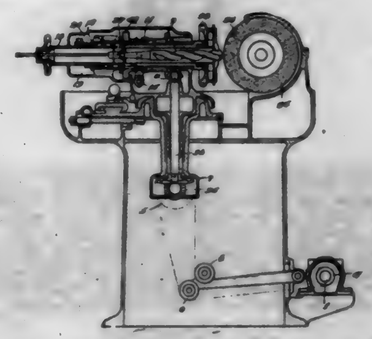
1,541,917. ROD SOCKET. DAVID W. BOWE, Detroit, Mich. Filed July 19, 1923. Serial No. 652,611. 3 Claims. (Cl. 25—131.)

1. Rod supporting means comprising a pair of castings, one having a laterally projecting seat in its inner face with closed rear ends, and the other having a similar seat open at its rear end.



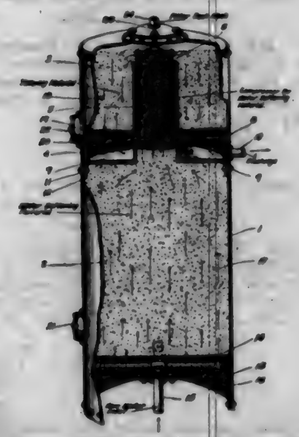
1,541,918. DRAINAGE TILE. JOHN W. BRENNAN, Denver, Colo. Filed Apr. 27, 1923. Serial No. 635,057. 8 Claims. (Cl. 61—16.)

1. A hollow drainage tile, comprising in combination, an upper semi-cylindrical section; a lower semi-cylindrical section coacting with and of less diameter than said upper section, the edges of said coacting sections overlapping; a longitudinal opening between said overlapped edges and blocks arranged to support



both said upper and lower sections and holding said sections in spaced relation and out of contact with each other.

1,541,919. SEED AND FERTILIZER SCATTERER. EDWARD R. BRIGGS, Berkeley, Calif. Filed Mar. 31, 1924. Serial No. 703,161. 2 Claims. (Cl. 275—2.)



2. In a motor vehicle for agricultural purposes, a hopper having a discharge-opening, and means for utilizing the power of the exhaust from the motor of the vehicle to distribute the material falling from the hopper, said means embodying an elongated blast nozzle arranged underneath the hopper and pivoted thereto, so as to permit its exit edge to be raised and lowered, and means for actuating the blast nozzle.

1,541,920. SPIRAL-DRILL-GRINDING MACHINE. HEINRICH BRITTINGER, Offenbach, Germany. Filed May 5, 1923. Serial No. 636,990. 8 Claims. (Cl. 51—219.)

1. In a spiral drill grinding machine, a drill holder spindle, mounted rotatably, a cam disc arranged revolubly with said spindle, a stationary slide, means being provided for interconnecting the said parts in such manner, that said cam disc, while revolving with said spindle, simultaneously produces oscillating and reciprocating motion of said spindle.

1,541,921. WATER SOFTENER AND FILTER. JOHN E. CAPS, Wilmette, Ill. Filed May 5, 1923. Serial No. 636,861. 5 Claims. (Cl. 210—24.)

1. In a device of the class described, a casing having an inlet at the bottom and an outlet intermediate its ends, a hollow casting co-extensive in cross section with the casing, and having a hollow portion communicating with the outlet, one wall of the casting having openings whereby communciation may be established between the casing and the hollow portion of the casting, the casting having a central upstanding tubular neck, terminating short of the top of the casing, and a packer loosely mounted in the tubular neck, adapted to bear upon material in the lower chamber.

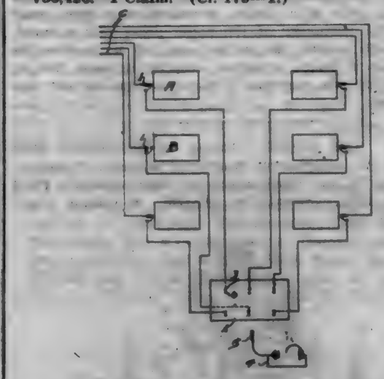
1,541,922. LEATHERBOARD FELT. FRANKLIN V. CHANEY, Boston, Mass., assignor to Chaton Fibre Company, Boston, Mass., a Corporation of Massachusetts. Filed Mar. 8, 1923. Serial No. 623,749. 3 Claims. (Cl. 92—3.)

1. A leatherboard felt comprising 40% leather fibre, 20% mixed paper fibre, 30% coarse animal or vegetable fibre, and 10% binder.

1,541,923. BOUQUET. IRA W. CUNNINGHAM, St. Louis, Mo., assignor to Cunningham & Cade, a Copartnership composed of myself and Byron Cade, sr., doing business at St. Louis, Mo. Filed July 14, 1924. Serial No. 725,971. 1 Claim. (Cl. 24—5.)

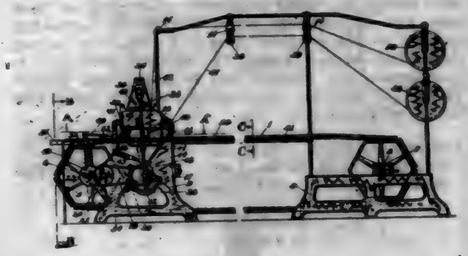
A corsage adapted for display upon the wrist and including a cluster of flowers secured together at their stems, in combination with a wrist-encircling band, a ribbon having engagement with the flower-cluster and with the band for both fastening the band intermediate its ends to the flower-cluster and decorating the flower-cluster, and means carried by and at the ends of the band for fastening the same about the wrist.

1,541,924. METHOD OF BENDING READILY-BREAKABLE METALS. ALEXANDRE L. DUVAL D'ADRIAN, Washington, Pa. Filed Apr. 26, 1921. Serial No. 464,729. 2 Claims. (Cl. 219—3.)



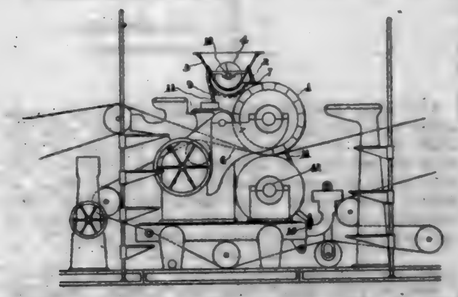
1. The herein described method of bending sections of wire formed of readily breakable metals such as tungsten and molybdenum, which consists in connecting one end of each section of wire to a form, then passing an electric current through the wire for heating it to a temperature at which it may be readily bent without liability of breakage, and bending the wire while thus heated about said form.

1,541,925. TRICK DECK OF CARDS. WILLIAM I. DAVIDSON, Long Beach, Calif. Filed May 24, 1923. Serial No. 641,090. 5 Claims. (Cl. 273—153.)



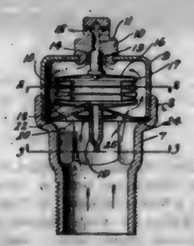
1. A trick deck of cards consisting of two groups which have differentiated end edges whereby when the cards of the two groups are stacked in alternate positions the end edges of one group of the cards will provide means to receive pressure of the player's finger, or fingers, when applied to the end of the deck, the differentiation consisting in that the transverse end edges of the cards of one group are substantially burred.

1,541,926. TELEPHONE SYSTEM. WILLIAM F. DAVIDSON, St. Paul, Minn. Filed Aug. 6, 1924. Serial No. 730,426. 1 Claim. (Cl. 179—1.)



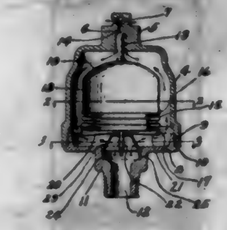
An office building telephone service system, comprising an incoming telephone line, a telephone set connected thereto in a tenant's office, a line from said telephone set to an outlet in a central switchboard, identifying means adjacent said outlet, and switch means operable from said tenant's office to route an incoming call directly to the central switchboard, or to the telephone set in the office of the tenant, at will.

1,541,927. MACHINE FOR USE IN MAKING BOXES. EDWARD F. DUNNE, JR., Morristown, N. J., assignor to Wirebounds Patents Company, a Corporation of Maine. Filed Nov. 7, 1921. Serial No. 513,529. 37 Claims. (Cl. 1—8.2.)



37. A machine for use in making wire-bound boxes comprising, in combination, binding-wire-applying means including fastener-setting mechanism operable at intervals upon moving box parts; means to position and feed box parts to said mechanism; and means to increase the extent of movement of the box parts between fastener-setting operations.

1,541,928. BROKE REMOVER FOR PAPER MACHINES. THOMPSON E. DURHAM, Sault Ste. Marie, Canada. Filed Apr. 30, 1924. Serial No. 710,136. 4 Claims. (Cl. 92—10.)

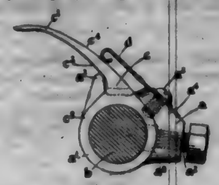


1. The combination with a paper machine provided with press rolls of a doctor extending into close proximity to the periphery of the upper press roll, a transverse trough behind the doctor adapted to receive the broke; and a helical conveyor located in said trough, the pitch of the conveyor increasing towards the discharge end.

1,541,929. AIR VALVE. LEWIS W. EGGLESTON, Buffalo, N. Y., assignor to American Radiator Company, Chicago, Ill., a Corporation of New Jersey. Filed Feb. 4, 1921. Serial No. 442,536. 6 Claims. (Cl. 297—5.)

1. A device of the character described, comprising a closed shell having a head, said head being resilient and normally dished outward relative to the shell, the interior of said shell being rarefied to hold said resilient head flexed inward against its inherent resilient tendency to assume its normal outwardly dished position.

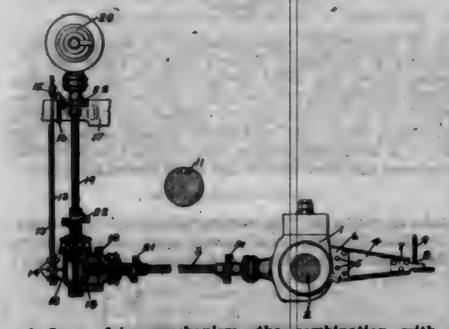
1,541,930. AIR VALVE. LEWIS W. EGGLESTON, Buffalo, N. Y., assignor to American Radiator Company, Chicago, Ill., a Corporation of New Jersey. Filed Feb. 4, 1921. Serial No. 442,532. 3 Claims. (Cl. 236—63.)



1. In a valve, the combination of a casing having inlet and outlet ports therein, a valve for controlling one of said ports, and means for operating said valve said means comprising a shell having a flexible body portion and a float portion and closed ends, one of said end portions being resilient and normally dished outwardly.

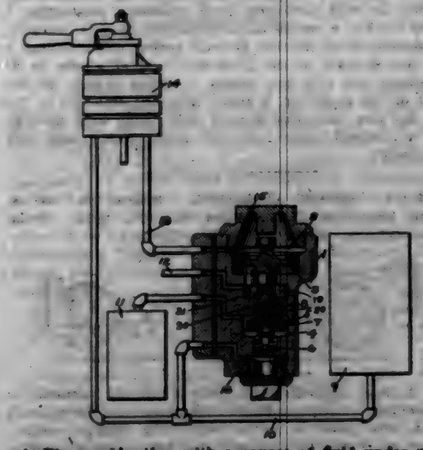
1,541,931. MEANS FOR PACKING CIGARETTES. GUNNAR CHRISTIAN EKSTRÖM and GUSTAF ÖRSTRÖM, Stockholm, and BROR ANDERS EMIL JOHNSON, Appelviken, Sweden, assignors to Aktiebolaget Gerh. Arehns Mekaniska Verkstad, Stockholm, Sweden, a Corporation of Sweden. Original application filed July 7, 1921, Serial No. 483,667. Divided and this application filed Nov. 17, 1924. Serial No. 750,475. 3 Claims. (Cl. 226—5.)

1. In a device for transmitting cigarettes from a cigarette making machine to a packing device the provision of means, which positively transfer the cigarettes from the cigarette producing members of the said machine to a flexible carrier and positively place the same into the said carrier, and a member, on which the said carrier, containing cigarettes, is wound.



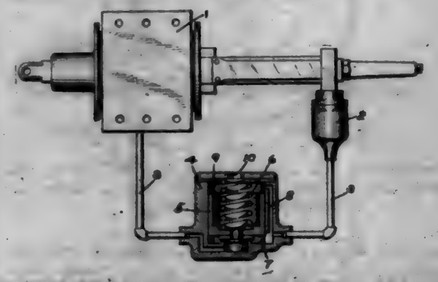
1,541,932. SHEET-GRIPPING MECHANISM OF PRINTING MACHINES. ARTHUR BURROUGHES EVANS, Leeds, England. Filed Nov. 26, 1924. Serial No. 752,376. 2 Claims. (Cl. 101—412.)

1. Sheet gripping means for printing presses comprising a rock shaft, a gripping finger loosely mounted on said shaft, a collar adjustably secured to the shaft and having a part projecting beneath said finger and



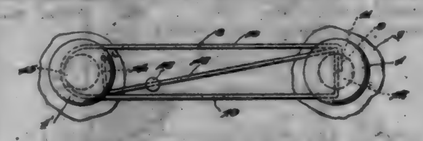
forming a stop for the same, and a spring normally holding the finger against said stop.

1,541,933. TRAIN-CONTROL DRIVE MECHANISM. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Mar. 24, 1922. Serial No. 546,525. 6 Claims. (Cl. 105—117.)



1. In a drive mechanism, the combination with a locomotive truck axle and a gear housing mounted on said axle, of a horizontal drive shaft extending from said housing, a vertical drive shaft, bevel gears for connecting the horizontal drive shaft with the vertical drive shaft, and flexible connections in each shaft.

1,541,934. RAIL-SANDING DEVICE. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Jan. 6, 1923. Serial No. 611,090. 6 Claims. (Cl. 291—14.)

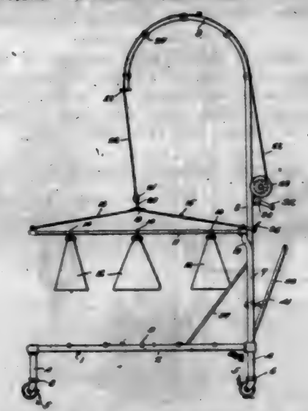


1. The combination with a source of fluid under pressure and a reservoir, of a sand valve device comprising a valve for controlling the supply of fluid from said reservoir to effect the sanding of the rails, a valve for controlling the supply of fluid from said source of fluid under pressure to said reservoir, and a piston operated by fluid under pressure for operating said valves.

1,541,935. SLACK ADJUSTER. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed June 24, 1924. Serial No. 722,020. 5 Claims. (Cl. 188—203.)

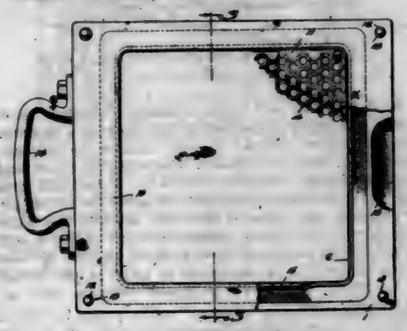
5. The combination with a brake cylinder and a slack adjuster operated by fluid supplied from the brake cylinder in applying the brakes, of valve means for controlling communication through which fluid under pressure is supplied from the brake cylinder to the slack adjuster and for controlling communication from the slack adjuster to an exhaust port.

1,541,936. FASTENER. IKLEY C. FIFE, Chicago, Ill. Filed Jan. 18, 1924. Serial No. 687,111. 2 Claims. (Cl. 24—93.)



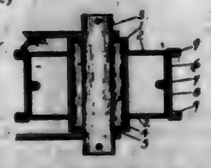
1. A fastener of the class described including knob members detachably connected to the body of a garment at pre-determined points, a loop member having one end connected with one of said knobs and its other end detachably engaged with the other knob, a yieldable arm carried by said loop and normally disposed at an oblique angle between the sides of the loop whereby the same may be moved laterally to permit insertion of the second loop within the loop, and a stop finger carried by said arm and adapted to be positioned in front of the second knob to retain said knobs in spaced relation with respect to each other.

1,541,937. CABLE INSTALLATION. HENRY W. FISHER and RALPH W. ATKINSON, Perth Amboy, N. J., assignors to Standard Underground Cable Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Original application filed July 8, 1920, Serial No. 395,574. Divided and this application filed Dec. 24, 1924. Serial No. 757,906. 3 Claims. (Cl. 175—294.)



1. A high-tension electric transmission installation including a length of cable within which fluid bodies are maintained under pressure and means in communication with said cable length operated by reduction of pressure for disconnecting said cable length from associated parts of the installation, substantially as described.

1,541,938. HOSPITAL TRUCK. WILLIAM W. FREDERICK, Coshocton, Ohio. Filed June 12, 1924. Serial No. 719,596. 2 Claims. (Cl. 5—89.)

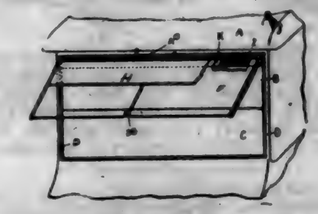


1. In a device of the class described, a truck including an upstanding derrick and an upstanding end member, the upper portion of the end member extending across the derrick to form a shoulder, a stretcher supported at one end on the shoulder against downward swinging movement and abutting against the derrick to prevent horizontal movement of the stretcher, latch means for holding the stretcher detachably engaged with the shoulder and the derrick, and means assembled with the derrick for raising and lowering the stretcher.

1,541,939. CAPSULE MOLD. JOSEPH L. GEORGE, Cincinnati, Ohio. Filed Dec. 13, 1924. Serial No. 755,800. 6 Claims. (Cl. 18—35.)

1. A plural cavity mold section, having dividing walls defining regular polygonal shaped openings, each wall of each opening being cupped midway between its junction with adjacent walls.

1,541,940. WHEEL FOR ROLLER-BEARING DRY-KILN TRUCKS. HERBERT B. GILLETT, Grand Rapids, Mich. Filed Sept. 23, 1921. Serial No. 502,775. 4 Claims. (Cl. 301—63.)



2. A fabricated sheet metal wheel comprising side disks, a main cylindrical tread of sheet metal having an inwardly projecting peripheral strengthening rib upset therein, an outer auxiliary tread of sheet metal, the edges of which are folded and conformed over the periphery of the disks to form wheel flanges, as specified.

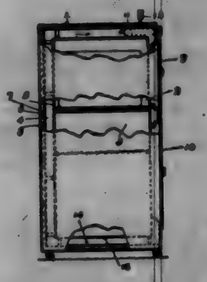
1,541,941. TIMER. ABRAHAM S. GOLDSTEIN and ALEXIS P. DAVIS, Baltimore, Md., assignors to The Ford Duplex Timer and Accessories Company, Baltimore, Md., a Corporation of Maryland. Filed Feb. 17, 1923. Serial No. 619,580. 2 Claims. (Cl. 200—24.)

1. In a timer the combination with a casing having a plurality of stationary contacts each of which has two contact faces, of a rotor having a rock-frame, a contact carried by said rock-frame means for holding the rock-frame and its contact against outward movement under centrifugal force said rock-frame contact engaging one face of a stationary contact, and a second rotor contact to engage the other face of the same stationary contact.

1,541,942. SHADE FOR WINDSHIELD PROTECTORS. OTHELLO O. GREENWOOD, Lowell, Mass. Filed Mar. 28, 1923. Serial No. 628,352. 3 Claims. (Cl. 296—95.)

1. In an automobile having a wind-shield frame, the combination with an adjustable transparent wind-shield protector, of pull bar checks and guideways at each side carried by said protector, each guideway supporting a roller bracket, a spring roller supported by said brackets, an opaque shade carried by said spring roller having a pull bar slidable in the guideways and of a size to fit in behind the pull bar checks, a pulley carried at the front of the protector, a shade pull-cord attached to the pull bar and extending around said pulley back through the wind-shield frame, and means to fasten said cord in position.

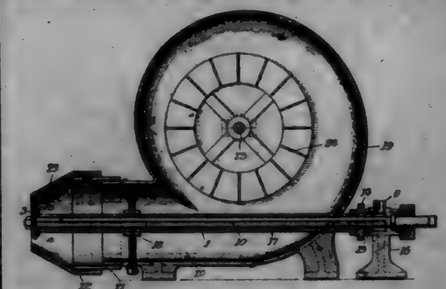
1,541,943. SHOCK ABSORBER. ROLAND M. GAUSS, San Francisco, Calif. Filed May 24, 1923. Serial No. 641,228. 3 Claims. (Cl. 267—54.)



1. A shock absorber comprising a cylinder adapted for positioning vertically adjacent the frame and spring ends of an automobile, a piston within the cylinder with a piston rod extending through the upper end thereof, a base member secured to the lower end of the cylinder and having a cylindrical skirt depending therefrom having a side opening adapted to receive the spring end for pivotal connection to the skirt and also the frame end, a pin extending through slots in opposite sides of the skirt and said frame end, and a pair of rods extending vertically along opposite sides of the cylinder connected at their lower ends respectively to the ends of the pin and connected at their upper ends to the piston rod by a cross head.

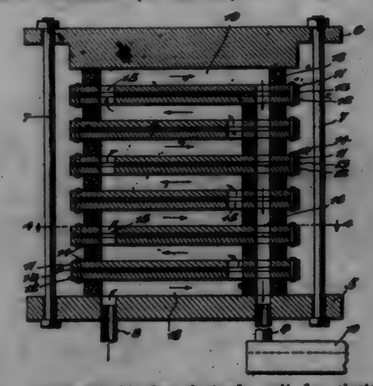
1,541,944. PISTON RING. HAMPTON ARTHUR GUERLAY, Houston, Tex. Filed Apr. 11, 1924. Serial No. 705,913. 2 Claims. (Cl. 74—109.)

1. A piston ring having a plurality of spaced lugs upstanding on its upper surface, a plurality of spaced lugs extending inwardly of the ring, the various lugs defining spaces for the admission of pressure fluid to respectively force the ring down and out in a piston groove, and means by which a joint is made between the separated ends of the ring including means providing a recess to receive an end of the ring, and upstanding lugs spaced closer than the other to reinforce the joint.



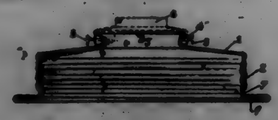
1,541,945. VACUUM REFRIGERATOR. WILLIAM H. W. HAMILTON, Rochester, N. Y., assignor of one-half to Joseph H. Huntsman, San Francisco, Calif. Filed Apr. 12, 1924. Serial No. 706,028. 2 Claims. (Cl. 220—9.)

1. A refrigerator having a chamber surrounded by double walls enclosing a "vacuum", said chamber being divided into an ice-compartment and a storage-compartment, openings leading respectively into said compartments, closures for said openings comprised respectively of double walls also enclosing vacuum-spaces a third wall spaced from and enclosing said double walls and providing an air-space therebetween, an air-pump mounted within said vacuum-space for securing and maintaining "vacuum" within said vacuum-space, and a gauge for indicating the degree of "vacuum" within said space.



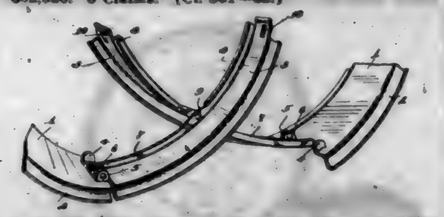
1,541,946. ATOMIZER. BURT S. HARRISON, Chicago, Ill., assignor to Drying Systems, Inc., Chicago, Ill., a Corporation of Illinois. Filed May 15, 1922. Serial No. 561,238. 4 Claims. (Cl. 158—77.)

1. A device of the class described comprising a pair of coaxial spaced disks, means for rotating one of said disks, means for delivering a liquid to the space between said disks, means for regulating the flow of such liquid by a provision for adjusting one of said disks toward and away from the other, a means for delivering air under pressure past the periphery of said disks, said means including a nozzle converging toward said disks



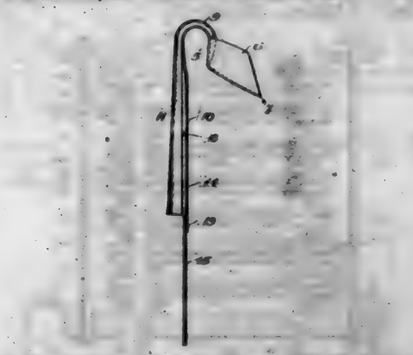
whereby the air and atomized liquid are directed to a focal point outward of and in line with the axis of the disks.

1,541,947. ELECTROLYTIC CELL. FRANK E. HARTMAN and HARRY BURTON HARTMAN, Scottdale, Pa., assignors to Electric Water Steriliser & Ozone Company, Scottdale, Pa., a Corporation of Pennsylvania. Filed Mar. 21, 1923, Serial No. 545,509. Renewed Apr. 3, 1925. 5 Claims. (Cl. 204—5.)



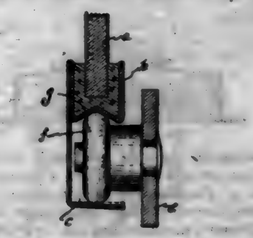
1. A composite bipolar electrode unit for electrolytic cells including an aluminum anode plate, and an iron cathode plate having an insulating sheet therebetween, means for uniting said plates, and both of said plates and sheet having openings.

1,541,948. ADAPTER FOR LAMP SHADES. JOSEPH HASLER, Brooklyn, N. Y., assignor to William E. Noe & Sons, a Copartnership of New York, N. Y. Filed Apr. 13, 1922. Serial No. 552,157. 1 Claim. (Cl. 240—128.)



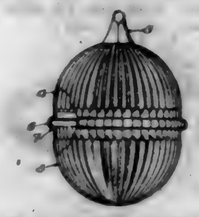
In combination with a standard shade holder an adapter comprising a cap having a flange lip engaging the screws of the standard shade holder and provided with a lower threaded flange, a threaded annulus, to engage the threaded flange of the cap, provided on its lower portion with an outwardly projecting wire frame and a shade mounted over the annulus and suspended from the wire frame.

1,541,949. DEMOUNTABLE RIM. CHESTER N. HAUPER, Columbus, Ohio. Filed Apr. 16, 1923. Serial No. 632,320. 5 Claims. (Cl. 301—32.)



1. A collapsible rim for automobile tires comprising a transversely divided major rim section having its ends normally spaced, a minor rim section pivotally connected with each end of the major rim section and normally in engagement with the opposite ends of said major rim section, each minor rim section having means for interlocking engagement with the other, said minor rim sections being pivotally connected to each other intermediate their ends.

1,541,950. PEN FOR RECORDING APPARATUS. HENRY W. HERSCH, Rochester, N. Y., assignor to The Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed Oct. 29, 1923. Serial No. 671,456. 3 Claims. (Cl. 120—43.)

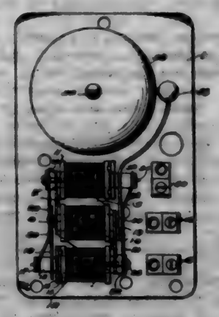


1. In a pen, a reservoir portion comprising a rear wall and converging side walls forming between them an ink feeding channel having a writing point at the forward end thereof, and a shank extending from the rear of said reservoir comprising a strip bent marginally upon itself to provide a socket for the reception of a pen support.

1,541,951. WINDOW-SASH CHANNEL. ERNEST E. HEINTZ and THOMAS P. ARCHER, Detroit, Mich., assignors to Ternstedt Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed June 28, 1924. Serial No. 723,062. 2 Claims. (Cl. 189—76.)

1. A sash lower channel bar, comprising a single strip of stock, fashioned into an upwardly presenting channel to take the glass and having a depending L-like portion doubled back on one side wall of the upwardly presenting channel to form a laterally opening channel to guide a regulator element.

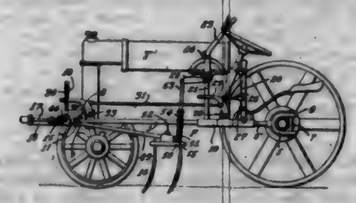
1,541,952. METHOD FOR PRODUCING ORNAMENTS. HUGO HELLER and HOBART F. FRIMMEL, Milwaukee, Wis.; said Frimmel assignor to said Heller. Filed Feb. 17, 1923. Serial No. 619,665. 13 Claims. (Cl. 41—10.)



1. The method of producing a hollow ornament from sheet metal, which comprises decorating the surface of the metal with a colored film, and crimping the metal to bring the article into the required form.

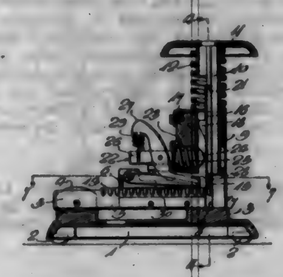
1,541,953. TOY SAVINGS BANK. HENRY HERMANI, Baltimore, Md., assignor to The Tin Decorating Company of Baltimore, Baltimore, Md., a Corporation of New Jersey. Filed May 2, 1924. Serial No. 710,566. 13 Claims. (Cl. 232—4.)

1. In a device of the class described, the combination with a wall having a slot, of a coin guard therefor comprising a pair of resiliently connected jaws normally spaced apart less than the thickness of the smallest coin to be received, the jaws having portions within the slot to be engaged by an inserted coin thereby to spread the jaws and means to slidably connect the jaws to the wall.



1,541,954. COMBINED BELL AND BUZZER. HARRY HIMAN, Marinette, Wis. Filed Oct. 19, 1920. Serial No. 418,058. 2 Claims. (Cl. 177—7.)

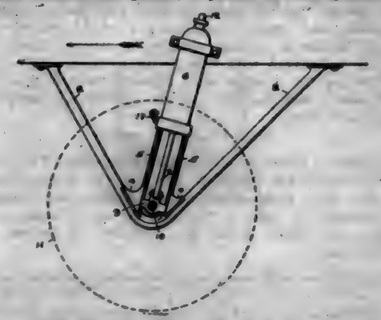
1. An electric signaling apparatus comprising a bell and buzzer signal and an electro-magnet adapted for separately operating said bell and buzzer, said electro-magnet comprising three cores supported substantially parallel with each other, the means for supporting said cores comprising metallic plates of magnetic material



to which, respectively, opposite ends of the center core and of different outer cores are connected, core windings and vibrating armatures adapted to bridge the spaces between said center core and the unsupported ends of the outer cores which are bridged at the respective opposite ends of said cores by the supporting plates which connect said cores in pairs, and said magnetic plates being connected by a plate at one side of at least a portion of all of the windings, whereby in effect two separate horseshoe magnets are formed of each of which the center core is an element, substantially as described.

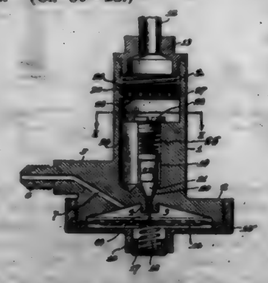
1,541,955. MOTOR CULTIVATOR. ELIJAH A. HOLLENBECK, Shelby County, Mo. Filed July 24, 1922. Serial No. 577,246. 11 Claims. (Cl. 97—47.)

1. A motor plow comprising a tractor, a rigid frame surrounding the tractor body secured to the tractor at front and rear, a plurality of plow beams mounted on said frame, operating means for said beams mounted on the frame adjacent the rear end of the tractor and connected to said beams.



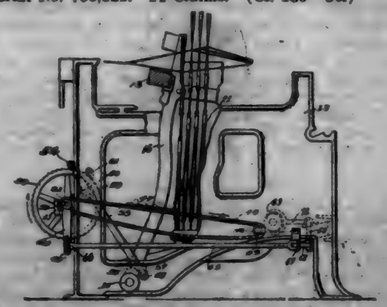
1,541,956. STAPLING MACHINE. RICHARD JACOB HOLSHAUSEN, Westport, Conn., assignor to The Compo Manufacturing Company, Westport, Conn., a Corporation of New York. Filed Feb. 14, 1921. Serial No. 444,953. 16 Claims. (Cl. 1—2.3.)

7. A combination binder comprising a plunger and staple securing and straightening means adjacent said plunger and traveling throughout part of its journey with said plunger and parallel therewith.



1,541,957. SHOCK ABSORBER. HARRIS G. HOOPER, San Francisco, Calif. Filed May 7, 1919. Serial No. 295,444. 5 Claims. (Cl. 244—2.)

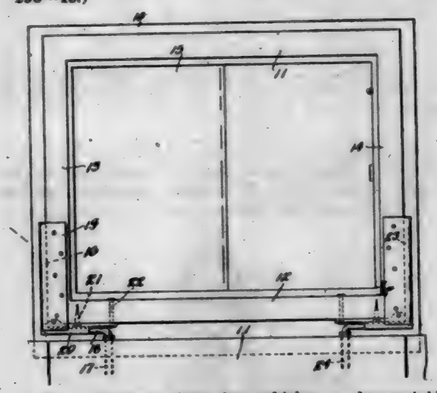
1. In combination with the frame of an aeroplane, a hanging bracket bolted at one end to said frame, guides secured at one end to the free end of said bracket, a metallic cylinder secured at one end to said frame and at its opposite end to said guides, a slidable cross-head mounted within said guides, a piston in said cylinder, a



pitman pivotally engaging at one end said piston and at its other end said cross-head and a wheel shaft yieldingly supported in said cross-head.

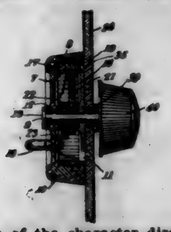
1,541,958. DIAPHRAGM VALVE. FRANK HORAWA, Detroit, Mich. Filed May 18, 1923. Serial No. 639,759. 1 Claim. (Cl. 50—23.)

A valve of the type described comprising a valve body having a diaphragm chamber and inlet and outlet connections, a diaphragm in said chamber, and a conical member between the inlet connection and chamber of said valve body and slidable axially of said body, said conical member being connected to said diaphragm and held normally open thereby, and said valve body having a by-path leading to the conical portion of said conical member.



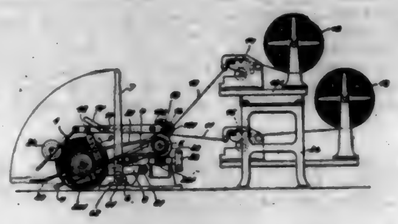
1,541,959. LOOM. JOHN HENRY HOWARTH, Lanett, Ala., assignor to West Point Manufacturing Co., Langdale, Ala., a Corporation of Alabama. Filed Dec. 30, 1924. Serial No. 758,821. 14 Claims. (Cl. 139—80.)

7. In a bag loom, shed forming mechanism to effect the weaving of a unitary tubular fabric and intervening connecting sections of different weave including two inde-



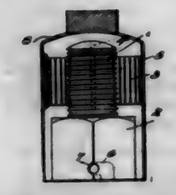
pendent sets of harnesses spaced transversely of the loom, two independent sets of harness-cams each including a change cam, and means for simultaneously shifting the change cam of each set into and out of operative position, and means comprising a chain on the loom frame having a pattern surface, a ratchet wheel operatively associated with said chain pawl, means actuated by the lay for rotating said ratchet wheel step by step, and means engaging the pattern surface and adapted to shift said cams.

1,541,960. CONNECTING MEANS FOR TWO-PART AUTOMOBILE DOORS. MATTHEW R. HULL, Connersville, Ind., assignor to Rex Manufacturing Company, Connersville, Ind., a Corporation of Indiana. Filed Mar. 29, 1924. Serial No. 702,958. 3 Claims. (Cl. 296—45.)



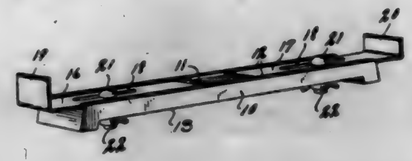
1. In a two-part door for vehicles, a demountable upper door section, a permanent lower door section, a connector at the hinge side of the door comprising upper and lower parallel arms secured to the respective sections and an angularly related body in the same plane with the arms said body being fixed to the upper section, and a similar connector similarly secured at the closing side of the door the last-named connector having its arms located in diverging planes whereby when it is forced into position on the lower door section the body of the connector is twisted to bias the upper edge of the demountable door section toward the vehicle body, substantially as set forth.

1,541,961. RHEOSTAT. STANLEY E. JACOBS, Brooklyn, and LOUIS J. SCHMEHL, Larchmont, N. Y., assignors to Stanley-Everett Corporation, New York, N. Y., a Corporation of New York. Filed Sept. 3, 1924. Serial No. 735,580. 13 Claims. (Cl. 201—55.)



13. In a device of the character disclosed, an insulating base, an annular resistance element seated in said base, wiring terminals for said resistance element exposed at the back of said insulating base for wiring purposes, a plate attached to the front of the insulating base and provided with a screw bushing for seating in a panel or other support, a shaft journaled in said screw bushing and a contact arm actuated by said shaft for cooperation with the annular resistance element.

1,541,962. MANUFACTURE OF PACKAGES OF ROLLED WEBS OF PAPER. EMIL JAGENBERG, Duesseldorf, Germany. Filed Apr. 12, 1924. Serial No. 706,018. 8 Claims. (Cl. 93—1.)



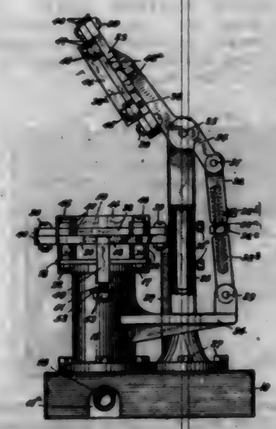
1. In a machine for packaging rolled webs, means for rotatably supporting a web roll, means for applying a protecting strip about the periphery of the roll so as to overhang an end thereof, and means having rolling contact with the protecting strip and supported by the roll to bend the overhanging portion of the strip over the end of the roll by and during movement of the roll.

1,541,963. SAFETY DEVICE FOR NUTS ON BOLTS. CHRISTIAAN HENDRIK JASPER, Rotterdam, Netherlands. Filed Oct. 28, 1924. Serial No. 746,304. 3 Claims. (Cl. 151—29.)

1. A locking safety device for a bolt nut, comprising an axially applicable cap adapted to enclose a nut and having a nut-engaging end portion and an inner portion larger than the bolt, a coiled spring within said cap, the outer end of said coiled spring being attached to said cap, said bolt having a radial longitudinal groove therein extending partially therethrough at the part thereof projecting beyond said nut; the inner end of said coiled spring being adapted to automatically enter into said groove in said bolt on turning the cap counter-clockwise and to be retained thereby, whereby said cap tends to keep the nut tight, the diameter of the inner portion of the cap being less than the diameter of the untensioned spring.

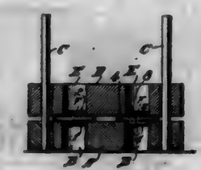
1,541,964. JOINTING AND RAKING TOOL. LEWIS H. JOHN and ALFRED HARRIES, Johnstown, Pa. Filed Mar. 14, 1925. Serial No. 15,504. 3 Claims. (Cl. 72—137.)

1. A jointing tool for bricklayers comprising a handle having a longitudinally extending recess upon one face, the recess being defined by upwardly extending shoulders and the handle being perforated through to said recess, a blade angularly bent to provide a cutter and a shank, the shank lying in said recess and being longitudinally



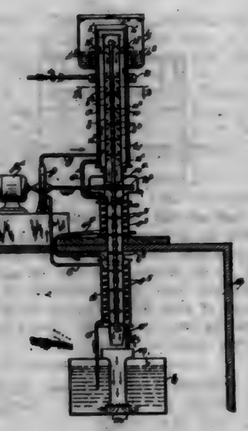
slotted, and a bolt passing through said slot in the shank and through said handle and carrying a nut whereby the blade may be shifted longitudinally upon the handle.

1,541,965. MOTOR VEHICLE. LAWRENCE F. JORDAN, Deer Park, Wash. Filed June 7, 1921. Serial No. 475,813. 6 Claims. (Cl. 180—22.)



1. The combination with a motor vehicle frame and its driving axle, of a pair of rectangular side frames on said axle and means for supporting the vehicle frames from said axle, of a pair of driving wheels arranged in tandem form and journaled within said rectangular frames, the rear wheels only in said frames being movable for steering, and means for moving said steering wheels.

1,541,966. PRESS. HENRY KAPPELE, Stamford, Conn. Filed Oct. 6, 1924. Serial No. 742,082. 6 Claims. (Cl. 18—17.)

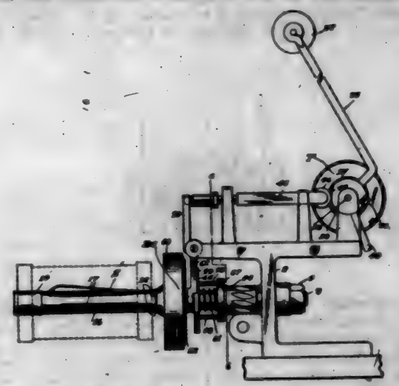


4. A press of the kind described comprising a base, an upright standard thereon, a sleeve slidably mounted on said standard to move in a vertical, lineal path, means for introducing a fluid under pressure into said sleeve to raise the same, a lower die carried by said sleeve and movable therewith in a lineal path, a device pivotally mounted upon said base, an upper die carried by said device and movable therewith in a curved path and a connection between said sleeve and device whereby both dies are coincidentally moved toward each other in their respective paths on the power stroke and automatically moved away from each other by the gravitative action of said sleeve and its die when the power is discontinued.

1,541,967. WAFER CAPSULE. GUSTAVE KLINKENSTEIN, New York, N. Y., JOHN L. LITOMY, Glen Ridge, and EMIL PLAVECSKY, West Orange, N. J. Filed Sept. 2, 1922. Serial No. 585,911. 3 Claims. (Cl. 167—2.)

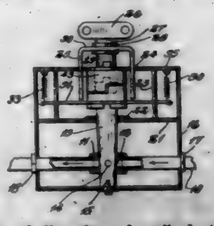
2. A wafer capsule including two cup-shaped wafer-like sections the side walls of which are formed to telescope and frictionally engage to hold said sections together, the bottom of each of said sections being formed with an exterior projection substantially coaxial with the section and disposed in spaced relation to said side walls to prevent flexing or denting of said bottom.

1,541,968. REFRIGERATION. DONALD B. KNIGHT, Brooklyn, N. Y. Filed Jan. 9, 1925. Serial No. 1,348. 10 Claims. (Cl. 62—94.)



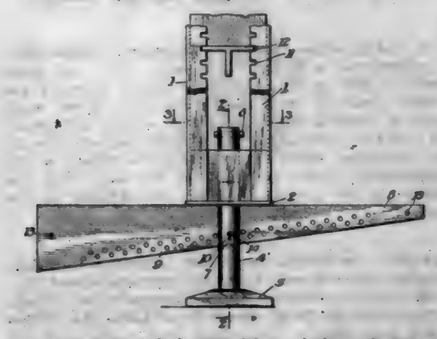
10. Refrigerating apparatus comprising a brine tank, a concentrator, a pump and tubes to deliver the brine from the tank to the concentrator, means to return the soluble substance from the concentrator to the tank, tubes to condense the vapor of the solvent and return the water of condensation to the tank, and means to apply the cooling effect of the brine in its passage to the concentrator to cool and condense the vapor from the solvent in its passage from the concentrator to the tank.

1,541,969. WINDING MACHINE. EDWARD J. KOSAK, Cicero, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed June 30, 1922. Serial No. 571,920. 14 Claims. (Cl. 242—156.)



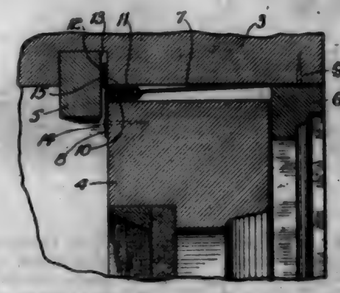
1. In a winding machine, the combination with a winding mandrel, a source of supply for said machine, a rocking element having a to-and-fro movement, a cam

for said rocking element, a push rod associated with said cam, and means controlled by the tension of strand be-



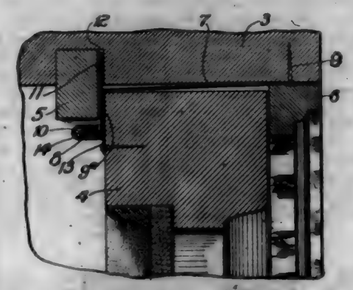
tween said winding mandrel and said source of supply for actuating said cam and rod for maintaining a constant tension upon said strand.

1,541,970. VALVE LOCK FOR GASOLINE CONDUITS. MICHAEL KROMP and STANISLAW JALOSZYNSKI, Montréal, Quebec, Canada. Filed Nov. 10, 1924. Serial No. 749,081. 3 Claims. (Cl. 251—6.)



1. In a lock of the class described, the combination with a casing of a rotatable valve body in said casing adapted to establish and interrupt the flow of fuel from a fuel tank to an engine, a collar on said body having upper abutments and lower recesses, a projection at the upper end of said body adapted to be engaged by a key for rotating said body, and means for locking the parts in their adjusted positions.

1,541,971. WEDGE JACK. HENRY H. LAMPERT, Chicago, Ill. Filed Apr. 16, 1924. Serial No. 706,955. 2 Claims. (Cl. 254—104.)

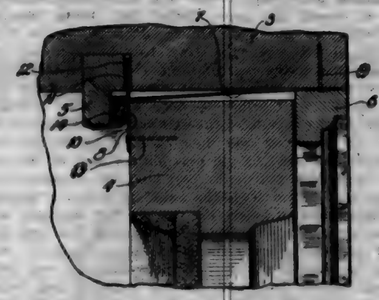


2. An improved jack comprising a base, a slotted post having swivel connection to said base, a casting with an aperture to fit said post, a wedge co-acting between said slot and said casting, stops on said post and said wedge, a rectangular shore timber socket built on said casting, and a shelf supported in said socket.

1,541,972. METAL WEATHER STRIP. ALFRED M. LANE, St. Louis, Mo., assignor to Monarch Metal Products Company, St. Louis, Mo., a Corporation of Missouri. Filed May 28, 1923. Serial No. 641,929. 4 Claims. (Cl. 20—69.)

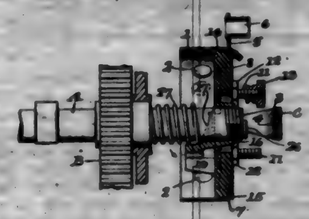
1. The combination of a frame and a closure therefor, of a metal weather strip comprising two cooperating members mounted on said frame and said closure, respectively, the frame member comprising a metal strip located between the opposing faces of said frame and said closure and having a free marginal portion doubled back upon itself and formed into a grooved portion having one wall of double thickness.

1,541,973. METAL WEATHER STRIP. ALFRED M. LANE, St. Louis, Mo., assignor to Monarch Metal Products Company, St. Louis, Mo., a Corporation of Missouri. Filed May 28, 1923. Serial No. 641,930. 3 Claims. (Cl. 20—69.)



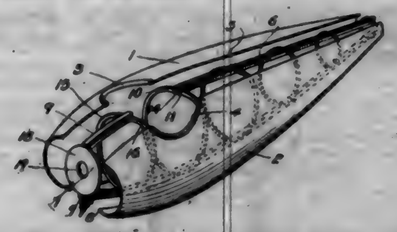
1. The combination with a frame and a closure therefor, of a relatively flexible member disposed between said frame and the adjacent face of said closure and secured along one margin to said frame adjacent to one side of said closure and a relatively rigid member secured along one margin to the opposite side of said closure, the free marginal portions of said members being formed with cooperating ribbed and grooved portions located opposite the side face of said closure outside the general plane thereof.

1,541,974. METAL WEATHER STRIP. ALFRED M. LANE, St. Louis, Mo., assignor to Monarch Metal Products Company, St. Louis, Mo., a Corporation of Missouri. Filed May 28, 1923. Serial No. 641,931. 5 Claims. (Cl. 20—69.)



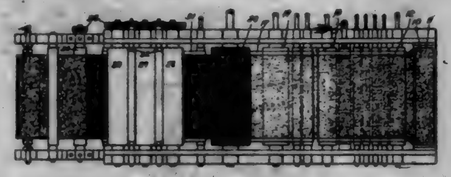
1. The combination of a frame and a closure therefor, of a member secured to said frame adjacent to one

corner of said closure, and a member secured to said closure adjacent to the opposite corner thereof, said



members having loosely interlocked portions located beyond said opposite corner of said closure.

1,541,975. TIMER. NORBERT J. C. LESTER, Knoxville, Tenn. Filed July 5, 1923. Serial No. 649,616. 5 Claims. (200—24.)



2. A timer comprising a shell, a ring of insulating material fitting within the shell, contact members carried thereby, a brush having a slightly tapered central opening fitting over an operating shaft, means for causing the brush to rotate with the shaft but permitting endwise and rocking motion thereon, and means engaging said brush to give it both movements thereby holding it in close engagement with said contact members.

1,541,976. FUSELAGE. ALBIN K. LONGREN, Topeka, Kans. Filed Apr. 10, 1922. Serial No. 551,054. 3 Claims. (Cl. 244—30.)

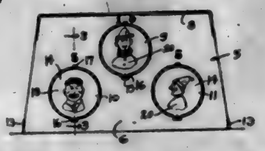
3. A fuselage comprising complementary concave-convex side members, longerons at the top and bottom of the fuselage, and interposed between the edges of said side members, each longeron have oppositely disposed grooves in its sides to receive the opposite edges of the respective side members to stiffen same and maintain the said edges in coincident planes, each longeron having a relatively deep longitudinal groove in its inner face to lighten the same, means whereby to secure the edges of the side members in said grooves in the opposite sides of the longerons, and substantially circular transverse braces connected to the longerons and to the side members.

1,541,977. PAPER MAKING. WILLIAM A. LORENZ, Hartford, Conn., assignor to The Otaka Fabric Company, Hartford, Conn., a Corporation of Connecticut. Filed Jan. 29, 1921. Serial No. 440,869. 9 Claims. (Cl. 92—70.)

1. The method of forming a web of pulp, pressing water from the web, embossing the pulp web with a suitable design while still moist, maintaining the embossed condition of the pulp web while finally drying the same into paper, and calendering the dry web to flatten out the embossings and limber the paper.

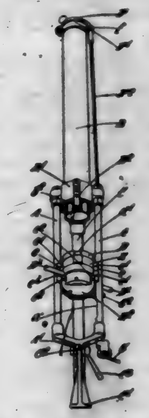
1,541,978. AIRPLANE PROPELLER AND PROCESS OF MAKING THE SAME. WILLIAM A. LORENZ and STILLMAN SHAW, Hartford, Conn.; said Shaw assignor of his entire right to said Lorenz. Filed April 20, 1921. Serial No. 462,795. 7 Claims. (Cl. 18—56.)

1. The process of forming a propeller for airplanes which consists in providing a solid block of fibrous material, chemically treating the block and then washing the same, carving the block while it is still moist and pliable so as to form a hub and solid blades which are tapered down towards their edges, then twisting the blades to the helical pitch desired while in soft and pliable condition, and then drying the propeller while it is held in twisted condition.



1,541,979. TRAFFIC SIGNAL FOR STREET CROSSINGS. JOHN W. LOWTHER, Pittsburgh, Pa. Filed Oct. 3, 1924. Serial No. 741,406. 5 Claims. (Cl. 116—63.)

2. In a signaling device of the class described, a two-position support rotatable on a vertical axis, a Stop signal rigidly borne by said support and extending in vertical plane, a Stop and Go signal rotatably borne by said support and provided with Stop and Go panels, and means for rotating said Stop and Go signal and bringing the Stop and Go panels alternately to position in a



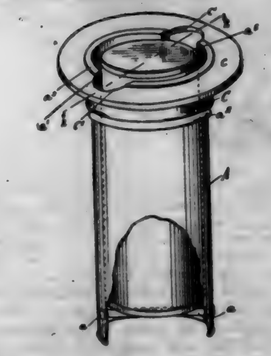
vertical plane angularly disposed to the plane of the first-named Stop signal, while the support continues unchanged in position.

1,541,980. GAME DEVICE. SOLOMON LUBIN, New York, N. Y., assignor to Standard Solophone Mfg. Co., Inc., New York, N. Y., a Corporation of New York. Filed Jan. 19, 1925. Serial No. 3,234. 4 Claims. (Cl. 273—122.)

1. A game device comprising a board having an inclined face with a plurality of openings therein, game piece receptacles hingedly associated with said face adjacent said openings, and means on said face member for releasably holding said receptacles in position to receive a projected game piece.

1,541,981. BREECH LOADING GUN. OWEN DAVID LUCAS, Bayswater, London, England, assignor to Vickers Limited, London, England, a British Company. Filed Mar. 3, 1923. Serial No. 622,516. 3 Claims. (Cl. 89—1.)

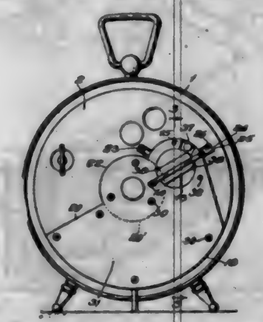
1. In a breech loading gun mount, a breech screw, a carrier in which the breech screw is rotatably mounted, and inclined shock-resisting strut members comprising part of said mount on which said carrier is slidably mounted, the said carrier being movable along the strut members away from the breech end of the tube for loading.



1,541,982. TRAP NEST. WILLIAM R. LUTS, St. James, Mo. Filed Feb. 2, 1925. Serial No. 6,241. 4 Claims. (Cl. 119—47.)

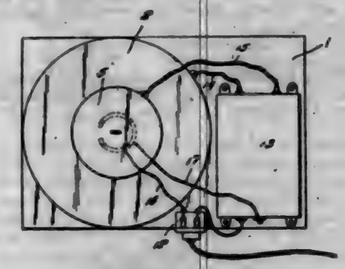
1. A device of the kind described, comprising a lower egg trap box and an upper nest box, the two being connected by an egg port through the floor of the nest box; an outwardly swinging door for the front entrance of the nest box; a sliding door for the said front entrance, the same being set in front of the swinging door and spaced therefrom; a latch mechanism for releasably holding the swinging door in an horizontal open position, the said latch having a shank extended into the pathway from the doors to the interior of the box; means for automatically elevating the swinging door to its horizontal open position as the sliding door is raised; a sliding door for the rear opening of the nest box; an oscillating lever on top of the nest box and having its ends connected respectively to the front and rear sliding doors so that one will stand open while the other is closed, the front sliding door being arranged to overbalance the rear sliding door so as to stand normally closed when the rear door is open; an exit cage attached at the rear of the nest box and into which the rear sliding door opens; an outwardly swinging rear door for the exit cage; a door controlling platform mounted in the bottom of the exit cage and hinged to the sill of the swinging rear door and having its free forward end connected to the rear sliding door of the nest box; a nest arranged in the nest box and communicating through its bottom with the said egg port; a primary egg chute mounted below the egg port of the nest box; a latch lever pivoted within the egg trap box and having at one end a latch for releasably holding the rear sliding door in closed position, the opposite end being disposed below the mouth of the primary egg chute; means for normally holding the forward end of the latch

lever in elevated position with the latch at the rear end in engagement with the rear sliding door; an egg tray mounted on the end of the said lever under the said egg chute; an egg trap loosely mounted within the egg trap box under the said egg tray, the said egg trap including an elongated box set on an incline and having a plurality of beveled and overlapping egg trap boards pivotally mounted therein from end to end, in such manner that an egg will roll from the upper end to a lower point and then automatically upturn the available rearmost board, and a secondary egg chute mounted on the egg trap and adapted to be disposed under the egg tray of the latch lever; a hen trap at the rear of the exit cage and into which the latter opens through its said swinging door, the said hen trap being enclosed with netting at its sides and end and having sliding exit doors for the several compartments, the said compartments being formed of beveled trap boards similar in shape and design to the egg trap boards but much larger in size, the same being pivoted within an elongated box.



1,541,983. GROUND VASE. ROBERT B. MCGOWAN, Cincinnati, Ohio. Filed Nov. 19, 1923. Serial No. 675,605. 3 Claims. (Cl. 47—41.)

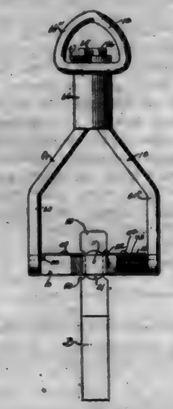
3. In a ground vase the combination of a cylindrical casing provided with finger recesses, an outwardly extending bead on said casing, a metal casting comprising



a flanged ring member, supported by said bead, a vase member within said casing and means integral with said casing for permitting the ready removal of said vase from said casing.

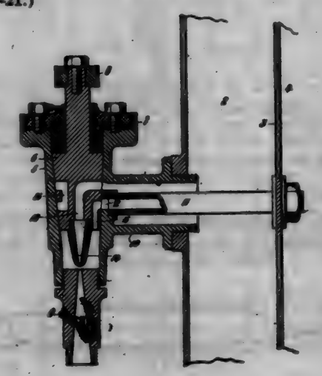
1,541,984. COIN-CONTROLLED CLOCK. RAYMOND H. MCMINN, Chicago, Ill. Filed Apr. 20, 1921. Serial No. 462,836. 9 Claims. (Cl. 194—84.)

1. In combination, a clock, a winding stem therefor, a coin-controlled key for operating said winding stem, and means for automatically accelerating said key relative to the unwinding movement of said stem to release a coin therefrom.



1,541,985. ELECTROCUTING RAT TRAP. GEORGE A. MARQUIS, Lewiston, Me. Filed Jan. 3, 1925. Serial No. 344. 2 Claims. (Cl. 43—98.)

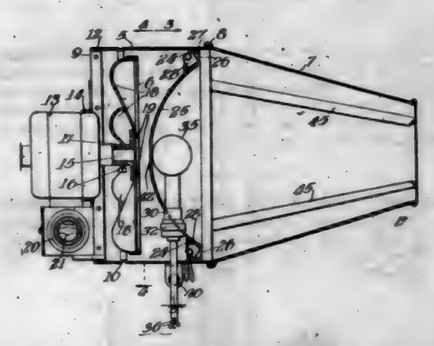
1. A rat trap comprising an insulated base, a bottom metallic plate supported thereon, an upper metallic plate, a semi-spherical head carried by the upper plate and cooperating with the lower plate for tiltably supporting the upper plate on the lower plate, contacts carried by the opposed faces of the respective plates and insulated therefrom, said contacts being normally spaced from each other, and adapted to be brought into engagement with each other when the upper plate is tilted, and means for returning the upper plate to its normal position.



1,541,986. ELEVATOR FOR SUCKER RODS. JOHN B. MARTIN, Shreveport, La. Filed Feb. 16, 1924. Serial No. 693,254. 4 Claims. (Cl. 294—91.)

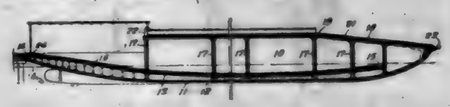
1. An elevator of the class described comprising a body having an opening therein and a radial slot leading to said opening, said body being recessed from its upper face about the opening to provide an annular seat, a lug extending upwardly from said seat, a circular block rotatably fitting into the opening of said body and having a radial slot, said block having an outstanding annular shoulder extending into the recess and resting upon said seat with its upper face flush with the upper face of the body, a cover plate carried by said body and extending over said block to retain the same in place and permit rotary movement thereof so that a portion of the slot of said member extends into the area of the opening of said body; said block being turnable within said body so that the slots of the block and body may be placed in alignment or out of alignment with respect

to each other, the annular shoulder of said block having its inner face provided with an annular recess receiving said lug and limiting rotary movement of said block and latch means for holding the block in a locked relation with respect to the body when the slots are out of alignment with respect to each other.



1,541,987. VALVE FOR STERILIZING APPARATUS. GEORGE SAMUEL MASCALL, London, England, assignor to John Bell & Croyden Limited, London, England. Filed Jan. 5, 1925. Serial No. 729. 1 Claim. (Cl. 137—21.)

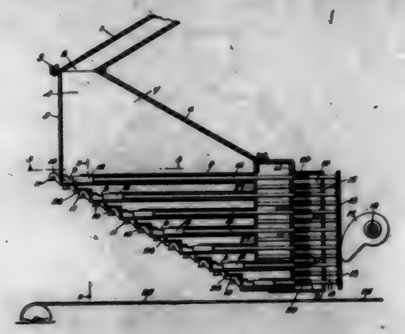
In sterilising apparatus comprising an inner and an outer casing forming an inner sterilising chamber and an outer pressure steam chamber; the combination therewith of a valve casing, a revoluble valve plug located within said valve casing, a cover to close one end of said valve casing, a stem on said plug extending through said cover, an operating handle on said stem, the opposite end of said valve casing extending beyond said valve plug, a continuation tube open to the atmosphere fixed to said extending end of said valve casing, said valve casing having a lateral tubular shank fixed to said outer casing of the apparatus communicating at one end with said pressure steam chamber and at the opposite end with the periphery of said valve plug, an extension tube passing through said tubular shank to com-



municate at one end with said sterilizing chamber and at the opposite end with the interior face of said valve casing, said valve plug having a central conical nozzle fixed at its end opposite to said continuation tube of said casing and said valve plug having a bore communicating with said nozzle and extending to the circular face of said valve plug to communicate with said tubular shank and with said steam chamber in one position of said valve plug, and said valve plug having a second bore communicating, in the same position of said valve plug, with said extension tube and said sterilizing chamber to exhaust air or steam from the latter, and said plug having a U-shaped passage adjacent that side opposite to the openings of said bores, the arms of said U-shaped passage opening onto the periphery of said valve plug to effect communication in another position of said valve plug between said pressure steam chamber through said tubular shank and simultaneously with said sterilizing chamber through said extension tube, to admit steam from said steam chamber to said sterilizing chamber.

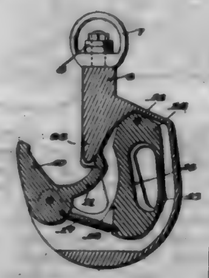
1,541,988. METHOD OF AND MEANS FOR DRYING. WILLIAM MEYER, Chicago, Ill. Filed Aug. 2, 1923. Serial No. 655,174. 11 Claims. (Cl. 34—26.)

1. In a device of the class described, the combination of a casing having an inlet and an outlet and an annular passage providing communication between said inlet and said outlet and a heating element arranged annularly in said annular passage.



1,541,989. DOUBLE-DECKED CAR FERRY. JAMES G. MILLER, Norfolk, Va. Filed Apr. 3, 1925. Serial No. 20,416. 4 Claims. (Cl. 114—60.)

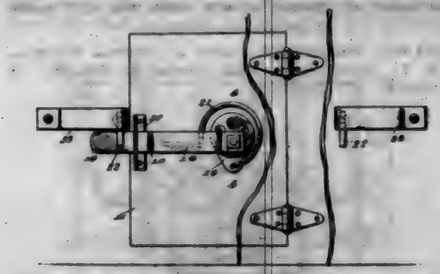
1. A vessel of the character described, comprising an upper and lower deck, a plurality of sets of rails mounted upon the decks, a portion of said upper deck sloping forwardly and downwardly and the lower deck curving rearwardly and upwardly.



1,541,990. BATTER DROPPER. NATHAN MINNERSO, Minneapolis, Minn. Filed Aug. 9, 1922. Serial No. 580,706. 4 Claims. (Cl. 107—28.)

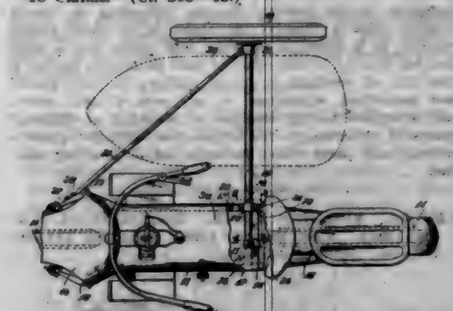
1. In a device of the class described the combination of a chamber adapted to receive material to be deposited in drops; a plurality of tubes associated with said chamber in staggered relation and provided with apertures through which portions of said material may enter; flaring discharge nozzles carried by the ends of said tubes; plungers slidably mounted within said tubes adapted to move past said apertures to open and close the same, and to expel the material within said tubes through said nozzles in drops; and means for reciprocating said plungers.

4. In a device of the class described, the combination of a chamber adapted to receive dough material to be deposited in drops; a plurality of tubes passing through said chamber and provided with apertures through which portions of said material may enter; a plurality of outlets for said tubes disposed in staggered relations and in different horizontal planes; plungers slidably mounted within said tubes adapted to move past said apertures to open and close the same, and to expel the material within said tubes in drops; and means for reciprocating said plungers.



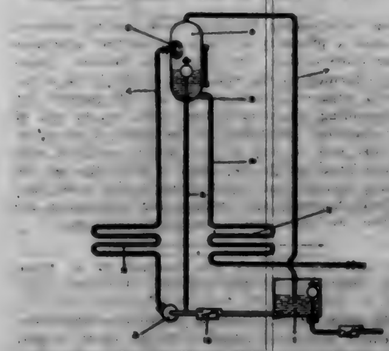
1,541,991. SAFETY HOOK. JOSEPH F. MOODY and VIRGIL L. DU BOIS, Tulsa, Okla. Filed June 24, 1924. Serial No. 722,071. 8 Claims. (Cl. 24—241.)

1. A safety hook comprising a body having a pair of bills cooperating with the body in defining a socket, a latch pivoted to the bills and having an inwardly extending branch, and a trigger adapted to engage the branch to hold the same in position, said trigger being housed within and protected by said body.



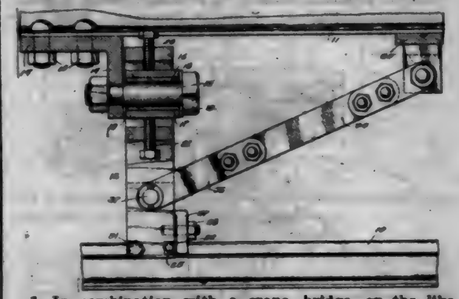
1,541,992. DOOR LATCH. BENEDICT B. MORIARTY, Howard, S. Dak. Filed May 5, 1924. Serial No. 711,137. 3 Claims. (Cl. 292—228.)

1. In a swinging door, a stem journaled through the door, having a handle at its inner end, a latch bar secured at one end upon the outer end of said stem, keeper brackets at opposite sides of the door and of similar construction, gravity keepers swingable in said brackets and similarly cooperating with the latch bar to hold the door in open and closed positions, and a spring



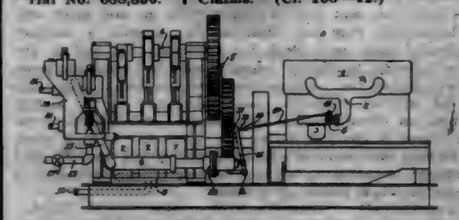
engaging the latch bar and controlling movement thereof and also controlling movement of the stem and the inner handle.

1,541,993. THIRD-WHEEL ATTACHMENT FOR MOTOR CYCLES. CARL A. NERACHER, Syracuse, N. Y., assignor to Ner-A-Car Corporation, a Corporation of New York. Filed June 13, 1921. Serial No. 477,148. 18 Claims. (Cl. 208—45.)



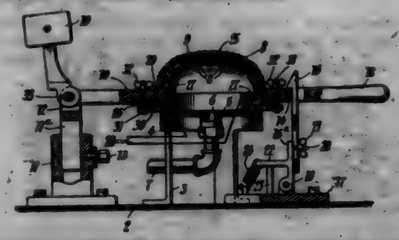
1. In combination with the frame of a two-wheeled motorcycle, comprising side frame members on opposite sides of the wheels of the motorcycle and a transverse frame member, a third wheel attachment for the motorcycle comprising an axle, a wheel mounted thereon, and means for detachably fastening the axle to said frame at two places spaced transversely apart thereon.

1,541,994. PROCESS FOR CONTINUOUSLY STERILIZING MILK AND THE LIKE. NIELS JONAS NIELSEN, Aarhus, Denmark. Filed June 28, 1924. Serial No. 723,025. 1 Claim. (Cl. 99—15.)



A process for sterilizing milk or a similar liquid by continuously passing the liquid through a heated tube system or the like under pressure, characterized in passing the liquid when leaving the heating system, through a chamber of lower pressure and condensing the vapors thus developed in the liquid passing to the heating system, thus depriving the sterilized hot liquid of heat and preheating the fresh liquid.

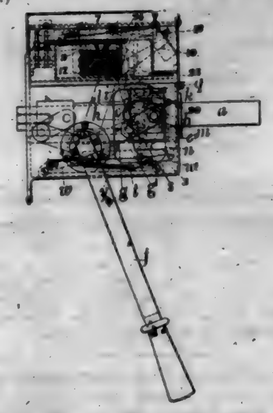
1,541,995. DEVICE FOR SMOOTHING OR DRESSING RAILS. GEORGE ODUM, Chicago, Ill. Filed Dec. 18, 1924. Serial No. 756,693. 16 Claims. (Cl. 104—1.)



1. In combination with a crane, bridge, or the like, having a carriage travelling on rails; a tool holder attached to said carriage; and a cutting tool mounted in said tool holder and adapted to engage the margin of the upper surface of one of the rails and smooth or dress the same as said carriage moves.

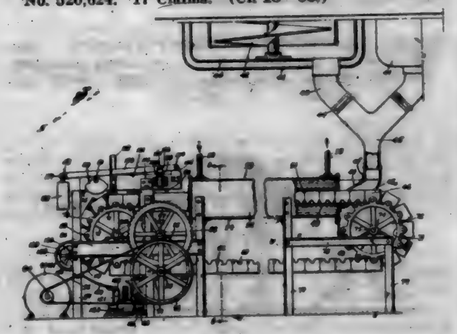
1,541,996. GOVERNOR FOR POWER-DRIVEN PUMPS. IMMANUEL ALVIN OLIVER, Santa Clara, Calif., assignor to Bean Spray Pump Co., San Jose, Calif., a Corporation of California. Filed Jan. 26, 1924. Serial No. 688,890. 7 Claims. (Cl. 103—42.)

1. The combination with a power driven pump having a fluid discharge and a pressure chamber connected therewith, of means for reducing the fluid pressure at said discharge when the pressure in said chamber rises above a pre-determined value; and means actuated by the pressure reduction at said discharge for reducing the power output of the driving means.



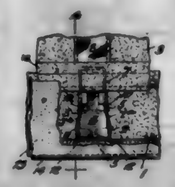
1,541,997. HAT-LINING-BLOCKING MACHINE. LESLIE M. PAGE, Maplewood, N. J., and LOUIS MEYLACH, Brooklyn, N. Y. Filed Sept. 12, 1924. Serial No. 737,248. 6 Claims. (Cl. 223—31.)

1. In a machine of the character described the combination of a block perforated for the passage of steam, means for supplying steam to said block, a yoke pivoted



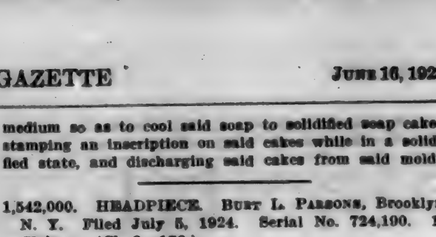
at one side of said block, a forming hood of flexible material adapted for coaction with said block, carried by said yoke, means for releasably latching said yoke in coacting relation with said block, means for adjusting said latching means vertically, and means for adjusting the pivot of the yoke to compensate for the adjustment of the latching means.

1,541,998. CIRCUIT BREAKER. GEORGE PAILIN, Manchester, England, assignor to Ferguson Pailin Limited, Manchester, England, a British Company. Filed May 12, 1923. Serial No. 638,540. 6 Claims. (Cl. 200—106.)



2. In circuit breakers, the combination comprising a switch arm having an annular groove therein, a block slidable on said arm, a ball carried by said block and detachably engaging said annular groove, a member pivoted upon said block for retaining said ball in the said groove, means for releasing said ball retaining member, means for reciprocating the said block both with and without imparting such movement to the switch arm, an energy accumulator, means whereby said accumulator is charged during the movement of said block without movement of said arm, and means whereby said energy is caused to actuate the said releasing means of the said ball retaining member.

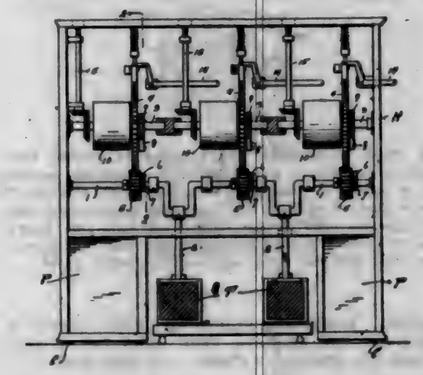
1,541,999. MOLDED ARTICLE AND METHOD OF MANUFACTURING SAME. LEWIS A. PALEY, Buffalo, N. Y., assignor to Paley Engineering Company, New York, N. Y., a Corporation of New York. Original application filed Apr. 1, 1920, Serial No. 370,441. Divided and this application filed Dec. 7, 1921. Serial No. 520,624. 17 Claims. (Cl. 18—58.)



1. A method of treating soap and the like, which includes introducing hot, liquid soap into a plurality of molds, moving said molds while subjected to a cooling medium so as to cool said soap to solidified soap cakes, stamping an inscription on said cakes while in a solidified state, and discharging said cakes from said molds.

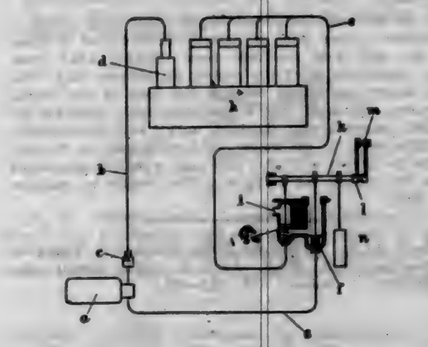
1,542,000. HEADPIECE. BURT L. PARSONS, Brooklyn, N. Y. Filed July 5, 1924. Serial No. 724,190. 11 Claims. (Cl. 2—176.)

9. In a head piece, a band part, a crown part, and collapsible connections between the parts at spaced intervals around the band for holding the parts selectively either spaced apart or together, said connections comprising a metal stamping secured to one of said parts by integral teeth which are clinched into said part, said stamping having integral tongues extending in spaced relation with a face of the stamping to form guides running in a direction between said parts, and a wire member secured to the other of said parts and having a plurality of resilient stretches running in said guides and permitting separation or approach of said parts, said stretches having changes in direction at different points in their length for cooperation with the grooves to hold said parts either in separated or abutting relation.



1,542,001. BUILDING BLOCK. GAETANO PILATI, Florence, Italy. Filed May 21, 1924. Serial No. 714,860. 1 Claim. (Cl. 72—41.)

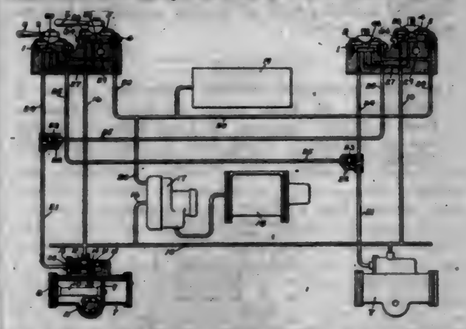
A hollow interlocking building block having between its side faces a plurality of rows of vertical apertures of circular cross-section, flat side faces thereon, ridges and grooves formed on the end faces of the block to interlock with adjacent blocks and to provide pockets for mortar, depending ridges extending from end to end of the lower marginal side edges of the block, grooves extending from end to end of the upper marginal side edges of the block for the reception of the ridges on the block resting thereon, and a flat recess in the under face of the block—between said ridges—for containing the mortar when the blocks are in assembled position.



1,542,002. MOTOR. ENRICO RE, Vineland, N. J. Filed Nov. 28, 1923. Serial No. 677,493. 1 Claim. (Cl. 185—9.)

In combination with a shaft a plurality of shaft sections rotatably supported adjacent to the shaft, a gear loosely mounted on each of the shaft sections, a gear loosely mounted on the first named shaft with which said gear of the shaft section meshes, a spring associated with each shaft section and gear thereon for rotating the gear, coacting means carried by the shaft and each of the gears mounted thereon to cause said gear and shaft to rotate in unison in one direction,

means for holding the gears on the shaft sections against rotation, the spring associated with one gear operating when unwound to release the holding means of the succeeding gear.



1,542,003. AIR-DISCHARGE DEVICE WITH INTERNAL-COMBUSTION ENGINES. ALFRED REINSCH, Berlin-Marienfelde, Germany, assignor to Daimler-Motoren-Gesellschaft, Stuttgart-Unterturkheim, Germany, a Corporation of Germany. Filed Mar. 1, 1924. Serial No. 696,277. 2 Claims. (Cl. 123—33.)

1. The combination, with an internal combustion engine, especially of the type which operates according to the Diesel principle, of an air-supply tank, a pipe connecting it with the fuel-valves of the engine, a shut-off valve arranged in said pipe, an air-discharge device independent of said valve also located in said pipe, and means for actuating said valve and air discharge device simultaneously to reduce the pressure on the fuel valves to atmospheric pressure.

1,542,004. CAR-DOOR-CONTROL DEVICE. WILLIAM B. RENSHAW, Wilmerding, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Nov. 20, 1924. Serial No. 750,989. 3 Claims. (Cl. 303—6.)

1. In a car door control apparatus, the combination with a door engine, of a door controlling valve device at each end of the car, a door control pipe leading from each door controlling valve device to the door engine,

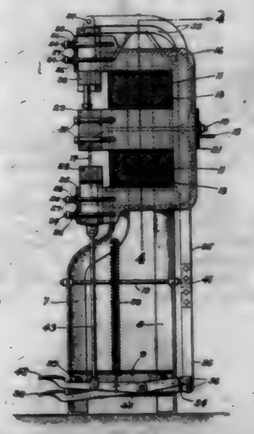
and a double check valve for controlling communication from said control pipes to the door engine.

1,542,005. HOLLOW ELASTIC PLAYING BALL. RALPH E. RILEY, Akron, Ohio, assignor to The Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Original application filed Oct. 31, 1921, Serial No. 511,720. Divided and this application filed Jan. 17, 1922. Serial No. 529,876. 7 Claims. (Cl. 273—58.)

1. A hollow elastic thin walled rubber playing ball having a design portion of elastic sheet rubber inlaid in the surface of the ball, and autogenously united therewith.

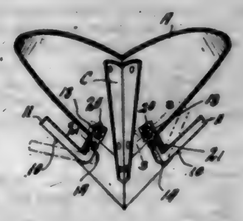
1,542,006. DECOLORIZING CARBON PARTICULARLY FOR MEDICINAL USE. JOHAN NICOLAAS ADOLF SAUER, Amsterdam, Netherlands, assignor to Naamlooze Vennootschap Norit Witsuiker Maatschappij (also called Norit White Sugar Company), Amsterdam, Netherlands, a Corporation of the Netherlands. Filed July 26, 1917. Serial No. 182,883. 2 Claims. (Cl. 167—7.)

1. A medicinal preparation comprising a shaped product of a size adapted to be taken in the mouth, containing sterilized decolorizing vegetable carbon, substantially free from soluble ash constituents, of which the dry matter contains substantially above 94% of free carbon, such material being held together by a crystalline binder which is readily soluble in the juices of the alimentary canal.



1,542,007. CUTTING TOOL. FRANK J. SCHROEDER, Altoona, Pa. Filed Dec. 6, 1922. Serial No. 605,269. 1 Claim. (Cl. 29—96.)

A cutting tool comprising a holder provided at one end with a tapered tool receiving socket, an upstanding boss adjacent the socket, a cutting member having

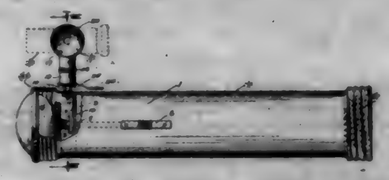


a tapered shank portion for fitting in the tapered socket, and a locking member projecting through the upstanding boss and engaging with the cutting member to lock the same in the socket.

1,542,008. ELECTRIC RIVET HEATER. JOHN E. SEDERHOLM, St. Paul, Minn., assignor to American Hoist & Derrick Company, St. Paul, Minn., a Corporation of Minnesota. Filed Aug. 5, 1922. Serial No. 579,940. 7 Claims. (Cl. 219—13.)

1. In an electric rivet heater, the combination with a magnetic core in the form of a rectangular frame, of primary coils arranged on the longitudinal parallel members of said core, secondary elements of substantially E-shape, with their branches extending above and below the longitudinal members of said core, and means on the ends of said branches for holding rivets between the middle branch of said secondary element, and the upper or lower branch thereof.

1,542,009. WEED-CUTTING ATTACHMENT FOR PLOWS. CLEO SHIPMAN, Hamlin, Tex. Filed Dec. 30, 1924. Serial No. 758,867. 2 Claims. (Cl. 97—133.)

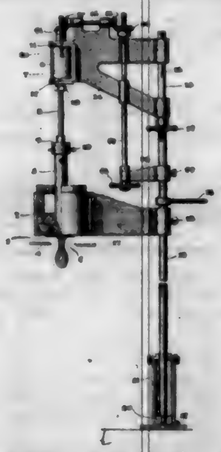


1. In combination with a buster plow having wings and a point the wings adjacent the point being perforated for the passage of bolts and the point adjacent the wings being also perforated for the passage of bolts, of a weed cutting attachment therefor comprising two knives each having a blade and a shank angularly disposed relative to the blade, the shanks extending across the face of the point and on to the wings and being slotted for the passage of bolts passed through the apertures of the wings and point, the slots permitting an angular adjustment of the knives.

1,542,010. HANDLING DEVICE. WILLIAM H. SIEMA, Oakglen, Ill. Filed Oct. 6, 1921. Serial No. 505,811. 1 Claim. (Cl. 100—57.)

A device to facilitate the handling of stalked vegetables, comprising a trough having a supporting surface and a back wall forming a dihedral angle, the line of intersection of said surface and wall being lower than the opposite edge of the surface or wall, one lateral edge of surface and wall being lower than its opposite edge, the dihedral being open at its lowest point.

1,542,011. PORTABLE SURGICAL LIGHT. HIRAM R. SIMPSON, San Francisco, Calif. Filed Feb. 4, 1924. Serial No. 690,584. 3 Claims. (Cl. 240—8.5.)

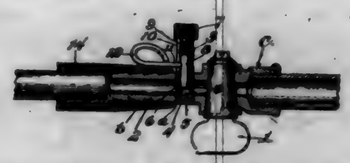


1. In an elongated pocket electric flash lamp having a container casing with a battery therein and a lamp at one end, with its light beam directed away from and longitudinally of the casing, an electric lead from the battery extending through the side of the casing adjacent said lamp, and a localizing light projector rotatably mounted over the lead, on an axis substantially at right anges to the casing, an electric bulb in the projector in circuit with the lead, and a switch associated with the casing for completing the circuit to energize the bulb.

1,542,012. JUMPING TOY. OLIVER P. SPILMAN, Houston, Tex. Filed Apr. 3, 1923. Serial No. 629,590. 7 Claims. (Cl. 273—95.)

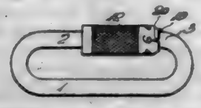
2. A game comprising a plurality of flat pieces adapted to be placed on a surface to be placed upon to represent pools of water, and a toy representing a frog with a body having a flat under surface on which it normally rests, and a leaf spring extending upwardly from the body with one end anchored in the body and the other end free, the tension and inertia of the spring when compressed and suddenly released being operable to propel the toy in a forward direction.

1,542,013. PLUNGER-OPERATING MECHANISM FOR GLASS FURNACES. THOMAS STENHOUSE, Washington, Pa., assignor to Hazel-Atlas Glass Co., Wheeling, W. Va., a Corporation of West Virginia. Filed Mar. 22, 1922. Serial No. 545,762. 19 Claims. (Cl. 49—55.)



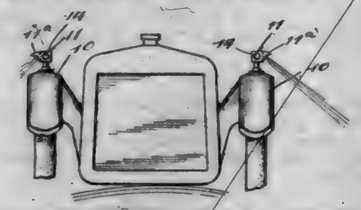
5. A glass furnace including a flow spout, a plunger adapted to reciprocate in said flow spout, means for reciprocating the plunger, and fluid pressure operated means for lifting the plunger clear of the flow spout.

1,542,014. METHOD AND DEVICE FOR CRIMPING EYELASHES. CHARLES W. STICKEL, Rochester, N. Y. Filed June 5, 1922. Serial No. 566,114. 17 Claims. (Cl. 132—32.)



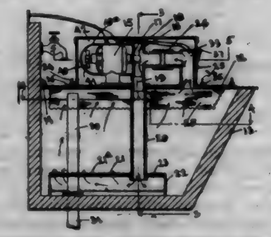
16. An eyelash curler comprising cooperating jaws, one having a gripping edge curved to fit about the eyelid and the other having substantially parallel curved ridges spaced to receive the gripping edge of the first jaw.

1,542,015. VALVE. CLARENCE E. STRICKLAND, Atlantic City, N. J. Filed July 12, 1924. Serial No. 725,678. 6 Claims. (Cl. 284—13.)



1. In combination with a conduit, a tubular member carried by and in communication with the conduit, a valve slidably mounted within the tubular member and extending within the conduit to close the flow therethrough, means for constantly maintaining the valve in closed position, a wall of the tubular member being provided with a slot, and a shank secured to the valve and extending outwardly through the slot.

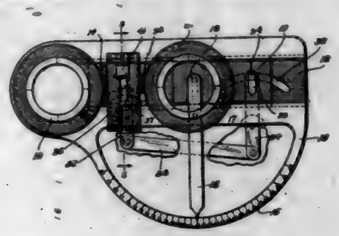
1,542,016. PERMUTATION LOCK. JACOB HENRY STULL, Fremont, Ohio. Filed Mar. 6, 1924. Serial No. 697,898. 3 Claims. (Cl. 70—19.)



1. A lock comprising a shackle having a straight portion formed with registering longitudinal and transverse grooves, a sleeve frictionally surrounding said straight portion of said shackle and having a stud received normally in a transverse groove thereof but adapted for reception also in a longitudinal groove of said shackle portion, said sleeve having a transverse slot from its exterior to its interior, and an operating barrel rotatably surrounding said sleeve and having a stud extending inwardly through the aforesaid slot and normally received in a transverse groove of said straight shackle portion, the last named stud being adapted also for reception in a longitudinal groove of said shackle portion when the first named stud is similarly positioned, whereby the barrel and sleeve as a unit are longitudinally slidable with respect to the shackle.

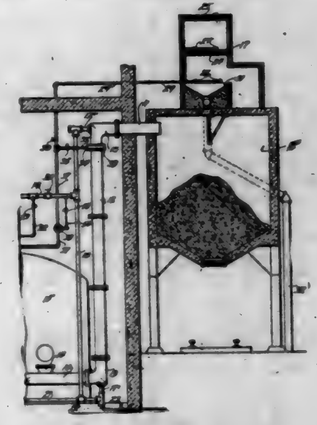
1,542,017. AUTOMOBILE SIGNAL. WILLIAM F. TERRY, Washington, D. C. Filed June 13, 1923. Serial No. 645,171. 3 Claims. (Cl. 177—329.)

1. In combination with a vehicle, a combined emergency headlight and signal element mounted at each side and at the forward end of the vehicle for rotative adjustment thereon, means for securing the signals in adjusted positions, an illuminating element in each signal element and means for selectively or simultaneously controlling said illuminating elements, said signal elements each embodying means for directing a beam of light from the illuminating element thereof outwardly from the signal element in one direction, a second modulated beam horizontally outwardly from the signal element at substantially right angles to the first named beam and a third beam likewise modulated but differing from the second beam outwardly from the signal element in the opposite direction from and in alignment with said second beam.



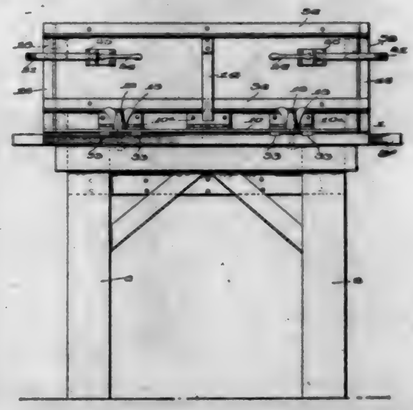
1,542,018. WASHING APPARATUS. WILLIAM B. TUNSTALL, Worcester, Mass. Filed May 19, 1922. Serial No. 562,080. 5 Claims. (Cl. 68—37.)

1. A washing apparatus comprising a platform, formed as a cover adapted to close the mouth of a tub, airforcing means fixed to and located above the platform;



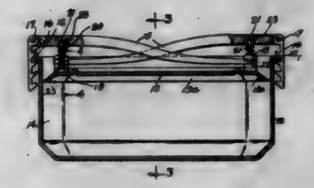
and air-conducting means fixed to the platform and including a flow conduit, adapted to conduct air downward to the lower portion of a tub, and a return conduit adapted to conduct air upward from the upper portion of the tub, said platform and the air-forcing and air-conducting means fixed thereto being applicable as a unit to a tub.

1,542,019. INSTRUMENT FOR MEASURING OPTICAL FRAMES. JOSEPH P. WHITAKER, Apponaug, and JOHN FIELDING, Providence, R. I. Filed June 8, 1923. Serial No. 644,286. 14 Claims. (Cl. 33—200.)



1. An instrument for measuring optical frames, comprising a pair of relatively adjustable members adapted to be spaced to receive eye wires of frames having different interpupillary distances, and means controlled by the relative movement of said members for indicating the interpupillary measurement of each frame positioned thereon.

1,542,020. ASH CONVEYER. CARL F. ZIMMERMANN, Chicago, Ill., assignor to Conveyors Corporation of America, Chicago, Ill., a Corporation of New York. Filed June 10, 1921. Serial No. 476,415. 3 Claims. (Cl. 302—20.)

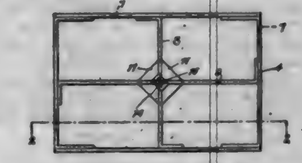


1. A steam ash conveyer system comprising a collecting receptacle for the ashes, a conveyer conduit discharging the ashes into said receptacle, a wash vent leading from said collecting receptacle, water spray nozzles discharging into said wash vent, a plurality of steam nozzles discharging into said conveyer conduit to impel the travel of ashes through said conduit, a steam supply pipe connected to said steam nozzles, means for controlling the flow of steam through said steam supply pipe, a water supply pipe connected to said water spray nozzles, a control valve in said water supply pipe comprising a normally closed movable valve element, an expansible chamber having its movable wall connected to said movable valve element, and a steam connection between said expansible chamber and said steam supply pipe for opening said water control valve when said steam nozzles go into operation.

1,542,021. MOLD FOR MAKING CONCRETE BLOCKS. CHARLES WILLIAM AKERS, Nashville, Tenn. Filed Sept. 27, 1924. Serial No. 740,360. 4 Claims. (Cl. 25—121.)

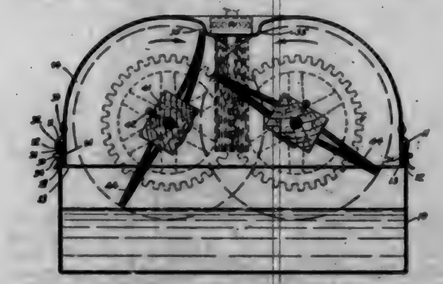
1. A concrete mold comprising adjusting plates, side plates hingedly connected with the adjusting plates, means for adjustably spacing the adjustable plates and side plates, end plates hingedly connected to one side plate, and means for releasably locking the opposite ends of the end plate to the other side plate.

1,542,022. OCTAGONAL HAM BOILER. HANS ADELMANN, New York, N. Y., assignor to Ham Boiler Corporation, New York, N. Y., a Corporation of New York. Filed Mar. 30, 1925. Serial No. 19,264. 4 Claims. (Cl. 100—57.)



1. In a ham boiler, the combination with a receptacle and a cover therefor, of means for depressing said cover to bear down upon the contents of said receptacle and to lock said cover in depressed position, said means comprising a pair of levers extending across said cover, racks pivoted to an end of each of said levers and arranged to adjustably engage said receptacle at opposite points thereof, each of said levers having pivotal engagement at the other end thereof with said cover and at a point opposite to the location of its rack, resilient abutment means being provided for each lever at a point between the end thereof to resiliently depress said cover according to the adjustment of said racks, said resilient means being arranged in proximity to said racks and remotely from the opposite ends of said levers so as to provide space for a considerable deflection of said resilient means when said racks are adjusted.

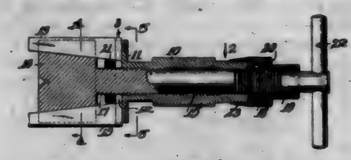
1,542,023. TRUCK. THOMAS J. ALEXANDER, Selma, Calif. Filed Mar. 15, 1924. Serial No. 699,539. 6 Claims. (Cl. 214—82.)



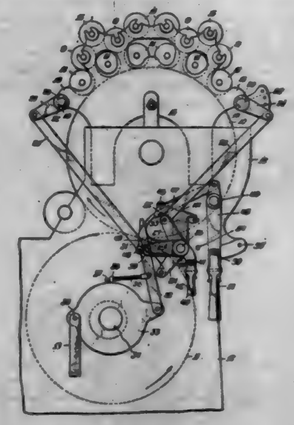
1. A wheeled truck having a continuous load bed and adapted for being up-ended, and for discharging its freight in that position by forwardly projecting its load-bed.

1,542,024. CHICK CONTAINER. PETER BAAR, Zeeland, Mich. Filed Aug. 4, 1924. Serial No. 729,868. 5 Claims. (Cl. 229—15.)

1. A chick container comprising a rectangular box divided into compartments, each compartment having an oblique wall at the center of the container.



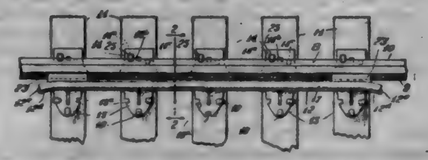
1,542,025. BRUSH CLEANER. CHARLES W. BALLMAN, Indianapolis, Ind. Filed Nov. 17, 1923. Serial No. 675,251. 8 Claims. (Cl. 15—88.)



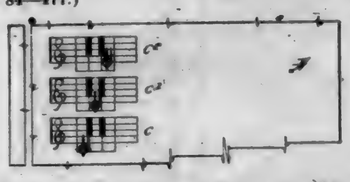
1. In a brush cleaner, the combination of a reservoir, a detachable cover therefor having a brush receiving slot therein, and means supported by the cover and movable into the reservoir when actuated for cleaning brushes inserted into said slot.

1,542,026. ADJUSTABLE INTERNAL GAUGE. JOHN BATH, Worcester Mass., assignor to John Bath & Co. Inc., Worcester, Mass., a Corporation of Massachusetts. Filed Oct. 20, 1919. Serial No. 331,337. 10 Claims. (Cl. 33—178.)

1. An adjustable internal gauge comprising an elongated body, a pair of gauge bars mounted on the end of the body for radial movement only thereon and projecting lengthwise from the end of the body, a single operating member engaging both of said bars and effective to move said bars simultaneously radially when moved lengthwise of said body, and means to adjust said operating member lengthwise relatively to said body.

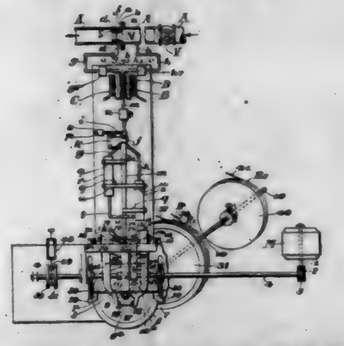


1,542,027. HAND AND AUTOMATIC ROLL TRIP. JOSEPH R. BLAINE, Chicago, Ill., assignor to Miehle Printing Press and Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 17, 1921. Serial No. 492,882. 7 Claims. (Cl. 101—352.)



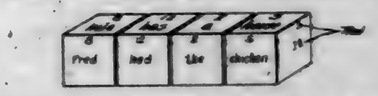
1. In a printing press, the combination of inking rolls, an operating cylinder having a journal, a member pivotally mounted thereon and normally operatively connected to said inking rolls for tripping the latter, means for releasing the operative connection between said member and rolls, and other means for tripping said rolls after releasing said operative connection.

1,542,028. GUARD-RAIL CONSTRUCTION. GROVER F. BLAIR, Bellevue, Ohio, assignor of one-half to Rolandis A. Blair, Fort Wayne, Ind. Filed May 7, 1924. Serial No. 711,560. 16 Claims. (Cl. 238—19.)



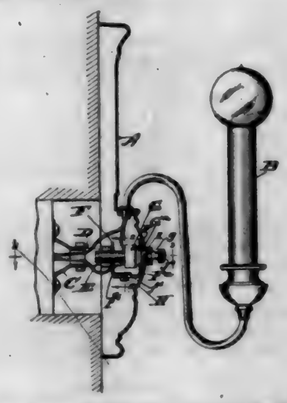
1. In a guard rail construction, the combination of supporting means adapted to be fixed against lateral movement away from a railroad rail, a member separable from said supporting means and having a plurality of wearing surfaces, and means for mounting said member upon said supporting means so that any one of said wearing surfaces may be readily brought into operative position.

1,542,029. INSTRUCTION ROLL. ISABELLE MCKEE BLOCH, Chicago, Ill., assignor to the Q R S Music Company, Chicago, Ill., a Corporation of Illinois. Filed June 3, 1922. Serial No. 565,691. 10 Claims. (Cl. 84—477.)



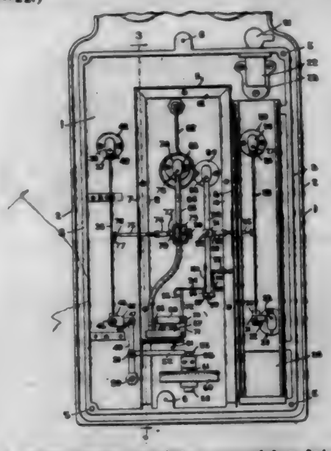
5. An instruction roll for utilizing automatic playing devices for teaching manual playing, having imprinted over the areas containing the slots for automatic playing, delineations of significant portions of the manual of the instrument with which the note sheet is designed to cooperate, the slots being cut through the delineation of the keys which correspond to the slots respectively.

1,542,030. CONTROL METHOD AND APPARATUS. EDWARD S. BRISTOL, Philadelphia, Pa., assignor to Leeds & Northrup Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 25, 1921. Serial No. 464,485. 58 Claims. (Cl. 137—78.)



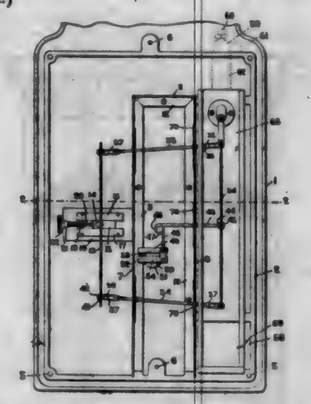
1. In a control system, structure actuated in response to changes in magnitude of a condition, a deflecting member mechanically connected with and actuated by said structure, a movable structure, a source of power, a disengageable mechanical connection between said source of power and said movable structure controlled by said deflecting member, and control mechanism controlled by said movable structure.

1,542,031. EDUCATIONAL DEVICE. LUCY M. BRUEN, Jamaica Plain, Mass., assignor to Milton Bradley Company, a Corporation of Massachusetts. Filed Feb. 2, 1924. Serial No. 690,172. 6 Claims. (Cl. 35—1.)



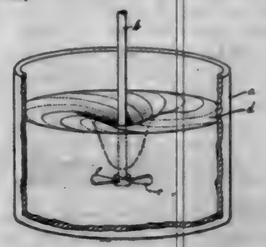
1. An educational device comprising a plurality of blocks, each block having an incompleted sentence or vocabulary unit and an index designation exhibited on one or more of its sides, said index designation being different for each block but the same on the various sides of each separate block, said blocks adapted to be differently arranged side by side according to predetermined combinations of said index designations whereby said vocabulary units form different completed sentences.

1,542,032. DEVICE FOR SUPPORTING ELECTRIC WALL BRACKETS. ROMULUS CAROSELLI, Detroit, Mich. Filed Dec. 1, 1924. Serial No. 753,404. 3 Claims. (Cl. 240—85.)



1. In a device of the character described, the combination of a hickey; an adjustable supporting fixture for a wall bracket comprising two telescoping L-shaped members, means for securing said members together when adjusted; an adjustable nipple screwed into the hickey and projecting through the wall of one of said L-shaped members; an electric switch adapted to be secured between the walls of the fixture by the adjustment of said nipple; an electric fixture including a wall bracket; a nut screwed to the switch extending through and overlapping the wall of said bracket, and means projecting through the nut for operating the switch.

1,542,033. THERMOSTATIC REGULATOR. EDWARD W. COMFORT, Winchester, and ALBERT W. THOMPSON, Lowell, Mass., assignors to Parks-Cramer Company, Boston, Mass., a Corporation of Massachusetts. Filed June 11, 1923. Serial No. 644,555. 15 Claims. (Cl. 236—44.)

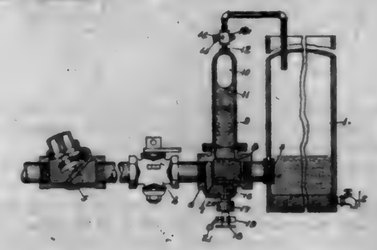


1. A thermostatic regulator comprising laterally distortional thermo-flexible members subject respectively to the dry and wet bulb temperatures of the air, supporting means for each of said members acting to prevent lateral movement of the ends thereof and an energy-controlling device differentially operable by the lateral distortional movements of said members.

1,542,034. THERMOSTATIC REGULATOR. EDWARD W. COMFORT, Winchester, and ALBERT W. THOMPSON, Lowell, Mass., assignors to Parks-Cramer Company, Boston, Mass., a Corporation of Massachusetts. Filed June 11, 1923. Serial No. 644,556. 24 Claims. (Cl. 236—44.)

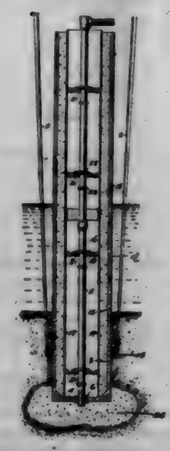
1. A thermostatic regulator comprising a base, two thermo-flexible members subject respectively to different temperature conditions, means supporting the same upon said base to utilize relative lateral movement between the middle and the ends of each of said members when subjected to variations in temperature, an energy-controlling device fixed on said base and means operable by the differential action of the lateral deflections of both of said members to actuate said energy-controlling device.

1,542,035. DISPERSION OF BITUMINOUS MATERIALS AND PROCESS OF MAKING SAME. MARK R. CONE, Baltimore, Md., assignor to The Union Trust Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 30, 1923. Serial No. 642,872. 37 Claims. (Cl. 134—1.)



1. In a process of dispersing a herein described heat liquefiable substance in a liquid ordinarily immiscible therewith, the steps which include subjecting said substance in a fluid state to tension and accelerated motion in the presence of said liquid.

1,542,036. TANK-DISCHARGE-CONTROLLING DEVICE. RUDOLPH CONRADES, Erie, Pa. Filed Apr. 9, 1919. Serial No. 288,867. 14 Claims. (Cl. 137—68.)

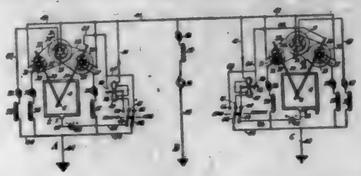


1. In a tank discharge controlling device, the combination of a valve body having a valve passage therethrough and a seat; a float chamber above the seat; a float in the chamber; and a valve directly connected to and controlled by the float and operating on the seat, said float chamber being of sufficient height to maintain when filled the float and valve above the draft of the fluid passing through the seat.

8. In a tank discharge controlling device, the combination of a valve body having a valve passage therethrough and a seat; a float chamber above the seat; a float in the chamber; and a valve controlled by the float and operating on said seat, said chamber trapping the air after a discharge operation and maintaining a liquid level operating on the float below the connected tank level whereby the float may remain on the seat and affect a closure.

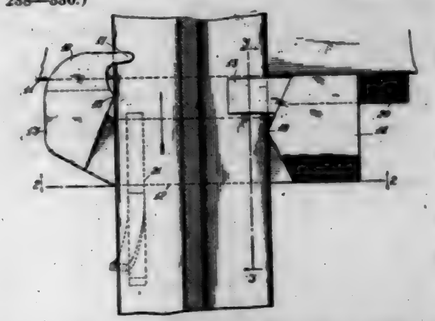
11. The combination of a conduit; means acting with the introduction of air from the conduit to said means for closing the conduit; and devices for discharging the air so introduced.

1,542,037. PROCESS OF AND APPARATUS FOR MAKING CONCRETE STRUCTURES. CARLOS E. CORTES, Martinez, Calif., assignor to Shell Company of California, a Corporation of California. Filed Mar. 8, 1922. Serial No. 542,029. 9 Claims. (Cl. 61—57.)



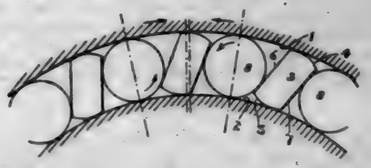
1. The process of forming a concrete pile in situ comprising forming a sectional concrete casing about a mandrel, filling the space between the casing and the mandrel with concrete, lowering the filled casing and removing the mandrel therefrom after the filled concrete has set.

1,542,038. TELAUTOGRAPH APPARATUS. ALBERT V. T. DAY, Paris, France. Continuation of application Serial No. 450,843, filed Aug. 26, 1908. This application filed Nov. 15, 1916. Serial No. 131,443. Renewed Oct. 7, 1924. 11 Claims. (Cl. 178—19.)



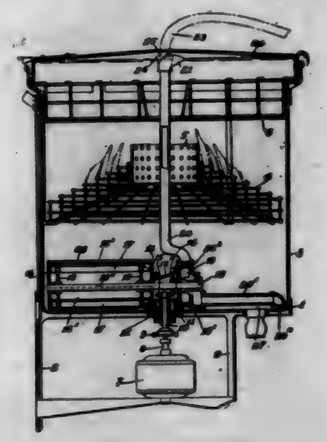
1. An electric system for transmitting chirographic or other movements, comprising a common transmitting circuit, means for superposing thereon a number of component currents characterised by periodic variations of different frequencies, means for producing in each com-

ponent current a phase variation corresponding to one respective component of the movement to be transmitted, and reproducing means controllable by the trans-



mitting circuit and responsive to the phase variation in each component current to reproduce the component of movement corresponding thereto.

1,542,039. RAIL ANCHOR. WILLIAM H. DE BUSK, Chicago, Ill., assignor to The P & M Company, Chicago, Ill., a Corporation of Illinois. Filed June 28, 1924. Serial No. 721,862. 13 Claims. (Cl. 238—330.)



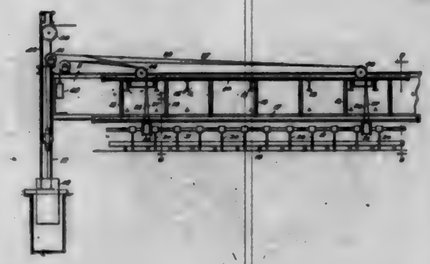
1. A rail anchor comprising a rigid body adapted to extend across beneath a rail, rigid bearings on said body adapted to engage the side faces of the flange of the rail, other rigid bearings on said body adapted to engage the top and bottom faces of the flange of the rail, and a bearing on said body adapted by engagement with the cross tie when there is a tendency for the rail to creep to swing the anchor slightly with respect to the rail for causing a tight operative shackle grip upon the side faces of the flange and also on the top and bottom faces of the flange at the side of the rail adjacent the tie engaging portion of the anchor.

1,542,040. PAWL MECHANISM. DIMITRI SENSAUD DE LAVAUD, Paris, France. Filed May 14, 1923. Serial No. 638,940. 1 Claim. (Cl. 74—16.)

In a pawl mechanism, the combination with a pair of spaced concentric surfaces, of a plurality of prisms having parallel faces and cylindrical surfaces connecting said parallel faces and in eccentric relation to each other, and rollers arranged between said prisms and engaging the flat sides thereof and holding the curved surfaces in contact with the spaced concentric surfaces.

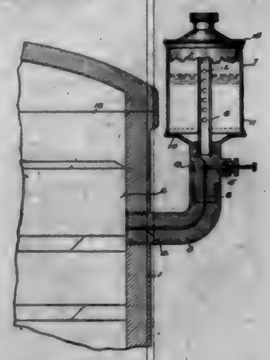
1,542,041. DISHWASHING MACHINE. CHARLES F. DOBLE, Wollaston, Mass. Filed July 10, 1922. Serial No. 574,059. 8 Claims. (Cl. 141—9.)

1. In a dish washing machine, a tank, means for supporting dishes therein, a rotary propeller and a rotary pump mounted within said tank, for simultaneous rotation about a common horizontal axis, and effective to project water upwardly past and downwardly upon the dishes, and means for simultaneously revolving said propeller and pump about a common vertical axis, whereby to project the water against the dishes in a revolving sheet.



1,542,042. RAIL ANCHOR. PATRICK H. DONOVAN, Chicago, and LAURENCE J. BERKELEY, Evanston, Ill., assignors to The P & M Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 22, 1923, Serial No. 670,020. Renewed Sept. 27, 1924. 34 Claims. (Cl. 238—329.)

1. A rail anchor comprising a jaw member for engaging one edge of a rail base and a toggle member interposed between the rail and the jaw member to effect a toggle grip on the rail during the presence of creeping pressure.



1,542,043. APPARATUS FOR HANDLING RAILS. WILLIAM T. DRAKE, Harrisburg, Pa., assignor to Bethlehem Steel Company, Bethlehem, Pa., a Corporation of Pennsylvania. Filed Nov. 21, 1922. Serial No. 602,460. 11 Claims. (Cl. 266—6.)

1. In a device of the class described, the combination with a bed for heated steel rails and a device supported above the bed for treating a heated rail with fluid under pressure, of mechanism for lifting a heated rail from

the bed to said device along an arcuate path, holding it in position to be treated, and lowering it again to the bed.

1,542,044. OIL CUP. LESLIE CARL DUTRO, Long Beach, Calif. Filed July 26, 1923. Serial No. 653,994. 2 Claims. (Cl. 184—58.)

1. An oil cup for lubricating engines, comprising a container formed with a bottom having a boss or hub, said boss or hub having a threaded socket and a restricted passage-way extending from the socket, a needle valve arranged in said hub and adapted to restrict said passage-way according to the position of the valve, a tubular member screwed into said socket extending to near the top of said container, said tubular member having a plurality of apertures arranged therein at different levels, and a member having a restricted passage-way connected with said hub and adapted to connect said cup with an engine cylinder at a point covered by the piston of the engine when starting its power stroke.

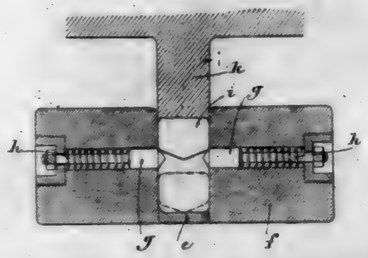
1,542,045. CALISTHENIC TOY. PETER ESSER, Clifton, N. J. Filed Oct. 11, 1921. Serial No. 507,113. 5 Claims. (Cl. 46—45.)

1. A toy comprising a wheeled dirigible platform, a single hollow standard thereon, a spindle revoluble transversely in said standard at the upper end thereof, cranks on the ends of said spindle, a manikin journalled above its center of gravity on one of said cranks whereby it is caused to move reciprocatively in a substantially vertical plane, a U shaped loop fixedly carried by said spindle diametrically opposite the crank, the bight of said loop passing under said manikin when the latter is raised and over the manikin when in its lowermost position, a figural element actuated by the other crank,

said element having weighted feet to extend nearly to said platform and maintain the element erect by gravity, a positive gear drive wholly within said standard for

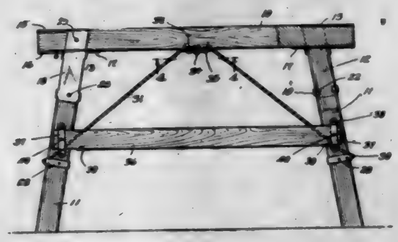
actuating said spindle, said means being actuated by the wheels of said platform upon movement thereof, and a motor for propelling said platform.

1,542,046. REBOUND CHECK. SAMUEL S. FALKINBURG, Chicago, Ill. Filed Aug. 25, 1924. Serial No. 734,046. 5 Claims. (Cl. 267—60.)



1. A rebound check comprising a strap adapted to pass beneath an axle, an extensible spring connected at its lower end to the upper part of the strap, the upper end of the spring formed into an eye, a hooked bolt passing through the eye, an angle member having a hole in one flange for receiving said bolt, the other flange of the angle member adapted to engage over a frame part above the axle, the angle member arranged between the spring eye and the hooked end of the bolt and means for drawing and holding the hooked end of the bolt and the angle member clamped against and upon a frame member as and for the purpose specified.

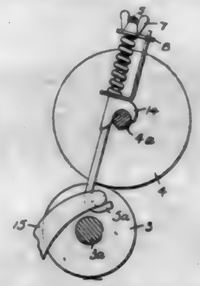
1,542,047. MANUFACTURE OF DIES, MATRICES, PUNCHES, AND LIKE OBJECTS MOLDED IN THE HOT STATE. LAURENT FERRARI, Beausoleil, France, assignor to The Societe Francaise pour l'Exploitation des Procedes Canaval-Ferrari, Beziers, Herault, France. Filed Aug. 16, 1922. Serial No. 582,173. 3 Claims. (Cl. 76—107.)



1. A process of manufacture of dies, matrices, punches, and like pressed or molded objects, consisting in preparing by fusion an alloy which is malleable at a relatively low temperature, said alloy being subsequently

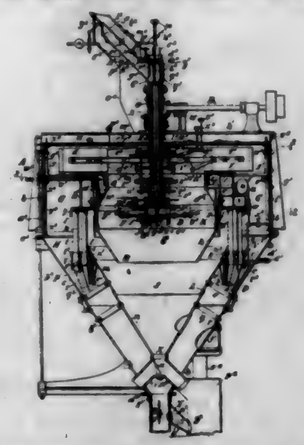
cast in molds so as to constitute a piece which is then suitably brushed, and strongly compressed in the hot state whereby it shall be rendered perfectly homogeneous and shall be given a conical form, said piece of alloy being then polished, brushed and heated in order to

render it malleable, and is then placed in the apparatus serving to press strongly together the said piece and a patrix used for making the impression, said apparatus being so disposed that the piece of alloy shall come into contact with the patrix at the time when the pressure is applied.



1,542,048. MECHANIC'S HORSE. JAMES FORESTER, New York, N. Y. Filed Aug. 6, 1923. Serial No. 655,902. 6 Claims. (Cl. 304—5.)

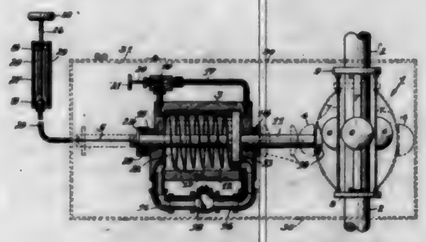
1. The herein described bracket for connecting the legs to the beam of a mechanic's horse, said bracket comprising a keeper and a shell portion integral therewith, said keeper constituting a loop for surrounding the beam and having a horizontal opening for receiving the beam and comprising top and bottom members extending parallel to each other outward beyond the side portions of the loop, said bottom member extending also inward beyond the side portions, and said shell portion extending downward from said side portions of the loop and comprising two divergent flat side panels and bracing means for stiffening them and assisting in holding the legs within the shell.



1,542,049. DEVICE FOR INDICATING SPRING PRESSURE UPON SPINNING-MACHINE ROLLERS. WILLIAM JAMES FOURACRE and ALLAN FOURACRE, Harden, near Bingley, England. Filed Aug. 29, 1924. Serial No. 734,915. 3 Claims. (Cl. 265—1.)

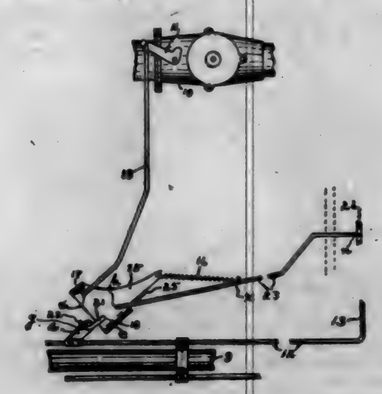
1. In a spinning machine, the combination of a shaft, a roller supported by the shaft to rotate about the axis thereof, a second roller arranged to rotate in peripheral contact with the first said roller, a relatively stationary member having a threaded stem extending across the axis of the first said roller, a slide fitted on said stem and having a lateral projection extending across and bearing against the shaft supporting the first said roller, a coiled spring surrounding the stem and tending to move the slide to maintain contact between the rollers, a nut mounted on the stem and movable

thereon to vary the strength of the spring, and means for indicating the location of the nut on the stem in any adjusted position.



1,542,050. AIR SEPARATOR. GEORGE HOLT FRASER, Brooklyn, N. Y. Filed Mar. 8, 1919, Serial No. 281,445. Renewed Sept. 19, 1924. 90 Claims. (Cl. 83—40.)

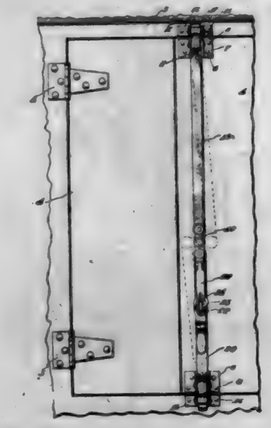
2. In combination, a casing enclosing a chamber, an upper receptacle within said casing having upper and lower openings communicating with said chamber or wall, a lower receptacle within said casing having an open upper end spaced from said upper receptacle and affording communication between said chamber and said lower opening, means for feeding material to be separated into said upper receptacle, means for causing a fluid current to flow through said upper receptacle into said chamber and return between said receptacles to said lower opening, a filter for intercepting particles floating in such current from said chamber toward said lower opening, and an adjustable valve surrounding said filter for varying the space through which return current may flow thereto.



1,542,051. CIRCUIT BREAKER FOR MOTOR VEHICLES. CHARLES L. GEDNEY, St. Paul, Minn. Filed July 27, 1921. Serial No. 487,830. 8 Claims. (Cl. 123—146.5.)

4. In a device of the class described, a cylinder adapted to be filled with a liquid, a piston in said cylinder, a conduit for liquid between the ends of said cylinder, a spring to resiliently hold said piston at one end of its stroke, a switch adapted to be actuated to stop the vehicle motor when said piston is in a predetermined position, means for holding said piston out of said pre-

determined position when the vehicle is in motion and manually operated means for drawing said piston temporarily out of said predetermined position when the vehicle is stationary.

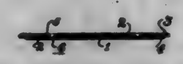


1,542,052. FOOT ACCELERATOR. ALEXIS F. GILLET, Omaha, Nebr., assignor to Jubilee Manufacturing Company, Omaha, Nebr., a Corporation. Filed Feb. 5, 1925. Serial No. 7,160. 5 Claims. (Cl. 74—39.)

1. In a foot control for the valve-lever of a carbureter throttle, the combination with a manually rotatable operating-rod having a fixed arm, of a swivel-post pivotally connected with said arm, a bell-crank pivotally connected with the swivel-post and provided with a stop-member, a throttle-rod pivotally connected at its respective ends with the bell-crank and said valve-lever, a foot-control-rod pivotally connected with the bell-crank, and a resilient element connecting the bell-crank with the foot-control-rod normally maintaining said foot-control-rod in engagement with said stop-member, said foot-control-rod being movable against the force of said resilient element into disengaged relation with the stop-member for moving said throttle-rod.

1,542,053. CAR-DOOR FASTENER. WILLIAM R. GILLIES, Chicago, Ill., assignor to Equipment Specialties Co., Chicago, Ill., a Corporation of Illinois. Filed May 12, 1923. Serial No. 638,507. 4 Claims. (Cl. 292—48.)

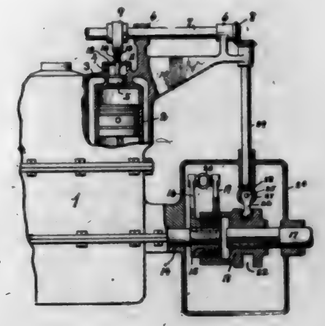
1. The combination with a car having a door hinged to swing around a vertical axis, cam hooks pivotally mounted upon the door at its upper and lower edges and adapted to move relatively to the door around axes parallel with the plane of the door, car carried keepers disposed above and below the door opening, and exterior of the car surface, said keepers comprising portions behind which said cam hooks may engage, and means for



swinging said cam hooks outwardly to engage behind said keeper portions when the door is to be fastened and for retracting said cam hooks when the door is to be unfastened.

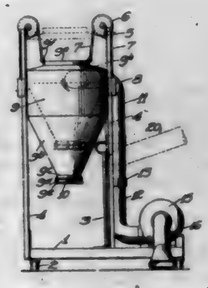
1,542,054. HYDRAULIC RECOIL CHECK. STEFAN GOSOS, Chicago, Ill. Filed May 14, 1924. Serial No. 713,183. 2 Claims. (Cl. 188—80.)

1. In combination, a closed casing adapted to be filled with liquid, a movable partition extending across said casing and dividing it into two chambers, said partition consisting of two telescoped parts and springs between said parts tending to increase the effective length of the partition and permitting the effective length to be automatically decreased to provide a passage between said chambers, and means for moving said partition.



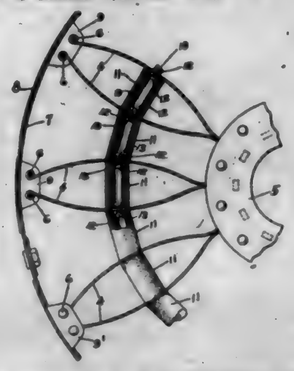
1,542,055. ANTIFRICTION INSERT FOR SPRINGS. ARTHUR V. GULLBORG, Chicago, Ill. Filed Jan. 5, 1923. Serial No. 610,766. 4 Claims. (Cl. 267—49.)

1. The combination with a leaf spring, of strips of relatively soft material positioned between the leaves thereof, relatively hard anti-friction members between



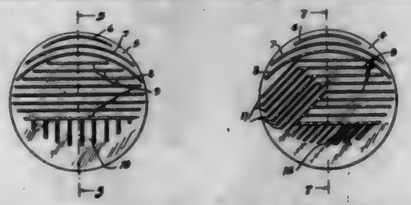
said leaves associated with said strips of material, and raised resilient portions on the strips of material for preventing the entrance of foreign material between the spring leaves.

1,542,056. ENGINE. MAURICE GUY and JOSEPH J. RUIN, Detroit, Mich. Filed May 4, 1923. Serial No. 636,572. 5 Claims. (Cl. 123—78.)



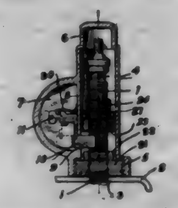
3. In an internal combustion engine, an explosion chamber, a piston to vary the volume thereof, a rotatable cam to move the piston, a crank shaft and a power transmitting device attached thereto comprising a driving and a driven part and a spring between them, said driven part being rotatable relative to the driving part in proportion to the force transmitted, and means connected to the driven part and to the cam to rotate the cam in proportion to the force transmitted and so vary the volume of the explosion chamber.

1,542,057. PORTABLE COOLING, TURNING-OVER, AND SACKING APPARATUS. OLAV HOYDEN, Point Loma, Calif. Filed Mar. 23, 1922. Serial No. 546,197. 5 Claims. (Cl. 302—17.)



1. In an apparatus of the class described, a truck, a suction nozzle secured to said truck, spaced from and obliquely with the floor, a suction producing means secured to said suction nozzle, support members extending upwardly from said truck, a cyclone hopper adjustably suspended from said support member and conductors communicating with said suction producing means at one end and tangentially with the cyclone hopper at the other.

1,542,058. VEHICLE WHEEL. ADELBERT F. KELLY, Spokane, Wash. Filed Feb. 12, 1923. Serial No. 618,550. 6 Claims. (Cl. 152—51.)

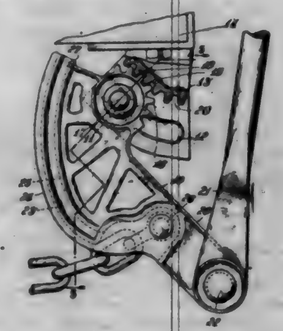


1. In a vehicle wheel, the combination of a hub, a rim, and pairs of intermediately bowed resilient spokes connecting the hub and rim, with resilient means interposed between the bowed portions of the members of each pair.

1,542,059. SYSTEM OF AUTOMOBILE LIGHTING. FRANK A. KENNEY, Denver, Colo. Filed Jan. 19, 1924. Serial No. 687,217. 6 Claims. (Cl. 240—48.4.)

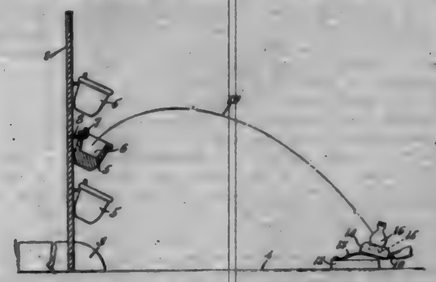
1. A system of road illumination for automobiles comprising two spaced headlights having reflectors, lamps and lenses, both of said lenses having means for deflecting upwardly inclined rays from the lamps downwardly upon the road and for permitting horizontal rays to pass through unaffected and the righthand lens having additional means for deflecting a portion of the rays downwardly and to the right.

1,542,060. TIRE LOCK. JAMES G. KING, Edgewater, Colo., assignor to J. L. Bruns, Denver, Colo. Filed Aug. 31, 1923. Serial No. 660,848. 7 Claims. (Cl. 70—122.)



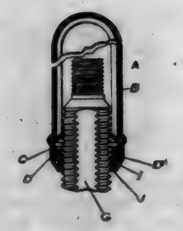
1. In combination, a threaded stem, a nut threadedly connected thereto, a tubular casing adapted to surround said stem and nut, said tubular casing and nut being freely movable relative to each other, and movable locking means carried by the tubular casing for engaging said nut when the tubular casing is moved in one direction, whereby the tubular casing will be held against longitudinal movement.

1,542,061. PASSENGER-IDENTIFICATION DEVICE. JOHN G. KING, Morristown, N. J. Filed May 22, 1923. Serial No. 640,695. 2 Claims. (Cl. 40—10.)



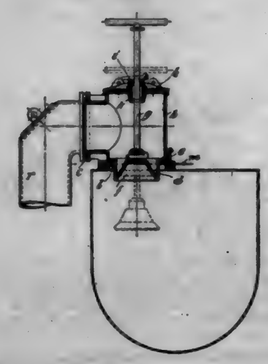
2. In a device of the kind described comprising a backing plate, a ticket with slots in opposite edges, and headed studs to hold the plate permanently on a support and to hold the ticket removably in place at the slots.

1,542,062. BRAKE-OPERATING MECHANISM. AUGUSTUS F. KLASING, Chicago, Ill., assignor to The Klasing Car Brake Company, a Corporation of Colorado. Filed June 17, 1921, Serial No. 478,258. Renewed Jan. 24, 1923. 11 Claims. (Cl. 74—110.)



1. In brake operating mechanism, the combination of members angularly disposed with respect to one another and each movable in substantially the direction of its length, a rolling element to transmit movement from one of said members to the other and a fixed member on the car upon which the aforesaid element rolls in a path inclined downwardly away from the brakes, the inclination of which is less as said element approaches the limit of its travel.

1,542,063. GAME APPARATUS. SIDNEY W. KNIGHT, London, England, assignor to Parker Brothers, Salem, Mass., a Corporation of Maine. Filed Oct. 21, 1924. Serial No. 744,933. 2 Claims. (Cl. 273—105.)

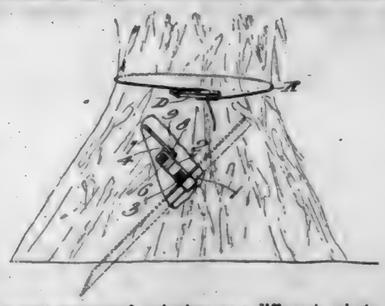


1. A game board comprising a flat board, a hook thereon, a bucket, means on said bucket for suspending engagement with said hook, slots in the lower edge of said board and correspondingly slotted supporting strips adapted for interlocking therewith and retaining the board in upright position.

1,542,064. DUST CAP. HENRY P. KRAFT, Ridgewood, N. J.; Edgar J. Phillips and Earl A. Darr executors of the will of said Henry P. Kraft, deceased. Filed Dec. 24, 1920. Serial No. 432,966. 1 Claim. (Cl. 152—12.)

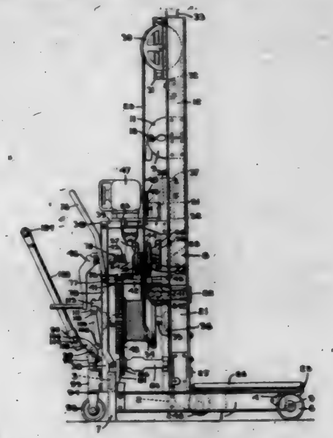
A dust cap or the like, having a clamping ring, and means for forcibly contracting the same to clamp the cap to a valve casing or the like, said clamping ring having a threaded interior, and the threads of the ring being of less depth than the threads of the valve casing.

1,542,065. COKE-OVEN GAS-MAIN VALVE. HEINRICH KOPPERS, Essen-Ruhr, Germany, assignor to The Koppers Development Corporation, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 31, 1921. Serial No. 497,362. 11 Claims. (Cl. 251—167.)



4. A stop valve for dry receivers in chamber ovens for producing gas and coke, comprising, in combination with the casing box and valve seat, a cover for the box, a valve cone pressing outwardly against its valve seat, said valve seat being adapted for removal through the casing box after the cover of said box is removed, said valve seat being removably secured in place by obliquely inclined pressure screws that are adjustable from the outside of said casing box, and a slot in the box casing adapted to receive a sheet metal slide after the valve seat is removed in order to close the opening between the receiver and the casing box.

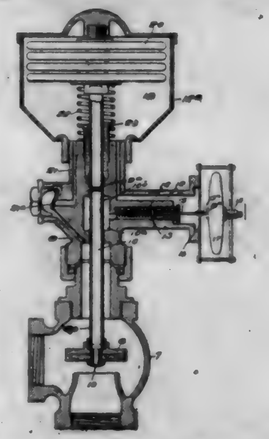
1,542,066. TEMPORARY SHOCK SUPPORT. THOMAS LEWIS, New Cumberland, Ohio. Filed Mar. 15, 1923. Serial No. 625,381. 8 Claims. (Cl. 56—131.)



1. A temporary shock support comprising a stake to be driven into the earth, a pair of arms intermediate the ends of said stake normally diverging from each

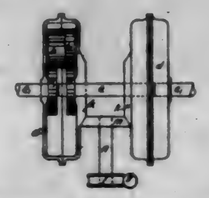
other in a plane substantially at right angles to the stake, and means pivotally and frictionally mounting the arms on the stake for inward swinging toward each

other, and downward swinging on a different axis to a position parallel with the stake, when the device is withdrawn from a completed shock.



1,542,067. HOISTING MACHINE. RALPH M. LOVEJOY, Meredith, N. H., assignor to Lewis-Shepard Company, South Boston, Mass., a Corporation of Massachusetts. Filed July 12, 1922. Serial No. 574,517. 8 Claims. (Cl. 192—15.)

1. A hoisting device comprising load supporting means, means for raising said load supporting means including co-operating rotatable clutch members, means for preventing retrograde rotation of one of said clutch members, progressively movable controlling means operable to release said clutch members from effective engagement and means for restoring said clutch members into effective engagement upon interruption of the progressive movement of said controlling means.



1,542,068. CONTROLLING DEVICE FOR HEATERS. JAMES MCALEAR and ERNEST W. RIESBECK, Chicago, Ill., assignors to The McAlear Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed June 16, 1917. Serial No. 175,392. 5 Claims. (Cl. 236—42.)

1. A controlling and regulating device for heaters comprising a valve casing, a valve therein for controlling the admission of the heating fluid to the heater, a valve stem connected with said valve, a controlling element responsive to variations in temperature directly connected with said valve stem for moving it so as to move said valve, a portion of said valve casing being provided with a passageway, a connection between said passageway and the admission side of said valve so that the heating fluid may pass up into said passageway when said valve is closed or open, a controlling valve for said passageway, a thermostatic device mounted on said casing and responsive to variations in temperature of the apartment to be heated for controlling said controlling

valve, said passageway leading to said controlling element so that when said latter valve is open the heating fluid acts upon said controlling element to cause the valve stem to be moved, a retracting device for said controlling element, said valve casing provided with a second passageway through which water of condensation returns, and a check valve for controlling said latter passageway.

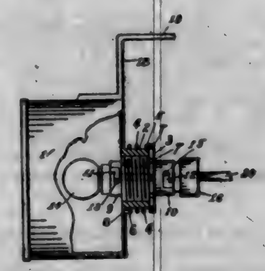
1,542,069. DIFFERENTIAL GEAR. ERIC WILLIAM MACKAY-WHITE, Edmonton, Alberta, Canada. Filed Sept. 11, 1922. Serial No. 587,597. 1 Claim. (Cl. 180—17.)

In differential gears of the planetary type, a pair of rotating members in the form of gear casings, driving and driven shafts forming bearings for said members and operatively connected therewith, driving gears mounted on said driving shafts, driven gears mounted on said driven shafts, communicating gears multiplied in numbers and journalled on bearings in said casings and connecting said driving and driven gears, outer gears secured to said casings, a cooperating gear and a worm wheel shaft bringing the latter gear into coaction with said casing outer gears, and a worm coacting with a worm wheel on said worm wheel shaft in affecting the locking or partial locking of the planetary system.

1,542,070. STEM HANDLE. HARRY E. MCKEE, Brooklyn, N. Y. Filed Mar. 17, 1924. Serial No. 699,676. 5 Claims. (Cl. 251—150.)

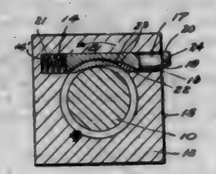
5. A valve stem having a screw threaded outer portion, a handle having a hub engageable on said threaded portion, spaced radial teeth on the end of said hub, a

clamp nut engaged on the exterior of said hub, to envelop the screw threads thereon, said nut having a wrench engaging portion and containing an axial shouldered recess through which said stem extends, a collar slid-



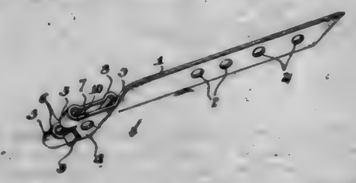
able on the end of said stem, said stem having a squared portion at the base of its screw-threads to which said collar is fitted, and teeth on one end of said collar engageable with the teeth of said hub, the opposite end of said collar abutting the shoulder in said nut.

1,542,071. SOCKET WRENCH. WILLIAM D. MCKEON, Worcester, Mass., assignor of one-half to Arthur R. Petterson, Worcester, Mass. Filed Jan. 18, 1924. Serial No. 687,106. 5 Claims. (Cl. 81—60.)



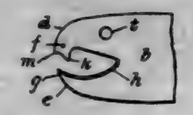
1. As an article of manufacture, a wrench comprising a handle and a head, said head being of general cylindrical form and having sockets of different sizes in the opposite ends and being provided with a stud near the center thereof projecting therefrom substantially at right angles to the axis of the head and the handle having a recess substantially at right angles to its length and another extending longitudinally in which said stud can be rotatably located for the purpose described.

1,542,072. AUTOMOBILE LAMP. PRICE H. MCNEILL, Olympia, Wash. Filed Sept. 4, 1924. Serial No. 735,872. 2 Claims. (Cl. 240—7.)



1. In an automobile lamp, an aperture formed in the body of the lamp, an externally screw threaded plug adapted to engage internal screw threads formed in the said aperture and adapted to receive an electric light bulb, a flange formed on one end of the said plug having slots formed in the periphery of said flange, a helical spring, having one end adapted to engage the slots formed in the periphery of said flange, the opposite end of said spring adapted to engage an aperture formed in the lamp body thereby securely locking said plug in position, substantially as shown and described.

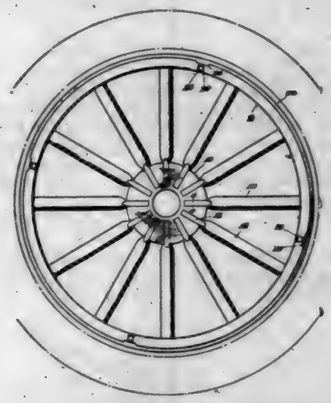
1,542,073. NUT LOCK. ROBERT W. MARTIN, Glenoma, Wash., assignor to R. W. Martin Company, Tenino, Wash., a Corporation of Washington. Filed Dec. 22, 1922. Serial No. 608,412. 1 Claim. (Cl. 151—26.)



A nut having a chamber extending thereinto from one of its peripheral faces and arranged to have the longitudinal axis of the chamber inclined with respect to the plane of the end bearing surface of the nut and substantially tangent with the internal threaded surface of the nut, said chamber having at its outer end a restricted opening to afford a stop thereat, a pin in said chamber, said pin having intermediate its length an arcuate recess, said pin being provided longitudinally thereof with a ridge which extends into said recess, said pin having an end of reduced diameter which extends from a shoulder on the pin through said restricted opening, said shoulder cooperating with said stop to limit the outward movement of the pin with respect to the chamber, and a spring provided in said chamber and acting against the pin to protrude the end of the latter from said chamber.

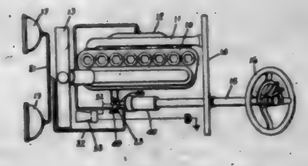
1,542,074. ELECTRIC GROUND CLAMP. WALTER S. MAYER, Philadelphia, Pa. Filed Feb. 24, 1922. Serial No. 538,898. 7 Claims. (Cl. 173—273.)

1. An electric clamp comprising an integral strip of material having a section adapted for engaging a conduit, a section adapted for engaging a conductor, a lug for spacing said sections apart and means comprising a bolt passing through both of said sections for drawing said section first named against said lug and said conductor against said section second named.



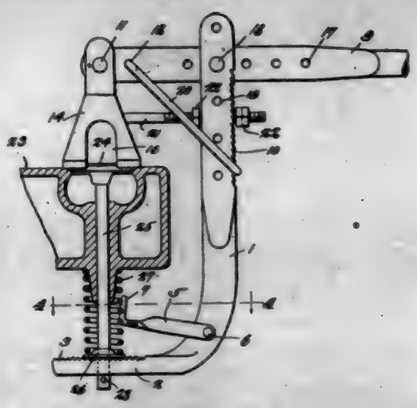
1,542,075. DEVICE FOR OPENING TINS, CANS, CARTONS, AND THE LIKE. JOHN DOUGLAS MITCHELL, Stocksfield, England. Filed Sept. 18, 1921. Serial No. 500,327. 2 Claims. (Cl. 30—3.)

1. A can opener comprising a leverage member provided with two oppositely disposed coacting jaws, forming an incising jaw and a hooking jaw, said hooking jaw being provided at its forepart with a hooking member comprising a laminal tooth or lug formed to lie approximately over the forepart of said incising jaw and sub-



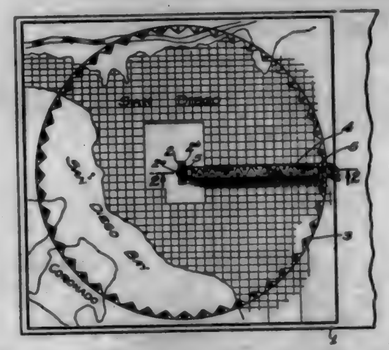
stantially in co-planar alignment therewith, the inner wall of the said tooth or lug being formed to droop downwards abruptly from the palate portion of the said hooking jaw, the said tooth or lug being thus formed as a distinct drooping offset from the interior roof portion of the palate of the hooking jaw, the organization being such that the hooking member will first securely engage the bead, fold, corner or similar part of a can in a hook like manner during the working can incising stroke of the incising jaw and subsequently act as a fulcrum will towards the forepart of the said incising jaw to admit of the effective use of the latter as an outwardly cutting can cutter.

1,542,076. VEHICLE WHEEL. FREDERICK L. MINNICK and HIGHLAND Z. DEAN, Ellensburg, Wash., assignors to Dean-Minnick Steel Wheel Company, Seattle, Wash., a Corporation. Filed May 6, 1924. Serial No. 711,427. 4 Claims. (Cl. 301—80.)



4. In a metallic vehicle wheel, a hub having radial slots therein opening through the side faces of the hub, spokes provided at their inner ends with terminals inserted in said slots, the terminals being normally wider than the hub to project it at the side faces thereof, and locking ribs swedged from the projecting portions of said terminals to overhang the side faces of the hub.

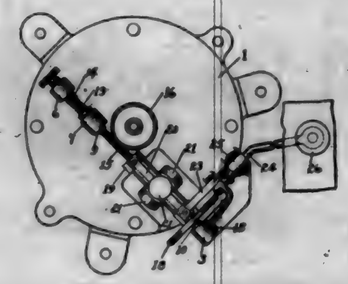
1,542,077. HEADLIGHT AND SIGNAL CONTROL FOR VEHICLES. JOHN C. MOORE, Connersville, Ind. Filed July 2, 1921. Serial No. 482,052. 4 Claims. (Cl. 177—311.)



1. The combination with a vehicle having a steering post, and movable means for projecting a beam of light on the ground at different distances from the vehicle, of a single means for independently operating said signal and moving said movable means including a rod and means for slidably and rotatably mounting said rod on said steering post.

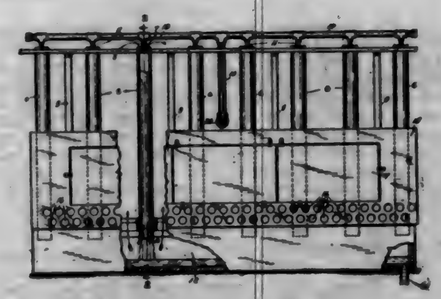
1,542,078. VALVE-SPRING COMPRESSOR. MAYWOOD C. MORGAN, Portsmouth, Ohio. Filed Apr. 28, 1922. Serial No. 557,163. 6 Claims. (Cl. 29—86.3.)

1. A device of the class described comprising a main member provided at one end with a transverse foot and having a longitudinal rack; a head cooperating with the foot to compress a valve-spring; a brace carried by the head and receiving the main member slidably; a lever; pivot elements connecting the lever with the main member and with the head; and a latch mounted pivotally on the lever and coacting with the rack to hold a valve-spring compressed.



1,542,079. LOCATION-INDICATING MEANS FOR MAPS. ANN MULLIGAN, San Diego, Calif. Filed Sept. 15, 1924. Serial No. 737,775. 11 Claims. (Cl. 35—6.)

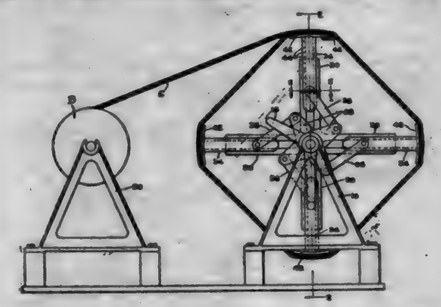
1. In a means of the class described, a map structure provided with a perforation, and a flat shiftable indicator provided with graduated characters rotatably mounted about said perforation at its one end and adapted to be shifted through said perforation.



1,542,080. SPEED GOVERNOR. THOMAS J. MURPHY, Astoria, N. Y., assignor of one-half to James P. B. Duffy, Rochester, N. Y. Filed Apr. 3, 1924. Serial No. 704,006. 2 Claims. (Cl. 188—187.)

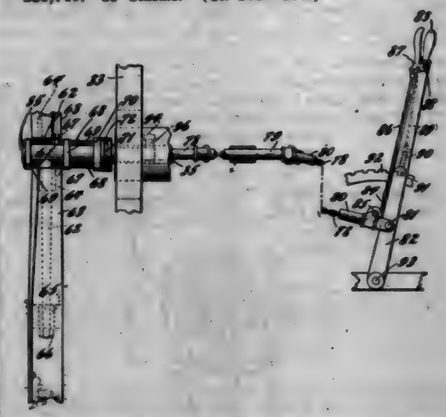
1. In a speed governor, the combination of a part to be governed, a rotary element, gear means connecting said part and element to rotate the latter, means supporting said element for rotation and also for axial movement produced by variation in the force transmitted by said gear means, adjustable resilient means resisting said axial movement of said element, centrifugal speed means

including a part carried by said element and actuated by said centrifugal means and also by said axial movement of said element for maintaining the speed of the latter constant.



1,542,081. REFRIGERATING DEVICE. ROBERT BRUCE MUSSER, Seattle, Wash. Filed June 30, 1921. Serial No. 481,456. 3 Claims. (Cl. 261—116.)

1. A refrigerating device embodying a compartment; one or more vertically disposed cylinders therein, extending from near the ceiling of said compartment to near the floor thereof; a nozzle axially disposed in the upper end portion of said cylinder; a trough disposed beneath the lower end portion of said cylinder; a pipe connecting said nozzle with a source of refrigerating fluid; a second pipe connecting said trough with said source of refrigerating fluid; and means whereby said fluid may be jetted from said nozzle against the walls of said cylinder, whereby the air from the upper portion of said compartment may be forced downwardly, by means of said jet action and by reason of the weight of the cooled air through said cylinder and ejected from the lower end portion of said cylinder.

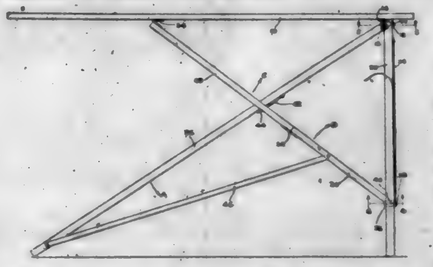


1,542,082. CORD WINDING AND CUTTING DEVICE. CHRISTIAN V. NELSON, Minneapolis, Minn., assignor to Washburn Crosby Company, Minneapolis, Minn., a Corporation. Filed Feb. 2, 1926. Serial No. 6,272. 3 Claims. (Cl. 242—113.)

1. A cord winding and cutting device comprising a rotatable shaft, a plurality of bars arranged in parallel spaced relation around said shaft, means connecting the ends of said bars with said shaft, a clip attached to one of said bars for securing the end of cord which is to be wound, and a knife guide secured to said clip bearing bar in parallel spaced relation to a longitudinal edge

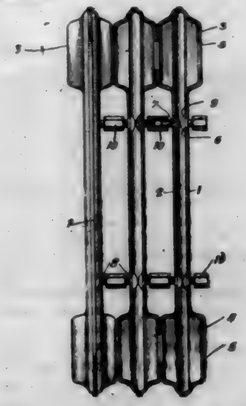
thereof whereby the wound cord may be cut into pieces of uniform length by drawing a knife between said guide and the adjacent edge of said bar.

1,542,083. PROPELLER APPARATUS. MOSES C. NIXON, Chicago, Ill. Filed Apr. 12, 1919. Serial No. 289,740. 39 Claims. (Cl. 170—163.)



18. In a propeller apparatus, the combination with a revoluble shaft, propeller blades mounted on said shaft and arranged to be rotatably adjusted about an axis at right angles to the axis of said shaft, the base of said blades each being formed adjacent one side with an arcuate series of holes arranged concentric of its axis of adjustment and provided adjacent the opposite side with a turning pin, a locking member for each blade carried by said shaft and arranged to cooperate with any one of said holes, a frame carried by and mounted to slide axially of said shaft, said frame including bars provided with a plurality of cam surfaces adapted to cooperate with said locking member to intermittently engage and disengage them and also bars provided with a plurality of contact faces arranged to intermittently cooperate with said turning pins during disengagement of said locking members, whereby said blades may be locked in different positions of adjustment and shifted from one position to another, and means for shifting said frame.

25. In a propeller apparatus, the combination with a revoluble shaft, propeller blades mounted on said shaft and arranged to be rotatably adjusted about an axis at right angles to the axis of the revoluble shaft, means adapted to turn said blades about their axis during rotation of said shaft, and releasable means carried by said shaft and resiliently actuated to lock said blades in adjusted position whereby said blades may be unyieldingly



locked in extremes and intermediate positions, said locking means being operatable during rotation of said shaft, and means by which the locking means may be released during rotation of the revoluble shaft.

1,542,084. IRONING TABLE. KEMUEL B. OLANDER, Minneapolis, Minn. Filed Sept. 28, 1923. Serial No. 665,440. 3 Claims. (Cl. 68—10.)

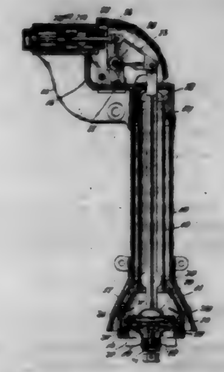
1. An ironing table comprising an ironing board, a pair of legs pivotally attached to the front of said board, a rearwardly extending support pivotally attached to the front of said board and occupying a downwardly inclined position when the table is set up for use, toggle arms hinged together and having the upper arm hinged to an intermediate portion of said board and the lower arm hinged to said legs near their lower ends, a stop carried by said support and adapted to engage the lower side of said toggle arms, and a connecting bar pivoted at one end to the rear portion of said support and pivoted at the other end to an intermediate portion of said lower arm.

1,542,085. RADIATOR. ANTON PERSSON, Charleroi, Pa. Filed May 22, 1924. Serial No. 715,066. 1 Claim. (Cl. 257—140.)

In a radiator, a plurality of sections each comprising halves welded together along their margins, each half being formed with upper and lower square perforations, adjusting screws formed with square shoulders disposed in the said square perforations, and a turnbuckle connecting the reversely threaded ends of said screws.

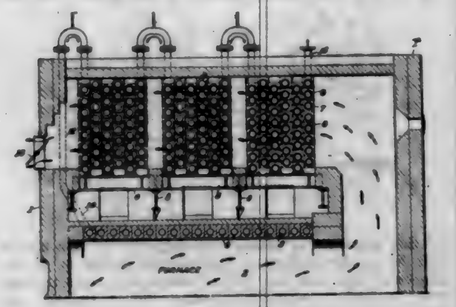
1,542,086. BEDSPRING STRETCHER. GEORGE H. PHILP, Los Angeles, Calif. Filed Nov. 5, 1923. Serial No. 672,840. 2 Claims. (Cl. 140—110.)

1. In a bed spring stretcher, a pair of parallel bars, means for clamping said bars together with a bed spring interposed therebetween, a series of internally threaded members on one of said bars adapted to be adjusted to various positions longitudinally of the bar, threaded



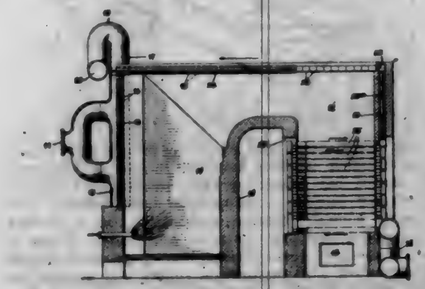
shafts engaging said members, and means for supporting said shafts against longitudinal movement on a spring frame.

1,542,087. RING SPRING. PHILIP PROEL, New Dorp, N. Y. Filed Oct. 22, 1924. Serial No. 745,051. 3 Claims. (Cl. 63—17.)



3. The combination with a ring, of a filler arranged to be secured therein at a portion thereof, said portion having a surface formed to lie in close contiguity to the inner surface of said ring, an inwardly extending cup being formed in said portion having its opening in the surface of contact between the filler and the ring, and solder within said cup to secure the filler to the ring, said solder being confined within said cup by the ring acting as a closure therefor at said surface of contact to prevent spreading of the solder and injury to the ring while the filler is being attached.

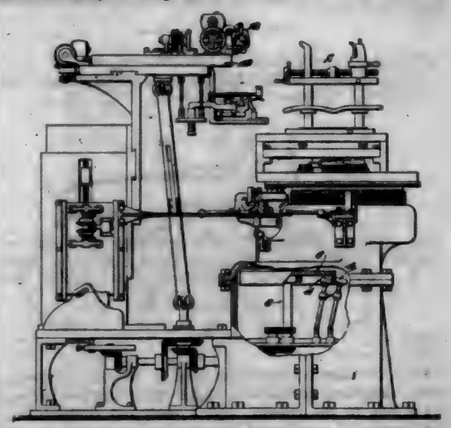
1,542,088. THERMOSTATIC CELL. EDWARD C. POST, Chicago, Ill., assignor to Vapor Car Heating Company, Inc., Chicago, Ill., a Corporation of Illinois. Filed May 26, 1924. Serial No. 716,006. 5 Claims. (Cl. 207—9.)



1. In a thermostatic device, an expansible metal cell to contain a thermostatic fluid, having a flexible side wall formed with a single concavity to provide for expansion under internal pressure having a central indentation to prevent snap action.

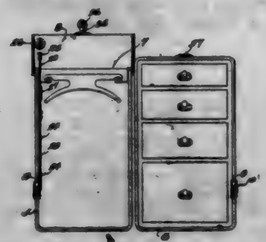
1,542,089. OIL HEATER. JOHN PRIMROSE, Dongan Hills, N. Y., assignor to Power Specialty Company, New York, N. Y., a Corporation of New York. Filed May 4, 1920. Serial No. 378,989. 21 Claims. (Cl. 196—110.)

1. In an oil heater the combination with a furnace chamber, of a roof therefor comprising oil conducting pipes, blocks of refractory non-metallic material surrounding the said pipes to control the absorption of heat by the oil and prevent the dissociation of oil therein, and banks of oil conducting pipes having heating surfaces thereon through which the oil flows after passing through the first mentioned pipes, said last mentioned banks being disposed in the path of the hot gases from the furnace chamber.



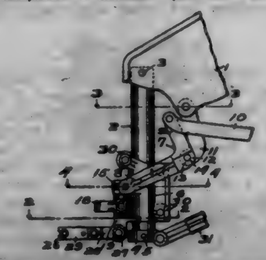
1,542,090. OIL HEATER. JOHN PRIMROSE, Dongan Hills, N. Y., assignor to Power Specialty Company, New York, N. Y., a Corporation of New York. Filed Mar. 19, 1923. Serial No. 626,239. 8 Claims. (Cl. 196—110.)

8. An oil heater comprising a plurality of horizontally extending vertically superimposed tubes disposed to define one wall of a furnace chamber, a second bank of horizontally extending tubes disposed side by side and defining the roof of the furnace chamber, a third bank of tubes disposed in the path of the hot gases and cast iron casings upon a portion of said roof tubes and said tubes in the path of the hot gases for the purpose described.



1,542,091. AUTOMATIC SHOE MACHINE. EDWIN J. PRINDLE, East Orange, N. J., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed July 31, 1916, Serial No. 112,291. Divided and this application filed Oct. 17, 1919. Serial No. 331,293. 18 Claims. (Cl. 12—17.)

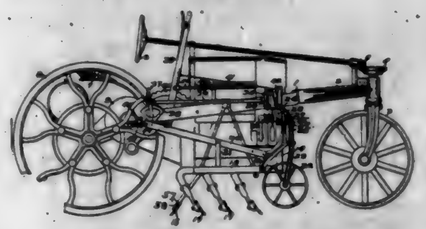
1. A shoe machine, having, in combination, means for supporting a shoe, a mechanically actuated tool for operating progressively upon portions of the shoe, mechanism for relatively feeding the shoe to the tool, and means



responsive to variations in the relative speeds of the feed and tool for synchronizing the speed of the tool actuating means with the feeding mechanism.

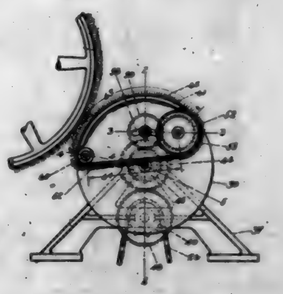
1,542,092. TRUNK LOCK. MARTIN RASMUSSEN, Racine, Wis., assignor to Hartmann Trunk Company, Racine, Wis., a Corporation of Wisconsin. Filed July 7, 1923. Serial No. 650,187. 5 Claims. (Cl. 292—99.)

1. In a trunk lock, a keeper member; an oscillatable locking member provided with a recess and a toe adapted to engage said keeper member and draw it into said recess; means movable in one direction by a trunk section for oscillating said locking member; and additional means for moving said last named means in the other direction.



1,542,093. ADJUSTABLE TRACTOR HITCH. SAMUEL W. RAYMOND, Adrian, Mich. Filed May 18, 1922. Serial No. 561,833. 5 Claims. (Cl. 280—33.44.)

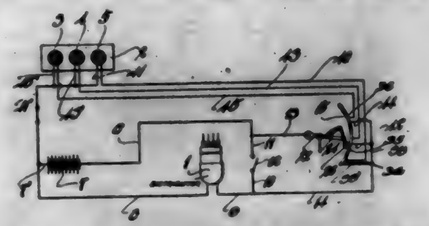
1. In a tractor hitch, a vertical member connected to the tractor, a hitch block slidably located on the member and rotatable relative thereto, a bifurcated lever



having arms located on opposite sides of the hitch block and connected to the hitch block for raising and lowering the hitch block.

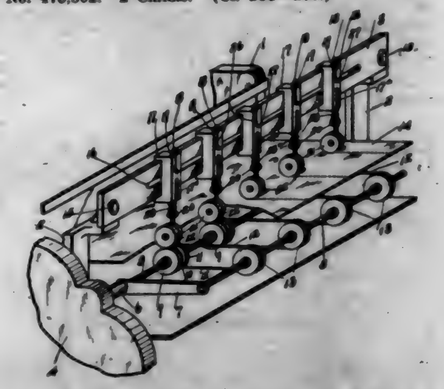
1,542,094. TRACTOR CULTIVATOR. SAMUEL W. RAYMOND, Adrian, Mich. Filed Oct. 2, 1922. Serial No. 591,686. 6 Claims. (Cl. 97—47.)

1. In a tractor cultivator, a pair of side harnesses each comprising a frame, a toggle joint interconnecting the frame to the tractor, and a push rod connected to the tractor at a point at the rear of the frame and to the forward end of the frame for applying pressure at a point near the forward end of the frame for moving the frame with the tractor, means for limiting the movement of the toggle for determining the lateral position of the frame relative to the center line of the tractor.



1,542,095. INSULATING MACHINE. JOHN J. REINHOLD, Marietta, Pa. Filed Nov. 25, 1921. Serial No. 517,726. 4 Claims. (Cl. 117—40.)

1. The combination with a frame structure rotatably mounted, of an endless belt having teeth and carried by said frame structure, said endless belt being so arranged that a portion only thereof forms a true arc concentric with the center of rotation of said frame structure, and propelling means arranged to progressively move said endless belt when said frame structure is rotated.



1,542,096. THERMOELECTRIC INDICATOR. ROYAL N. RIBLET, Spokane, Wash., assignor of one-half to Weston J. Hobbs, Spokane, Wash. Filed Apr. 27, 1920. Serial No. 376,993. 1 Claim. (Cl. 177—351.)

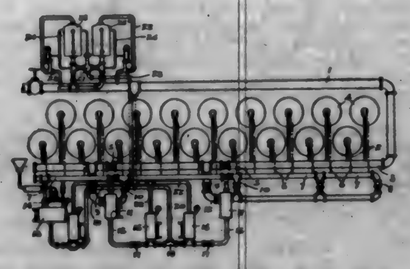
A combined temperature signal system and ignition cut-off for internal combustion engines comprising in combination, a plurality of distinctive electric signals, separate circuits for said signals, a control device for said circuits comprising a plurality of insulated overlapping conducting segments and an insulating segment at the termination of the conducting segments, each conducting segment being included in one of said circuits respectively, a cooperating contact device engageable progressively with said conducting segments and included in each said circuits, means exposed to the engine temperature for controlling the position of the contact device and thereby selectively energize said signals, an ignition circuit for the engine, said ignition circuit including therein the contact device in series and the con-

ducting segments in parallel whereby the ignition circuit will be maintained when the contact device is in engagement with any one of the conducting segments and will be broken when the contact device engages the insulating segment.

1,542,097. PERFORATING ATTACHMENT. ALBERT E. RIPLEY, Ray City, Mich. Filed June 6, 1921. Serial No. 475,302. 2 Claims. (Cl. 164—100.)

1. The combination with a printing press having a pair of spaced apart brackets mounted thereon, a longitudinally slotted bar connecting said brackets and detachably secured thereto, a plurality of heads slidably and adjustably mounted thereon, perforating means carried thereby and comprising relatively wide rollers having a plurality of small teeth formed thereon grooved, driven rollers beneath said perforating rollers and adapted to impart motion thereto and in which the said perforating teeth travel, and means on the heads for maintaining a pressure on the perforating rollers for positively moving the stock over the grooved rollers.

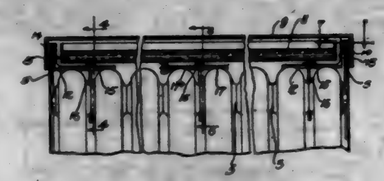
1,542,098. COMPOSITE PACKING MATERIAL. CHARLES T. RIPLEY, Chicago, Ill. Filed June 19, 1922. Serial No. 569,433. 4 Claims. (Cl. 308—243.)



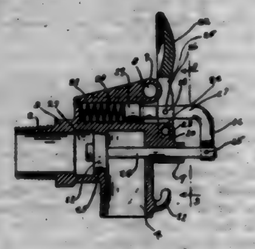
1. Journal box packing material comprising a mass of fibrous material capable of absorbing oil and a plurality of coiled springs embedded therein, both extremities of each spring being bent back.

1,542,099. FISHING TOOL. THERON M. ROGERS, Fellows, Calif. Filed May 17, 1924. Serial No. 713,999. 7 Claims. (Cl. 294—114.)

1. A fishing tool comprising a bell open at its lower end, and a helical track in the bell extending to the lower end thereof.



1,542,100. SYSTEM OF STEAM DISTRIBUTION AND CONDENSATION CONTROL. WILLIAM HUGH ROSS, Toronto, Ontario, Canada. Filed Sept. 14, 1922. Serial No. 588,274. 5 Claims. (Cl. 34—43.)

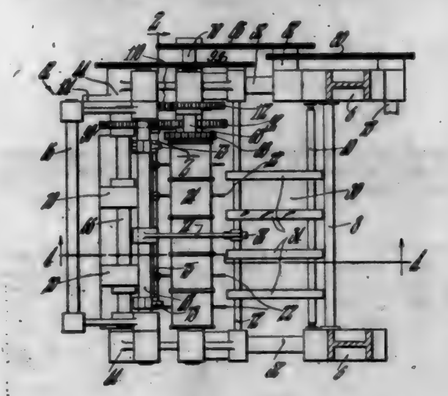


4. A system of steam distribution and condensation control, comprising the combination with a steam generator, of a plurality of batteries of individual heating units, a steam line leading directly from a steam generator to the first of said batteries, a return steam pipe forming an unobstructed collector of the low pressure steam and condensate from said battery, a separator adapted to remove the condensate from the exhaust steam, means for directing the dry steam from the separator to the secondary battery, an equalizer tank adapted to receive the condensate from the separator, means for elevating the condensate to a point above the generator, and means for discharging the elevated condensate into the generator.

1,542,101. TOP INCLOSURE FOR RADIATORS. PAUL E. SCHLEICHER, Chicago, Ill. Filed June 28, 1924. Serial No. 722,978. 4 Claims. (Cl. 237—79.)

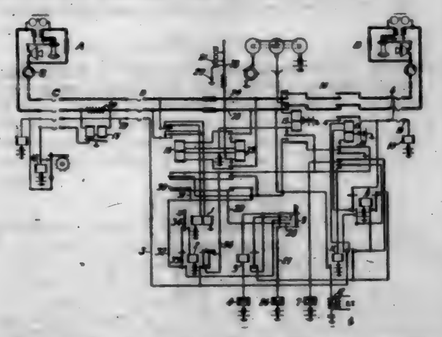
2. In a radiator cover, a back plate, brackets secured to the upper side edges of the back plate, each bracket having a series of holes, a support having prongs adjustably engaging the holes in each bracket, means for clamping said supports upon a radiator, a humidor supported upon said supports, means for holding said brackets in spaced relation and a cover fitting over the tops of said brackets and back plate.

1,542,102. VALVE. FRIEDRICH SETTE, Iron Ridge, Wis., assignor of one-fourth to Frances Sette and one-fourth to Madia Sette, both of Milwaukee, Wis. Filed July 31, 1922. Serial No. 578,331. 3 Claims. (Cl. 251—134.)



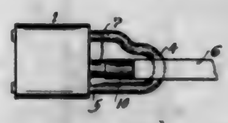
1. In a valve including a unitary body portion having a passageway therethrough, a valve seat in said passageway, and a valve adapted to co-operate with said valve seat, the combination with a valve stem on said valve and projecting outwardly of said body portion, of a rod having a portion thereof substantially parallel to said valve stem and having one end secured thereto, a plunger on the other end of said rod, said body portion being provided with a cylindrical aperture closed at one and surrounding said plunger, a spring interposed between the closed end of said aperture and said plunger, and a lever pivoted intermediate its ends to an intermediate portion of said rod and at one end to said body portion.

1,542,103. SKATE WHEEL. ALVIN H. SHOEMAKER, Seattle, Wash. Filed Apr. 25, 1922. Serial No. 556,414. 4 Claims. (Cl. 208—181.)



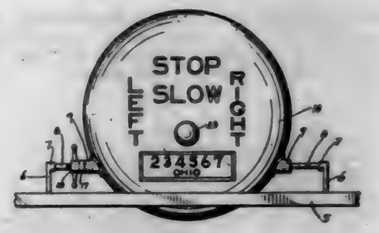
1. A skate wheel embodying a bearing member, two discs of elastic material disposed near the respective ends of said bearing member and forming treads, spacing means of less diameter than said discs interposed between said discs and means on the ends of said bearing member for compressing said discs against said spacing means.

1,542,104. STRIP FEEDING, CUTTING, AND DELIVERING MECHANISM. ELMER LOVELL SMITH, Springfield, Mass., assignor to Package Machinery Company, Springfield, Mass., a Corporation of Massachusetts. Filed Nov. 15, 1921. Serial No. 515,264. 10 Claims. (Cl. 164—68.)



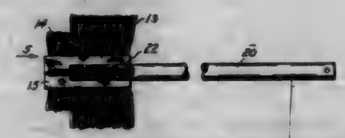
1. In a mechanism of the class described, a drive shaft, a knife roll and a bed roll arranged to receive a strip of paper therebetween, the bed roll being provided with a knife receiving slot, a knife carried by the knife roll disposed tangentially thereof for severing pieces from the strip, mechanism for advancing a strip to the said rolls, means connecting the drive shaft and advancing means for driving the latter continuously, means connecting the knife roll and bed roll for driving the same in unison, elliptical gears connecting the knife roll and drive shaft that are arranged for unlimited adjustment angularly of their respective shafts whereby the knife and bed roll may be driven at a variable speed with respect to the advancing mechanism.

1,542,105. MEASURED-SERVICE AUTOMATIC TELEPHONE SYSTEM. PERCY C. SMITH, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 20, 1922. Serial No. 569,700. 6 Claims. (Cl. 179—9.)



1. In a telephone system, calling and called telephone lines, an automatic switch for interconnecting the same wherein said called lines terminate in groups, meters for said calling lines, a relay included in said switch responsive to the removal of the receiver of the called line for supplying current to the calling line of the proper character for operating the calling line meter, another relay, means for operating the same when any one of certain predetermined groups is selected by said automatic switch whereby said first mentioned relay is prevented from responding to the removal of the receiver of the called line, and means for supplying talking current to the calling line.

1,542,106. PADLOCK. FORREST H. SPENCER, Spirit Lake, Idaho. Filed June 9, 1924. Serial No. 718,781. 4 Claims. (Cl. 70—108.)

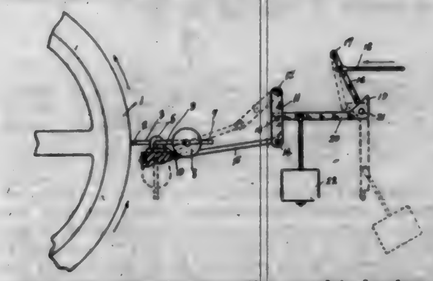


1. The combination with a lock and its hasp, of a tensioning device comprising a cup integral with the lock, a reintively movable member carried by the cup, and a spring within the cup urging said member to bear against a lock support.

1,542,107. COMBINATION TIRE CARRIER AND BUMPER. JOHN G. SUTHERLAND, Oakwood, Ohio. Filed Aug. 3, 1923. Serial No. 655,441. 4 Claims. (Cl. 293—55.)

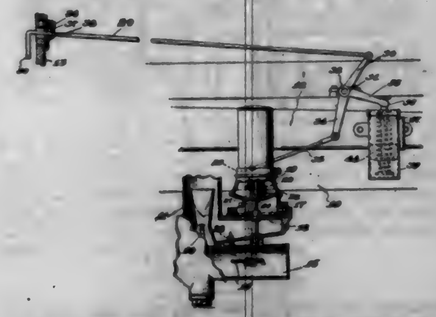
1. In a device of the type described, the combination with a bumper frame attachable to an automobile, of a tire carrier swiveled within said frame for a turning movement from a vertical to a horizontal position.

1,542,108. BOTTLE CLEANER. GEORGE E. TAYLOR, Auburn, Mass. Filed May 23, 1923. Serial No. 640,962. 3 Claims. (Cl. 15—211.)



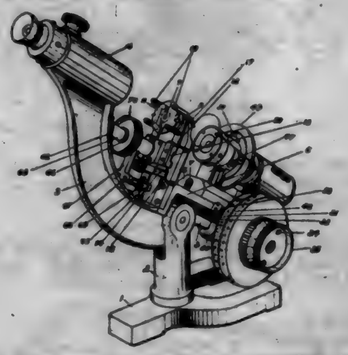
1. As an article of manufacture, a mop for cleaning bottles and the like comprising a handle having a central longitudinal slit at the end, two layers of woven textile material located inside the slit and projecting beyond the end of the handle, and two series of strands of flexible fibrous material held between the two layers of fabric at their centers and projecting therefrom at the sides, one series of strands being located in the part of the two layers of textile material projecting beyond the end of the handle and constituting an end mop flexibly supported by the projecting part of the flexible material.

1,542,109. PLATFORM SCALE. WILLIAM H. TAYLOR, St. Johnsbury, Vt., assignor to E. and T. Fairbanks and Company, St. Johnsbury, Vt., a Corporation of Vermont. Filed June 12, 1924. Serial No. 719,469. 4 Claims. (Cl. 265—71.)



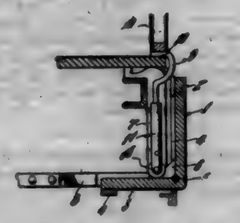
1. A pivot link for scales having an opening and a passageway leading thereto, lugs adjacent said passageway, a locking plate having an offset flange for engagement with a face of said link, and projections on said locking plate for bending over said lugs to hold the plate in locking position.

1,542,110. TRIP DEVICE FOR PREVENTING BREAKAGE OF TRANSMISSION ROPES. SAMUEL TEMBEY, Nanaimo, British Columbia, Canada. Filed Oct. 30, 1924. Serial No. 746,907. 4 Claims. (Cl. 192—120.)



1. A trip device for preventing complete breakage of transmission ropes after partial breakage comprising, a weighted lever upturned and pivoted at one end, withdrawable means maintaining said lever normally horizontal, and means adapted to be actuated by an outflying rope strand to withdrw the withdrawable means clear of the lever.

1,542,111. INTERNAL-COMBUSTION ENGINE. MILTON TIBBETTS, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 7, 1922. Serial No. 527,535. 17 Claims. (Cl. 123—124.)

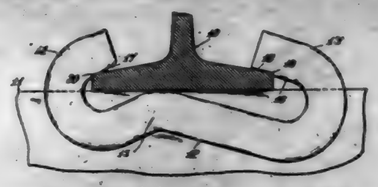


1. In an internal combustion engine, the combination of a mixture device therefor, means for varying the mixture, a manually operated device to move said varying means from normal position, automatic means for returning said varying means to normal position upon manual release thereof, and means governing the action of said automatic means.

1,542,112. LENS-TESTING INSTRUMENT. EDGAR D. TILLYER, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Apr. 10, 1922. Serial No. 551,081. 24 Claims. (Cl. 88—56.)

1. An instrument of the character described, including a standard lens, spaced independent targets disposed in different meridians and movable in and longitudinally of the optical axis of said standard lens, and a cylindrical lens attached to one of the targets for throwing a constant amount of astigmatism within the lens system of said instrument, to compensate for the minimum separation of the targets.

1,542,113. DISAPPEARING STEP. CARL H. VOGEL, Buffalo, N. Y. Filed Apr. 14, 1924. Serial No. 706,471. 2 Claims. (Cl. 280—166.)



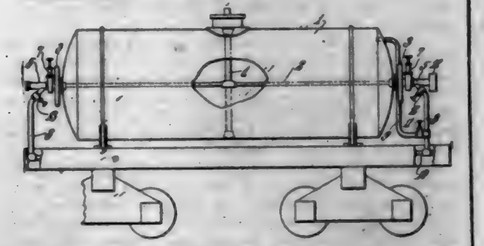
1. In a vehicle, a step member of angle shape in cross section and composed of a step part and a riser part, means for pivotally supporting the step member in the vehicle body under the door thereof and a rod having its upper end connected with the door and a lower part engaging the step member for tilting the member on its pivot when the door is opened or shut.

2. In a vehicle, a step member of angle shape in cross section and composed of a step part and a riser part, means for pivotally supporting the step member in the vehicle body under the door thereof, a member on the door engaging the step member for moving the same, such means comprising a rod connected with the bottom of the door and having a spring pressed telescopic part on its lower end and a roller on said part for engaging the step member.

1,542,114. RAIL ANCHOR. HAROLD G. WARE, Park Ridge, Ill., assignor to The P & M Company, Chicago, Ill., a Corporation of Illinois. Original application filed Aug. 2, 1923, Serial No. 655,240. Divided and this application filed Apr. 7, 1924. Serial No. 704,676. 10 Claims. (Cl. 238—330.)

1. A rail anchor adapted to be driven transversely of a rail to its applied position comprising a rail base embracing yoke provided with jaws having portions for

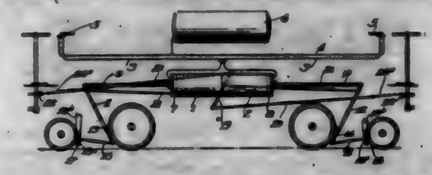
engaging the upper surfaces of a rail base adjacent opposite edges thereof and with abutments adapted to bear against the vertical edges of the said base; the body of



the yoke being bent to provide a seat adapted to bear against the under-surface of the rail base at a point nearer one of said jaws than the other.

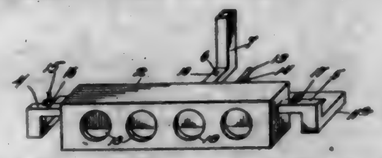
1,542,115. FOOD-STORING DISHES. ADOLPH O. WEIS, Cleveland, Ohio. Filed Oct. 25, 1924. Serial No. 745,836. 3 Claims. (Cl. 65—15.)

1. The combination with an elongated dish, of a multiple number of smaller dishes upon which said larger dish is superimposed, said larger dish being provided with depending transverse and longitudinal flanges upon its bottom wall, and with a marginal shoulder, said shoulder being engageable with the upper edges of said smaller dishes, said longitudinal flanges being cut away to permit the bottom of said larger dish to overlap the adjacent upper edges of said smaller dishes.



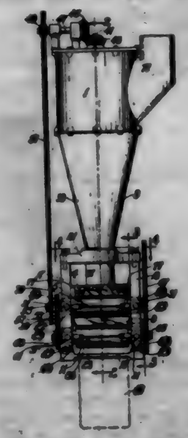
1,542,116. TANK CAR. RUDOLPH WELCKER, Springfield, Mass. Filed May 9, 1923. Serial No. 637,910. 4 Claims. (Cl. 105—231.)

1. In a railroad train a plurality of tank cars, each having in combination a discharge pipe connected to the discharge pipes of the other cars, means to apply air pressure to the top of the liquid in each tank and means to apply air pressure directly to the discharging body of liquid in said discharge pipe whereby the liquid in one car may be discharged through the discharge pipe of an adjacent car as well as through its own discharge pipe.



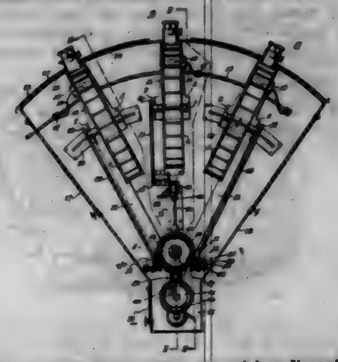
1,542,117. AIR-BRAKE-CONTROL APPARATUS. FRANK WEST, East San Diego, Calif. Filed Oct. 21, 1920. Serial No. 418,405. 4 Claims. (Cl. 303—6.)

1. An air brake control apparatus for vehicles, including a compressed air tank, a one piece compound cylinder, air conductors connecting said tank with the outer ends of the separate compartments in said cylinder, means for controlling the flow of air from said compressed air tank to said cylinder, a piston reciprocably mounted in each compartment of said cylinder adapted to be forced inwardly by the compressed air, a tension



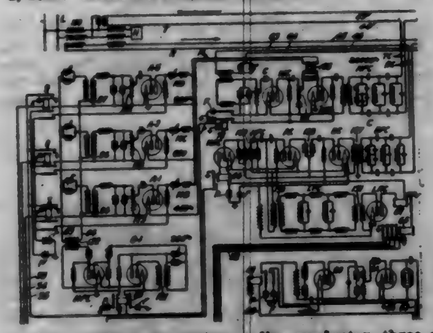
rod connected to each of said pistons and extending from the outer ends of said cylinder, a brake lever with one end connected to each of said tension rods connected with the other end of each of said levers and with the front and rear ends of said vehicle, and brake shoes connected with each of said levers and links.

1,542,118. WINDOW-GLASS APPARATUS. WILLIAM WESTBURY, Caney, Kans. Filed Feb. 19, 1923. Serial No. 619,927. 1 Claim. (Cl. 49—53.)



In glass making apparatus, a kiln having a plurality of openings, conduits communicating at one end with the kiln at opposite points thereof, a flue connected to the opposite ends of the conduits and open at one end, a stack connected to the other end of the flue, a valve for establishing communication between the rear end of either of the conduits and the open end of the flue and between the rear end of the other conduit and the stack, means for discharging a combustible mixture into the kiln from the conduit in communication with the open end of the flue, to sustain combustion in the kiln, and means for facing pots in the kiln through the openings of the latter.

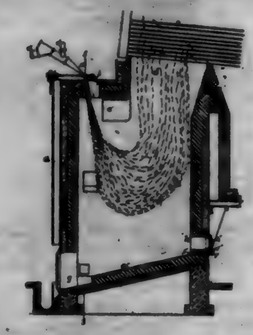
1,542,119. METHOD OF AND APPARATUS FOR COMPRESSING AMORPHOUS CARBON. GEORGE H. WEBSTER, Chicago, Ill. Filed Nov. 30, 1923. Serial No. 677,904. 10 Claims. (Cl. 18—8.)



7. The method of compressing loose amorphous carbon, which comprises progressively compressing said loose carbon and simultaneously conveying the same to an enclosed receptacle from which the carbon is forced past compressing rollers.

1,542,120. ADVERTISING APPARATUS. HARRY WIDRE, Detroit, Mich. Filed Apr. 16, 1923. Serial No. 632,333. 2 Claims. (Cl. 88—27.)

1. An advertising apparatus comprising diverging projecting machines, a dark cabinet for said diverging projecting machines, some of said machines being adjustable relative to a common pivot in said cabinet, means for fixing the adjustable machines relative to the pivot, and slidable shutters forming part of said cabinet and through which shutters said machines extend.

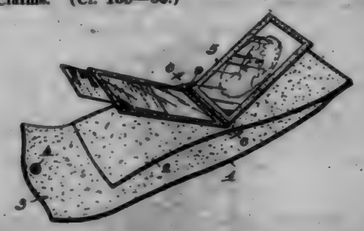


1,542,121. CARRIER-WAVE COMMUNICATING SYSTEM. SAMUEL B. WILLIAMS, Jr., Brooklyn, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 1, 1922. Serial No. 548,681. 40 Claims. (Cl. 179—15.)

1. In a carrier wave system, a line conductor, three or more stations arranged to communicate thereover, a frequency selective channel having a terminal at each station, means actuated responsive to the use of said channel at any station for impressing a wave on said channel, busy signals associated with said terminals, and means responsive to said impressed wave for operating the busy signals at the distant stations.

1,542,122. METHOD OF AND MEANS FOR BURNING PULVERULENT FUELS. EDWARD B. WORTHINGTON, Cleveland, Ohio, assignor to The M. A. Hanna Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 2, 1920. Serial No. 414,162. 10 Claims. (Cl. 110—28.)

9. In a furnace of the class described, the combination with a vertically elongated combustion chamber, of means for producing combustion in space intermediately of the walls thereof, an inclined bottom for said combustion chamber positioned at a distance from the zone of com-



bustion adapted directly to receive the solid products thereof, and means for moistening and cooling the bottom of said combustion chamber, substantially as set forth.

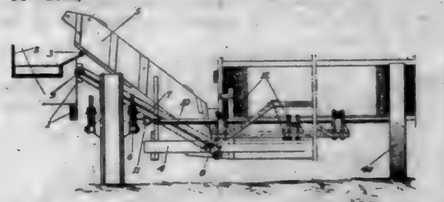
1,542,123. WRENCH. JOSEPH EIFEL, Detroit, Mich. Filed Oct. 29, 1917. Serial No. 199,034. 14 Claims. (Cl. 81—60.)

3. A device of the kind described, comprising, in combination, a pair of jaws, a pair of simple, operating levers for directly giving the jaws relative movement, and supplemental means for increasing the tension between said operating levers.

1,542,124. PASS CASE. OLAF HALVORSEN and WILLIAM T. SEIBELS, Chicago, Ill.; said Seibels assignor to said Halvorsen. Filed May 29, 1924. Serial No. 716,556. 3 Claims. (Cl. 150—35.)

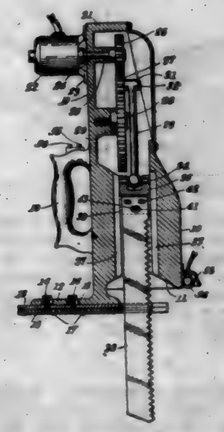
1. A pass-case comprising a foldable cover of pliable material, a card holding member, consisting of frames of transparent material joined together by a section of flexible material, and a bar adapted to extend transversely of said card holding member and provided with fastening members adapted to pass through the flexible section thereof and said cover.

1,542,125. METALLIC-SPIDERED FIBER PULLEY. WILLIAM D. HAMMERSTADT, Indianapolis, Ind. Filed May 3, 1924. Serial No. 710,710. 6 Claims. (Cl. 64—17.)



1. A fibrous wheel including a hub, a plurality of radially projecting metallic arms, each terminating in a

longitudinal and transversely extending sleeve, a pin positionable in said sleeve and projecting beyond the same

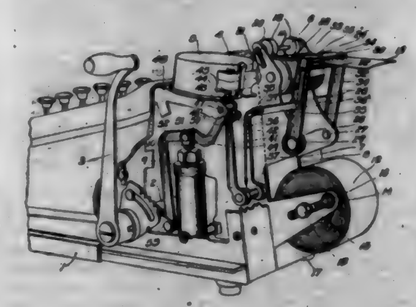


for support purposes, and a plurality of annular fibrous and suitably apertured wheel-forming sections secured to the arms by the sleeves and pins seating in said apertures.

1,542,126. HEADER-FRAME AND FEED-SPOUT CONNECTION. GEORGE H. HARRIS, Stockton, Calif. Filed June 16, 1923. Serial No. 645,742. 4 Claims. (Cl. 56—209.)

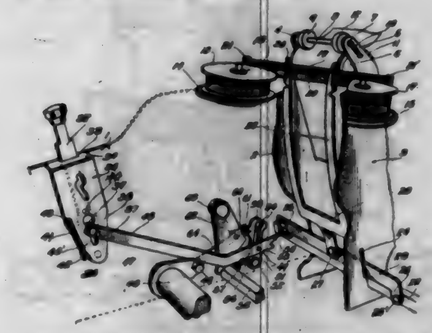
1. In side-hill harvester construction, a thresher having a feed house mounted thereon, said feed-house having an opening facing to one side of the thresher and a rail along the lower edge of said opening, a header-frame flexibly mounted at one end on the thresher for swinging movement relative thereto in a vertical plane, a feed-spout pivoted at one end of the header-frame and resting at the other end on the rail of the feed-house, and means whereby the header frame will move laterally of the thresher with any change of angular setting of said frame relative to the thresher.

1,542,127. PORTABLE ELECTRIC SAW. CHARLES B. HASTINGS, New York, N. Y. Filed Oct. 31, 1924. Serial No. 746,953. 5 Claims. (Cl. 143—72.)



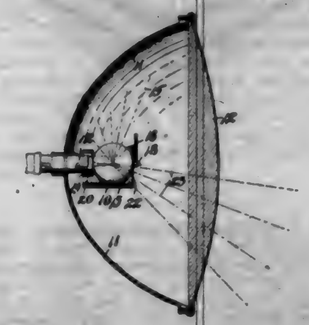
5. A portable electric saw comprising an elongated upright body, a motor attached thereto, a saw blade operatively connected to said motor to move reciprocatively, a laminated base adjustably attached to said body, a plurality of spherical anti-frictional elements held between the laminations of the base and extending through the lower element thereof, said base having an opening at its front and a narrow slot extending rearwardly from the opening, hardened guides at the sides and rear of the slot, means for adjusting said guides relative to the saw blade, means in said guides to carry lubricating material, means for illuminating the path of the saw blade, a handle fixed on said body, and switches carried by said handle to control said motor and illuminating means.

1,542,128. UNIVERSAL MANDREL. JOHN HAUSHALTER, Milwaukee, Wis. Filed Oct. 22, 1921. Serial No. 509,676. 4 Claims. (Cl. 82—11.)



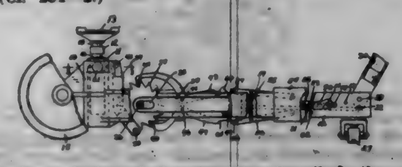
1. A dental mandrel comprising a body portion having two angularly related parts, a driving shaft having a bearing in one of said parts, a driven shaft having a bearing in the other of said parts and replaceably mounted therein, said shafts being formed at their ends to provide a quickly detachable driving connection whereby said second shaft may be rotated by the first shaft when properly positioned in operative relation thereto, and releasable means wholly exterior to said body portion for maintaining said second shaft in operative power receiving position with respect to the first shaft, said releasable means being adapted to permit the bodily removal of the second shaft.

1,542,129. STRIP-FEEDING MECHANISM FOR ADDING MACHINES. BENJAMIN P. HAYES, Kansas City, Mo. Original application filed Feb. 27, 1920, Serial No. 361,743. Divided and this application filed July 5, 1921, Serial No. 482,344. Renewed May 8, 1925. 7 Claims. (Cl. 271—2.5.)



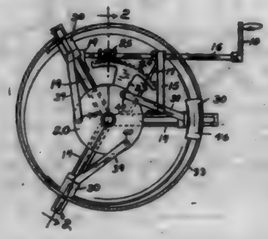
1. Strip advancing mechanism for adding or like machines, comprising complementary jaw frames, one pivoted to the other and the carrying frame having pivotal mounting to afford long and short radial movement of the respective frames, operating mechanism connected with the jaw frame having short radial movement, whereby the jaw frames are moved relative to each other, and an abutment on the long radius frame engageable by the short radius frame, whereby the frames are moved as a unit.

1,542,130. RIBBON-SHIFTING MECHANISM FOR ADDING OR LIKE MACHINES. BENJAMIN P. HAYES, Kansas City, Mo. Original application filed Feb. 27, 1920, Serial No. 361,743. Divided and this application filed July 11, 1921, Serial No. 483,888. Renewed May 8, 1925. 10 Claims. (Cl. 235—60.)



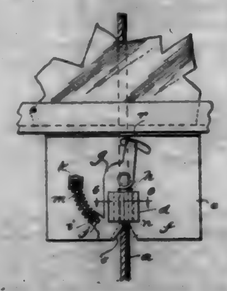
1. Ribbon shifting mechanism for adding or like machines comprising, in combination with a total key and a main actuator, a ribbon guide, and means, normally disconnected from the ribbon guide, settable by the total key and operable by the actuator to shift the ribbon guide.

1,542,131. SHIELD FOR LIGHT BULBS. FRANK V. HAYS, Jr., West Orange, N. J. Filed Apr. 16, 1924. Serial No. 706,841. 2 Claims. (Cl. 240—48.6.)



1. A shield for light bulbs comprising a sheet metal trough-like member with a plate across the top at one end the plate having a recess at its bottom edge to receive the top of the bulb, the member having spring fingers adapted to be snapped over the base of the bulb.

1,542,132. JACK. MARTIN L. HEINEKE, Springfield, Ill. Filed May 12, 1924. Serial No. 712,567. 25 Claims. (Cl. 254—2.)

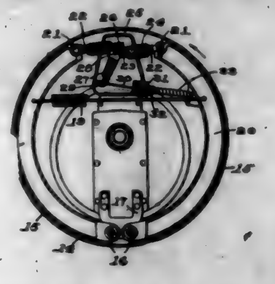


1. In a device of the character described, the combination with a horizontal frame and an oscillatory handle carried thereby, of a load supporting element vertically movable with reference to a portion of said frame longitudinally spaced from said handle, and motion transmitting connections operative between said handle and said element and adapted to actuate said element in a given direction upon the oscillation of said handle in either direction.

1,542,133. TIRE-CHANGING DEVICE. MARTIN L. HEINEKE, Springfield, Ill. Filed July 3, 1924. Serial No. 723,955. 12 Claims. (Cl. 157—1.)

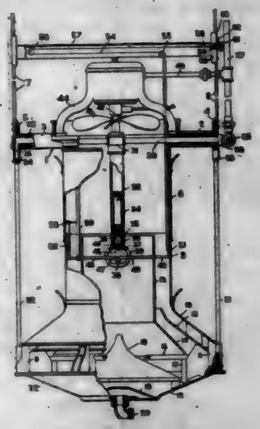
1. The combination of a pair of clamping jaws and means for moving the jaws transversely of the line of their clamping movement, one of said jaws having a portion guided for movement longitudinally with reference to the other and having a slight lateral motion permitting free longitudinal play in the absence of such transverse motion, said means for producing the transverse motion being connected to one of said jaws to move it laterally with reference to the other and thereby bind said portion.

1,542,134. WINDOW AND REGULATOR COUPLING. ERNEST E. HEINTZ, Detroit, Mich., assignor to Ternstedt Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 23, 1922. Serial No. 583,722. 7 Claims. (Cl. 268—4.)



1. In a window regulator, the combination of a window sash, a lifting member, and a detachable coupling between the two, including a slotted plate secured to the sash, a spring-pressed latch for guarding the opening in the plate, and a fixture secured to the lifting member which may ordinarily displace the latch in entering the slot in the plate, but which requires manipulation of the latch to release it.

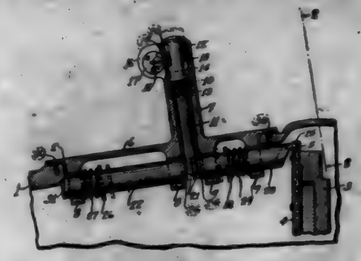
1,542,135. BRAKE. ERIK J. HERVONEN, Worcester, Mass., assignor to Leland-Gifford Company, a Corporation of Massachusetts. Filed Jan. 18, 1924. Serial No. 687,108. 11 Claims. (Cl. 188—78.)



1. The combination with a wheel, of a brake mechanism therefor comprising a circular brake casing and brake shoes adapted to engage it, of a non-rotary casing

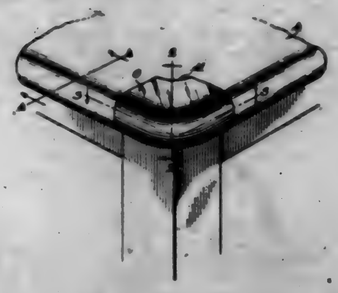
mounted within the first named casing, and mechanism for operating the brakes located in the second casing and

operating through the walls thereof, said second casing providing means to receive a lubricant for the operating mechanism.



1,542,136. HUMIDIFIER. WILLIAM B. HODGE, Charlotte, N. C., assignor to Parks-Cramer Company, Boston, Mass., a Corporation of Massachusetts. Original application filed Dec. 17, 1920, Serial No. 431,521. Divided and this application filed May 17, 1923. Serial No. 639,633. 13 Claims. (Cl. 236—44.)

1. A humidifier comprising a casing, means within said casing for producing a jet of spray, means for projecting a current of air through the spray and adjustable regulating means operable to intercept a portion of spray produced and thereby to regulate the amount of moisture delivered by the humidifier without varying the air current or the amount of liquid delivered to said spray producing means.

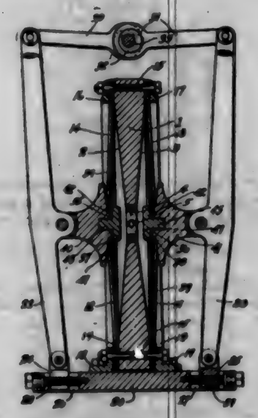


1,542,137. AUTOMOBILE LOCK. JOSEPH F. HOFFMANN, Maplewood, Mo., assignor to Johnson Automobile Lock Company, St. Louis, Mo., a Corporation of Illinois. Filed Nov. 18, 1922. Serial No. 600,677. 4 Claims. (Cl. 70—90.)

1. In combination with an automobile, including its transmission-housing and a rotary member of the transmission-assembly, a lock comprising a plate located upon the transmission-housing, a barrel fixed upon and upstanding at approximately right angles to the upper face of the plate, a pair of spaced aligning bolt-eyes depending from the under face of the plate, a toothed-end bolt supported by said eyes for slidable actuation to engage at its toothed-end with said rotary member to prevent rotary movement thereof, a plunger depressible in the barrel for engagement with and at the opposite end of the bolt for actuating the bolt into, and re-

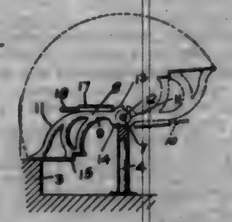
taining the bolt in, locking engagement with the rotary member, and means for yieldingly actuating the bolt out of engagement with the rotary member when released by the plunger.

1,542,138. FURNITURE-TOP CONSTRUCTION. DAVID R. HUNTER, Muskegon, Mich., assignor to The Shaw-Walker Co., Muskegon, Mich., a Corporation of Michigan. Filed Jan. 30, 1925. Serial No. 5,691. 8 Claims. (Cl. 45—31.)



1. A top for furniture comprising a core, a sheet of covering material laid over said core with its marginal portion extending around and beneath the edges thereof, and caps secured at the corners of said core and extending around the corner edges and inlaid flush with the edges and top surface of the covering material.

1,542,139. TRUCK FOR TOY RAILWAY CARS. HARRY C. IVES, Bridgeport, Conn., assignor to The Ives Manufacturing Corporation, Bridgeport, Conn., a Corporation of Connecticut. Filed Dec. 20, 1924. Serial No. 757,140. 6 Claims. (Cl. 105—208.)

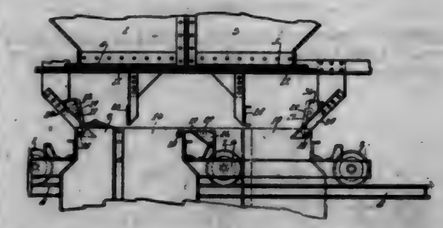


1. In a toy railway truck, a frame including an upper transverse portion, and opposed side portions at the ends of said upper portion, wheel carrying axles supported in and extending between said sides, a transverse brace bar extending between said sides, and clip means at each end of said bar interlockingly clipped to said sides.

1,542,140. COMPRESSOR. JOHN G. JOHNSON, Tacoma, Wash., assignor of one-half to John S. Anderson, Tacoma, Wash. Filed May 8, 1923. Serial No. 636,466. 2 Claims. (Cl. 230—5.)

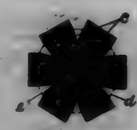
1. A device of the class described comprising in combination, a base plate, a circular body plate mounted on said base and having conically concaved opposite side faces and a central opening therethrough, and having valved inlet and outlet channels leading from its periphery into said central opening, flexible diaphragms secured upon opposite faces of the body plate to provide air tight chambers at opposite sides thereof, flexible reinforcing plates overlying said diaphragms, pumping heads fixed centrally to said diaphragms, a pair of pumping levers pivotally fixed to said heads and having ends pivotally and adjustably fixed to the base plate, a rotating shaft, eccentrics on said shaft and means connecting the eccentrics with said pump levers whereby said diaphragms will be moved simultaneously toward and from the body plate.

1,542,141. FOOT REST FOR SHOE-SHINE PARLORS. ALLAN ROLAND PYE JOHNSON, Toronto, Ontario, Canada, assignor of one-half to Charles Tilley and Herbert Victor Tilley, both of Toronto, Ontario, Canada. Filed Oct. 24, 1922. Serial No. 596,618. Renewed May 2, 1925. 2 Claims. (Cl. 15—205.)



1. A foot rest for shoe shine parlors comprising a platform provided with an upstanding ledge, a standard support located in front of the ledge, a member swung upon the upper end of the standard support and having its end curved into a vertical direction, a foot rest carried upon the vertically extending portion adapted to rest upon the platform ledge, and a step member carried upon the opposite side of the swung member to the vertically extending portion.

1,542,142. FLUID-FUEL BURNER. PETER JOHNSON, Seattle, Wash. Filed Nov. 17, 1924. Serial No. 750,279. 2 Claims. (Cl. 158—65.)

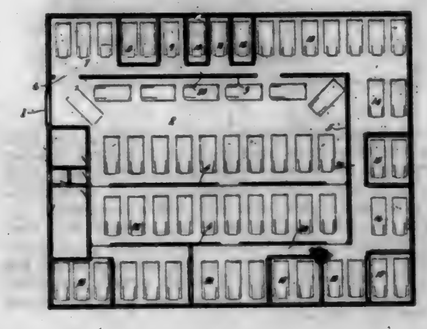


2. In a fluid fuel burner, a burner body, a fuel inlet pipe extending into said body and inclined upward relative to the horizontal the outer end of said inlet pipe being open, means for delivering a jet of fuel into the outer end of said inlet pipe, and a horizontally arranged T fitting on the inner end of said fuel inlet pipe, the ends of said T fitting being partially closed by segmental webs that extend across the bottoms of the same and form, within said T fitting, a wall from which liquid will flow outwardly through said inlet pipe before it overflows said webs.

1,542,143. MATERIAL-HANDLING APPARATUS. EDWIN F. JONES and JOHN A. AULD, Erie, Pa. Filed Mar. 31, 1922. Serial No. 629,070. 5 Claims. (Cl. 214—1.)

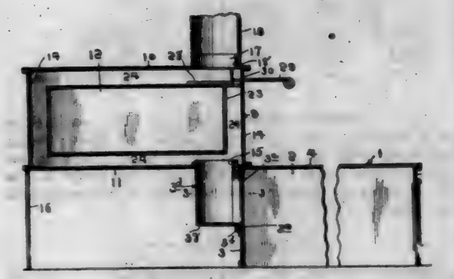
1. In a material handling apparatus, the combination of a measuring bin; an upright strike off blade; means for moving the bin and blade relatively to strike off excess material; and a catcher movable relatively to the bin catching the overflow and returning by its movements the same to the bin.

1,542,144. CORE OF TRANSFORMERS. YASUTARO KATSUMOTO, Nishi-ku, Osaka, Japan. Filed Feb. 27, 1922. Serial No. 538,394. 3 Claims. (Cl. 175—356.)



1. A transformer core, comprising a plurality of radially extending sheet iron frames of uniform dimensions, each having an inner vertical leg, an outer vertical leg, and a pair of horizontal legs connecting the ends of said vertical legs, the inner legs of the frames being disposed in contiguous relation in at least two layers and forming a central pole, the sectional form of the inner legs being rhombic and the outer vertical legs disposed in a circle.

1,542,145. OVEN FOR TREATING VEHICLE BODIES. RALPH A. KAUFFMAN, Seattle, Wash. Filed Apr. 30, 1923. Serial No. 635,906. 2 Claims. (Cl. 34—19.)



2. In a building of the class described, a passage along which vehicles may be successively advanced and ovens located in said passage, each having opposite side

openings through which said vehicles may pass and provided centrally at the top and floor with air inlet and outlet openings, with channels leading from said

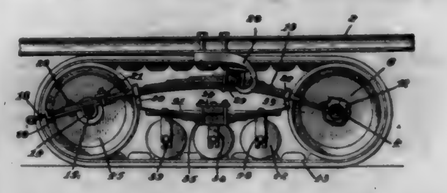
inlet to opposite ends of the oven, a blower located in the inlet and heating means located at the discharge ends of the channels.

1,542,146. STOVE. WILLIAM B. KIMMEL, San Francisco, Calif. Filed June 10, 1924. Serial No. 719 159. 2 Claims. (Cl. 126—9.)

1. A portable stove for camping purposes and the like comprising a firebox having a cooking top, an open bottom and a substantially vertical wall, said wall being provided with an outlet opening to discharge the products of combustion, an upwardly extending pipe section detachably connected to said wall and having an opening registering with said outlet opening, an oven having one of its ends projecting only slightly over and resting on the cooking top of the firebox, the bottom of said oven having an opening into which the pipe section extends for discharging products of combustion in to the oven, said oven having a baking compartment of sufficient size to house said pipe section when the latter is detached from the firebox, and the oven being of such size as to be nested in the firebox when the stove is not in use.

1,542,147. MUSICAL WHISTLE. WILLIAM KRAGIEL, Paterson, N. J. Filed Feb. 27, 1924. Serial No. 695,413. 2 Claims. (Cl. 46—46.)

1. A musical instrument comprising a pair of plates integrally joined together at their upper edges and being wholly open at one end, means connecting the opposite end edges of the plates, said connecting means having an inlet opening therein, a single elastic strip secured between the plates at one side and adapted to pass freely outward between the plates at the opposite

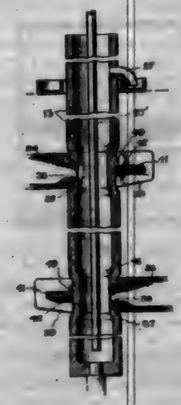


side, means for retaining said strip substantially parallel to the upper edge of the instrument, and a metal clip of relatively large area secured on the outer end of said strip.

1,542,148. PUZZLE. PETER KRAMARIUK, Sault Ste. Marie, Ontario, Canada. Filed Oct. 20, 1924. Serial No. 744,834. 5 Claims. (Cl. 273—160.)

1. A puzzle comprising a plurality of interlocking pieces arranged in cruciform structure, a key piece constituting one of the pieces, and a piece provided with locking means for locking the key piece against displacement.

1,542,149. TRACTION DEVICE. JOSEPH ADALBERT LANDRY, Mont-Joli, Quebec, Canada. Filed Dec. 24, 1923. Serial No. 682,565. 6 Claims. (Cl. 305—9.)



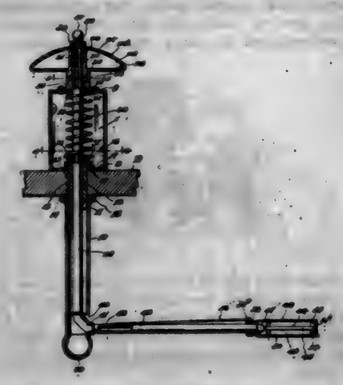
5. A traction device comprising a drive axle, a drive wheel mounted thereon, a spring extending from said axle, an auxiliary wheel supported by said spring, a tread member surrounding said wheels, a brace resting on said spring, a gooseneck extending upwardly from said brace, a vehicle body resting on said gooseneck, an auxiliary spring depending from said first named spring, a cross bar resting on said auxiliary spring, a plate secured to said cross bar, journals attached to said plate, and rollers mounted in said journals, said rollers engaging said tread member.

1,542,150. ROASTING FURNACE. ARTHUR VICTOR LEGGO, Melbourne, Victoria, Australia. Original application filed Dec. 22, 1921, Serial No. 524,301. Divided and this application filed July 3, 1923. Serial No. 649,381. 6 Claims. (Cl. 257—119.)

4. In roasting furnaces a hollow rabble shaft having a rabble arm fitted detachably thereto, recesses in the sides of the rabble shaft, jaws on the inner end of the

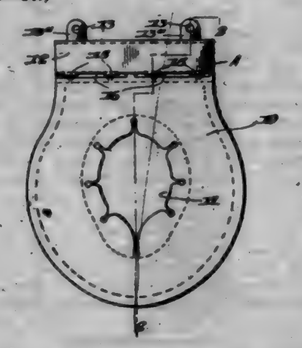
arm adapted to slide in the recesses in the rabble shaft, slots in the outer ends of the jaws, a cotter and gib

passing through the said slots, and a recess in the back of the rabble shaft against the upper end of which the cotter is adapted to bear.



1,542,151. GATE LATCH. MATTI LEHTONEN, Chisholm, Minn. Filed Feb. 13, 1922. Serial No. 536,189. 9 Claims. (Cl. 292—28.)

1. A gate latch comprising a housing, latches pivotally mounted within said housing and having keeper gripping portions arranged in overlapping relation, a pivoted tumbler arranged in said housing and having a portion co-operative with said latches for preventing movement thereof, and means for operating said tumbler.

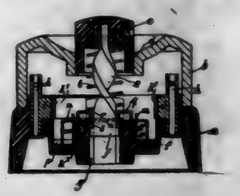


1,542,152. DIRECTION SIGNAL FOR AUTOMOBILES. CLARENCE C. LEONARD, Erie, Pa. Filed Aug. 14, 1924. Serial No. 732,006. 4 Claims. (Cl. 116—52.)

1. A direction signal comprising a housing a tubular casing, a bushing connecting the two and adapted to be fitted through a part of the body of an automobile whereby to mount the housing and tubular casing thereon, a spindle extending through the bushing and rotatably and shiftably mounted therein, the said spindle extending into the housing and beyond one end thereof and likewise, extending within the said casing, an arm connected with that portion of the spindle which extends within the casing and extending radially from the spindle, a signal member carried by the arm, a handle member carried by the other end of the spindle exterior to the housing, coacting locking elements upon the handle member and the housing adapted to be mutually engaged when the spindle is shifted in one direction and to be mutually disengaged when the spin-

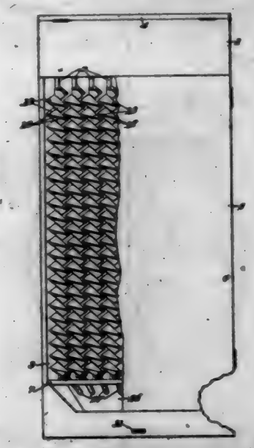
dle is shifted in the opposite direction, and a spring within the housing coacting with the spindle to yieldingly hold the same shifted in the first mentioned direction.

1,542,153. SANITARY TOILET-SEAT COVERING. HOWARD DOANE LEWIS, Pictou, Nova Scotia, Canada. Filed May 1, 1924. Serial No. 710,370. 1 Claim. (Cl. 206—57.)



In a device of the character described, the combination with a backboard having orifices therein of a length of spring metal sheeting bent to form a frame with top and bottom sides in spaced relationship to one another and having an open front and open ends, the bottom side being of greater width than the top and provided with spaced orifices designed to register with the outer edge of the top, teeth formed in the outer edge of the top and designed to penetrate sheets of paper or the like and to engage with orifices in the extended bottom and means for rigidly securing the frame to the backboard and suspension members carried by the backboard.

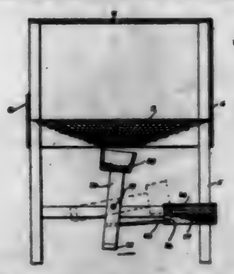
1,542,154. PUSH-BUTTON SWITCH. STEN ERIC LINDVALL, Altona, Germany. Filed May 24, 1924. Serial No. 715,616. 3 Claims. (Cl. 200—64.)



1. A push button switch comprising a casing, contact pieces attached to the sides of the casing and a rotatable contact piece adapted to make and break contact between the said fixed contact pieces, a spring pressed push button having a flat spirally twisted shaft prevented from rotation by being guided in a slot in the bottom of the casing, a slotted operating member engaged by said spi-

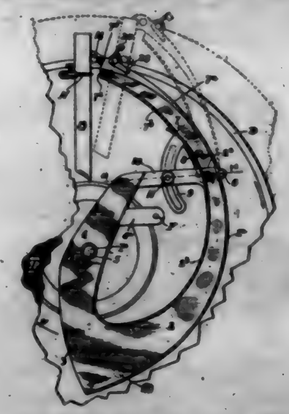
rally twisted shaft to be rotated thereby, when pushing down the button, ratchet teeth on a fixed part of the casing and ratchet teeth on the said operating member, corresponding in number to the first named ratchet teeth, a spring pawl in connection with the rotatable contact piece and adapted to rotate with the operating member

and to slide over the fixed ratchet teeth so as to be rotated about an angle corresponding to the pitch of the teeth by pushing inwardly the button and then locked in position when the said operating member returns into its original position on the backward movement of the button by its spring.



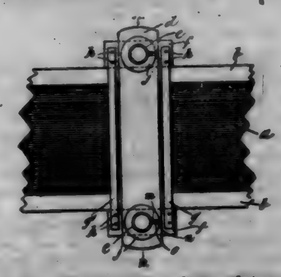
1,542,155. SEED SEPARATOR. FREDERIC S. LYMAN, Salt Lake City, Utah, assignor of one-half to Maurice Keating, Salt Lake City, Utah. Filed June 15, 1923. Serial No. 645,647. 6 Claims. (Cl. 130—18.)

2. In a seed separator, a seed-separating raceway comprising a pair of plates wound spirally around a support, each of said spiral plates adapted to receive seeds to be separated and to retain such of said seeds as possess predetermined properties and to eject others having other properties, and a spiral cover for said raceway following the convolutions thereof but spaced therefrom and adapted to prevent the reentrance into either of the spirals of said raceway of seed once ejected therefrom.



1,542,156. POULTRY NEST. THOMAS S. MCLENDON, Carrollton, Ga. Filed Aug. 23, 1923. Serial No. 658,988. 1 Claim. (Cl. 119—48.)

In a poultry nest, a frame, a floor therein forming a nest proper comprising a foraminous body inclined toward the center and apertured at its approximate center, a substantially vertical support oscillatory mounted under the opening of the floor and having a greater weight below the pivot whereby the said support is held normally approximately vertically, a cup on the upper end of the support adapted to receive eggs issuing from the opening in the floor, a yieldable collector with relation to which the cup is operative for delivering eggs to the collector, an arm extending laterally of the support and carried



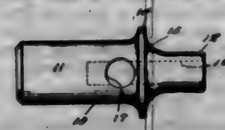
thereby, and an arresting element on the collector in the path of travel of the arm for arresting the said arm and retaining the support in normal position.

1,542,157. ADJUSTABLE PHONOGRAPH REPEATER. STERRETT E. MCNULTY, Los Angeles, Calif. Filed Dec. 12, 1922. Serial No. 606,412. 7 Claims. (Cl. 274—15.)

1. In a repeating attachment for a phonograph, a main plate provided with a needle-lifting blade and comprising one section of a guideway formed in two sections capable of relative movement.

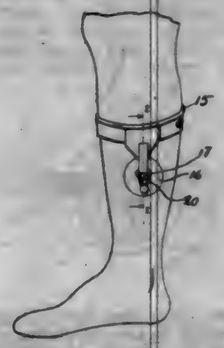
1,542,158. PROFILE TEMPLATE. ALBERT MADEN, Waterfoot, England. Filed Feb. 25, 1922. Serial No. 539,315. 1 Claim. (Cl. 33—175.)

In a conformator gage, two clamp plates comprising a front plate and a hinder plate, each having a rubber pad on its inner side, there being an aperture adjacent each end of each plate guide bars passing between said plates



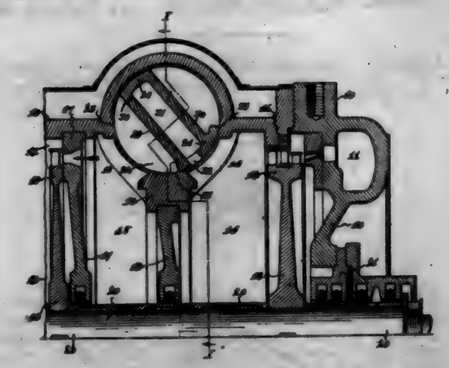
at the respective ends thereof, a series of wires adapted to move laterally between said plates and guided by said bars, studs screwed into the apertures in said hinder plate and projecting through the corresponding apertures in the front plate, distance pieces interposed between said plates and surrounding said studs and adapted to contact said guide bars, thumb nuts on said studs adapted to force said clamps together and springs respectively interposed between each nut and the front plate, detachable handles inserted into longitudinal bores in said studs and adapted to extend outwardly from said clamp plates, and catch means carried by said hinder plate adapted to engage in circumferential grooves in said handles respectively and to hold the same removably secured in said studs.

1,542,159. ARCHER'S ARROW NOCK AND FINGER GRIP. EDWIN F. MAXWELL, Berkeley, Calif. Filed Apr. 15, 1924. Serial No. 706,733. 8 Claims. (Cl. 124—7.)



1. A device of the character described including a finger grip body having a barrel to receive an arrow nock and provided with slots, and jaws accommodated in said slots of the barrel to engage said nock.

1,542,160. SWAGING TOOL. JOHN S. MAXWELL and ROBERT H. ROTHROCK, Pittsburg, Kans. Filed June 2, 1924. Serial No. 717,480. 2 Claims. (Cl. 153—79.)



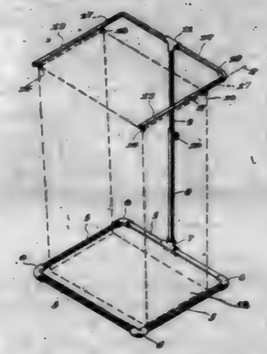
1. A tool comprising a body including a head, a centering extension, an annular flange surrounding the body between said head and extension, a flaring face extending from the flange and merging into the centering extension and a water outlet passage extending through the body and means included in the passage for reducing the pressure of water passing therethrough.

1,542,161. HOSE. GROVER B. MELLUS, Los Angeles, Calif. Filed Sept. 15, 1922. Serial No. 588,349. 3 Claims. (Cl. 2—240.)

1. A hose having a bead formed at its open end, and a supplemental piece of material secured to the leg portion of the hose, there being an opening from the outside to the space between the hose and the supplemental piece.

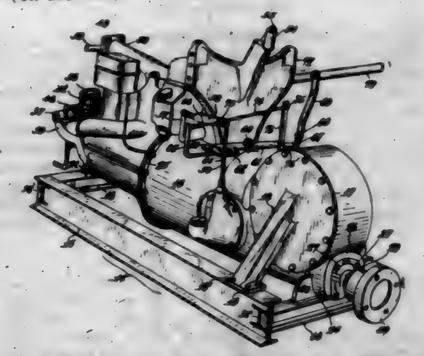
1,542,162. TURBINE BLEEDER VALVE. JAMES LEONARD MOORE, Wellsville, N. Y., assignor to The Moore Steam Turbine Corporation, Wellsville, N. Y., a Corporation of New York. Filed May 9, 1923. Serial No. 637,778. 7 Claims. (Cl. 60—67.)

1. A multi-stage expansion steam turbine comprising a casing having a live steam or high pressure inlet and final low pressure outlet, means for effecting a plurality of stages of expansion within said casing and interposed between said inlet and outlet, a diaphragm within the casing separating one stage of expansion from a succeeding stage of expansion and provided with an opening for the passage of the steam from one stage to the adjacent succeeding stage of expansion, an intermediate steam pressure outlet communicating with a stage ahead of the diaphragm and receiving expanded steam and exterior of the casing, a rotary bleeder valve disposed in said opening and provided with ports arranged and adapted to control the passage of the expanded steam through said opening from one stage to a succeeding stage or into the intermediate fluid pressure outlet, said bleeder valve provided with a chamber therein having openings or outlets communicating with the exterior of said valve and arranged and adapted to permit the steam to bleed into and through said chamber and valve when said valve is in its closed position, thereby uniformly heating all sections of said valve and permitting a small volume of expanded steam to constantly pass through the other stages of expansion between said diaphragm and final low pressure outlet.



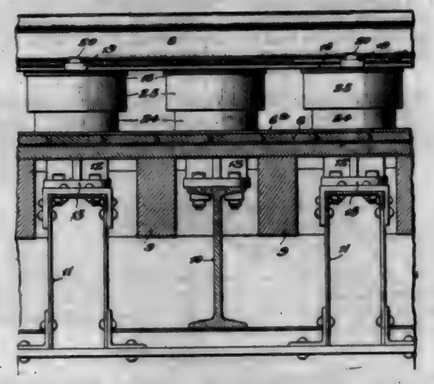
1,542,163. ADJUSTABLE CARRIER STRAP. ALBERT MOORE, New Bedford, Mass. Filed Dec. 1, 1923. Serial No. 678,056. 1 Claim. (Cl. 224—5.)

1. A device of the class described comprising a pair of shoulder straps, each of said straps being crossed and connected at their crossed portions to provide a loop, a



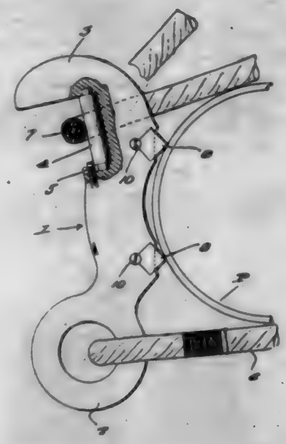
downwardly extending inner short end and a downwardly and outwardly extending relatively long end extending from the loop, means whereby the ends may be secured to a receptacle, a connecting strap, a loop at each end of the connecting strap for sliding engagement with the shoulder straps and means whereby the length of the connecting strap may be regulated.

1,542,164. BAG HOLDER. SWAN NELSON, Chicago, Ill. Filed Apr. 24, 1923. Serial No. 634,372. 1 Claim. (Cl. 83—26.)



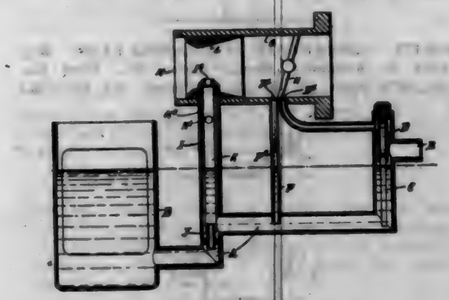
A bag holder comprising a U-shaped member having spaced parallel tubular sides and a bight portion, a standard connected to the bight portion, said spaced parallel sides being provided with longitudinal slots in the lower sides thereof, springs anchored within said tubular sides and having bag engaging hooks extending through the slots and extending downwardly from beneath the spaced parallel sides, and fixed bag engaging hooks depending from beneath the spaced parallel sides, said first and second named hooks being directly beneath and close to said spaced parallel sides for supporting the sides of the engaged bag close to and directly beneath the sides of the U-shaped member.

1,542,165. MARINE UNIT. JOSEPH S. ORCHELS, Philadelphia, Pa., assignor to Metalweld Service Corporation, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 7, 1924. Serial No. 730,789. 21 Claims. (Cl. 115—34.)



1. In a marine unit the combination of a basal framework of lock-welded standard sections, a tractor engine removably supported thereon, means for laterally bracing said engine to the framework, means driven direct from the engine shaft to maintain a continuous cooling circulation thereabout, control mechanism operative by a single manipulating element effective to lock the engine at any desired directional speed, and means whereby the propeller shaft may be repacked without dismantling the coupling connection.

1,542,166. WEATHERPROOF RAIL STAND FOR TRACK SCALES. JOHN WILSON ORROCK, Montreal, Quebec, Canada. Filed May 1, 1923. Serial No. No. 635,962. 12 Claims. (Cl. 265—71.)



1. A weather proof rail stand for track scales including a flashing, a rail supporting stand projecting through said flashing and having a head provided with lug receiving seats, and an apron having offset lugs for engaging in said seats and depending from said head in overlapping relation to said flashing.

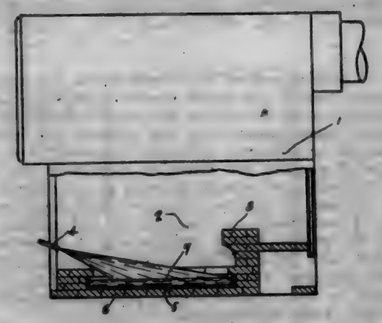
1,542,167. PIPE-GRIPPING DEVICE. FRANK CHARLES OSTHEIMER and LEON FROMAN ROBERSON, Virgil, Kans. Filed June 2, 1924. Serial No. 717,305. 1 Claim. (Cl. 81—64.)

A pipe gripping device comprising a body having an anchoring eye formed at one end, having a lateral projection formed at its opposite end constituting a rope guard, and having its intermediate portion of arcuate formation, the intermediate portion of the body being formed in its inner edge with polygonal sockets, which are closed at one end and open at the other end, substantially rectangular pipe contact blocks fitted into said sockets, retaining screws carried by the body and engaging the outer ends of the blocks to retain the latter in position, and an anti-friction roller rotatably mounted upon the outer edge of the body beneath said guard, and a pipe encircling rope anchored at one end to said eye, the intermediate portions of said rope adapted to be passed around the pipe and the free end portion thereof being adapted to be looped beneath the guard, to permit the bight portion of the loop to ride against said roller, whereby when the free end of the rope is pulled upon, the rope will be tightened about the pipe.

1,542,168. CARBURETOR. ARCHIE DONALD PATERSON and MALCOLM ALLAN GRAY, London, England; said Gray assignor to said Paterson. Filed Nov. 16, 1922. Serial No. 601,350. 1 Claim. (Cl. 261—41.)

In a carburetor, the combination, with a constant-level chamber, a mixing chamber, a throttle valve therein, a main nozzle discharging into the mixing chamber, and a secondary device for supplying starting or slow-running mixture also discharging into the mixing chamber; of means for supplying an auxiliary charge of undiluted liquid fuel into said mixing chamber at small throttle openings, said auxiliary charge being delivered at a point adjacent the point of discharge of said starting mixture into the mixing chamber and also adjacent the closed position of the throttle on the atmosphere side thereof; and a well with which the main nozzle, the starting supply device and the auxiliary fuel supply means communicate, the main nozzle communicating with said well at a lower level than the auxiliary fuel supply means.

1,542,169. FUSE. CHARLES H. PEARSON, Brookline, Mass. Refile of abandoned application Serial No. 435,787, filed Jan. 7, 1921. This application filed July 17, 1924. Serial No. 726,482. 6 Claims. (Cl. 102—36.)



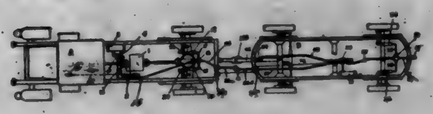
4. In a time fuse, the combination of a base, a firing pin in said base movable at right angles to the axis of the fuse in its flight, means normally tending to force said firing pin to its operated position, means for holding said firing pin in its normal position, a primer lying in the path of movement of said firing pin, a safety device interposed between said firing pin and primer, a second safety device retaining said first safety device in its normal position, said second safety device being operated by the shock of firing to release said first safety device, said first safety device being operated by centrifugal force to move out of the path of movement of said firing pin, and releasing means for said firing pin operating after the safety devices have operated.

1,542,170. PACKING RING. ANTHONY S. PIERREL, Washington, La. Filed Apr. 4, 1921. Serial No. 458,281. 1 Claim. (Cl. 288—1.)

A packing ring comprising an outer annular section formed of a plurality of segments substantially L-shaped in cross section, the adjacent ends of said segments being slightly spaced and juxtaposed, an inner annular section formed of a plurality of segments with their ends juxtaposed, each of said inner section segments being mounted upon and secured to an outer section segment and overlapping the joint between the supporting section and an adjacent outer section segment, the means for securing together the outer section and the inner section segments comprising a pin upon the segment of one of the sections projecting into a recess in the other section segment, and separate wire springs, each having a plurality of U-sections therein, joining the adjacent ends of the segments of said outer section, each spring having its ends anchored in adjacent segments and serving to hold said segments against relative movement both toward and from one another, the lengths of said springs between the bends paralleling the peripheral surface of the segments.

1,542,171. FUEL-OIL COMBUSTION. WILFRED FRANCIS RAVENOR, Vancouver, British Columbia, Canada. Filed Apr. 22, 1924. Serial No. 708,158. 9 Claims. (Cl. 158—117.5.)

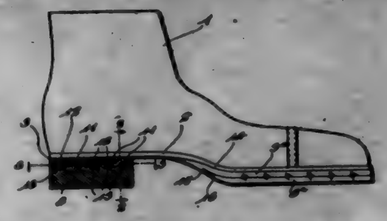
1. In fuel oil combustion, directing unvaporized oil particles contained in the flame on to a surface of liquid matter having a boiling temperature higher than the flame temperature.



5. In fuel oil combustion, directing the burning fuel on to a body of liquid matter having a boiling temperature higher than the flame temperature on the surface of which is spread a powdered catalytic agent.

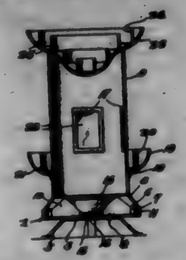
1,542,172. DRILLING APPARATUS. WARREN B. REED and WALTER HEFLIN, Morgan City, La. Filed Feb. 27, 1922. Serial No. 539,566. 21 Claims. (Cl. 255—72.)

1. In an apparatus of the class described the combination of an outer drill pipe; a core tube located inside said pipe; a guide tube inside said core tube; and a plug member associated with said guide tube and adapted to be pushed up into said core tube by the core material, substantially as described.



1,542,173. BRAKE SYSTEM FOR VEHICLE TRAINS. JOY S. REYNOLDS, San Francisco, Calif., assignor, by direct and mesne assignments, to Reynolds Brake Corporation, Detroit, Mich., a Corporation of Michigan. Filed June 17, 1922. Serial No. 569,132. 2 Claims. (Cl. 188—3.)

1. A braking system for vehicle trains consisting of a tractor member and trailer members, comprising means for accumulating and storing fluid under pressure on said tractor, means operated by said pressure for applying brakes on said tractor, a conduit connected with said source of pressure and extending throughout the train and adapted to serve brake elements on said tractor and said trailers, an auxiliary pressure tank positioned on each of said trailers and supplied by said conduit, and pressure operated means, responsive to a disconnection of said train, whereby the pressure in said auxiliary tanks will effect a locking of the steering gear of said trailers in the position that the said gear assumed at the time of said disconnection.



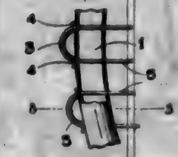
1,542,174. DETACHABLE HALF SOLE AND HEEL. LOUIS BONIDOUX, Norfolk Downs, Mass. Filed Aug. 20, 1923. Serial No. 658,527. 1 Claim. (Cl. 36—42.)

A shoe having relatively stationary and detachable sole members, an undercut rib and groove connecting said members, the inner face of one member having spaced sockets formed therein, the contacting face of the other member having similarly spaced knife cuts in inclined planes, the material at one side of each cut being bulged outwardly to provide a plurality of inclined

resilient teeth for reception in said sockets to hold the two members against sliding in a direction to remove the detachable member.

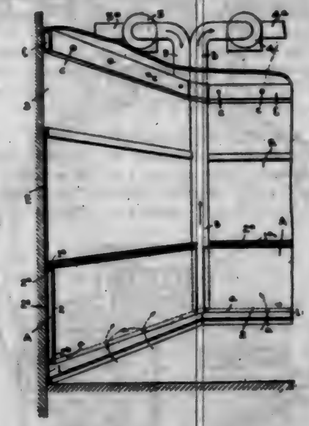
1,542,175. GREENHOUSE FUMIGATING LAMP. WILLIAM H. ROBINSON, Morton Grove, Ill. Filed Dec. 13, 1923. Serial No. 680,572. 3 Claims. (Cl. 43—125.)

1. In a greenhouse fumigating lamp, a base having lateral arms, a lamp body operatively supported upon the arms, a container operatively supported upon the base for the reception of alcohol to be burned, and a bowl operatively supported upon the upper end of the body for the reception of fumigating material or powder, said bowl having annular channels for the reception of fumigating material which evenly burns.



1,542,176. HARNESS. CYRUS C. ROSS, Walthill, Nebr. Filed May 12, 1924. Serial No. 712,603. 2 Claims. (Cl. 59—29.)

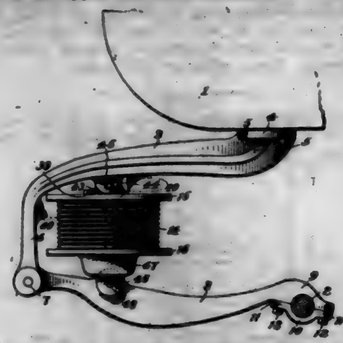
1. The combination with a hame member, of a wear plate extending over the top of said hame member and down the outer side thereof from the top downwardly, a rib member fixed to the portion of the wear plate extending down the outer side of the hame member and having harness rings at the top and bottom thereof, said rib member being provided intermediate the harness rings



said series of slots extending inwardly from the outer side from the rib member and each having a narrow neck and an enlarged inner portion, and a ring surrounding the hame member in normal position and having a flattened portion at one point in its circumference, said flattened portion being movable in and out of the narrow necks of said slots and the remainder of the ring fitting closely in the enlarged portion of said slots, said ring being of such dimensions to prevent it from dropping down over the bottom harness ring carried by the rib.

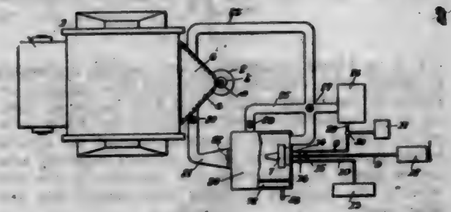
1,542,177. TENNIS RACKET AND THE LIKE. ROBERT ROSS, Birmingham, England. Filed Sept. 6, 1924. Serial No. 736,280. 2 Claims. (Cl. 273—73.)

1. A tennis or like racket having curved resilient plate springs disposed between the looped ends of the strings and the frame, said spring having bifurcated ends to receive and position the strings.



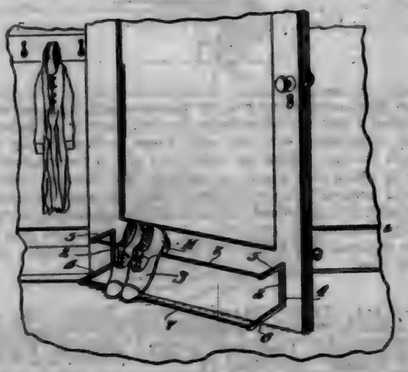
1,542,178. VENTILATING SYSTEM. DAVID E. ROSS and JAMES D. HOFFMAN, La Fayette, Ind., assignors to Purdue University, La Fayette, Ind., a Corporation of Indiana. Filed Mar. 1, 1923. Serial No. 622,093. 10 Claims. (Cl. 98—27.)

1. In ventilating apparatus for school rooms and the like; a duct having a series of openings increasing in area as they are further removed from the outlet of the duct, the total area of the series of openings in the duct approximating the cross sectional area of the outlet, and a series of partitions within the main duct forming sub-ducts therein, substantially as described.



1,542,179. SPRING. HUGH WHEELER SANFORD, Knoxville, Tenn. Filed July 28, 1920. Serial No. 399,476. 18 Claims. (Cl. 267—20.)

1. A spring attachment for vehicles, comprising an upper horizontal bracket, having a downward projection at its rear end and adapted to be connected at its forward end to the vehicle body, and a lower horizontal bracket member pivoted to the downward projection of the upper bracket member and adapted to be connected at its opposite end to an axle of the vehicle, a sheet metal air bellows construction interposed between and secured to the upper and lower bracket members, and de-



pending flanges on the upper bracket member adapted to normally extend below the upper end of the bellows and on opposite sides thereof.

1,542,180. ART OF AND APPARATUS FOR THE TREATMENT OF PLANT FIBER OR THE LIKE. CLARENCE C. SELDEN and ROBERT D. PEARSON, Los Angeles, Calif. Filed Apr. 28, 1924. Serial No. 709,610. 15 Claims. (Cl. 19—66.)

4. In combination with a carding machine, a housing through which the sheets of fiber pass in full width, and means for delivering vapor into the housing the full width thereof.

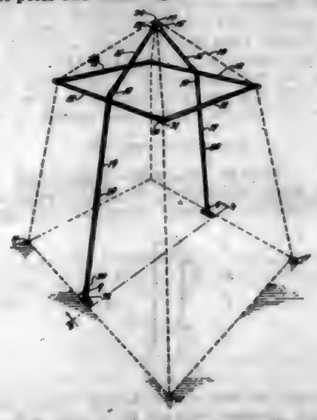
1,542,181. SHOE RACK. EATON G. SHERMAN, Hollywood, Calif. Filed Nov. 2, 1923. Serial No. 672,283. 2 Claims. (Cl. 211—14.)

1. A rack for supporting footwear comprising spaced brackets including shanks adapted to be attached to a primary support by means of screws extending therethrough, said brackets having forwardly extending bars

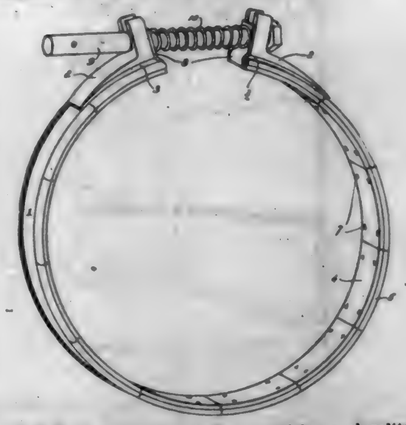
of different lengths integral with said shanks, transverse rails, and sockets formed on the ends of said bars adapted to receive the ends of said rails, the support engaging faces of said brackets being inclined to the planes of said brackets whereby as said screws are tightened, said brackets will be urged to positions inclined toward each other thereby firmly gripping said rails.

1,542,182. TIE HOLDER. SAVERIO A. SPAZIANTE, New York, N. Y. Filed Oct. 24, 1923. Serial No. 670,437. 2 Claims. (Cl. 211—17.)

1. A tie holder comprising a base member, a plurality of hollow arms extending from said base member, arranged in superposed relation and each having an opening in the underside thereof, a semi-circular finger member in each of the arms extending through the opening in the arm to engage the top of the next subjacent arm, and a spring in said finger and attached to the arm whereby the finger is yieldably held against said subjacent arm.



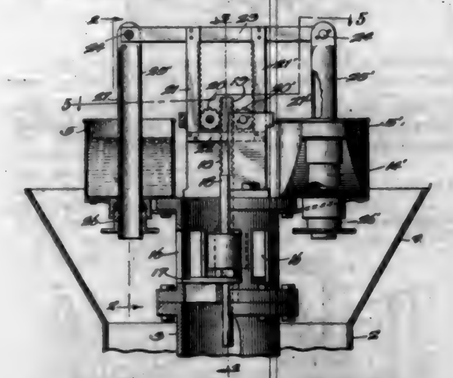
1,542,183. LIGHT-CONDUCTING ROD FOR THERAPEUTICAL PURPOSES. EDGAR STEINBERG, Berlin-Wilmersdorf, Germany, assignor to Ultra-Heilstrahlen-Apparate Aktien-Gesellschaft, Berlin, Germany. Filed June 18, 1923. Serial No. 646,140. 1 Claim. (Cl. 174—177.)



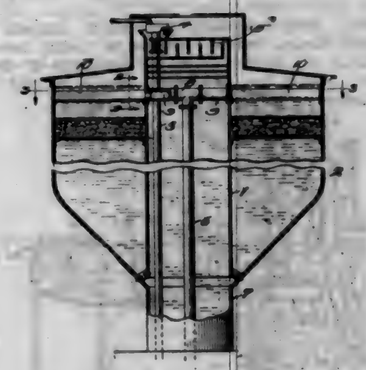
A light connecting rod for therapeutical purposes comprising a club-shaped body of quartz glass having polished and unpolished surfaces, only those surfaces being polished through which the light-rays are to be transmitted or by which they are to be reflected, the polished surfaces being arranged so as to reflect the light-rays backwards through the club head, the last light-transmitting surface being adapted for application to the inside of the gum for the treatment of a tooth and shaped in conformity with said gum.

1,542,184. TENT. FRANK M. STOLL, Denver, Colo., assignor to The Stoll Manufacturing Co., a Corporation of Colorado. Filed Sept. 2, 1924. Serial No. 735,433. 5 Claims. (Cl. 135—4.)

1. Means for supporting a tent of the type having an angularly depending top and relatively steeper depending side walls comprising: poles pivoted together at the peak of said tent and extending downward at an angle substantially parallel to said top and intermediate the corners of said tent; other poles arranged to be affixed to said first poles and extending downward at an angle substantially parallel to and on the center line of said side walls and a series of interconnecting poles upheld by said other poles and adapted to surround said tent substantially at the intersection of the top and side walls thereof so as to support the corners of said tent.



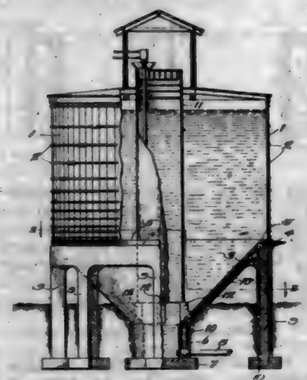
1,542,185. BRAKE BAND. ALVIN H. SWEET, Los Angeles, Calif., assignor, by direct and mesne assignments, to Title Guarantee and Trust Company, trustee, Los Angeles, Calif. Filed Apr. 30, 1923. Serial No. 635,552. 1 Claim. (Cl. 188—249.)



A brake band having a lining comprising a plurality of independent sections adapted for engaging the edges of said band and for circumferential sliding therewithin; and a pair of perforate plates spaced by a helical compression spring mounted on the tightening bar of said band; said plates extending inwardly over the respective ends of said lining to prevent circumferential movement of the latter with respect to said band.

1,542,186. LIQUID-TREATING APPARATUS. INOS B. TANNER, Chicago, Ill., assignor to Joseph E. Nelson & Sons, Chicago, Ill., a Copartnership composed of John E. Nelson and William H. Nelson. Filed May 4, 1923. Serial No. 636,743. 1 Claim. (Cl. 210—16.)

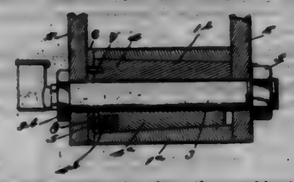
Liquid treating apparatus including a source of liquid furnishing liquid to be treated under pressure; a pipe communicating with said source; a valve in said pipe operated by the liquid, the pipe having a port closed by said valve and also opened to varying extents by the valve according to the pressure exerted upon the valve by the liquid; a settling chamber into which the liquid to be treated is discharged through said port; a chemical tank; a chemical pipe movable up and down and having a port at one end near the level of the chemical in the chemical tank and communicating with the chemical tank to receive chemical therethrough, said chemical pipe discharging at its other end into the settling chamber; an upright rack coupled with said valve; an upright rack connected with said chemical pipe; and gearing in mesh with said racks and serving to move said chemical pipe oppositely to the valve whereby the extent of the port in the chemical pipe through which chemical may flow is increased as said valve increases the extent of the liquid port through which liquid to be treated may flow and vice versa.



1,542,187. LIQUID TREATING APPARATUS. INOS B. TANNER, Chicago, Ill., assignor to Joseph E. Nelson & Sons, Chicago, Ill., a Copartnership composed of John E. Nelson and William H. Nelson. Filed May 4, 1923. Serial No. 636,745. 3 Claims. (Cl. 210—16.)

1. Liquid treating apparatus including a reaction chamber; means for supplying liquid to be treated and liquid treating chemical to said chamber; a settling tank in communicating with the reaction chamber at the lower part of said chamber and extending above said lower part of said chamber and having an outlet opening at an upper portion; and a trough in and extending crosswise of the settling tank in register with said outlet opening for conveying treated liquid thereto.

1,542,188. TANK. INOS B. TANNER, Chicago, Ill., assignor to Joseph E. Nelson & Sons, Chicago, Ill., a Copartnership. Filed Nov. 16, 1923. Serial No. 676,100. 3 Claims. (Cl. 72—13.)



1. The combination with the body portion of a tank; of a concrete foundation upon which said body portion is placed and inclusive of a portion constituting the bottom wall of the tank and downwardly converging toward the axis of the tank and terminating in a discharge pipe integrally formed therewith, and also formed with supporting legs at and projecting downwardly from the body portion of the tank.

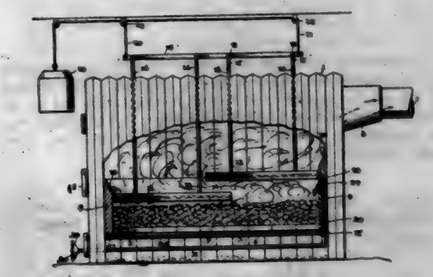
1,542,189. SHOE OR ANKLE ORNAMENT. RALPH A. THOMPSON, Garland, Pa. Filed Dec. 27, 1922. Serial No. 609,353. 1 Claim. (Cl. 2—245.)

A device of the class described, comprising an attachment member of cruciform shape, adapted to be attached at the end to a shoe, and a ring member attached to the attachment member, said ring member being folded over on a diameter to receive and detachably hold an ornament therein.

1,542,190. SPRING SHACKLE. BRUCE WHITE TRAYLOR, Philadelphia, Pa. Filed Jan. 23, 1924. Serial No. 687,954. 4 Claims. (Cl. 267—54.)

1. In a compensating bearing, the combination with a pivot member and an encircling sleeve spaced therefrom, one of said members having its bearing surface of frusto-conical shape, of an interposed longitudinally divided bushing having a frusto-conical face corresponding to said frusto-conical bearing surface, one section of said divided bushing being shorter than the other, and spring means exerting pressure on said shorter section.

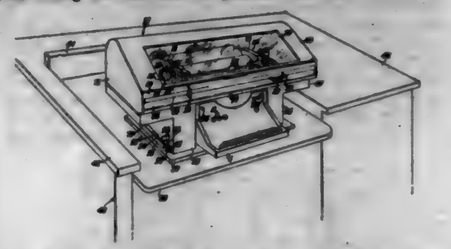
1,542,191. MOLD BOX FOR BLOCK PRESSES. JOSEF VAN HÜLLEN, Crefeld, Germany. Filed Oct. 17, 1924. Serial No. 744,192. 4 Claims. (Cl. 18—42.)



1. A mold box for block presses comprising in combination with the box proper having conical inner walls, conical heatable plates bearing against said conical inner walls of the mold box so that an inner space is formed enclosed by vertical faces, projections on said conical plates, and abutments on the inner walls of the mold box for limiting the movability of said heatable plates.

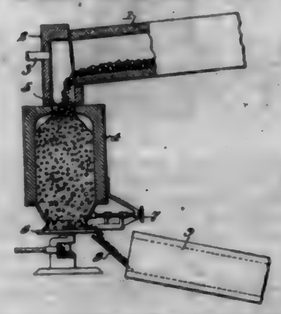
1,542,192. CHECK-BOOK HOLDER. JOSEPH A. VAUTROT, Mobile, Ala. Filed Apr. 15, 1925. Serial No. 23,877. 2 Claims. (Cl. 281—19.)

1. The combination with a foldable check book holder comprising a body portion adapted to be folden intermediate its ends, and a flap carried by one end of said bottom portion and adapted to be detachably secured to the other end when in closed position, of a spring carried by said body portion and extending on opposite sides of said intermediate point, said spring being adapted to be placed under tension when said holder is folded.



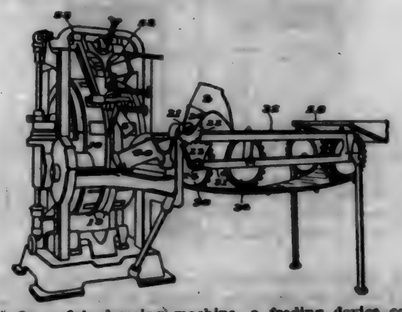
1,542,193. HEATING FURNACE. FRANK A. WALD, Camp Hill, Pa. Filed May 8, 1923. Serial No. 637,590. 8 Claims. (Cl. 110—66.)

1. A heating furnace having a grate, a plurality of arches positioned above the grate, suspending means for the arches capable of adjustments to vary the space between the arches and the grate, and means permitting relative adjustments between the arches.



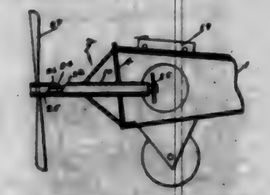
1,542,194. TYPEWRITING MACHINE. JOHN WALDHEIM, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed June 17, 1921. Serial No. 478,231. 13 Claims. (Cl. 197—186.)

1. In combination, a base which may be used in a drop-head typewriter desk, a typewriting machine mounted on said base, a sound-deadening casing mounted on said base and enclosing said machine, means for fastening said casing to said base to prevent rearward movement



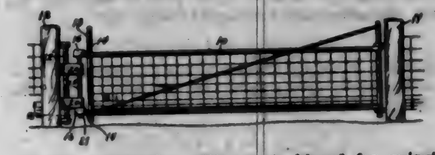
of said casing on said base when the latter is tilted rearwardly, and means within the casing for preventing movement of the machine relative thereto.

1,542,195. LIME-BURNING PROCESS. IRVING WARNER, Bellefonte, Pa. Filed Sept. 15, 1923. Serial No. 662,954. 1 Claim. (Cl. 222—4.)



The process of making lime from limestone which consists in heating the same in passage through a rotary kiln to a temperature above that of dissociation and then transferring the heated mass, while still above the dissociation temperature, to a heat insulated receptacle and permitting the mass to remain in this receptacle for a sufficient time to complete the calcination.

1,542,196. FISH-DRESSING MACHINE. EDWARD H. WAUGH, Seattle, Wash., assignor to Smith Cannery Machines Co., Seattle, Wash., a Corporation of Washington. Filed July 30, 1923. Serial No. 654,627. 64 Claims. (Cl. 17—3.)



4. In a fish dressing machine, a feeding device comprising an endless fish carrying apron, an endless chain connected to move in time with and alongside the apron and having fish positioning means, said chain stopping short of the apron at its delivery end, and a fish treating means acting upon the fish after being released by the chain and while still supported by the apron.

1,542,197. TOY AEROPLANE. AUGUST WEBER, Jersey City Heights, N. J. Filed Aug. 17, 1922. Serial No. 582,460. 2 Claims. (Cl. 46—46.)

1. In a toy aeroplane comprising a body, a sleeve carried by the body having a cam surface at its forward end, a rotatable and slidable shaft in the sleeve, a cam member mounted on the said shaft cooperating with the cam surface of said sleeve, and a propeller rotatable with the shaft whereby noise is produced as the cam surface and cam member engage each other.

1,542,198. GATE LATCH. SMITH A. WELLMAN, Mason City, Iowa. Filed July 19, 1924. Serial No. 727,067. 3 Claims. (Cl. 292—52.)

1. The combination with a gate hinged for swinging movement relative to a latch post, of a latching device comprising a bearing having a stem by which it is fixed to the free end of said gate, a rod mounted for rotary oscillation and for vertical sliding movement in said bearing, a cap fixed to said rod above said bearing and having a depending peripheral flange, the flange of said cap being formed with a radial notch adapted to receive the stem of said bearing and prevent oscillation of said cap and rod, and divergent wings fixed to said rod and adapted to partially embrace the latch post at times.

1,542,199. GLOVE. CHARLES W. WHITE, Kewanee, Ill., assignor to The Boss Manufacturing Company, Kewanee, Ill., a Corporation of Illinois. Filed June 11, 1921. Serial No. 476,697. 3 Claims. (Cl. 2—161.)

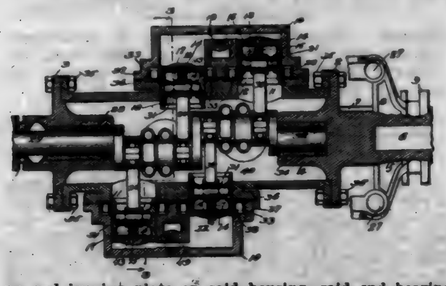
1. A glove made of cloth and having a protecting covering for the palm and fingers, said protecting covering comprising a palm having finger portions formed integral therewith and separate finger portions adapted to be secured to the integral finger portions to entirely enclose the fingers of the glove, the seams formed by securing the separate finger portions to the integral finger portions being at the front of the fingers.

1,542,200. CLOTHESLINE. DANIEL N. WILKERSON, Washington, D. C. Filed Aug. 17, 1922. Serial No. 582,437. Renewed May 11, 1925. 1 Claim. (Cl. 68—3.)

A pinless clothes line link made of a single length of wire having a portion constituting the strain receiving bar straight throughout its length, said portion being bent at each end to provide an eye for connection to adjacent links, the wire being continued from one end by a sharp bend from the eye at said end to provide a clothes receiving eye adjacent that end and to be then wrapped spirally about the strain bar portion and diverging therefrom, said wire being then directed toward the strain bar and being tightly wrapped about the remaining eye, said diverging portion and the portion directed toward the strain bar constituting one side of a clothes receiving eye.

1,542,201. THEFT SIGNAL. JOHN T. WILSON, Los Angeles, Calif. Filed Dec. 15, 1923. Serial No. 680,877. 4 Claims. (Cl. 296—95.)

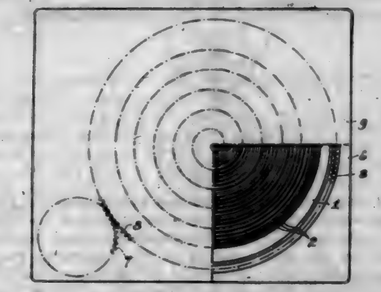
1. A convertible sun shield and theft signal for automobiles comprising an opaque visor pivoted at its upper edge to the upper part of the windshield frame, brackets secured on the side members of the windshield frame, slotted arcuate braces connected at one end to the visor and extending through said brackets, a clamp shaft extending through the slots in said braces and journaled in said brackets, a nut screw seated on one end of said shaft for engaging one of said braces, a tumbler on said shaft near its other end for engaging said other brace said nut and said tumbler cooperating to hold said visor in its upper position when used as a sun shield and to lock said visor in a vertical position in front of the wind shield when used as a theft signal.



1,542,202. PROCESS FOR PRODUCTION OF TRANSPARENT EFFECTS IN COTTON FABRICS. ROBERT ZIMMERMANN, Tubach, Switzerland, assignor to the Firm Textilwerk Horn A.-G., Horn-on-the-Bodensee, Switzerland. Filed Mar. 28, 1923. Serial No. 628,324. 9 Claims. (Cl. 8—20.)

7. Process of producing soft, pliable cotton fabrics having a transparent effect, which comprises treating the fabric with a bath containing at least 60% of sulphuric acid, water, and at least 5% of ammonium sulphate, the percentage of acid being higher the higher the percentage of ammonium sulphate.

1,542,203. HYDRAULIC POWER TRANSMISSION. BERTRAM E. ADAMS and JOSEPH A. BLAIR, Gold Hill, Oreg. Filed June 28, 1923. Serial No. 648,341. 1 Claim. (Cl. 192—60.)



In a mechanism of the class described, the combination of a housing, a plurality of blocks on said housing, each block provided with a plurality of piston receiving cylinders and with a passage between and communicating with said cylinders, a rotary valve in each passage of

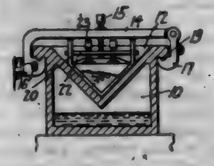
each block between the piston receiving cylinders, a driven shaft extending into said housing, pistons in said piston receiving cylinders and connected to said driven shaft,

an end bearing plate on said housing, said end bearing plate provided with an outwardly-extending hub-like portion, a pair of collars slidably mounted on said hub-like portion and held against rotation thereon, and connecting devices connecting said rotary valves and said collars.

1,542,204. SCREEN FOR RÖNTGEN-RAY EXAMINATION. ÅKE OLOF ÅKERLUND, Stockholm, Sweden. Filed Dec. 27, 1922. Serial No. 609,299. 3 Claims. (Cl. 250—34.)

1. In a rotatable screen for Röntgen-ray examination the combination of a carrier of a material permeable for the rays, and a plurality of substantially parallel spiral strips of an impermeable material, all extending from the same centre and having their planes coinciding in direction with that of the primary Röntgen-rays.

1,542,205. JAIL-LOCKING MECHANISM. JOHN ALLENSON, St. Paul, Minn., assignor to St. Paul Foundry Company, a Corporation of Minnesota. Filed June 14, 1922. Serial No. 568,148. 35 Claims. (Cl. 159—7.)

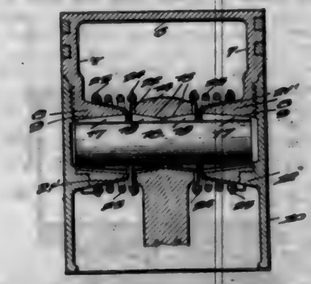


1. A locking device for pails comprising a latch bar, a bracket secured thereto, means engaging said bracket for raising said latching bar and individual means for engaging said bracket for lowering said latch bar.

1,542,206. TRACTION WHEEL. LOUIS W. ANTHONY, Albany, Oreg. Filed Sept. 22, 1922. Serial No. 589,827. 6 Claims. (Cl. 301—43.)

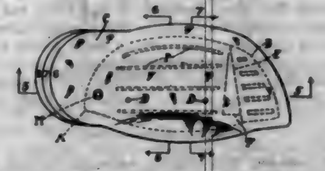
5. A traction wheel comprising a sectional hub supported upon an axle, an eccentric rotatable with respect to the axle and located between said sections, a collar rotatably mounted upon the eccentric, an outer rim supported by spokes radiating from the hub, an inner rim supported upon spokes radiating from the collar, means for rotating the eccentric, and traction means on the inner rim projectable through the outer rim.

1,542,207. VULCANIZING MACHINE. GEORGE S. BARKER, Denver, Colo. Filed Dec. 17, 1923. Serial No. 681,265. 6 Claims. (Cl. 18—19.)



1. A vulcanizing machine comprising a heat-containing unit and curing molds arranged to be clamped against said heat-containing unit, said curing molds comprising sections arranged to be clamped together around the article to be cured before said molds are clamped against said heat-containing unit.

1,542,208. CLOTHESPIN. GEORGE C. BERGER, Fosston, Minn. Filed Jan. 30, 1924. Serial No. 689,463. 2 Claims. (Cl. 24—137.)



1. A clothes pin comprising coacting gripping members pivotally connected with each other, means yieldably urging the members into contact with each other at their lower portions, the lower portion of each member being bent back upon itself to provide a rounded shoulder and being provided in its back-bent portion with indentations providing gripping protuberances.

1,542,209. WRIST-PIN MOUNTING. ALFRED BRONSON, New Bedford, Mass. Filed July 26, 1922. Serial No. 577,648. 7 Claims. (Cl. 74—108.)

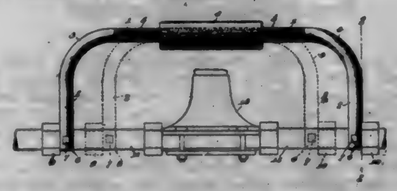
1. The combination with a movable member having a tapered socket, of a wrist pin extending into the socket, and a tapered split bushing having weakening slots both on the inside and outside of the bushing.

1,542,210. FOOT-ARCH-SUPPORTING DEVICE. DAVID BONADA, Cooma, New South Wales, Australia. Filed May 6, 1924. Serial No. 711,916. 3 Claims. (Cl. 36—71.)

3. A foot-arch supporting device for use within a boot or shoe and formed in two parts, in which one element of a transversely disposed tapered hinge is formed on the underside of the forward end of one part and a complementary hinge element is formed on the rearward end of the other part, said hinge providing the required flexibility.

1,542,211. COUPLING FOR RAILWAY OR OTHER VEHICLES. WILHELM G. BOONSAIER, London, England; Irene Kathleen Holland and Gregorio John Boonsaier executors of said Wilhelm G. Boonsaier, deceased. Filed Aug. 15, 1923. Serial No. 657,620. 3 Claims. (Cl. 213—107.)

1. An automatic coupling, comprising a coupling head having a pair of forwardly-extending arms providing a buffer recess between them; a pinion mounted in one arm and projecting into said recess to engage a similar pinion on the opposed coupling member; and a pawl pivotally mounted on the coupling head and having two separate locking portions, one for coaction with said pinion and the other for directly and simultaneously engaging a part of said head.



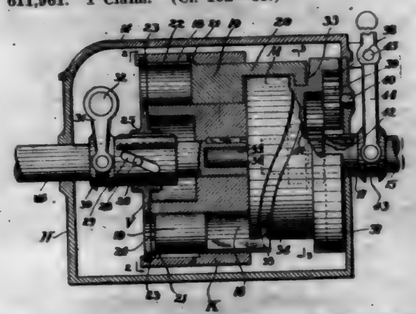
1,542,212. GAS BURNER AND HEATING APPLIANCE. JOHN WAINWRIGHT BOWERBANK, Kidderminster, England. Filed Apr. 5, 1924. Serial No. 704,537. 1 Claim. (Cl. 126—40.)

A gas heating appliance comprising a burner of the kind described secured centrally upon a bottom plate having an air inlet aperture centrally beneath said burner and an upstanding rim surrounding said burner, means for adjusting the burner valve from above the bottom plate and also from below said plate, radial arms on said

plate, means for radially adjusting said arms, and means on said arms inter-engaging with the legs of a stand associated with the vessel to be heated to secure said appliance at different positions in said stand, substantially as described.

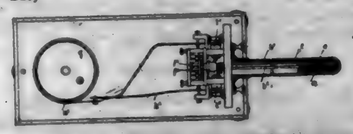
1,542,213. JACK. THOMAS PERRY BROCKETT, Goldsboro, N. C. Filed Oct. 14, 1924. Serial No. 743,606. 2 Claims. (Cl. 254—100.)

2. A device of the character described comprising a pair of pressure exerting members, each being substantially L-shaped and consisting of a straight threaded attaching end portion, a straight contact end portion and a curved intermediate portion merging the straight attaching end portion and the contact end portion one into the other, a coupling nut connecting the attaching end portions of said members, whereby the contact end portions of the members will be held substantially parallel with each other, each of said contact end portions being formed with a pair of forks at its extremity, said forks being offset laterally of opposite sides of the body of the contact end portion and the inner wall of each contact end portion being concavely curved at the junction of the forks of said contact end portion to closely fit over a pipe or like circular member which is straddled by the forks, and a set screw threaded through a transverse opening in one of the forks of each contact end portion for securing said contact end portion to the member which is straddled by said forks.



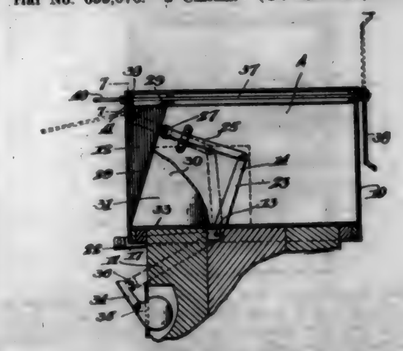
1,542,214. SHUTTLE-THREADING DEVICE. LOUIS ALEXANDRE CADORET, Pawtucket, R. I. Filed Oct. 30, 1924. Serial No. 746,886. 4 Claims. (Cl. 139—223.)

1. A thread guide comprising a base plate intended to be secured in a shuttle recess, and a length of wire over said plate, the wire being secured at one end to the plate and extended upwardly to form a thread-guiding leg, said wire being extended from the upper end of said leg to provide a substantially horizontal arm, the wire being bent substantially upon itself at the end of said arm and then declining to provide a second



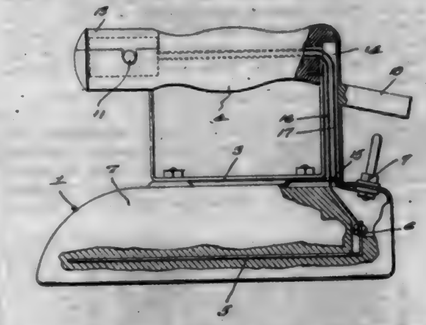
arm which diverges laterally from a vertical plane between the two arms, the lower extremity of said second arm being bent downwardly and secured to the plate to provide a second thread-guiding leg.

1,542,215. FLUID-CLUTCH TRANSMISSION FOR MOTOR VEHICLES AND THE LIKE. VAN ROY CARTER, Los Angeles, Calif. Filed Jan. 11, 1923. Serial No. 611,961. 1 Claim. (Cl. 192—59.)



In a fluid clutch transmission, a driving shaft, a driven shaft, a motion conveying member adapted for operative connection with the driving shaft, said member being formed with a cam groove, piston and cylinder units fixed to the driven shaft, rods on the pistons, extensions formed on the rods of said pistons and engaging with said cam groove, a housing adapted to contain fluid, a valve fitting against the ends of the cylinder units and having openings adapted to register with the cylinders, said valve having a hub portion, a sleeve slidingly mounted on the driven shaft and having ribs to engage in grooves in the hub portion, the sleeve being connected to the driven shaft by pins fixed in the driven shaft and extending into cam slots in the sleeve, a collar extending from the sleeve, and a fork engaging the collar so that by operating the fork the sleeve may be reciprocated to rotate the valve to control the outlets of the cylinders.

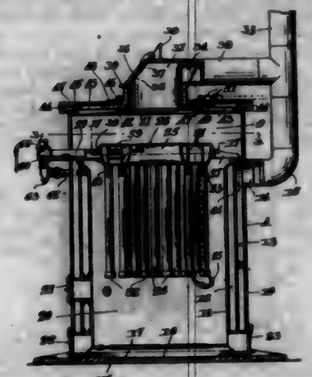
1,542,216. INDUSTRIAL APPARATUS FOR THERMOMETRIC ANALYSIS. PIERRE CHEVENARD, Imphy, France, assignor to Societe Anonyme de Commentry, Fourchambault & Decazeville, Paris, France. Filed Feb. 7, 1922. Serial No. 534,782. 11 Claims. (Cl. 234—11.)



10. Apparatus for thermometric analysis comprising a tube, a specimen of the substance under examination placed in the bottom of the tube, an axial hole bored through the specimen, a needle located in the hole and impinging on the bottom of the tube and constituted by an alloy exempt from thermic anomalies, means for transmitting to the outside of the tube and amplifying the variations of the temperature of the specimen according to the variations of the length of the needle resulting from its expansion, means for transmitting to the outside of the tube and amplifying the variations of the length of the specimen resulting from its expansion, the amplification of these variations of length being different from the amplification of variations of the length of the needle, a recording cylinder, means for recording on this cylinder the variations transmitted to the outside of the tube and resulting from the needle and from the specimen.

1,542,217. RURAL MAIL BOX. JOSEPH ELWELL COLE, Dacre, Ontario, Canada. Filed Mar. 13, 1924. Serial No. 699,076. 2 Claims. (Cl. 232—17.)

1. A rural mail box comprising, in combination, a suitable support, a casing on the support having an open end, a door swingingly mounted in the open end, a compound lever pivotally mounted adjacent the door and designed to extend beyond the front end of the casing, the other end of said lever being adapted to slidably contact with the door whereby, on the front end of the lever being pressed downwardly, the door is opened, and whereby, on the front end of the lever being released, the door is automatically closed, guide means for the lever, and means outside the casing for retaining the lever in downwardly operated position to hold the door open.



1,542,218. ELECTRIC IRON. LULA L. CONRAD, Johnstown, Pa. Filed June 30, 1924. Serial No. 723,260. 1 Claim. (Cl. 219—25.)

An electric iron including a base, a heating element in said base, a handle positioned above the base a substantially U-shaped supporting frame having its bight portion detachably connected to the top of said base and having the upper ends of its arms fastened to and supporting said handle, a conduit depending from one end of said handle, and communicating with a recess formed in said base, one end of said handle being recessed to provide a pocket, for reception of a controlling switch, and a removable cover for said pocket.

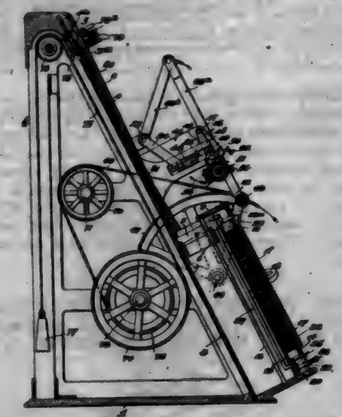
1,542,219. FURNACE. FREDERICK AUGUST DARCHERE, Ottawa, Ontario, Canada, assignor of three-fourths to William Frederick Powell, Ottawa, Ontario, Canada. Filed Sept. 10, 1923. Serial No. 661,954. 11 Claims. (Cl. 122—160.)

11. In a furnace of the character described, the combination with an outer casing and a suitable base having a top plate and a revolving cover plate, and an auxiliary flue through said plates, of an inner casing provided with a water jacket and adapted to form, in combination with the outer casing, an inner heating chamber and an outer heating chamber on each side of the water jacket, and of substantially lesser length than the outer casing, a header across the top of said chambers, and fluid heating elements from said header suspended within the inner chamber, whereby, in combination with the fire therein, the water in said elements and the water jacket is heated, a main flue through the side of the casing, and communicating with the outer chamber, and smoke baffle means for said flue, damper means in

the auxiliary flue adapted to divert the heat units and smoke to the outer chamber whereby the water in the water jacket is again heated, an inspection door in said cover and a plurality of apertures adapted to register individually with said door in the top plate, and cleaning door means in the auxiliary flue, cold water intake means connected to the header and the water jacket, hot water discharge means for the opposite side of the header, and hot water intake means connected to the water jacket, whereby the water circulates through the header and the water jacket to the heating coils and from the heating coils back to the water jacket.

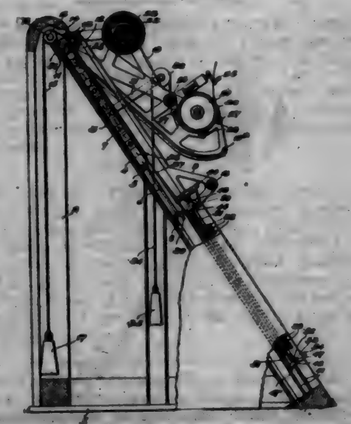
1,542,220. PREHEATER. CHARLES A. DARIUS, Montclair, N. J. Filed May 4, 1922, Serial No. 558,478. Renewed Nov. 8, 1924. 16 Claims. (Cl. 110—175.)

1. An air pre-heater attachment for furnace doors embodying reversely disposed and nested metal pan members perforated to provide a tortuous path of air from the open end of the outer pan through the bottom of the latter and through walls of the inner pan, and means to attach the device to a furnace door with the open end of the outer pan contiguous with the inner surface of said door.



1,542,221. SECTIONAL INKING ROLLER. HENRY DE JARNETTE, Des Moines, Iowa. Filed Mar. 12, 1923. Serial No. 624,481. 1 Claim. (Cl. 91—67.5.)

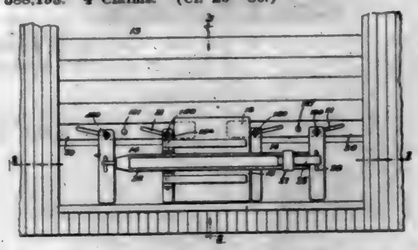
In a sectional composition roller, a cylindrical metal core, a sectional roller supported thereon comprising a tubular lining having reduced ends to fit said core, and a composition cover for said lining, clamp devices for



securing said lining to said core, said clamp devices and the reduced ends of the lining having coacting tongues and notches.

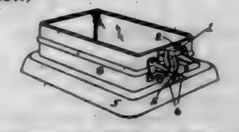
1,542,222. RAPID TYPE PRINTER. FRED A. DOLPH, Washington, D. C. Filed Mar. 4, 1924. Serial No. 696,890. 14 Claims. (Cl. 101—94.)

1. A machine of the class described, comprising a frame, type bars movably mounted thereon, means including resilient members for positively moving said type bars, a platen mounted on said frame and operatively associated with said means, a bank of movable type keys for limiting the movement of said bars in one direction, and resilient means for maintaining said type keys in any position to which they are moved.



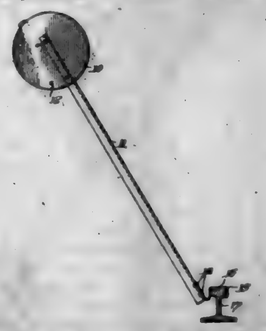
1,542,223. PRINTING MACHINE. FRED A. DOLPH, Washington, D. C. Filed July 11, 1924. Serial No. 725,509. 17 Claims. (Cl. 101—94.)

1. In a printing machine, the combination of a frame, type bars mounted for rotation and reciprocation in said frame, means for reciprocating said type bars, and



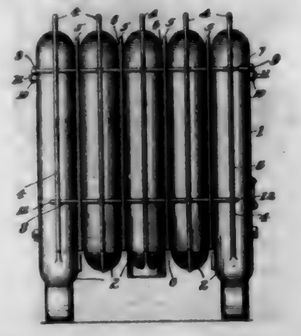
a keyboard including a plurality of letter keys, each of said keys being adapted to control the rotation and the longitudinal movement of one of said bars.

1,542,224. GRAIN-CAR DOOR. JOSEPH E. DRAKE, Blue Rapids, Kans. Filed Sept. 14, 1922. Serial No. 588,193. 4 Claims. (Cl. 20—30.)



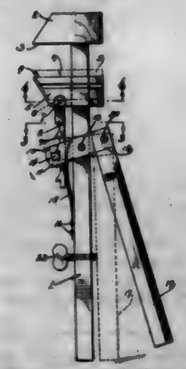
1. An auxiliary grain car door adapted to be detachably secured at its ends in a door opening beneath a main door, said auxiliary door including sections hinged together and presenting an opening therebetween, a closure for said opening hinged to one of said sections and movable to close or open position, and means on said sections of the auxiliary door movable in a vertical plane to engage the main door above and constitute a support therefor until said main door is nailed in position.

1,542,225. FLASK-POSITIONING DEVICE FOR PATTERN PLATES. HOWARD T. DUDLEY, Saginaw, Mich. Filed Jan. 11, 1924. Serial No. 685,569. 8 Claims. (Cl. 22—157.)



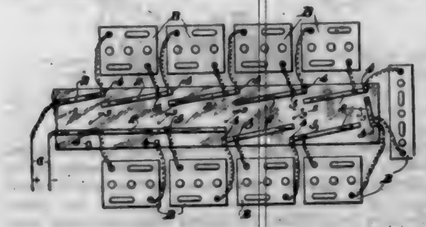
1. A flask-member positioning device for a pattern plate comprising an apertured lug on one end of said flask member and a fixed pin therefor on said plate, a pair of projections spaced apart on said pattern plate, an apertured lug on the other end of said flask member, the side faces of said lug adapted to fit closely, with respect to transverse dimensions only, between said projections.

1,542,226. TRACK-SIGNAL-FLAG HOLDER. HARRY W. FAHNESTOCK, Chicago, Ill. Filed Sept. 12, 1924. Serial No. 737,283. 1 Claim. (Cl. 246—477.)



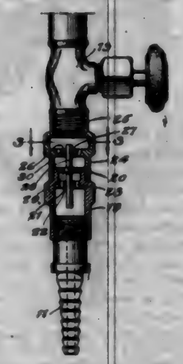
A railway signal comprising in combination a track clamp having an inturned portion adapted to engage a rail head on the underside thereof and having a vertical portion at the outside thereof adapted to engage the outer side of the rail head and an angularly disposed inner portion adapted to engage the inner side of a rail head, with portions of the clamp connecting said engagement and clamping portions, a signal holder secured at an angle of 45° to said clamp and a signal carried by the said holder.

1,542,227. RADIATOR GUARD. HERMAN J. FISHER and ARTHUR BETZ, Pasadena, Calif., assignors to Crown Gas Radiator Company, Pasadena, Calif., a Corporation of California. Original application filed Nov. 15, 1922. Serial No. 601,010. Divided and this application filed May 8, 1923. Serial No. 637,508. 1 Claim. (Cl. 126—202.)



The combination with a radiator comprising the usual spaced vertical sections; of perforate lugs on the outer sides of the end sections and near the top thereof, a guard for said radiator comprising spaced parallel bars adapted to extend laterally of the radiator, right angularly disposed arms at the ends of the uppermost of said bars, downturned hooks on the ends of said arms to enter said lugs, the said bar being spaced from said radiator when said hooks are engaged in said lugs, the other of said bars being shorter than the upper bar, looped portions at the ends of said other bar to engage with the sections of the radiator, and rods arranged in spaced parallel relation with each other and at right angles to said bars; the upper ends of certain of said rods bent inwardly to overlie portions of said radiator and spaced from the latter.

1,542,228. WRENCH. JAMES D. FRANKLIN, Chattanooga, Tenn. Filed Mar. 20, 1923. Serial No. 626,826. 1 Claim. (Cl. 81—86.)



In a wrench of the class described, comprising a shank having a fixed jaw at its upper end, a slidable jaw carried on said shank, said slidable jaw being provided with a socket in its lower face, a rack bar pivoted at its upper end within the socket of said slidable jaw and suspended from the latter adjacent one side edge of said shank, a bracket comprising a pair of parallel plates straddling said shank and pivoted thereto intermediate of its ends, a dog carried between the inner ends of the plates forming said bracket and adapted to engage the teeth of said rack bar, a lever reduced at its upper end and having said reduced end extended between and secured to the outer ends of the plates forming said bracket, the shoulders formed at the reduced end of said lever abutting the lower edges of the plates forming said bracket to provide a secure connection therebetween, a leaf spring secured at its one end to the side edge of said shank and bowed to contact with the side edge of the rack bar and normally retain the latter in engagement with said dog, said shank being provided with a threaded opening therein adjacent its lower end and a thumb screw extending through said threaded opening and adapted to have its end contact with the inner side edge of said lever to limit the inward movement of the latter, as and for the purposes described.

1,542,229. BATTERY-CHARGING SWITCHBOARD. JACOB PLANNIB GANTT, Wagener, S. C. Filed June 20, 1924. Serial No. 721,374. 5 Claims. (Cl. 175—298.)

1. A battery charging switch board comprising a panel, a plurality of alined switch arms pivotally mounted thereon, a switch contact mounted on said panel adjacent the free end of each of said switch arms, and means at the inner ends of each switch arm for receiving the adjacent free end of the next switch arm.

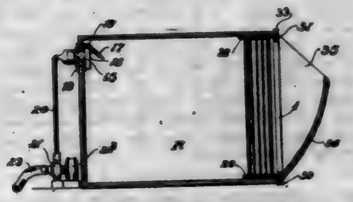
1,542,230. WELDING TORCH. ADOLF GANS, New Brighton, N. Y. Filed Dec. 18, 1922. Serial No. 606,590. 1 Claim. (Cl. 251—127.)

A valve structure comprising a housing provided at a point between its ends with a partition wall having a central guide opening and a series of eccentrically positioned ducts passing therethrough, the said housing being of greater internal diameter at one side of the partition wall than at the opposite side thereof, the housing being provided at that end of smaller internal diameter with a valve seat, a valve stem having one end portion slidably received in the central opening of the partition, a valve disk carried at the intermediate portion of the stem and adapted to close against said seat, a casing provided at a point between its ends with a diaphragm wall having a central guide opening wihch slidably receives the other end portion of the valve stem, the diaphragm also having a series of eccentrically positioned ducts passing therethrough and which converge inwardly toward the center of the valve disk, the casing being detachably connected at one end with the smaller end of the housing, the internal diameter of the casing at one side of the diaphragm being greater than the internal diameter at the opposite side of the diaphragm, the valve disk being received in the smaller end portion of the casing and the opposed side surfaces of the diaphragm and the valve disk lying in parallel planes whereby the said surfaces may meet in close contact with each other and the valve disk may completely close the ends of the converging ducts in the diaphragm.

1,542,231. COMBINED CORNER SHIELD AND CASTER. WALTER SUMNER GARFIELD, Dothan, Ala. Filed Dec. 4, 1923. Serial No. 678,526. 5 Claims. (Cl. 16—24.)

2. A combined corner shield and caster for use on trunks, said corner shield comprising a body portion having attaching wings, the body portion and the attaching wings being adapted to be secured flush up against the trunk, a caster housing integral with said body portion, said caster housing having a guide opening therein and having an inwardly directed marginal flange around the outer end of said opening and a recess around the inner end of said guide opening, a ball carrier arranged in said housing and having a socket therein, a ball rotatably mounted in said socket, a collar fixed to the carrier and having a flange enlarging the peripheral area of the collar and providing a spring seat, the periphery of the collar being slidably engaged with the wall of the guide opening, a compression coil spring having one end engaged with the spring seat of said collar, and a plate having a spring seat engaged with the opposite end of said coil spring, the plate being received in the recess of the body portion and being held therein by engagement with the trunk.

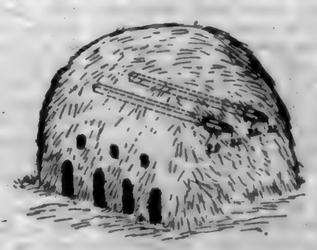
1,542,232. ALLOY. PIERRE GIRIN, Paris, France, assignor to Societe Anonyme de Commentry, Fourchambault & Decazeville, Paris, France. Filed Dec. 9, 1920. Serial No. 429,543. 6 Claims. (Cl. 75—1.)



1. An alloy of the character described containing nickel 25 to 40 per cent, metal of the chromium group appreciably in excess of 8 and not more than 15 per cent, manganese 0.5 to 5 per cent, carbon 0.3 to 1 per cent and the remainder iron.

1,542,233. ALLOY. PIERRE GIRIN, Paris, France, assignor to Societe Anonyme de Commentry, Fourchambault & Decazeville, Paris, France. Filed Dec. 9, 1920. Serial No. 429,545. 1 Claim. (Cl. 75—1.)

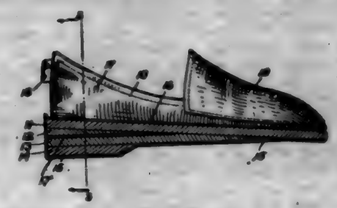
An alloy of the character described containing nickel appreciably in excess of 20% and not exceeding 40%,



chromium 10% to 15%, manganese 1% to 5%, carbon 0.2% to 1%, and iron the remainder, said alloy being heat-resistant and non-corrodible and having ductility and malleability adapting it for wire drawing and forging.

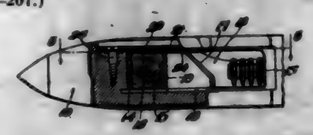
1,542,234. GERMICIDE TANK. JAMES M. GOLDEN, Paso Robles, Calif. Filed July 21, 1922, Serial No. 576,581. Renewed Mar. 18, 1925. 4 Claims. (Cl. 183—44.)

1. In a cleaning apparatus, a receptacle having a closed end and an open end, a nipple fitted in the closed end of the receptacle and having a head constituting a valve seat, a valve hingedly supported on the seat and normally occupying a closed position to close the end of said nipple, a conduit connected to the nipple, means for creating a suction inwardly of the conduit, a filtering member in the receptacle, and a chute removably fitted in the open end of the receptacle for deflecting the air and solid particles upwardly from the receptacle.



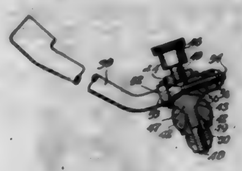
1,542,235. PROCESS OF STACKING AND CURING GRAIN. DAVID M. GRAHAM, Bordulac, N. Dak., assignor to Graham-Roach Harvester & Stacker Company of North Dakota. Filed Apr. 3, 1918. Serial No. 226,423. 2 Claims. (Cl. 98—26.)

1. A process of stacking and curing grain, which consists in forming a stack of the same, allowing the grain berries to mature and cure in said stack; then, before overheating or spoiling of the berries in the interior of the stack, restacking said stack, at the same time forming therein a defined ventilating air space and disposing in the interior of the second stack the drier grain from the exterior parts of the first stack, and disposing on the exterior of said second stack the moister grain from the interior of said first stack.



1,542,236. SLIPPER. MAX GREENBLATT, New York, N. Y. Filed July 14, 1924. Serial No. 725,792. 3 Claims. (Cl. 36—12.)

3. A slipper having an upper sole portion extending to the rear thereof, a wedge shaped lower sole portion extending to the rear thereof, a wedge shaped insert located at the rear of the slipper intermediate said sole portions, a fabric facing stitched to said insert and said upper sole portion, said fabric facing covering the top of said upper sole portion and having its ends turned inwardly under said insert, a second fabric facing covering the bottom of said lower sole portion and having its ends

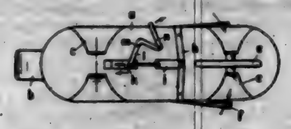


turned inwardly above the top thereof, and an upper having the ends of the rear thereof turned inwardly and located between the inturned ends of said facings.

1,542,237. SHUTTLE. RALPH L. GREENE, Attleboro, Mass., assignor to Shambow Shuttle Company, Woonsocket, R. I., a Corporation of Rhode Island. Filed July 21, 1924. Serial No. 727,141. 1 Claim. (Cl. 139—207.)

A shuttle comprising a body provided with a bobbin recess, a shuttle spring and bobbin guide supported in the shuttle body, and a filler plate provided with a recess adapted to embrace the inclined portion of the bobbin guide so as to interlock the bobbin guide and filler plate and prevent the lateral displacement of the one with relation to the other.

1,542,238. UNIVERSAL JOINT. WILLIAM G. GRIFFETH, Charlotte, N. C., assignor to Robert L. Carithers, Winder, Ga. Filed Nov. 8, 1923. Serial No. 673,459. 2 Claims. (Cl. 287—96.)

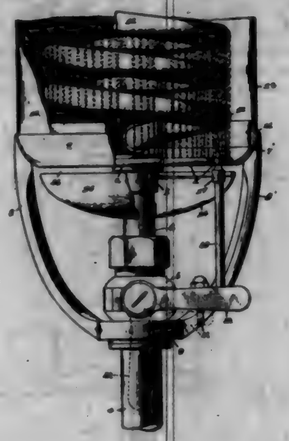


1. In a steering mechanism, a drag link, and means for connecting said drag link to the crank arm of a steering wheel comprising a portion on said drag link having an opening tapering inwardly from both sides to form a double cone shaped opening, a block bolt having a cone shaped end rotatably mounted in said opening, said block bolt having a reduced portion adapted to receive a cone shaped bushing, the other end of said block bolt having a transverse double cone shaped opening therein, and a crank arm having a conical portion rotatably mounted in said transverse opening and having a reduced extension adapted to receive a cone shaped bushing.

1,542,239. ROLLER SKATE. CARL HAAS, St. Moritz-Bad Engadin, Switzerland. Filed June 3, 1924. Serial No. 717,506. 1 Claim. (Cl. 208—173.)

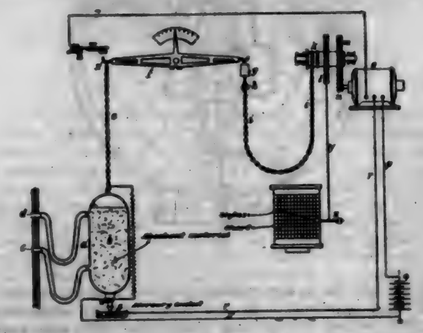
A roller skate comprising in combination a foot plate made from sheet aluminium, a lever system on the lower surface of said sole plate, sole claws and heel claws fixed

on said lever system and an elbow lever for operating said lever system so that the sole claws and heel claws



are simultaneously pressed against the boot, and an extension at the rear end of the foot plate said extension being bent down so that it can serve as brake.

1,542,240. AUTOMOBILE BUMPER. ALBERT HARRIS, Toronto, Ontario, Canada. Filed July 12, 1924. Serial No. 725,722. 1 Claim. (Cl. 293—55.)



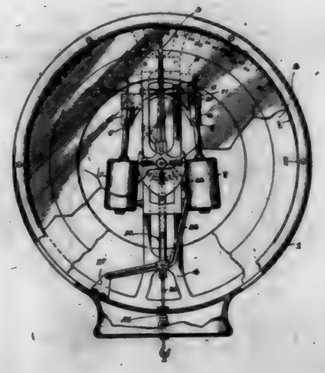
A bumper for automobiles, comprising a main bar member curved inward at its ends, a bar member fitting against the aforesaid bar member intermediately of its length and having its ends bowed outward from such main bar member and the extremities of the bowed portions curved inward to bear freely against the inturned ends of the main bar member, and means for clamping the main and bowed bar members together.

1,542,241. GAS BURNER. CARL HARTMANN, San Francisco, Calif. Filed July 15, 1924. Serial No. 726,137. 3 Claims. (Cl. 126—350.)

1. A gas burner comprising a plurality of arms each having a plurality of restricted apertures; a ring mounted around the burner arms and adapted to receive an element to be heated; a reflector mounted below the arms and ring and having its upper edge in slightly spaced relation to the lower edge of the ring to form an annular air passage around the burner arms; and a valve controlling the passage of gas to the burner arms whereby gas from a source of supply may be caused to issue from the restricted apertures in the arms without prior admixture with air for burning below and around the element to be heated, the combustion of said gas being supported by air admitted around the burner arms only through the passage between the reflector and the ring.

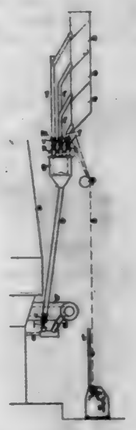
1,542,242. METHOD AND APPARATUS FOR CARRYING OUT AUTOMATIC GAS ANALYSIS BY WEIGHT. CARL A. HARTUNG, Berlin, Germany. Filed Nov. 14, 1924. Serial No. 749,964. 5 Claims. (Cl. 23—232.)

1. A method for carrying out automatic gas analysis by weight, which consists in passing the gas through absorbent material, continuously balancing said material, controlling the balancing operation by the increase in weight of the material, and recording the increase in weight.



5. A device for carrying out the hereindescribed method of automatic gas analysis by weight, comprising in combination a vessel containing absorbent material, flexible gas conduits leading to and from said vessel, a weighing device for continuously balancing the vessel, means to reset the weighing device operated by the increase in the weight of the said vessel, and means to record the increase in weight.

1,542,243. TOOTH-CLEANING IMPLEMENT. WILLIAM F. HEINELMAN, Pittsburgh, Pa. Filed Jan. 15, 1924. Serial No. 686,422. 4 Claims. (Cl. 132—92.)



1. A device for the purpose set forth comprising a body, means whereby the body may carry a supply of dental floss, a holder adjustably mounted upon one end of the body, a latching member mounted in the end of the body and engaging the holder to yieldably retain the same in a set position, and guides within the body for directing dental floss to the holder.

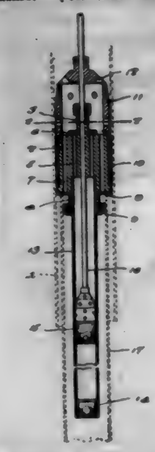
1,542,244. WEIGHING SCALE. HALVOR O. HEM, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Dec. 26, 1919. Serial No. 347,431. 12 Claims. (Cl. 265—62.)

1. In a scale, in combination, a frame, a pendulum comprising a connected head and bob, a flexible supporting member having non-winding connections with said head and said frame, and a guide for preventing undue swinging of said head.

1,542,245. METHOD OF CHARGING SHAFT FURNACES WITH FINELY-GROUND CHARGING MATERIAL BY FEEDING INTO THE SMELTING ZONE. HERMANN HENRICH, Duisburg, Germany, assignor to Deutsche Maschinenfabrik A. G., Duisburg, Germany. Filed Jan. 27, 1922. Serial No. 532,287. 5 Claims. (Cl. 266—27.)

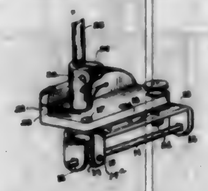
2. Apparatus for charging into the smelting zone of blast furnaces by way of the air blast tuyères finely divided substances such as ore, fuel and flux, comprising a number of separate containers for the said substances, a mixing container disposed beneath the said containers, conduits between the said containers and the said mixing container through which the said substances may respectively pass, valves on the said conduits, means for independently regulating the said valves, and a conduit between the said mixing container and the air blast pipes, substantially as described.

1,542,246. BELT BUCKLE. ARAM HOGASSIAN, New York, N. Y. Filed Apr. 24, 1924. Serial No. 708,704. 5 Claims. (Cl. 24—180.)



1. A belt buckle comprising a face plate, a bail swingingly mounted thereon, means upon the bail for the connection thereto of one end of a belt of ordinary type provided with openings, and a tongue upon the bail for engagement in the said openings in the belt, the said bail having an open portion through which the belt end is insertible and the said tongue projecting into said open portion of the bail.

1,542,247. LOCKING DEVICE FOR BOLT NUTS AND THE LIKE. JAMES BRUCE HOOD, Newark, N. J. Filed Aug. 18, 1924. Serial No. 732,634. 7 Claims. (Cl. 151—25.)

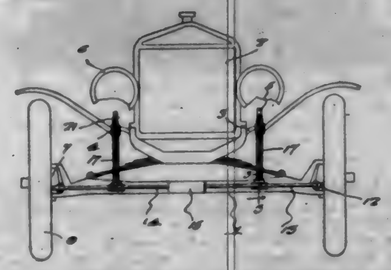


3. A nut locking device, comprising a nut and a resilient coil segment, concentric with and frictionally engaging the helix of the bolt to which the nut may be applied, one end of said segment to be movably hinged to the top surface of the nut and the other end wound in a direction corresponding to the unscrewing direction of the helix.

1,542,248. WORKING BARREL. CHARLES P. HOWE, Walters, Okla. Filed Sept. 20, 1924. Serial No. 738,984. 2 Claims. (Cl. 103—178.)

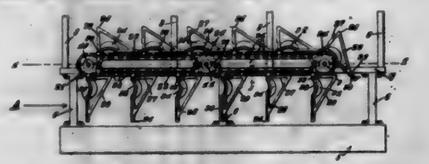
1. A working barrel structure comprising a fitting provided at its opposite ends with nipples, one nipple being of greater diameter than the other nipple, a cylinder connected in the larger nipple and having a valve, a plunger slidably mounted in the cylinder, said fitting being provided with passageways which communicate with the upper end of the cylinder, the valve member slidably mounted upon the smaller nipple and adapted to close the upper ends of said passageways, the said fitting being provided with other passageways located beyond the first mentioned passageways, and a valve member located upon the larger nipple and adapted to be disposed in the lower end of the second mentioned passageways.

1,542,249. RACK FOOT OR SUPPORT. SAMUEL N. HURT, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Dec. 10, 1919. Serial No. 343,915. 10 Claims. (Cl. 265—32.)



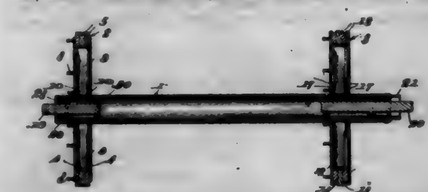
1. In a scale, in combination, a lever, a rack bar connected thereto, means for adjusting said rack bar angularly relative to the plane of movement of said lever, and means for adjusting said rack bar bodily laterally.

1,542,250. CREAM SEPARATOR. ROY S. INNES, Madison, S. Dak. Filed Apr. 8, 1924. Serial No. 704,983. 2 Claims. (Cl. 137—20.)



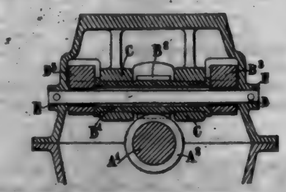
2. In a cream separator, a substantially J-shaped siphon tube, an air tube rigidly connected to the short leg of the siphon tube and having a shoulder, a flexible disk formed to seat on top of a milk bottle and having a central opening removably receiving the tubes, said shoulder of the air tube being located opposite and adjacent to the curved part of the siphon tube whereby said shoulder and the said adjacent curved part form abutments to each engage the upper face of the disk.

1,542,251. DIRIGIBLE HEADLIGHT FOR AUTOMOBILES. VICTOR KETTELER, Neshkoro, Wis. Filed Mar. 21, 1924. Serial No. 700,891. 1 Claim. (Cl. 240—62.)



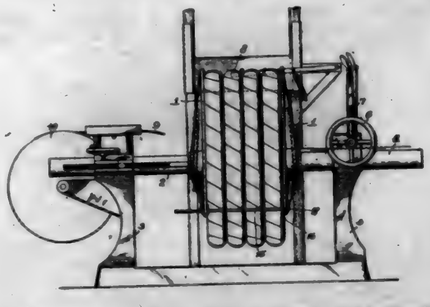
A dirigible headlight gear for an automobile machine comprising a rod pivotally connected at its ends with the steering knuckles of the machine and provided with sections of gear teeth, a guide mounted upon the intermediate portion of the axle of the machine and receiving the intermediate portion of said rod, lamp posts pivoted upon the frame of the machine and provided with angularly disposed arms, gear wheels carried by the arms and meshing with the teeth of the bar and springs coiled around the lamp post and serving to hold the teeth of the gear wheels in close contact with the teeth of the bar.

1,542,252. TIDE AND CURRENT MOTOR. MARTIN KIMBLE, Washington, D. C. Filed Oct. 25, 1921. Serial No. 510,258. 3 Claims. (Cl. 170—86.)



2. In a device of the class described, a vessel, sprocket wheels journaled on the vessel, a sprocket chain engaged with the wheels, and buckets pivoted to the chain, the buckets being provided with recesses located closely adjacent to the pivotal mountings of the buckets on the chains, the recesses being concaved to conform to the periphery of one wheel, thereby to permit the buckets to rest on said wheel throughout an appreciable portion of the periphery of the wheel, and to lessen the leverage of the buckets on the pivotal mountings of the buckets as the buckets feather upon leaving the water, and as the buckets move over said wheel and upon the upper run of the chain.

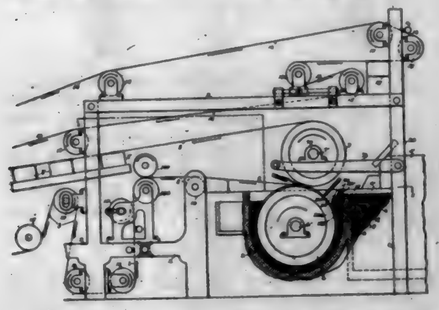
1,542,253. GUDGEON FOR BULL WHEELS. MEINHARD H. KOTZEBUE, Tulsa, Okla., assignor of three-fourths to Walker S. Estes, Tulsa, Okla. Filed Jan. 22, 1924. Serial No. 687,806. 2 Claims. (Cl. 64—41.)



1. A device of the character described comprising a tubular shaft, a gudgeon inserted in one end of the shaft, a pair of disks welded to the gudgeon in spaced relation one being welded to the shaft on the inside the other being of the same dimensions as the shaft and welded to the end thereof to provide a closure plate, and a third disk welded to the inner extremity of the gudgeon and having frictional engagement with the inside of the tubular shaft.

1,542,254. BALANCING OF RECIPROCATING ENGINES. FREDERICK WILLIAM LANCHESTER, Birmingham, England. Filed Nov. 18, 1924. Serial No. 750,649. 4 Claims. (Cl. 24—38.)

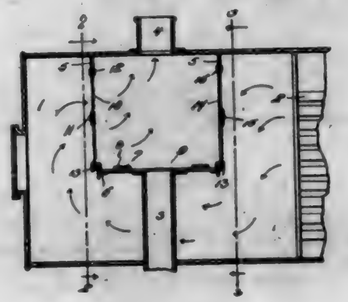
1. Harmonic balancing mechanism for a reciprocating engine including a pair of reverse rotating rotor elements each comprising a driven portion and a pair of balance weights driven thereby but mounted independently thereof.



1,542,255. TIRE-STRAPPING PRESS. JOHN W. LESLIE, Evanston, Ill., Assignor to Signode System, Inc., Chicago, Ill., a Corporation of Delaware. Filed June 29, 1921. Serial No. 481,212. 7 Claims. (Cl. 100—31.)

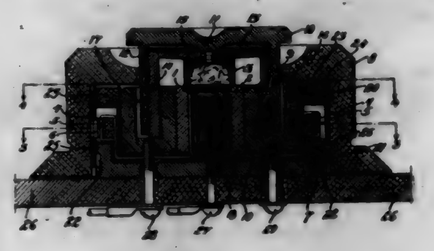
1. In apparatus of the class described, and in combination, a pair of separately adjustable compressing means, having a compressing movement in a horizontal direction, adapted to compress and hold a plurality of tires, and facilitate their being formed into a bundle; and radially adjustable means whereby said tires may be supported directly from the compressing means.

6. In apparatus of the class described, and in combination, rotatable compressing means, having a compressing movement in a horizontal direction, adapted to compress and hold a plurality of tires, and facilitate their being formed into a bundle; means whereby said tires may be supported directly from the compressing means, said latter means permitting rotation of said tires with said compressing means, and tire feeding means adapted to feed tires into said supporting means.



1,542,256. PAPER-MAKING MACHINE. WINFIELD E. MCINTYRE, Fayetteville, N. Y. Filed July 24, 1924. Serial No. 727,995. 11 Claims. (Cl. 92—43.)

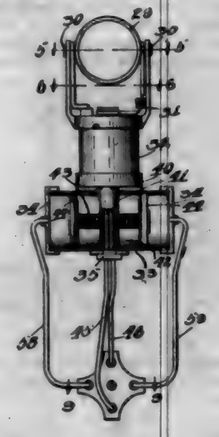
3. In a machine for making cloudless tissue paper, the combination with a cylinder, a vat, and a flow-box separated from the vat by a submerged dam, of a gage mounted upon the top of the dam for regulating the flow of the liquid pulp into the vat, and a deflector disposed between the flow-box and the cylinder for preventing the pulp from contacting with the cylinder until it sinks below the gage.



1,542,257. DRAFTING SYSTEM FOR LOCOMOTIVES. WILLIAM L. MCMAHAN, Oskaloosa, Iowa, assignor of one-third to L. L. Jordon, Oskaloosa, Iowa. Filed Aug. 7, 1924. Serial No. 730,656. 1 Claim. (Cl. 110—47.)

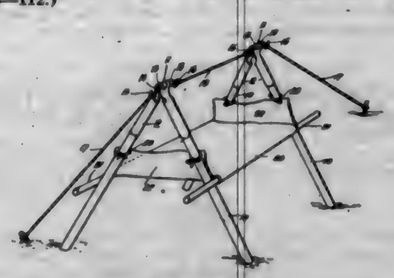
In a locomotive, a draft system comprising an exhaust nozzle leading into the smoke box, sectional baffle plates hingedly connected together and provided at their edges with clips, flanges located in the smoke box of the locomotive, and adapted to be engaged by said clips, table plates hingedly connected together and provided at their hinged edges with recesses, said recesses adapted to register with the discharge end of the exhaust nozzle, said table plates adapted to rest upon the flanges

in the smoke box, and screen sections hingedly connected together and having at their free edges clips adapted to engage the flanges in the smoke box, the baffle plates being interposed between the flues and exhaust nozzle of the locomotive, and the scren sections being interposed between the exhaust nozzle and the forward end of the smoke box.



1,542,258. MINERAL DETECTOR AND RECTIFIER FOR RADIORECEPTION. JOSEPH MCMENAMIN, Philadelphia, Pa. Filed Oct. 17, 1922. Serial No. 595,025. 14 Claims. (Cl. 250—31.)

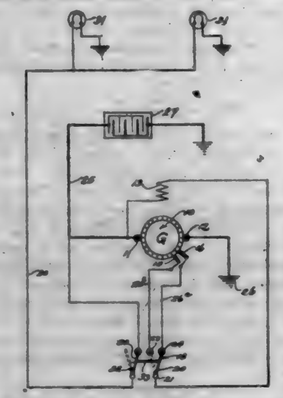
1. A rectifier and detector for radio reception comprising a mass of rectifying material, a plurality of insulated wires grouped at one end to form a compact mass with a flush face and presenting a plurality of fixed contacts opposed to the mineral, and means for selectively bringing any of the wires into circuit.



1,542,259. SEARCHLIGHT. ALFRED JOHN MACE, Chicago, Ill. Filed Jan. 11, 1924. Serial No. 685,497. 7 Claims. (Cl. 240—61.)

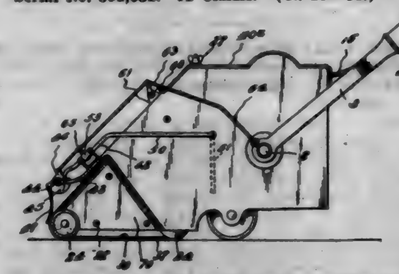
1. A searchlight control comprising suction actuated pistons adapted to cause movement of said searchlight about two axes and a single universally mounted operating valve handle adapted to control the movement of

said pistons singly or simultaneously according to the direction of movement of said handle.



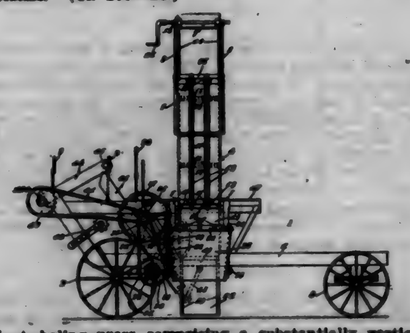
1,542,260. AUTOMATIC TIGHTENING COT OR THE LIKE. MARVIN R. MARSTON, Long Beach, Calif. Filed May 12, 1924. Serial No. 712,747. 2 Claims. (Cl. 5—112.)

1. A device of the character described comprising two pairs of legs hingedly connected together at their tops and adapted to be set on a supporting surface with the legs of each pair at an angle to each other, a tie member between the pairs of legs and braces for the legs, and a cot or like member comprising a flexible horizontal sheet and two longitudinal side poles attached thereto and bearing on the outer surfaces of the angularly braced legs; so that a weight on the sheet tending to move the sheet and poles down tends to spread the poles apart and stretch the sheet; the hinge connection between the legs of each pair comprising hinge members and a hinge pin with a hook formed at each end of the hinge pin, and the tie between the pairs of legs and the braces being attached to said hooks.



1,542,261. ELECTRIC GENERATOR CIRCUIT. JAY C. MOORE, Fredonia, Pa. Filed Oct. 10, 1923. Serial No. 667,718. 2 Claims. (Cl. 171—313.)

1. In combination with an electric system for motor vehicles including a battery circuit and a lighting circuit, a generator including a commutator and main collector brushes operatively disposed in the battery circuit, a shunt field winding circuit for the generator including a plurality of brushes operatively connected on the commutator of the generator, switch means for selectively placing any of the last mentioned brushes



in said shunt field winding circuit, and a switch for the lighting circuit operatively connected to the first mentioned switch.

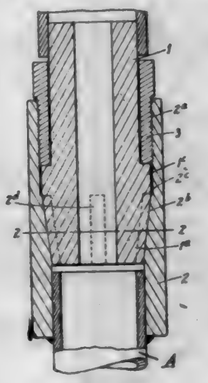
1,542,262. FLOOR-CLEANING MACHINE. JOHN B. MORTON, Jr., Charleston, W. Va. Filed Sept. 28, 1922. Serial No. 591,031. 11 Claims. (Cl. 15—51.)

1. A floor cleaner of portable type comprising carrying means, a tank carried thereby, an endless mopping cloth or belt carried by the carrying means, means to drive said cloth or belt, means to supply water from the tank to a surface to be cleaned, side wheels supporting the carrying means, and an auxiliary wheel supporting the carrying means and arranged intermediate the side wheels.

1,542,263. HAY PRESS. ORRAN C. NICKEL, Las Animas, Colo. Filed May 15, 1923. Serial No. 639,121. 2 Claims. (Cl. 100—24.)

1. A baling press comprising a substantially vertical trunk, a loop-shaped guide extended longitudinally of the trunk, and spacers movable through the trunk and slid-

able on the guide, the spacers moving upwardly through the trunk responsive to the pressure of the material in the trunk, and moving downwardly on the guide externally of the trunk, the slidable mounting of the spacers on the guide permitting the spacers to move downwardly faster than they move upwardly, thus to minimize the number of spacers required.



1,542,264. PROCESS OF MAKING ACIDS FROM AROMATIC HYDROCARBONS. JAMES FLACK NORRIS and EVERETT W. FULLER, Cambridge, Mass. Filed July 18, 1922. Serial No. 575,783. 22 Claims. (Cl. 260—108.)

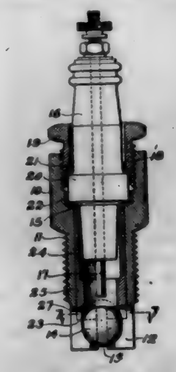
1. In a process of making an aromatic acid, treating an aromatic hydrocarbon with phosgene and aluminum chloride, forming a large quantity of a compound of aluminum chloride and an aromatic acid chloride and a small quantity of a compound of aluminum chloride and a di-aryl ketone by conducting the reaction in the presence of a substance which dissolves the hydrocarbon and removes a large quantity of the reaction products from the sphere of reaction before secondary reaction therewith occurs.

1,542,265. PROCESS OF MAKING AMINOSALICYLIC ACID. JAMES F. NORRIS and EDMUND O. CUMMINGS, Cambridge, Mass. Filed Oct. 20, 1922. Serial No. 595,753. 14 Claims. (Cl. 260—109.)

1. In a process of preparing an amino acid from a corresponding aryl azo acid, reducing the latter by means of a $TiCl_3$ solution.

1,542,266. DRILL-ROD-JOINT CONNECTION. WILLIAM H. PALMER and EDWARD W. PALMER, San Diego, Calif. Filed June 20, 1921. Serial No. 478,939. 2 Claims. (Cl. 205—124.)

1. A drill rod connection, including a hollow exterior member provided with an interior tapered portion provided with grooves in said tapered portion, and an internal thread in one end thereof, an internal member provided with a taper conforming to the taper in said external member and provided with outwardly extending lugs adapted to fit snugly into said grooves, and provided with an outwardly extending annular flange adapted to fit snugly against the shoulder formed at the upper end of the said tapered portion and a bushing threaded on its outer side adapted to be screwed between the exterior and interior connection members and fit against said flange.

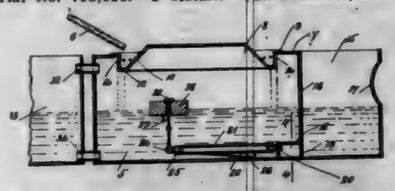


1,542,267. DEVICE FOR SUPPORTING PIPE COILS. PHILIP PARKER, Woburn, Mass. Filed Dec. 5, 1923. Serial No. 678,736. 1 Claim. (Cl. 248—34.)

A support of the class described, comprising a supporting rod, securing members removably secured to the ends of the supporting rod, tubular supporting members mounted on the rod, each of the tubular supporting members including a relatively wide flange formed adjacent to the lower end thereof, a hook member formed integral with each tubular supporting member and arranged adjacent to the upper end thereof, said hook member extending from the side of the tubular support-

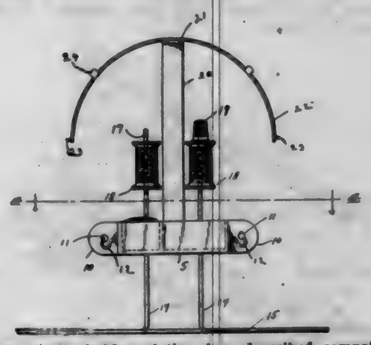
ing member opposite to the side supporting the flange, each supporting member having cut out portions in its lower end, each supporting member having lugs extending upwardly from the upper end thereof, the lugs of one supporting member adapted to fit in the cut out portions of the adjacent upper tubular supporting member to lock the tubular supporting members together.

1,542,268. SPARK PLUG. CLARENCE EDWARD PARKERTON, Danbury, Conn. Filed Sept. 7, 1923. Serial No. 661,413. 2 Claims. (Cl. 123—169.)



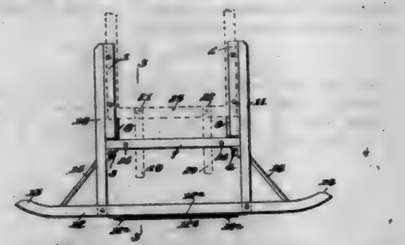
1. In a spark plug, a substantially cylindrical metallic body externally threaded to fit the spark plug opening in the cylinder and formed at its inner end with integral spaced fingers forming a ball cage, a ball movable within the cage and forming one electrode, an insulating member removably secured within the body portion and having a metallic core constituting the other electrode, said fingers being formed with internal shoulders, and a sleeve rigidly held between the insulating member and said shoulders with its inner end limiting the approach of the ball toward the other electrode, said sleeve being removable from the body portion when the insulating member is removed therefrom.

1,542,269. WINDOW-SCREEN FASTENER. SAMUEL I. PATTON, Dallas, Tex., assignor of one-third to H. J. Garrett, Dallas, Tex., and one-third to T. J. Barton, Fort Worth, Tex. Filed Mar. 13, 1924. Serial No. 699,049. 3 Claims. (Cl. 292—202.)



1. In a window screen latch, a rotatable latch member having a finger provided with an inclined edge and a wedge pin engaged by said inclined edge when the latch is rotated.

1,542,270. STOCK WATERER. REUBEN G. PETERSON, Wessington Springs, S. Dak. Filed June 7, 1924. Serial No. 718,611. 4 Claims. (Cl. 119—78.)

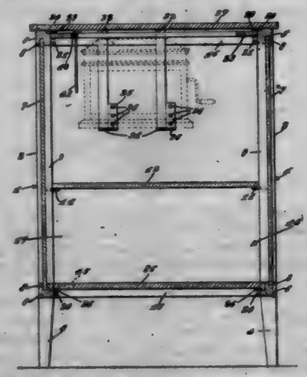


4. In a stock waterer, a supply tank, a drinking trough, an air vessel having an outlet at its lower part which communicates with the trough, two tubular stems connected to the air vessel and projecting laterally of it, two flexible pipes arranged side by side in the tank and secured to the said stems, a cross pipe connected between its ends to the two flexible pipes, inlet nozzles connected to the ends of the cross pipe, and a float in the tank for sustaining the inlet nozzles in an inclined position, said float being connected to the cross pipe between its ends.

1,542,271. ARTICLE HOLDER. CLIFFORD C. RAMSEY, Cleveland, Ohio. Filed Feb. 6, 1923. Serial No. 617,254. 2 Claims. (Cl. 45—135.)

1. An article holder of the class described comprising a horizontal frame provided with upstanding legs, a receptacle connected to and vertically adjustable upon said legs, an arm connected with said receptacle and rising vertically therefrom, and an arcuate strip connected with the upper end of said arm and overlying said receptacle.

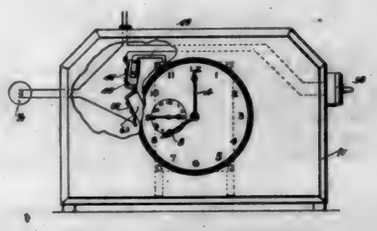
1,542,272. AUTOMOBILE BUMPER. JUAN P. RAVELO, Habana, Cuba. Filed Nov. 24, 1923. Serial No. 676,727. 4 Claims. (Cl. 293—55.)



1. A bumper for use on vehicles, comprising, a transverse beam, notches provided in the transverse beam, for receiving arms of a tire carrier, a frame connected to said beam and positionable at the rear of the vehicle, and separate bumper elements connected to the frame and comprising two curved resilient members.

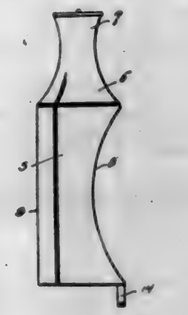
1,542,273. FRONT FENDER FOR AUTOMOBILES. JUAN P. RAVELO, Habana, Cuba. Filed Nov. 24, 1923. Serial No. 676,728. 2 Claims. (Cl. 293—55.)

1. A front fender for automobile vehicles, preferably of the Ford type, comprising a buffer of angular cross section, two bumper members connected to the buffer, bent ended bars connected to the buffer, attaching means to fix the bars to a vehicle, said attaching means comprising, a plate connected to each of the bars and having an opening for receiving the standard head light support rods, whereby the fender can be securely attached to a Ford type machine by means of the standard structure of the machine, and without alteration of the same.



1,542,274. KNOCKDOWN CABINET. JOSEPH H. RICHARD, Minneapolis, Minn. Filed June 20, 1922. Serial No. 569,619. 1 Claim. (Cl. 45—52.)

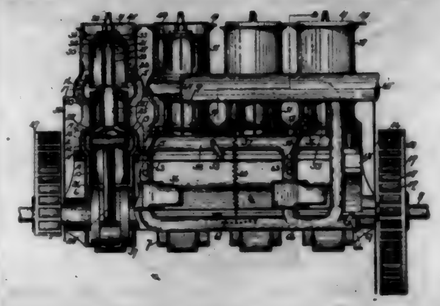
In a device of the class described, a cabinet comprising sides, a back, detachable connections between the side and the back, a bottom, means for supporting



the bottom removably in the cabinet, an upwardly removably open frame seated detachably in the upper end of the cabinet, a depending hanger, and means for supporting the hanger on opposed portions of the frame for sliding movement therealong.

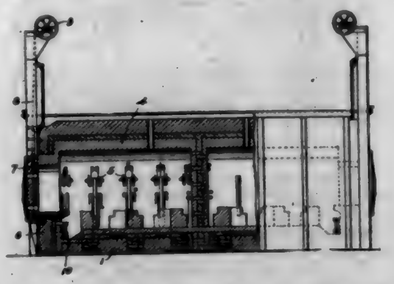
1,542,275. ELECTRIC ALARM CLOCK. MANUEL HENRY RODRIGUES, Honolulu, Territory of Hawaii. Filed Feb. 11, 1924. Serial No. 692,141. 4 Claims. (Cl. 58—19.)

1. In combination with a clock mechanism having a time indicating mechanism, an escapement control for the same and an alarm release associated therewith, an electric alarm device including a switch having two movable contact members, means associated with the alarm release for operating one of the contacts and means associated with the escapement control for operating the other contact.



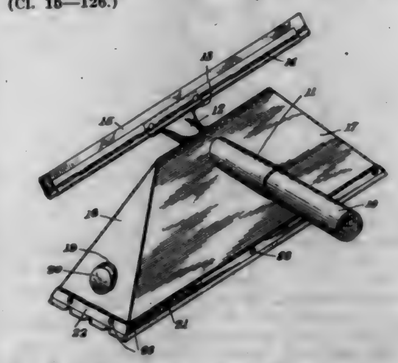
1,542,276. HOT-WATER BOTTLE. CLARENCE SMALL, Binghamton, N. Y. Filed Nov. 21, 1923. Serial No. 676,092. 1 Claim. (Cl. 128—258.)

A hot water bottle comprising a body formed of rigid material having opposite side walls, one of the side walls being concaved transversely of the body and the opposite side wall being convexed longitudinally of the body.



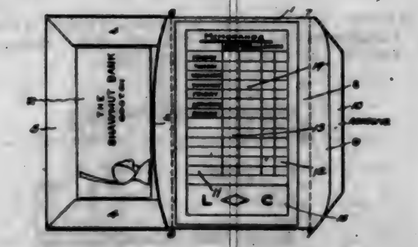
1,542,277. GAS ENGINE. IRA H. SPENCER, West Hartford, Conn. Filed Apr. 10, 1920. Serial No. 372,998. 40 Claims. (Cl. 123—73.)

1. An engine including a cylinder having an explosion chamber therein, a piston located in said cylinder with its top in said chamber at the time of explosion therein, said piston having a central chamber with ports extending therefrom for flow of fluid thereto,



and means for conducting fluid upwardly from said central chamber when the piston is in the lower part of the cylinder.

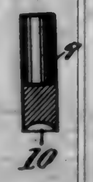
1,542,278. ELECTRIC FURNACE. RANDAL E. TALLEY, Irwin, Pa., assignor to George J. Hagen Company, a Corporation of Pennsylvania. Filed July 19, 1923. Serial No. 652,467. 4 Claims. (Cl. 204—64.)



1. An electric furnace having heating elements along the walls thereof, a door and a compensating heating element so positioned as to compensate for heat lost through said door.

1,542,279. WINDOW CLEANER. WILLIAM R. TURNER, Newark, and AARON V. SNEDEKER, East Orange, N. J. Filed Mar. 14, 1924. Serial No. 699,201. 3 Claims. (Cl. 15—126.)

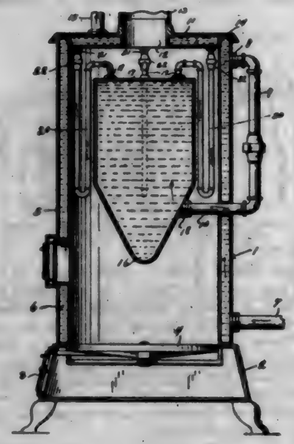
1. A window cleaner comprising a handle bar, a reservoir rigidly carried on said bar, said reservoir being of triangular cross section, a perforate block removably engaged in the base of said reservoir, said block having a series of longitudinal grooves in its lower surface, and a scrubbing pad of textile fabric covering the bottom and edges of said block, said pad conformably lining the mentioned grooves.



1,542,280. PAY ENVELOPE. PAUL F. WACHENHUSEN, Brighton, and FREDERICK H. WACHENHUSEN, Malden, Mass. Filed June 2, 1921. Serial No. 474,445. 2 Claims. (Cl. 283—1.)

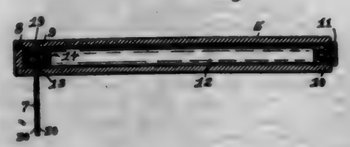
1. A combined pay envelope and packetbook comprising a back members with a pocket on the inner face thereof, record recording spaces also on said face, the back adapted to be folded between the pocket and record spaces to constitute part of the back a flap for the envelope and packetbook, the back scored near one end and also gummed at such end to provide an adhesive flap adapted to be folded against the outside of the back and opposite the pocket when the structure is used as an envelope, the back adapted to be severed along the scored line to open the envelope and thus provide an ungummed flap for the structure when used as a packetbook with record therein of the data on which the pay was computed

---



1,542,281. SQUARE-END NAIL OR STAPLE. GEORGE X. WENDLING, San Francisco, Calif. Filed May 16, 1923. Serial No. 639,868. 1 Claim. (Cl. 85—90.)

A nail for driving into wood for securing purposes comprising a head and rigid elongated shank of relatively small diameter, the lower or driving end of the shank being dished to provide a sharp peripheral cutting edge of the same circumference as the shank.



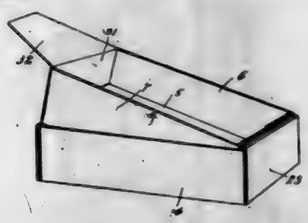
1,542,282. WATER HEATER. ELMER R. WILLIAMS, Springfield, Mo. Filed Jan. 22, 1924. Serial No. 687,798. 4 Claims. (Cl. 122—165.)

2. In a water heater, the combination of a stove having hollow walls forming a water jacket and a hollow head having a hot water outlet, a heating drum within said stove in spaced relation to the walls thereof, a conduit leading from the upper portion of said water jacket and communicating with the lower portion of said drum, and heating coils leading from the upper end of said drum

and extending downwardly and then upwardly between the drum and walls of the stove and communicating with the hollow head.

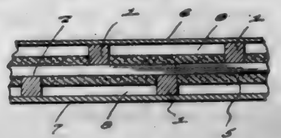
1,542,283. TOY. FRANK ZANFAGNA, Providence, R. I. Filed Jan. 14, 1925. Serial No. 2,345. 4 Claims. (Cl. 46—46.)

1. In a toy of the nature described, a handle, a water reservoir in the handle, an absorbent material in the water reservoir, a sound-box, flexible means operatively connecting the sound-box with the handle and means operatively connecting the water reservoir with the said flexible means.



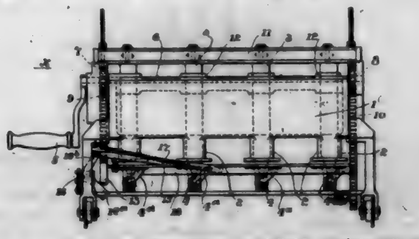
1,542,284. FAUCET. AURELIO SEVILLA BLANCO, Habana, Cuba. Filed Feb. 2, 1925. Serial No. 6,464. 3 Claims. (Cl. 251—27.)

2. A faucet comprising, a body, inlet and outlet passages in the body, an operating member in the body, a valve stem mounted in the operating member, a head on the free end of the stem, a tube sleeved on the stem and held thereon by the head and a resilient valve head slidably received on the tube and surrounding the tube, stem and stem head.



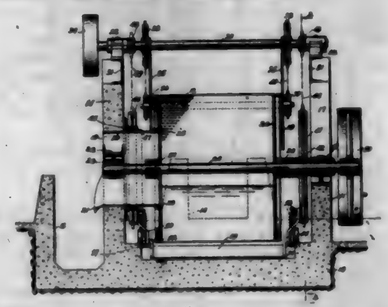
3. A valve operating member, a valve stem carried by the operating member, a head on the free end of the stem, a tube sleeved on the stem and held thereon by the head and a resilient valve head slidably received on the tube and surrounding the tube, stem and stem head.

1,542,285. DISPLAY CARTON. LEVERETT D. CAMPBELL, Latonia, Ky., assignor to The Globe Folding Box Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Dec. 5, 1921. Serial No. 519,903. 5 Claims. (Cl. 206—44.)



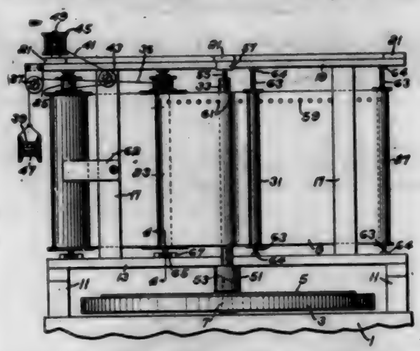
1. A carton formed from a single blank of suitable material cut and scored to form body and cover portions of bottom, sides, and ends, with said two portions integrally connected longitudinally by a strip of the material extending between the adjacent ends of the top and cover when the carton is closed and scored to permit folding with the cover and container both upright as the carton is set up, whereby the cover may enclose the container and may be removed therefrom and turned to hold the container in display position.

1,542,286. HOUSE-WALL STRUCTURE. PURVIS E. DEAN, Boyne City, Mich. Filed Oct. 15, 1924. Serial No. 743,709. 1 Claim. (Cl. 72—49.)



A wall structure comprising a central partition wall composed of a wooden frame work including vertical studs arranged in staggered relation on opposite sides of horizontal connecting pieces, and a concrete wall in which said frame work is embedded, the opposite sides of the concrete wall terminating in spaced relation from the outer surfaces of the vertical studs, and facing walls secured to said studding and spaced from the concrete wall to provide dead air spaces between the facing walls of the concrete wall.

1,542,287. MACHINE FOR DEPOSITING SEMIFLUID, PASTY, OR DOUGHLIKE MATERIALS.. JOHN DEMPSEY, Belfast, Ireland. Filed Feb. 19, 1924. Serial No. 693,870. 2 Claims. (Cl. 107—28.)

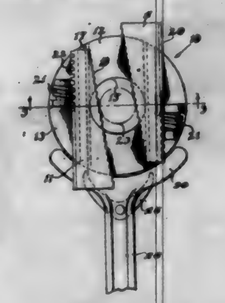


2. A machine for depositing semi-fluid, moistened or pasty material having in combination a hopper, a tube below the hopper and open to the bottom of the latter, a reciprocating plunger adapted at times to enter the tube and eject material from it, a cross-bar to which the plunger is attached, means to reciprocate the plunger comprising a reciprocating rack attached to the cross-bar a gear wheel gearing with the rack and a handle to rotate the gear wheel, a valve at the lower end of the tube, a lever for operating the valve, a projection on the lower end of the rack, a bell-crank lever pivoted to the frame of the machine and having one arm in the path of the machine and having one arm in the path of the projection, a link connected to the other arm, a reciprocating bar connected to the link and to the valve lever, and means to return the bar and link to normal position to close the valve when permitted to do so by the projection on the rack.

1,542,288. SEPARATOR. WILLIAM LIVINGSTON D'OLIER, Philadelphia, Pa. Filed Oct. 20, 1920. Serial No. 418,217. 25 Claims. (Cl. 210—201.)

1. A separator comprising a rotary screen, and a rotary scraper arranged to travel around said screen and at a different rate of speed from that of the screen.

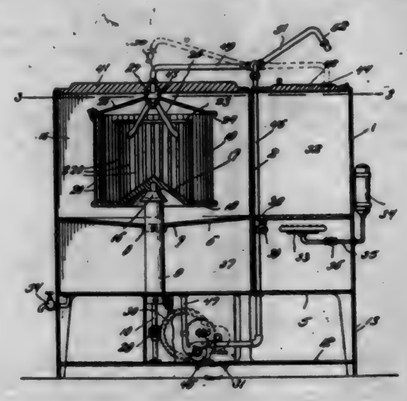
1,542,289. PHONOGRAPH ATTACHMENT. MARION A. DOWNES, West Roxbury, Mass. Filed Mar. 9, 1923. Serial No. 623,964. 5 Claims. (Cl. 40—28.)



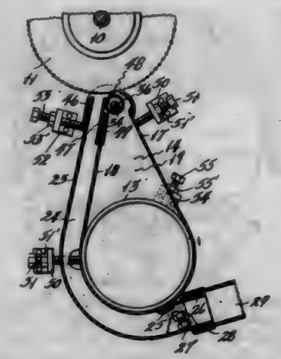
1. An attachment for a phonograph comprising a support adapted to be applied to or removed from a phonograph and having means for applying the same to the phonograph above the turn-table thereof, said support having means for holding with relation to a visible field a traveling display film bearing indications related to successive portions of the phonograph record, said holding means comprising a supply spindle and a winding spindle, the former being removable to permit the substitutions of different films severally related to different phonograph records, devices actuated by the phonograph for positively engaging successive portions of the film intermediate said spindles and maintaining a feed of the film across the field of vision at a uniform and continuous rate for a given phonograph speed, said devices comprising a spur wheel feed-controlling device cooperating with successive perforations in the film, a light and easily turned driving spindle on said support to actuate said devices, and a detachable driving connection between said driving spindle and phonograph turn-table part comprising an apertured cap adapted to set over the phonograph mandrel when the support is applied to the phonograph.

1,542,290. DEVICE FOR OPERATING THE BRAKES OF ALL THE FOUR WHEELS OF A VEHICLE. GUSTAVE DUMONT, Neuilly-sur-Seine, France. Filed Mar. 23, 1923. Serial No. 627,177. 3 Claims. (Cl. 188—106.)

1. A system for controlling the brakes of the four wheels of a vehicle, and particularly applicable to automobile vehicles, comprising, two front and two rear brake operating means, two cables, one connecting the front brake operating means and the other the rear brake operating means, two movable members, a pulley on each member, each pulley having one of the cables passing around it, a second pulley on each of the movable members, an operating member, and a third cable, connected at one end to an adjustable support, passed around each of the second pulleys and connected at the other end to the operating member.



1,542,291. ADJUSTABLE WRENCH. MICHAEL J. ECONOMIDES, Brooklyn, N. Y. Filed May 7, 1924. Serial No. 711,688. 6 Claims. (Cl. 81—179.)

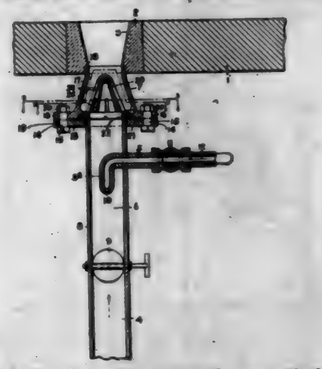


1. A wrench comprising a head provided with an axially disposed opening to receive an article to be turned, said head being formed of mating sections having their end faces meeting along a diameter of the head when in a closed position and said sections being adapted to be moved into and out of a closed position, and common means for gripping an article disposed in said opening and holding said sections in a closed position, said means overlapping both sections when in a locking position.

1,542,292. WASHING MACHINE. GUY FRANCIS EDDY, Medford, Oreg. Filed June 2, 1924. Serial No. 717,379. 5 Claims. (Cl. 68—18.)

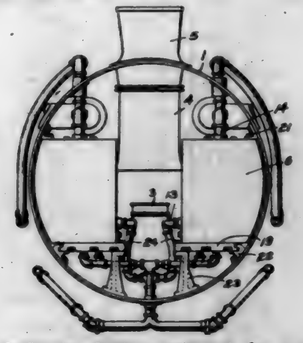
1. A washing machine comprising a casing, a clothes receiving means supported therein, means for rotating the same, a water supply tank communicating with said casing, a supply pipe extending from said casing, a pump associated therewith, a discharge pipe extending from said pump, the upper end of said discharge pipe having a fitting mounted thereon, a lateral pipe extending from each side of said fitting, one of the lateral pipes adapted to communicate with the casing, the other lateral pipe adapted to communicate with the water supply tank.

1,542,293. AIR-BLAST FLUE AND NOZZLE FOR COTTON GINS. GEORGE E. EVANS, Waco, Tex. Filed Dec. 10, 1923. Serial No. 679,589. 10 Claims. (Cl. 19—57.)



9. In a cotton gin, the combination with a saw cylinder, of an upright air flue having a nozzle at its upper end located under the saws, a lint flue contiguous to the air flue having a restricted mouth in juxtaposition to the nozzle, and under the saws, and a member adjustable in the nozzle obstructing the passage of air transversely across the saw teeth to the mouth of the air flue and for varying the opening of the nozzle and coincidently the inlet area of the lint flue.

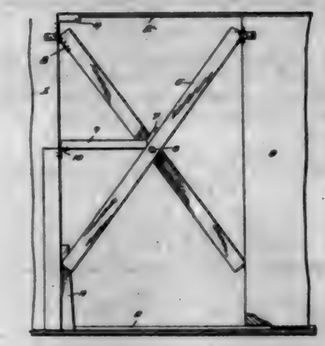
1,542,294. BURNER. GEORGE L. FOGLER, Pittsburgh, Pa., assignor to James B. Blackburn, Pittsburgh, Pa. Filed Apr. 8, 1921. Serial No. 459,763. 6 Claims. (Cl. 158—96.)



5. A burner comprising a mixing chamber, means for supplying fuel and air to the said chamber, a deflector comprising a hollow cone having its larger end in com-

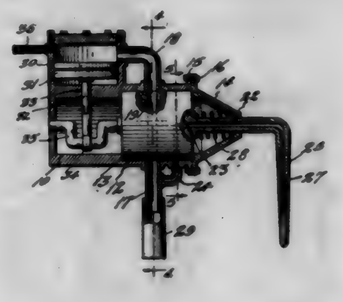
munication with the said mixing chamber and having a plurality of laterally inclined slots formed lengthwise along its sides, and a sleeve surrounding the said cone

and spaced therefrom, the combined areas of the said slots being substantially equal to the area of the inlet end of the said cone and being also substantially equal to the outlet from the said sleeve.



1,542,295. FEED-WATER HEATER. GUY T. FOSTER, Dayton, Ohio, assignor to Locomotive Economizer Corporation, New York, N. Y., a Corporation of Delaware. Filed Jan. 31, 1922. Serial No. 533,055. 2 Claims. (Cl. 122—426.)

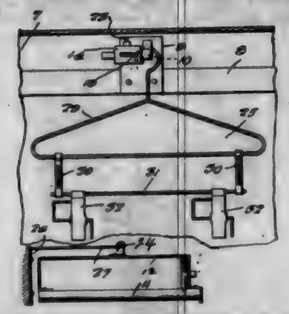
1. A feed-water heater equipment for a locomotive engine including in combination with a horizontally disposed cylindrical smoke-box, a smokestack rising vertically from said smoke-box at a point intermediate the length of the smoke-box, and a steam exhaust directed vertically upward diametrically through the smoke-box and into the smokestack, of twin heater halves provided with sill-plates, seats for said heater halves formed within the smoke-box, each seat including an inwardly opening horizontal slot arranged on either side adjacent the smoke-box wall and adapted to receive the sill-plates of the heater halves when thrust laterally in outward direction away from the medial vertical plane of the smoke-box, and means arranged adjacent the medial vertical plane of the smoke-box for securing to place said heater halves when so thrust outward.



1,542,296. DOOR CARRIER. JAMES V. GIBSON, Baker, Oreg. Filed July 7, 1924. Serial No. 724,633. 3 Claims. (Cl. 20—19.)

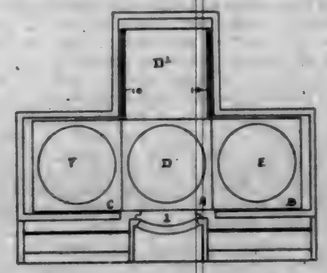
3. In combination with a frame having a door slidably mounted therein, bars pivoted together at a point midway between their ends, hinge members connecting the upper ends of the bars with the frame and door respectively, said bars having at their lower ends bearing corners for engaging the frame and door respectively,

and means for engaging the pivoted portion of one of the bars so as to prevent said bars swinging to allow the closing of the door.



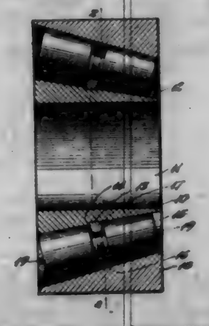
1,542,297. AUTOMATIC TRAIN-STOPPING APPARATUS. JOHN A. GRAMM, Dallas, Tex., assignor of one-eighth to A. J. Urbish, one-eighth to James P. Thomas, one-eighth to Benjamin R. Buford, and one-eighth to D. B. Mathers, all of Dallas, Tex. Filed Mar. 21, 1924. Serial No. 700,818. 3 Claims. (Cl. 246—190.)

1. In a train stopping apparatus, a housing, a valve mounted in the housing having an air passage, an air line connection with which said valve passage registers, an air conductor leading from the housing and with which said valve passage is adapted to register, the valve being normally out of registration with both the air line connection and the air conductor, a tripping arm connected with said valve and extending from the housing, a cylinder connected with the conductor, a reduced air discharge on the cylinder, a piston in the cylinder, and a connection between the piston and the valve.



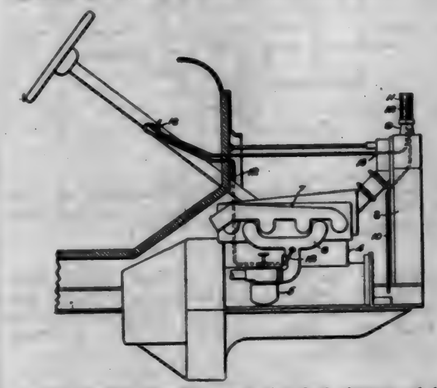
1,542,298. GARMENT-HANGER-SUPPORTING MECHANISM FOR WARDROBE TRUNKS. WADE H. HARRISON, Petersburg, Va. Filed Jan. 18, 1924. Serial No. 687,052. 3 Claims. (Cl. 211—15.)

1. In a garment hanger structure, a support, a bar projecting from said support, a second bar telescoped over the first bar, a frame attached to the second bar, a third and fourth bar extending from the support, one on each side of the frame for preventing rotation of the



second bar in relation to the first bar, the third bar being longer than the fourth bar and provided with an extension disposed toward the fourth bar.

1,542,299. ROTARY STAGE. MAX HARAIT, Dresden, Germany, assignor to Aktiebolaget Ars, Stockholm, Sweden, a Corporation. Filed Dec. 24, 1921. Serial No. 524,635. 3 Claims. (Cl. 20—1.123.)



1. A stage system comprising rotary stages, means for moving said stages vertically into compartments situated above and below the normal stage floor, and means for moving the said stages in a direction parallel to the stage opening and at right angles thereto in each of said compartments.

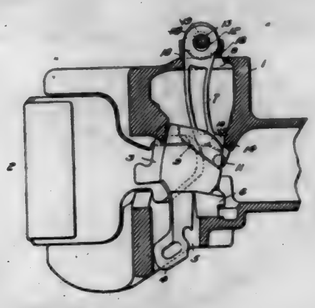
1,542,300. ROLLER-BEARING STRUCTURE. WILLIAM F. HUTHER, Canton, Ohio. Filed Jan. 10, 1923. Serial No. 611,911. 3 Claims. (Cl. 64—62.)

1. In a roller bearing, an inner member having a frusto-conical exterior and provided with a short cylindrical portion dividing the member into minor and major frusto-conical ends, a roller retaining ring frictionally engaged on said cylindrical portion said minor end forming a guide and expanding means for the ring, said ring being a continuous unbroken annulus, rollers surrounding the inner member and engaging against the side of said retaining ring whereby longitudinal movement of said rollers is prevented, and an outer member having a frusto-conical interior surrounding said rollers.

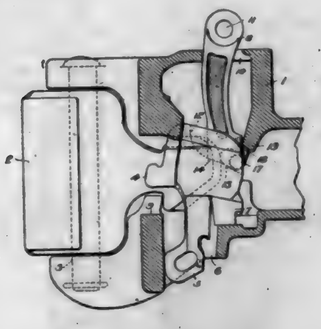
1,542,301. VAPOR-SUPPLY APPARATUS FOR FUEL CHARGES OF INTERNAL-COMBUSTION ENGINES. PERCY L. JONES, Medford, Mass. Filed Nov. 2, 1923. Serial No. 672,314. 3 Claims. (Cl. 123—25.)

1. In a vapor supply system for fuel charges of internal combustion engines, the combination of an engine-heated water reservoir, a filling cap therefor presenting a vapor chamber above the water space and a restricted passage within said filling cap between said vapor chamber and said water space, and a vapor pipe having its inlet orifice in said vapor chamber within said filling cap above said restricted passage.

1,542,302. ADJUSTABLE CAP. ISIDOR KAPLAN, New York, N. Y. Filed Nov. 5, 1924. Serial No. 747,910. 13 Claims. (Cl. 2—197.)



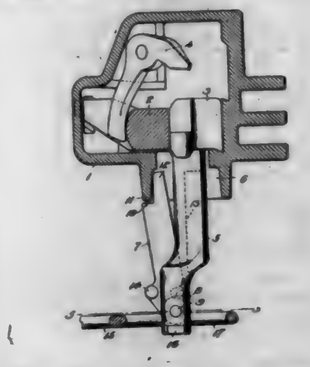
1. In an adjustable cap, a pair of strap members, one of said strap members having a series of spaced apertures near the end thereof, movable slide free of said cap and having a pair of openings therein through which the apertured strap member passes, a clasp element on said slide, and a cooperating clasp element on the other of said strap members, a portion of one of said clasp elements being adapted to pass completely through said apertures into the other of said elements for locking said slide in place.



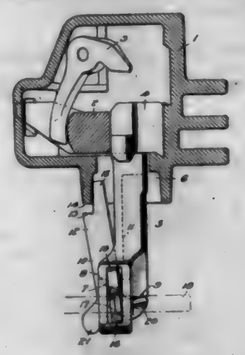
1,542,303. CAR COUPLER. WILLIAM KELSO, Pittsburgh, Pa., assignor to The McConway & Torley Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 31, 1923. Serial No. 616,121. 9 Claims. (Cl. 23—127.)

8. In a coupler, the combination of a head, a lock mounted in said head, a lifter for said lock, a collar

mounted on said lifter and cooperating with said head to prevent movement of said lifter beyond a certain predetermined amount in a given direction for preventing jamming of said lifter, and an uncoupling rod forming an operative connection between said lock lifter and collar.

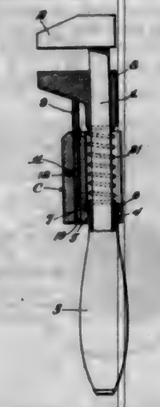


1,542,304. CAR COUPLER. WILLIAM KELSO, Pittsburgh, Pa., assignor to The McConway & Torley Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Feb. 7, 1923. Serial No. 617,548. 2 Claims. (Cl. 213—127.)



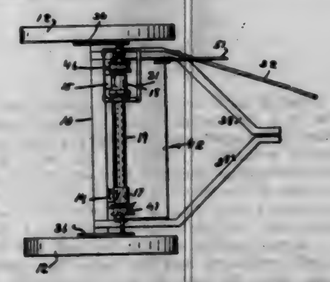
1. In a car coupler, the combination with a coupler head, of a knuckle pivotally mounted thereon, an upwardly movable and rearwardly swinging lock for said knuckle, and a lock lifter for actuating said lock, said lock being provided with an upwardly and rearwardly opening slot adapted to receive the lower end of said lifter, said lifter being formed at its lower end with a plurality of faces disposed at an angle to each other and being provided with trunnions extending into said slot and movably and detachably connecting said lifter to said lock, said slot being formed with a bottom wall comprising a plurality of faces angularly disposed with respect to each other and respectively adapted to engage the said angularly disposed faces of said lifter, one of said faces of said bottom wall being inclined downwardly toward the rear of said lock, and one of said faces of said lifter being inclined downwardly toward the rear of said lifter, said inclined faces being adapted to cooperate to enable said lifter to slide down said inclined face of said bottom wall under the influence of gravity, and the other of said faces of said bottom wall and lifter being adapted to engage each other to limit said sliding movement of said lifter with respect to said lock.

1,542,305. CAR COUPLER. WILLIAM KELSO, Pittsburgh, Pa., assignor to The McConway & Torley Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Nov. 4, 1924. Serial No. 747,810. 11 Claims. (Cl. 213—146.)



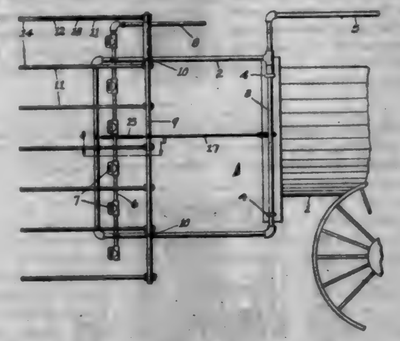
1. A car coupler having a head, a knuckle, a lock for said knuckle, a device for preventing said lock from accidentally moving to unlocked position, and means for actuating said device to permit said lock to move to unlocked position, said means being adapted to effect an unlocking movement of said lock through the intermediacy of said device and being supported by said lock when the latter is in locked position, said device being pivotally mounted on said lock beneath said head and having a shoulder adapted to engage a portion of said head to prevent accidental unlocking of said lock, and said device also being provided with a lug adapted to be engaged by said means to cause said device to execute a pivotal movement with respect to said lock, said lug serving to limit upward movement of said means with respect to said lock.

1,542,306. CAR COUPLER. WILLIAM KELSO, Pittsburgh, Pa., assignor to The McConway & Torley Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Nov. 29, 1924. Serial No. 752,889. 10 Claims. (Cl. 213—146.)



2. A car coupler having a head, a knuckle pivotally mounted thereon, a lock for said knuckle having a depending leg extending through an opening in said head, means movable with respect to said lock for preventing accidental unlocking of the latter, and an uncoupling member adapted to actuate said means and to actuate said lock through the intermediacy of said means, said leg being provided with an elongated slot, and said means being provided with a lug of greater height than width which extends into said slot and is adapted to move vertically with respect to said lock and also to oscillate angularly.

1,542,307. WRENCH. ROBERT A. KENNEDY, Lavonia, Ga. Filed Jan. 7, 1924. Serial No. 684,832. 3 Claims. (Cl. 81—150.)

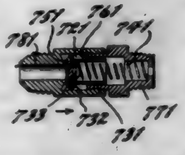


3. A wrench comprising a shank provided with a jaw, a casing substantially U-shaped in cross section having its outer end closed by a plate, said plate being provided with an opening, the shank being disposed through the casing and through the opening in the plate, a hand grasp for the shank, an end portion of said hand grasp being disposed through the opening in the plate; a washer in threaded engagement with said end portion of the hand grasp and in contact with the inner face of the plate, the inner walls of the casing being provided with a groove in which said washer is received, and a movable jaw mounted on the shank between the casing and the jaw of the shank.

1,542,308. WHEELED SCRAPER. HARRY KLINE, Kerman, Calif. Filed Feb. 20, 1924. Serial No. 693,987. 5 Claims. (Cl. 37—132.)

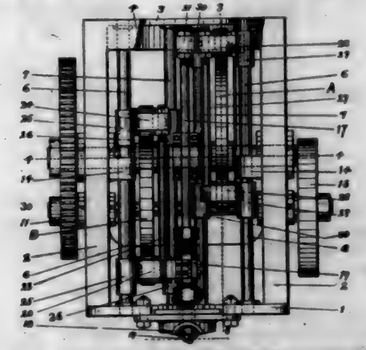
1. A wheeled scraper comprising an axle; wheels supporting said axle; sprockets carried by said wheels; vertically extending guide members carried by said axle interemdiate said wheels having guideways therein extending from the bottom to near the top; a scoop slidably mounted in said guideways; bearings rigidly mounted one at the upper end of each of said guide members; a hollow shaft revolubly mounted in said bearings to project beyond the outer ends thereof; a winding drum rigidly mounted upon said hollow shaft at each end thereof; cables connecting said drums and said scoop; a brake drum rigidly connected to the inner end of one of said bearings; a braking member slidably but non-revolubly mounted upon said hollow shaft adapted for engagement with said brake drum to retard rotation of said shaft; a shaft revolubly mounted within said hollow shaft and projecting beyond each end thereof; sprockets rigidly mounted upon the ends of said last shaft; chains connecting said sprockets and the sprockets of said supporting wheels, whereby when said wheels are rotated said shaft will be rotated therewith; a clutch member slidably but non-revolubly mounted at one end of said shaft; a clutch member projecting outwardly from said winding drum adapted for engagement by said first clutch member; an operating lever for said clutch members; an operating lever for said brake members; and means connecting said operating levers whereby the same are operated synchronously.

1,542,309. SPRAYING APPARATUS. LAWRENCE B. LE DUKE, Lawrence, Mich. Filed June 28, 1924. Serial No. 722,958. 9 Claims. (Cl. 299—39.)



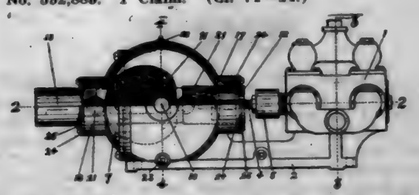
9. In a spray apparatus, the combination of a sprayer, a pivotally mounted spreader provided with a plurality of fingers, and means for yieldingly supporting said spreader with its fingers in an outwardly projecting rearwardly inclined relation relative to said sprayer.

1,542,310. ELECTRIC SNAP SWITCH. HENRY B. LEPPERT, New Britain, Conn., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn., a Corporation of Connecticut. Filed Dec. 15, 1923. Serial No. 680,841. 8 Claims. (Cl. 200—67.)



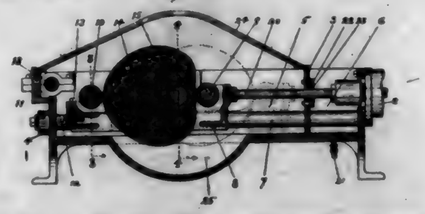
1. In a snap switch, a frame, a yoke hinged thereto and having an opening in its bottom, an operating lever hinged to said frame and having a swinging finger piece, a link having a reduced end extending into said opening to afford a loose pivotal connection with said yoke and having a sliding connection with said lever, said link having an extended head alternately engaging the opposite edges of said yoke, a spring surrounding said link, and a cupped washer slidable on said link and having a flange surrounding one end of said spring and engaged by the end of said lever.

1,542,311. LUBRICATING APPARATUS. SYLVANUS D. LOCKE, Bridgeport, and CHARLES R. DOSCH, Stratford, Conn., assignors to The Chassis Lubricator Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Feb. 28, 1922. Serial No. 540,000. 10 Claims. (Cl. 184—7.)



5. In a lubricating system for machine bearings, a conduit, means for increasing and decreasing pressure on the lubricant in said conduit and a measuring valve in said conduit, comprising a valve body having a chamber therein, an inlet port and an outlet port in said chamber, a member in said chamber and arranged to move between the inlet port and the outlet port and to form a poppet valve to close said ports alternately with each increase and decrease of pressure on the lubricant in the conduit, and a spring arranged to hold said member against said inlet port when the lubricant pressure is low.

1,542,312. CAM-DRIVEN PUMP. SAMUEL W. LUITWIELER, Rochester, N. Y. Filed Sept. 27, 1922. Serial No. 590,858. 9 Claims. (Cl. 74—14.)



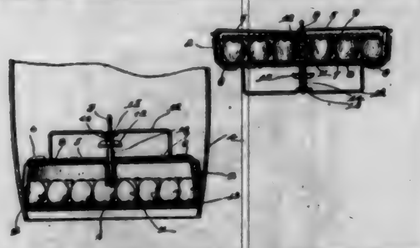
1. In a pump, the combination with a cam-shaft and cam fixed thereon, of a cam frame including upper and lower cross-heads carrying rollers engaging the cam at opposite points of its periphery, a front guide-rod disposed at one side of said cam, a rear guide-rod disposed at the opposite side of the cam, and guide loops carried by said cross-heads and travelling on the guide-rods.

1,542,313. CAM-DRIVEN PUMP. SAMUEL W. LUITWIELER, Rochester, N. Y. Filed Oct. 6, 1922. Serial No. 592,889. 1 Claim. (Cl. 74—14.)

The combination with a cam housing having collars at its opposite ends affording relatively large circular openings constituting guideways, of a cam rotatable in the housing, a cylindrical one-piece cam-actuated member including relatively large cylindrical end portions which are hollow and travel in the aforesaid guideways, a piston rod connected to one of said end portions, a stuffing box surrounding said piston rod and adapted to be received by the adjacent hollow end portion as the latter moves toward the stuffing box, a cam shaft on which the cam is fixed, the cam-actuated member also including a cylindrical central portion formed integral with said end portions and slotted in right-angled planes to receive the cam and cam shaft respectively, the cam-actuated member having cylindrical transverse openings extending parallel to the cam shaft, and rollers journalled in said openings and engaging opposite points of the cam.

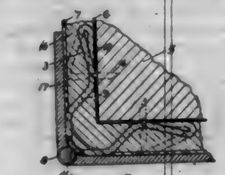
1,542,314. CAM-DRIVEN PUMP. SAMUEL W. LUITWIELER, Rochester, N. Y. Filed Jan. 11, 1923. Serial No. 612,088. 4 Claims. (Cl. 74—14.)

1. The combination with a reciprocating pump element and a frame connected thereto, of a cam, rollers mounted on the frame and engaging the periphery of the cam at opposite points, one of said rollers being supported in a plate carried by the frame, and means for adjusting the plate on the frame so as to bring the roller into contact with the periphery of the cam.



1,542,315. PRINTING-PLATE CLAMPING DEVICE. ELMER F. NOELL, Cincinnati, Ohio, assignor to The Printing Machinery Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Jan. 26, 1925. Serial No. 4,743. 3 Claims. (Cl. 101—385.)

1. A printing plate clamp device, adapted for use in apertures in a base block having shoulders formed in the bottom of the apertures comprising a body having a jaw thereon, a member pivoted on the body, so as to swing into substantial alignment therewith thereby permitting insertion of the entire device in the aperture, said member having a projection at the lower end thereof for engagement with the shoulder in the base of the aperture, and means movable through the body and engaging the pivoted member to rock the same into position of engagement with the wall of the hole, thereby moving the projection into position beneath said shoulder by the tilting of the body.



1,542,316. RECEPTACLE FACER. ARTHUR H. PHILLIPS, Hulberton, N. Y. Filed May 23, 1924. Serial No. 715,479. 9 Claims. (Cl. 225—17.)

1. The combination with a facing receptacle having a bottom wall and a surrounding side wall, of a cover for said facing receptacle formed with material adapted to support articles in the facing receptacle when the latter is inverted, and means for holding said cover in place, said means being mounted on the facing receptacle and being movable thereon to free the receptacle when

the facing receptacle is placed in an inverted position within the container so that the cover may remain in the container when the facing receptacle is withdrawn.

1,542,317. CORNER BEAD. FRED E. PLANETT, Oakland, Calif., assignor to Planett Manufacturing Company, Oakland, Calif., a Corporation of California. Filed Apr. 30, 1924. Serial No. 709,090. 3 Claims. (Cl. 72—121.)

1. A corner bead for plastered walls comprising a stiff longitudinal rod having wire staples integrally secured thereto at spaced intervals and in alignment, the extremeties of each staple being recurved to form driving prongs, and said staples provided with shoulders adjacent said prongs for spacing purposes.

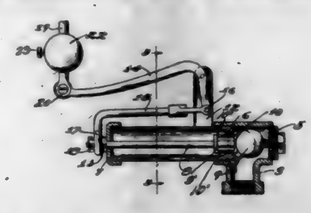
1,542,318. MAKE-UP MIRROR. GORDON B. POLLOCK, Hollywood, Calif. Filed Sept. 19, 1921. Serial No. 501,720. 4 Claims. (Cl. 88—1.)

1. A mirror for the purpose of showing a reflected image of an object as the object will appear in a photograph, that includes a reflective surface, and light selective means associated with the reflective surface, said means selecting light so that the light reflected is characterized by a relative predominance of actinic rays.

1,542,319. ROTARY JAR. ROBERT MCDONALD PYLES, Long Beach, Calif. Filed Dec. 10, 1920, Serial No. 429,635. Renewed Nov. 11, 1924. 1 Claim. (Cl. 255—27.)

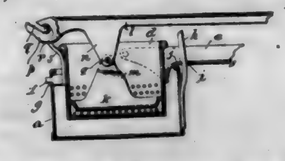
A rotary jar comprising a tubular drive section, and a tubular driven section telescopically united for relative longitudinal movement, an abutment on one section having opposite clutch surfaces, opposed abutments on the other section having clutch surfaces for alternate cooperation with the clutch surfaces of said first named abutment, said opposed abutments being relatively spaced to permit longitudinal sliding of one section upon the other to forcefully dash the cooperating clutch surfaces together on opposite strokes of the drive section and the cooperating clutch surfaces being formed to intermesh to establish rotary connection of the two sections at opposite ends of the longitudinal stroke of the drive section.

1,542,320. GARMENT HANGER. WILLIAM REID, Philadelphia, Pa. Filed Feb. 9, 1924. Serial No. 691,573. 1 Claim. (Cl. 211—13.)



A garment hanger constructed from a single strand of wire, said wire formed into a suspension hook at one end, then straightened out to a point at one side of the hook, thence returning at a slight inclination to a central point below the hook to form one half of a skirt or trouser supporting horisontal cross bar, then twisted vertically downward for a short distance and thereafter bent into an elongated loop to form one half of a coat supporting portion, the return of said loop being extended beyond the central twisted portion and a second elongated loop formed therein to provide the other half of the coat support, the wire being thereafter again involved in the twisted portion, and the end finally bent laterally from the twist to form the complemental arm of the trouser or skirt supporting bar.

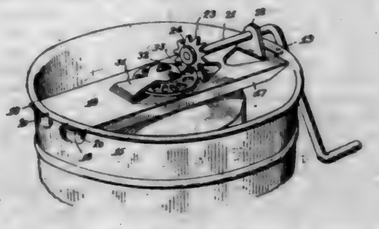
1,542,321. CLOSET-TANK VALVE. JOHN RENNER, Madison, Nebr. Filed Apr. 11, 1923. Serial No. 631,470. 1 Claim. (Cl. 137—104.)



A device of the character described comprising a horizontal tubular casing having a valve seat at one end thereof, an inlet pipe connected to said casing at the

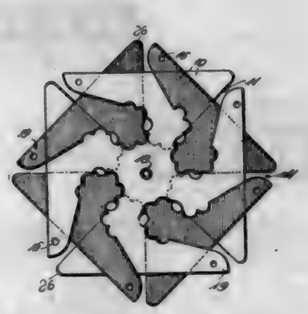
end having said valve seat, a valve stem slidably mounted in said casing, a valve carried by said valve stem adapted to engage said valve seat, a support extending upwardly from said tubular casing, an L-shaped lever pivotally connected intermediate its ends to said support, a float

connected to one end of said L-shaped arm, and an L-shaped link having one end thereof connected to one end of said L-shaped arm while the opposite end thereof is detachably connected to the end of said valve stem opposite to that carrying said valve seat.



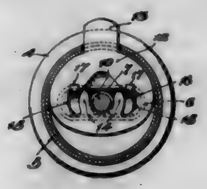
1,542,322. COMBINATION FRUIT PRESS, POTATO MASHER, AND STRAINER. MICHAEL A. ROLLMAN, Mount Joy, Pa. Filed Sept. 23, 1920, Serial No. 412,143. Renewed Dec. 10, 1924. 7 Claims. (Cl. 100—41.)

1. As a new article of manufacture, a culinary utensil combining in one a fruit press, potato ricer and strainer embodying a two-part handle, a perforated hopper, and an imperforate detachable cup having a bearing on the lower member of said handle.



5. A utensil combining a main cup, a hopper detachably supported therein and provided with strainer openings and with a handle, means for supporting and latching the hopper within the cup, said means embodying a latch at the front end of the cup, a pair of supporting pins attached to the rear end of the hopper and adapted to engage holes in the wall of the cup, and a plunger and lever mounted on the hopper and detachable therefrom.

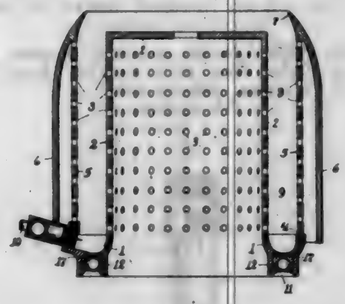
1,542,323. ICE-CREAM FREEZER. MICHAEL A. ROLLMAN, Mount Joy, Pa. Filed Oct. 6, 1922. Serial No. 592,811. 7 Claims. (Cl. 259—88.)



2. In an ice cream freezer, a bridge, a driven gear resting thereon, a driving shaft carrying a driving gear meshing with said driven gear and provided with an annular hub, and a guard or shield for holding the driven gear in place carried by the bridge and extending over the driven gear and engaging under the annular face of said hub.

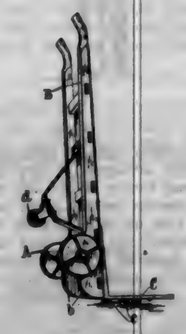
1,542,324. WIND WHEEL AND METHOD OF MAKING. ANOUSH M. SAMOUR, Boston, Mass. Filed Jan. 24, 1925. Serial No. 4,538. 2 Claims. (Cl. 46—14.)

1. The method of making a wind wheel consisting in stamping identical units corresponding generally to a square with openings extending inwardly from the corners toward the center and diverging and merging into a scalloped inner enlarged opening, two of said units being connected together at their centers by an eyelet and given an eighth of a turn with the cut out portions of each interwoven with the other, turning in the uppermost ends of the interwoven blanks and connecting said inturned ends by a fastening member inserted therethrough and through the center eyelet.



1,542,325. CUFF BUTTON. LESSER SAMUELS, New York, N. Y. Filed July 24, 1924. Serial No. 727,905. 9 Claims. (Cl. 24—110.)

1. In a cuff button, a male member having connected inner and outer heads, a stud carried by the inner head and having a circular part and a head spaced therefrom, a female member having an inner and an outer head and a hollow shank connecting the latter heads, the inner head of the female member having an opening in its outer face to receive said circular part of the stud, a latch plate slidable in the head of the female member and having opposed arms to embrace the stud and to engage between the head and said circular part thereof, said latch plate having a single operating part projecting outwardly beyond the inner head of the female member and a substantially U-shaped plate spring in the hollow shank of the female member having fingers engaged with the latch plate to normally hold the arms of the latch plate in latching engagement with the stud.

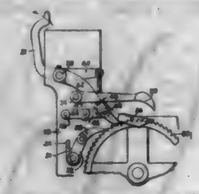


1,542,326. OIL BURNER. GEORGE SAWYER, Atlantic, Mass. Filed Dec. 3, 1923. Serial No. 678,137. 1 Claim. (Cl. 158—81.)

A burner comprising a shallow moat for receiving the fuel to be consumed, said moat having a concave bottom made very thin at its lowermost section, and an electrically heated helix supported close to said thin section

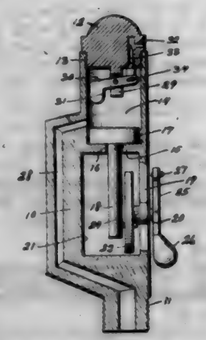
but beneath the same and insulated electrically therefrom, whereby the oil fed into said moat is ignited along said concave thin section of the same.

1,542,327. HAND TRUCK. HARRY C. SLINGSBY, London, England. Filed June 14, 1924. Serial No. 719,980. 1 Claim. (Cl. 280—56.)



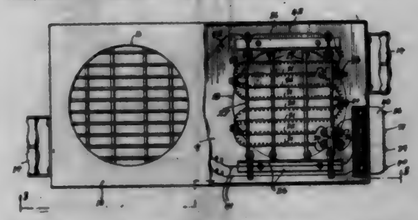
The combination in a two-wheeled hand truck of a pair of shafts formed with rounded ends on which the truck can be rocked in a vertical plane when the shafts are raised into an approximately vertical position, a wheel mounted on each shaft at such a distance from its rounded end that the said wheels are clear of the ground when the shafts have been raised to bring the said rounded ends to bear upon the ground, a lifting plate rigidly mounted on said rounded ends and projecting at right angles to the shafts, and a rolling support mounted on the under side of said lifting plate at a point some distance from the rounded ends of said shafts and adapted to roll on the ground when the shafts are raised into a vertical position and also to form a fulcrum in tilting the truck to raise a load under which the lifting plate has been introduced.

1,542,328. LET-BACK FOR LOOM TAKE-UPS. WALTER H. WAKEFIELD, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Oct. 4, 1923. Serial No. 666,594. 2 Claims. (Cl. 139—314.)



1. In a take-up for looms having a filling stop motion, a reciprocating take-up actuating pawl, a cam normally

out of the path of the pawl, a toggle joint interposed between the cam and a fixed point on the loom, and con-

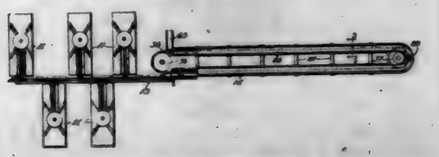


nections between the stop motion and the toggle to move said cam into the path of the pawl when the stop motion operates.

1,542,329. SELF-CLOSING BLEED COCK FOR AIR BRAKES. ROSS G. YOUNT, Calwa City, Calif. Filed Sept. 2, 1924. Serial No. 735,453. 6 Claims. (Cl. 303—80.)

1. A bleed cock of the character described including a body having a chamber formed therein, there being a duct leading from the interior of the chamber to one end of the body, a valve disposed in said chamber, the chamber having an outlet opening, means normally closing said outlet opening, manually operable means for lifting the valve, said manually operable means automatically returning to its normal position without affecting the lifted valve, and means acted upon by the lifting of the valve permitting the escape of air through said outlet opening and acting upon the descent of the valve to close said outlet opening.

1,542,330. ELECTRIC HEATER AND STOVE. HENRY PRICE BALL, New York, N. Y., assignor to Redtop Electric Co., Inc., New York, N. Y., a Corporation of New York. Filed Apr. 3, 1922. Serial No. 549,018. 7 Claims. (Cl. 219—19.)



1. An electrical stove and heater comprising a frame, a plate provided with an opening disposed in the frame, an electrical heating unit mounted on the frame above the opening in the aforesaid plate, an oven plate disposed beneath the aforesaid plate, and a heat-deflecting cap arranged to uncover the opening whereby heat is radiated downwardly upon the oven plate.

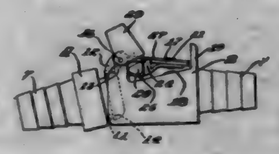
1,542,331. BOOT-SOCK GARTER. CHARLES E. BROCKWAY, Grundy Center, Iowa. Filed May 14, 1924. Serial No. 713,302. 4 Claims. (Cl. 36—58.5.)

1. In a device of the class described, the combination of a boot sock, an attaching strip provided with a broad center and reduced ends attached to the heel portion of the boot sock, and a garter device connected to the reduced ends of the attaching strip.

1,542,332. DRIER. HARVEY L. BRYANT, Newark, N. J., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 8, 1921. Serial No. 490,516. 17 Claims. (Cl. 34—12.)

1. An apparatus for drying gasket lined can covers, comprising a drying chamber, guideways in said chamber for a plurality of superimposed covers and single conveyor means for moving said covers through said guideways.

1,542,333. FOUNTAIN MARKING BRUSH. EMIL C. BUEHRER, Oakland, Calif. Filed July 23, 1923. Serial No. 653,387. 2 Claims. (Cl. 15—134.)

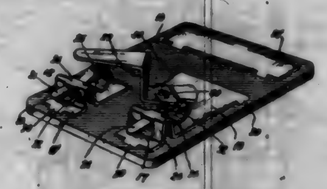


1. In a fountain marking brush, an ink reservoir, a tubular nozzle at one end, a capillary marking point extending from and projecting through said tubular nozzle into the reservoir, and a plurality of ink feeding grooves in the nozzle extending from the ink reservoir along side of the marking point and terminating before the extreme outer end of the nozzle.

1,542,334. PUMP LINING. LYELL P. BURGESS, Los Angeles, Calif. Filed Sept. 2, 1924. Serial No 735,300. 7 Claims. (Cl. 74—108.)

1. A liner for pump barrels comprising a plurality of tubular sections arranged in end to end relation, one of the sections having a flat end face, the opposing end of the adjacent section being beveled from the outer peripheral face of said adjacent section towards the end face thereof, the bevel and last named end face meeting to form an angular, annular edge, said edge being sufficiently spaced from the outer peripheral face of the liner to insure its complete seating on said flat face.

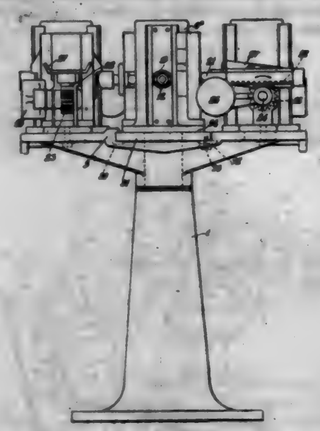
1,542,335. HOSE COUPLING. EMILIO CARDARELLI, Boston, Mass., assignor of one-third to Nicola Petitti, Boston, Mass. Filed Jan. 4, 1923. Serial No. 610,691. 9 Claims. (Cl. 285—188.)



1. A hose coupling comprising mating parts, a lever connected to one part movable to engage the other part to force the parts into fluid tight relationship, and cam means connected to said lever and movable in a plane transverse to the plane of the movement of said lever for forcing the lever into operative retaining position.

1,542,336. WRENCH. AUGUST EDWIN CARLBERG, Worcester, Mass., assignor, by mesne assignments, to Walden-Worcester, Incorporated, Worcester, Mass., a Corporation of Massachusetts. Filed Jan. 23, 1922. Serial No. 531,010. 8 Claims. (Cl. 81—121.)

1. In combination, a socket, a shank, the entire shank forming a straight line, an integral projection extending at an angle from said straight shank, said socket being pivoted on said projection and being free to turn in a plane parallel to the axis of said shank.

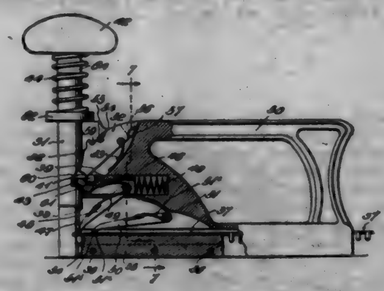


1,542,337. ELECTRICAL CONNECTER FOR TOY TRAIN TRACKS. LOUIS CARUSO, Irvington, N. J., assignor to The Lionel Corporation, a Corporation of New York. Filed Mar. 23, 1923. Serial No. 627,021. 5 Claims. (Cl. 191—22.)

1. The combination with a main rail and a third rail, of a binding connection comprising a piece of insulated material constructed to extend beneath the rails, a metallic anchor clip carried by the insulated piece for engagement directly with one of the rails, a line wire connecter secured to the said piece including an element electrically connected with said anchor clip, and means pivotally mounted on said piece adjacent to and cooperating with the other rail for positively locking the binding connecter to the rails.

1,542,338. APPLICATION OF BABBITT AND LINING METALS TO THE SURFACE OF RAILROAD AND OTHER JOURNAL BEARINGS. GILBERT R. COLEMAN, Jersey City, N. J., assignor of one-half to Thomas F. Kent, New York, N. Y. Filed July 27, 1923. Serial No. 654,073. 10 Claims. (Cl. 23—77.)

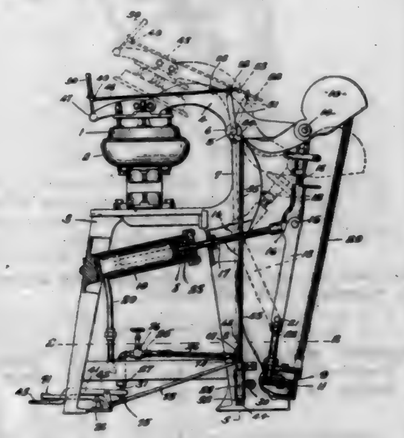
3. In an apparatus of the character described, a mandrel, side pieces coacting with said mandrel, a bar extending through said mandrel and attached to said side pieces, a screw member connecting said mandrel



and said bar, and means maintaining said side pieces in engagement with said mandrel.

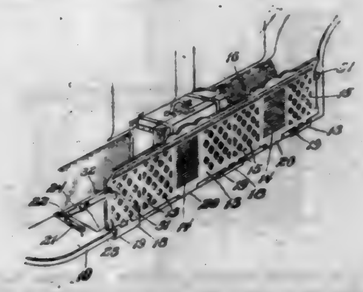
1,542,339. TIMBER CLAMP. PATRICK R. COLEMAN, Providence, R. I. Filed Apr. 25, 1924. Serial No. 709,056. 9 Claims. (Cl. 304—40.)

1. A timber clamp comprising a substantially U shaped member and a locking plate, the U shaped member having its ends bent downwardly and lying at such an angle thereto as to present an inclined face along which the edge of the locking plate is slidable.



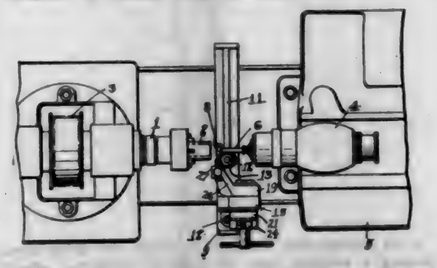
1,542,340. STAPLING MACHINE. JOHN B. CROFOOT, Chicago, Ill. Filed Feb. 18, 1924. Serial No. 693,612. 5 Claims. (Cl. 1—2.3.)

1. In a stapling machine, a frame, a plunger mounted to reciprocate in the frame, a feeding mechanism mounted to reciprocate in the frame and at its forward position to interlock with the plunger, and a latch inserted into the frame normally inactive but positioned to engage the plunger when released by the inaction of the feeding mechanism and adapted for swinging movement



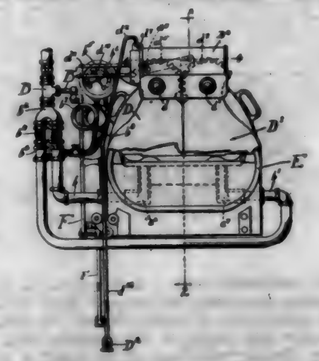
to another position to release the feeding mechanism from locking engagement with the plunger and for further movement to a position to release the feeding mechanism from the frame.

1,542,341. PRESSING MACHINE. OSCAR ROBERT DECKERT, Syracuse, N. Y., assignor, by mesne assignments, to Liberty National Bank, trustee. Filed Apr. 8, 1920. Serial No. 370,960. 16 Claims. (Cl. 68—9.)



6. In a pressing machine, a movable presser element mounted to have movements toward pressing position and into pressing position, an actuator for effecting the movement into pressing position, and mechanism for controlling the operation of said actuator and preventing the operation thereof until the pressing element is first moved toward pressing position, said mechanism including two movable parts connected together by a lost motion connection, one of said parts being arranged to take up the lost motion during the movement of the presser element toward pressing position, and a stop device located to normally prevent operative movement of said part to take up the lost motion when the presser element is up, substantially as and for the purpose set forth.

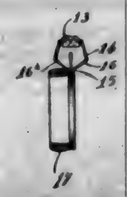
1,542,342. LUGGAGE CARRIER. PAUL DOCTOR, Denver, Colo. Filed May 20, 1924. Serial No. 714,650. 2 Claims. (Cl. 224—29.)



1. In a running board luggage carrier for vehicles, a plate of the same width as the running board adapted to be permanently pivotally connected to the outer longitudinal edge of the running board and swingable about the pivots thereof to a position flatly engaging the upper surface of the running board or to a position vertically aligned with the edge of the running board to which it is attached, means for locking the plate in either of said positions, comprising a link pivoted to the plate, a link pivoted to the running board and pivotally connected with the first named link, the adjacent ends of said links having overlapped portions, and a latch pivoted to one of said links and having arms positionable to engage the other of said links to maintain the links in alignment one with the other.

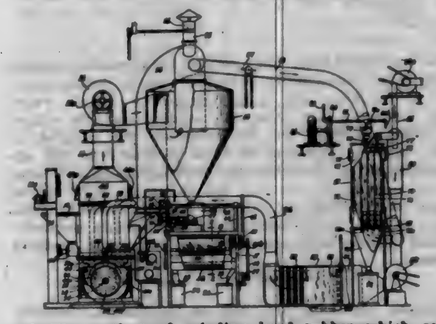
1,542,343. GRINDING-WHEEL DRESSER. ALDEN M. DRAKE, Worcester, Mass., assignor to The Heald Machine Company, Worcester, Mass., a Corporation of Massachusetts. Filed July 31, 1922. Serial No. 578,664. 3 Claims. (Cl. 125—11.)

1. In a grinding machine, a rotating grinding wheel, a bridge and a wheel dressing member adapted to be rendered inoperative by movement about a fixed axis provided by said bridge and extending substantially at right angles to the axis of rotation of said wheel.



1,542,344. LOCOMOTIVE STOKER. WILLIAM T. HANNA, Cincinnati, Ohio. Filed Apr. 28, 1920. Serial No. 377,336. 7 Claims. (Cl. 110—104.)

1. In combination with a furnace having a fuel feed opening, an ejector located at the fuel feed opening, a furnace door adapted to open and close the fuel feed opening, means for simultaneously operating the door and admitting fluid to the ejector, means for directing fuel in front of the ejector, and a regulated means comprising a by-pass for admitting a constant flow of fluid to the ejector.

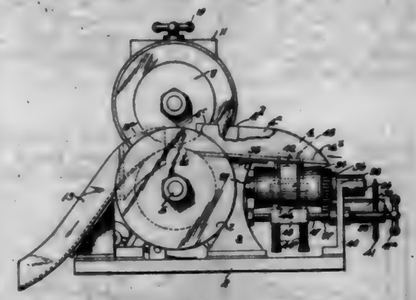


1,542,345. FINGER RING. DAVID G. HAY, Chicago, Ill. Filed Sept. 21, 1922. Serial No. 589,574. 1 Claim. (Cl. 63—17.)

A ring comprising a complete annular shank of the same cross-sectional size and shape throughout and having side surfaces lying in parallel planes, and a crown setting permanently secured only at a portion of the outer curved peripheral surface of the annulus, and having the bottom portions of said crown setting projecting outwardly and away from a central axis

through said annulus in opposite directions beyond the side surfaces of the shank to permit the abutment of a plain band ring against either side of the shank throughout its entire surface.

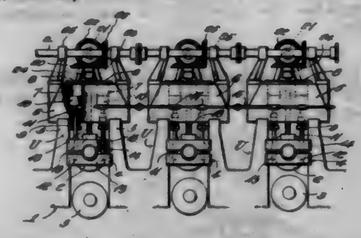
1,542,346. METHOD AND APPARATUS FOR GRINDING HARD RUBBER. WILLIAM C. HOOVER and AMBROSE DWYER, Akron, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Sept. 19, 1923. Serial No. 663,586. 26 Claims. (Cl. 18—52.)



8. The method of grinding hard rubber which comprises submitting it to a crushing action in an inert fluid medium at an elevated temperature such as to facilitate the grinding of the rubber, and separating the ground particles from said fluid medium.

1,542,347. EGG-WASHING MACHINE. CHARLES McCULLOUGH, San Francisco, Calif. Filed Jan. 8, 1923. Serial No. 611,471. 14 Claims. (Cl. 146—198.)

8. An egg washing machine comprising a tank, means for holding a number of eggs arranged in a common plane in the tank, a brushing device adapted to sweep against the eggs in the holding means, a reciprocable carriage to which the brushing device is secured, said carriage being provided with a smooth upper surface having a transverse groove adjacent one end thereof, a pitman and a cross bar on the pitman adapted in one position of the carriage to engage in the groove and reciprocate the carriage and in another position of the carriage and in another position of the carriage to slide over the smooth surface of the carriage without reciprocating the carriage.

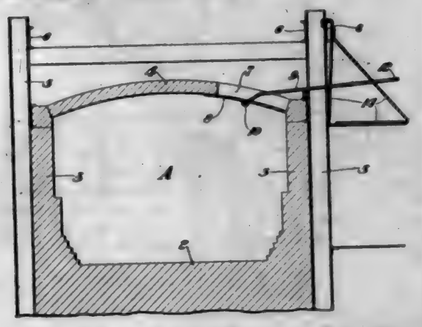


1,542,348. MOLDING MACHINE FOR SHAPING PLASTIC MATERIAL. JOHN S. OSTROM, San Francisco, Calif., assignor to Henry Rhine & Company, San Francisco, Calif., a Firm composed of Henry Rhine and Herman Moss. Filed Sept. 22, 1921. Serial No. 502,332. 5 Claims. (Cl. 107—12.)

1. In a machine for shaping plastic material, a pair of rollers arranged on paralell axes, means for varying the opening between the rollers, a stationary guide leading to the opening, and a wall section for the guide arranged at the side thereof and adjacent the end of the rollers, said section being mechanically connected to the varying means, whereby the position of the wall section is adjusted simultaneously with the opening.

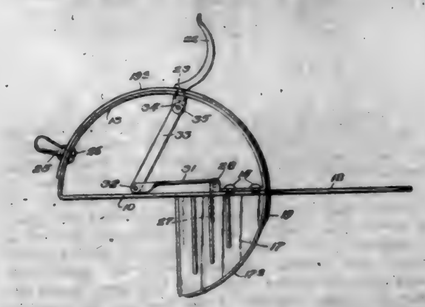
5. In a machine for shaping plastic material, a stationary roller, a parallel adjustable roller forming with the stationary roller an adjustable opening, an overhanging flange on the adjustable roller in proximity to the edge of the stationary roller, an adjustable bearing block for supporting the adjustable roller, and a chute forming a guide to the opening, said chute having an adjustable side wall in substantially the same plane as the overhanging flange and mechanically connected to the bearing block.

1,542,349. ROLLING MILL. ALBERT VERNON RIGBY, Sharon, Pa., assignor to Thos. H. Armstrong, Farrell, Pa. Filed Aug. 2, 1923. Serial No. 655,316. 4 Claims. (Cl. 80—58.)



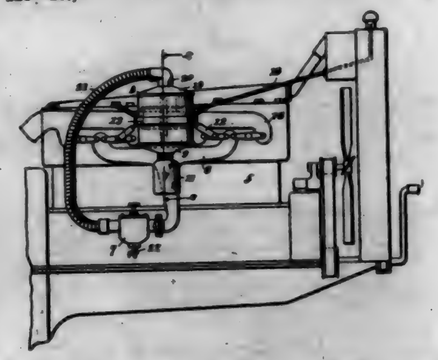
4. A rolling mill comprising a roll, bearings supporting the ends of said roll and divided horizontally into upper and lower sections, said upper and lower sections having vertically alined openings at opposite sides of the roll axis, a pair of upright piston rods at each end of the roll, said rods passing slidably through the openings of the upper bearing sections and being secured in the openings of the lower bearing sections, fluid pressure cylinders and pistons associated with the upper ends of said rods for raising them, and hold-down means engaging the upper sections of the bearings to normally hold them in operative relation with the lower sections of said bearings and to depress the bearings and roll, said hold-down means being vertically movable, and when raised permitting upward sliding of the upper bearing sections away from the roll and the lower bearing sections.

1,542,350. PROCESS OF TREATING TITANIFEROUS IRON ORES AND THE PRODUCTS THEREOF. CARL RAYMOND WHITTEMORE, Montreal, Quebec, Canada, assignor to John Irwin and Reginald Hill Monk, both of Montreal, Canada. Filed July 28, 1924. Serial No. 728,711. 8 Claims. (Cl. 75—18.)



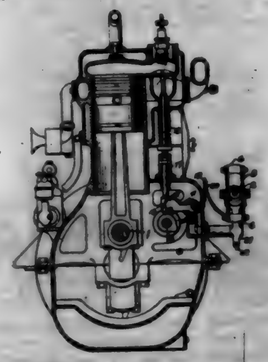
1. The process of treating titaniferous ore containing iron, consisting of reducing the comminuted ore to convert the iron into sponge, but without fusion or sintering, leaching the reduced ore with sufficient solvent to dissolve the iron.

1,542,351. METHOD OF REPAIRING FURNACE ROOFS. JAMES M. ANDREW, Farrell, and RALPH T. HADLEY, Sharon, Pa. Filed Sept. 17, 1923. Serial No. 663,153. 5 Claims. (Cl. 72—55.)



1. The method of repairing holes in open-hearth furnace roofs and the like, which are composed of a series of bricks or blocks and are self supporting, which consists in mounting an elongated brick supporting plate within the furnace, applying force to the plate to raise and hold said plate in position to engage the bottom face of the bricks used in repairing the roof, placing a series of bricks on said plate in the usual manner of laying up bricks, until a row of bricks are laid completely across the hole to be repaired when said row of bricks will be self supporting, and then advancing said plate to receive the next adjacent row of bricks, and repeating the operation for each successive row of bricks.

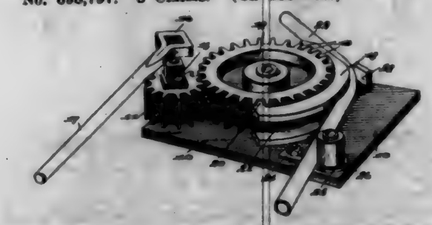
1,542,352. GRAPEFRUIT-PREPARING DEVICE. FLOYD H. ANKENY, Chicago, Ill. Filed Nov. 28, 1924. Serial No. 752,635. 10 Claims. (Cl. 146—3.)



1. A device of the character set forth, comprising a pair of converging blades with their outer edges curved for severing a pulp segment from adjacent partitions of the fruit, and a blade for severing the pulp segment at the rind curved to generally conform to the curvature of the outer edges of said converging blades, with its side edges converging in general conformance to the convergence of the outer edges of said converging blades, said converging blades and said second-named blade being relatively movable.

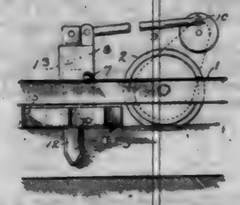
1,542,353. INTERNAL-COMBUSTION-ENGINE ATTACHMENT. JAMES R. ASH, Guys Mills, Pa. Filed Apr. 3, 1923. Serial No. 629,629. 2 Claims. (Cl. 123—25.)

1. An attachment for internal combustion engines comprising a receptacle provided with a threaded collar at its lower end, a jar adapted to contain water and having its neck threadedly engaged with the collar, a conduit leading into the receptacle and adapted to have one end arranged in close proximity to the exhaust manifold of an internal combustion engine whereby to conduct hot air into the receptacle and vaporize water contained in the jar, and an outlet leading from the receptacle and adapted to be arranged in communication with a carburetor to supply vaporized products thereto.



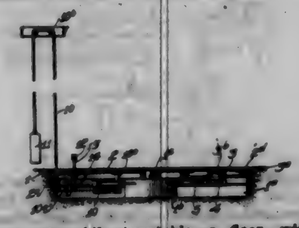
1,542,354. POWER CONTROL IN INTERNAL-COMBUSTION MOTORS. BUNZO ATSUMI, Tokyo, Japan. Filed Mar. 25, 1921. Serial No. 455,544. 2 Claims. (Cl. 123—90.)

2. In an engine of the character described, a crank case, a push rod, a cam cooperative therewith, a counter shaft having thrust transmitting members thereon interposed between the cam and push rod movable with the latter, and variable in position relatively by rotation of the counter shaft, a worm gear thereon, all the foregoing within the crank case, a control shaft at right angles to the counter shaft having a worm sector thereon meshed with the worm gear and being extended without the crank case, a dial without the case concentric with



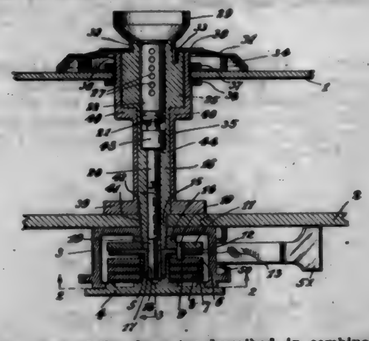
the control shaft, an adjustable arm and a pointer on the control shaft, a shaft subtending the arc of normal movement of the arm operatively connected with the engine, a centrifugal governor thereon, and operative connections between the governor and arm.

1,542,355. PIPE-BENDING APPARATUS. GUY EUGENE BARKER, Waterloo, Iowa. Filed Mar. 12, 1924. Serial No. 698,797. 3 Claims. (Cl. 153—40.)



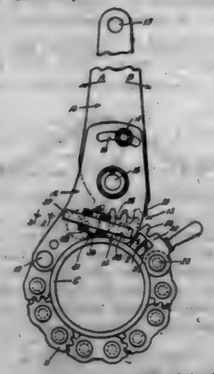
1. A device for manually bending pipe consisting of a main gear and an actuating gear in intermeshing relation, the latter having means providing for its manual rotation, a pipe bending segment associated with and conforming to the peripheral curvature of the main gear and having teeth upon its inner face engageable with the teeth of said gear at spaced points of the latter, a pipe-gripping member carried by said segment, and a pipe guide adjacent to the main gear forming an abutment for the pipe during the bending operation.

1,542,356. ROAD-BUILDING APPARATUS. ELDEN D. BAYLEY and WILLIAM BAYLEY, Springfield, Ohio. Filed Feb. 15, 1924. Serial No. 693,022. 27 Claims. (Cl. 94—48.)



1. A traveling carriage, a spading blade carried thereby for operation intermediate a mass of plastic material and the side of a mold form, a scraper shoe advanced in unison with the advance of the spading blade for returning to the mass any misplaced material, and an edger also advancing in unison with the spading blade and scraper shoe for forming and contouring the marginal edge of the mass.

1,542,357. AUTOMOBILE TURNTABLE. HENRY F. BECHER, Orange, Calif. Filed Nov. 6, 1924. Serial No. 748,076. 8 Claims. (Cl. 104—41.)

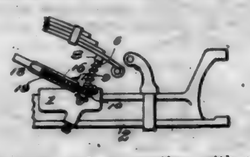


7. In an automobile turntable, a floor, with a circular recess therein, a platform revolubly mounted in said recess flush with the floor provided with a recess in one side thereof, a small platform revolubly mounted in said recess in said platform, a pinion in connection with said small platform, a gear rack meshing with said pinion, means for rigidly supporting said gear rack in the recess in said floor.

1,542,358. COMBINED KEY AND COMBINATION LOCK. DAVID H. BELLAMORE, New York, N. Y., assignor to The Mosler Safe Company, Hamilton, Ohio, a Corporation of New York. Filed Nov. 3, 1923. Serial No. 672,464. 13 Claims. (Cl. 70—53.)

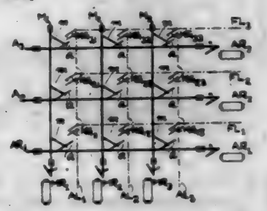
1. In a lock of the character described, in combination, combination lock mechanism operable from a combination operating member to lock and unlock the lock, and key lock mechanism associated with said combination operating member, said key lock mechanism being operable to lock and unlock the lock and being operable also to prevent or to permit the unlocking of the lock by operation of said combination lock mechanism.

1,542,359. TONGS. WILLIAM L. BESSOLO, Clearwater, Calif. Filed Feb. 3, 1923. Serial No. 616,821. 5 Claims. (Cl. 81—67.)



5. A tool of the character described including a handle having a rack on its inner end, a chain having one end connected with the inner end of the handle, a member on the other end of the chain having teeth adapted to cooperate with the rack, ratchet teeth on said member, and a pawl connected with the handle and adapted to cooperate with the ratchet teeth.

1,542,360. AUTOMOBILE-SPRING JACK. NORMAN C. BETHEA, Dunn, N. C. Filed July 10, 1924. Serial No. 725,246. 7 Claims. (Cl. 29—67.1.)



1. In a jack of the class described, the combination of a body provided with inclined guides, a frame having

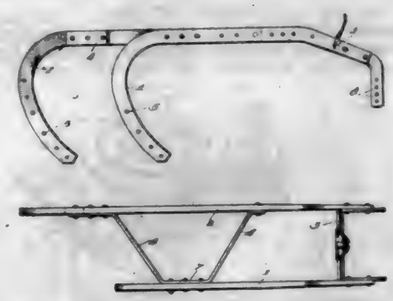
legs positioned in said guides, said legs provided with pinions for raising and lowering the same, and means

carried by the body and cooperating with said pinions for actuating said pinions.

1,542,361. INTERCONNECTION OF ELECTRICAL LINES. GOTTHILF ANSGARIUS BETULANDER, Sodertorns, Villastad, Sweden, assignor to The Relay Automatic Telephone Company, Limited, London, England. Filed Aug. 11, 1922. Serial No. 581,179. 7 Claims. (Cl. 179—18.)

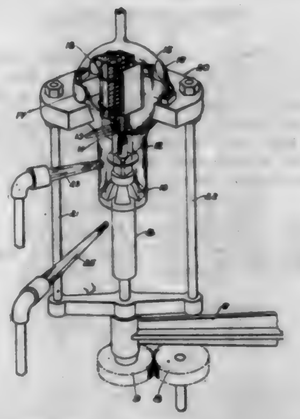
1. The combination of a plurality of lines of one order, a plurality of lines of a second order, a plurality of sets of contacts, the contacts of each set being arranged in intersecting rows and columns, each line of the second order being connected to only one set of contacts but to more than one row of contacts in that set and each line of the first order being connected to as many contacts in each of the sets as there are lines of the second order connected to that set, a relay adapted to control each row of each set and a relay adapted to control each column of each set.

1,542,362. SHIPMENT FASTENER. WILLIAM W. BLAKELY, Detroit, Mich. Filed Oct. 8, 1923. Serial No. 667,393. 5 Claims. (Cl. 280—179.)



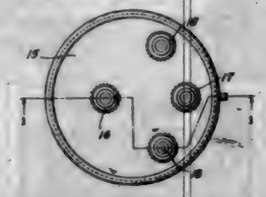
1. The combination with a flexible lashing and an anchorage permanently secured thereto including a sheet metal member folded to embrace said lashing and slotted across the fold thereof, the end portions of the slot being registered at the side of the lashing remote from said fold, and a headed securing element passing through said registered end portions in close proximity to said lashing.

1,542,363. AUTOMOBILE HEATER. THOMAS BOVEY, Chicago, Ill. Filed Feb. 14, 1925. Serial No. 9,278. 9 Claims. (Cl. 257—136.)



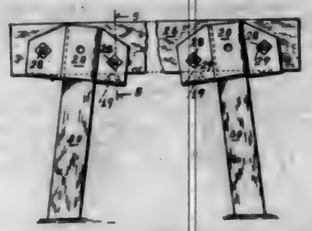
1. A removable partition for heaters comprising a suitably shaped strip, and supports extending from an edge thereof whereby to space said strip from the bottom of the heater.

1,542,364. PLOW FRAME. WILLIAM ALBERT BRADLEY, Moline, Ill., assignor, by mesne assignments, to Moline Implement Company, a Corporation of Illinois. Filed Feb. 9, 1922. Serial No. 535,149. 1 Claim. (Cl. 37—107.)



A plow frame having two parallel plow beams made of flat metal bars of rectangular cross section with the bars positioned with their flat faces in substantial vertical planes, one of said beams being longer than the other so that plow bodies attached to their rear ends will be in staggered relation, a U-shaped brace connecting the forward ends of the beams, one of the arms of the U being connected to one beam and the other arm being connected to the other beam, both of said arms extending forwardly and downwardly beyond the ends of the beams to form connections for receiving a draft hitch, and a U-shaped brace having diverging arms connecting the rear ends of the beams, the base of the U being connected to the short beam and the diverged arms being connected to the long beam.

1,542,365. GLASS WORKING MACHINE. JOSEPH BRANIGAN, Bloomfield, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 27, 1919. Serial No. 326,754. 5 Claims. (Cl. 49—2.)

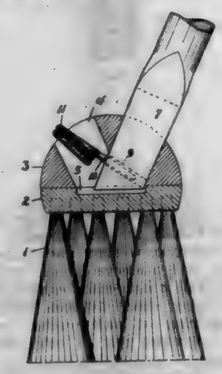


1. A machine for sealing a stem in a bulb comprising a support for the stem, a support for the bulb, means mounted on said support for the stem, and surrounded by the bulb for maintaining the bulb in the desired relation to the stem, said means having a discontinuous surface whereby heat may be applied to the stem.

1,542,366. VACUUM-TUBE BASE. WILLIAM R. BROUGH, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 2, 1920. Serial No. 427,807. 22 Claims. (Cl. 250—27.)

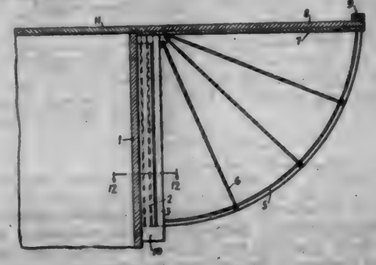
1. A base for a vacuum tube having electrodes, said base comprising a sheet metal shell, a disc mounted therein, said disc being of insulating material having a low specific dielectric loss, terminals for the electrodes of the tube mounted in said disc, each of said terminals being arranged at one vertex of congruent scalene triangles to establish for the operating voltages of the grid and anode an approximate minimum potential gradient between the terminals for the grid and cathode, between said terminals and the shell, and between said terminals and the terminals of the cathode.

1,542,367. WROUGHT-METAL SOCKET FOR LEGS OR STANDARDS OR THE LIKE. GEORGE A. BRYAN, Springfield, Ill. Filed Mar. 5, 1925. Serial No. 13,241. 2 Claims. (Cl. 304—5.)



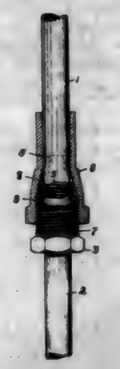
1. A wrought metal socket-member for legs, or standards or the like, comprising a tapered box having end walls parallel to each other, wings integral with an extending outwardly from the respective end walls, and stops of unequal length integral with the respective wings, and formed by bending one terminal part of each wing at an angle relative to the wing and adapted to hold the socket-member in inclined relation to the structure with which it is connected.

1,542,368. POT-HANDLE HOLDER. ALLAN EDWARD BRYCE, Providence, R. I. Filed Nov. 19, 1923. Serial No. 675,788. 1 Claim. (Cl. 220—96.)



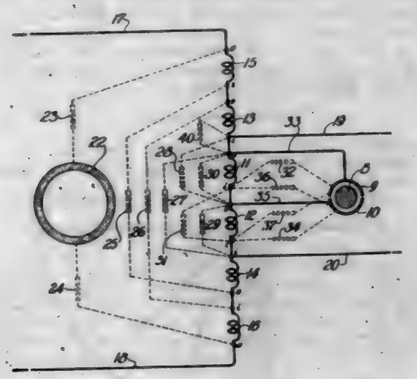
A bail handle holder adapted to be applied to a vessel consisting of a single piece of resilient sheet metal formed substantially U-shaped in side elevation and provided at the outer edge of the intermediate portion with a flange extending beyond the one side of the body of the piece and provided at a point between its ends with a notch, the end portions of the body of the piece being folded back upon themselves, said folded portions being ogee shaped in edge elevation and merging into extremities which are normally disposed substantially parallel with the inner part of the end portions of the body of the piece, said ogee shaped end portions and the extremities thereof being disposed at the opposite sides of the body of the piece from that side thereof beyond which the said flange is disposed.

1,542,369. FLOOR BRUSH. CHARLES BYRD, Fort Wayne, Ind. Filed Apr. 5, 1923. Serial No. 629,978. 1 Claim. (Cl. 306—29.)



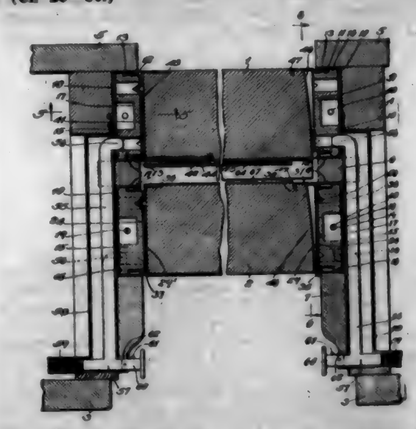
In a floor brush, a brush including an anchor plate; a back to which the anchor plate is secured, said back having divergent openings extending upwardly therethrough and intersecting at their lower ends, handle having a bifurcated head, shaped so as to fit in either of said openings; and an eye-pin having a shank and contiguous coiled head, said eye-pin being applicable selectively through the openings in the back of the brush to spread the head of the handle in the opposite opening at a point beneath the intersection of said openings while its coiled head is secured in the corresponding opening from turning therein.

1,542,370. SHIP. LEON CAMMEN, New York, N. Y. Filed Mar. 14, 1925. Serial No. 15,520. 1 Claim. (Cl. 244—2.)



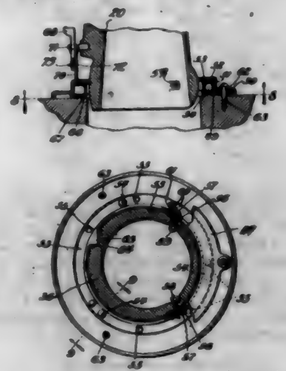
On a ship, a horizontal platform extending from the side thereof over the water, to afford starting or landing facilities for aircraft, said platform comprising floor members serving as runways for aircraft in starting or landing, and frames to support said floor members in proper relation to the ship, said frames consisting of stationary elements attached to the wall of the ship, and other elements held by said stationary elements and being in such relation thereto as to permit rapid erection and disassembling of said frames.

1,542,371. HOSE COUPLING. ORPHA P. CANADAY, Fort Wayne, Ind. Filed Mar. 19, 1923. Serial No. 626,033. 2 Claims. (Cl. 285—86.)



2. In a hose coupling, an externally threaded stock having a tapered stem for the reception of the hose; a close coil contacting member encompassing the hose about the stem; and a sleeve having threaded relation with the stock and constricting engagement with said member, there being space between said member and said stock admitting of unobstructed creeping movement of the lowermost coil of said member therein around the hose.

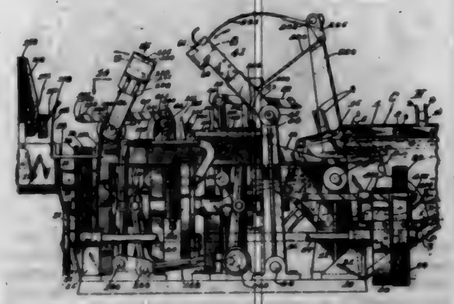
1,542,372. TRANSFORMER. WILLIAM L. CASPER, Brooklyn, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 19, 1922. Serial No. 595,538. 11 Claims. (Cl. 175—361.)



11. A transformer comprising a metallic casing and an electrostatically balanced winding comprising four multi-layer sections, two of which sections are wound on one portion of the core and the other two on another portion of the core said sections being serially connected in the following order: the inner layer of the outer section on one part of said core to the outer layer of the inner section of the other part of said core, the inner layer of said last mentioned section to the inner layer of the other inner section and the outer layer of said last mentioned inner section to the inner layer of the other outer section, said two last mentioned sections being wound in the opposite direction to said two first mentioned sections.

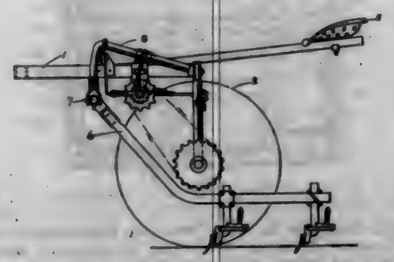
1,542,373. WINDOW. JAMES COUPLAND, Chicago, Ill. Filed June 12, 1924. Serial No. 719,564. 12 Claims. (Cl. 20—80.)

1. The combination with a window frame of a sliding and swinging window sash, a plurality of guides mounted on the window frame, a slide for each guide, means for securing one edge of the window sash to one of the slides, means for detachably securing the other edge of the sash to the other slide, and movable closure means interposed between the latter slide and the sash.



1,542,374. PHONOGRAPH TONE ARM. ROLAND B. DALBY, Chicago, Ill. Filed Mar. 24, 1922. Serial No. 546,302. 8 Claims. (Cl. 274—23.)

3. In a phonograph, the combination of a tone arm having one end loosely fitting within a collar with trunnions joining the tone arm to the collar to permit the tone arm to move in a vertical plane, the axis of said trunnions being parallel with but spaced from a diameter of said collar, the portion of the tone arm within said collar having two opposite sides of different curvatures, the curvatures of said sides being along the arcs of circles, the radii of which are the distances, respectively, from said sides to said axis of said trunnions.

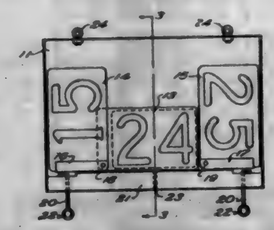


1,542,375. ART OF HANDLING AND BUNCHING BAGS. JOHN T. DALTON, Durham, N. C., assignor to Golden Belt Manufacturing Company, Durham, N. C., a Corporation of New Jersey. Filed Dec. 16, 1922. Serial No. 607,371. 88 Claims. (Cl. 112—2.)

88. Bag handling and fastening mechanism comprising a conveyor having spaced bag holders, each adapted to hold a bunch of fabric bags in flatwise contact, a fastening holder to position a bunch of bags for fastening, means for automatically transferring successive bag bunches from the conveyor holders to the fastening holder, means for passing a thread through the bunch of bags supported in the fastened holder to secure the bags together, means for transferring the successive fastened bunches from the fastening holder to a discharge

point, and means acting automatically upon absence of a bunch of bags at a predetermined position in the mechanism anterior to fastening position to render the fastening means inoperative at a time corresponding to the time when said absent bunch would be positioned for fastening in the normal operation of the machine.

1,542,376. POWER SHIFT FOR CULTIVATORS. HARRY S. DICKINSON, Moline, Ill., assignor, by mesne assignments, to Moline Implement Company, a Corporation of Illinois. Filed Apr. 14, 1921. Serial No. 461,336. 3 Claims. (Cl. 97—154.)

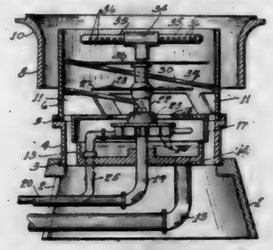


1. A tractor cultivator having a wheeled frame, a transversely movable drag bar support, drag bars connected to said support, a rock shaft connected to the drag bar support, and power operated means for oscillating the rock shaft to shift the drag bar support transversely.

1,542,377. TELEPHONE INSTRUMENT. HENRY F. DOBBIN, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 20, 1923. Serial No. 652,755. 4 Claims. (Cl. 179—158.)

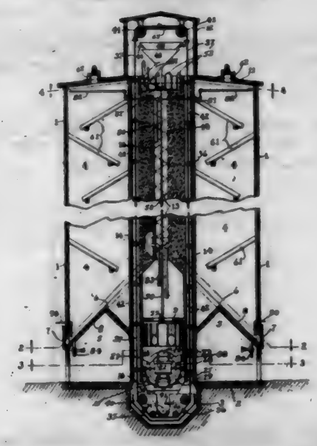
1. In a telephone instrument, a switchhook, a reciprocating shaft controlled by said switchhook, a member fixed to said shaft and carrying a pair of operating lugs, a lever disposed between said lugs so as to allow said shaft a certain amount of play in either direction without actuating said lever and thereafter actuating said lever, and contact springs actuated by the movement of said lever.

1,542,378. PRICE-EXHIBITING DEVICE. PAUL W. FENTON, New York, N. Y. Filed May 7, 1925. Serial No. 28,541. 5 Claims. (Cl. 40—67.)



3. A price exhibitor comprising a housing and two sets of marked plates mounted therein at opposite sides, and the said housing being provided with an intermediate window, a U-shaped holding member for each set of the plates, means to pivot said members with plates to the housing, and push rods extending beyond the housing and having their inner ends in proximity to the U-shaped members and adapted to engage the same for upsetting a set of plates.

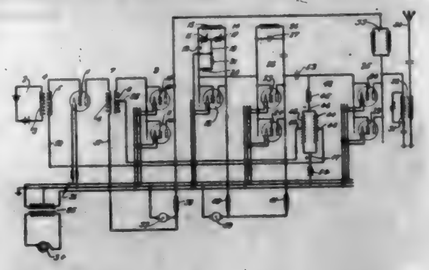
1,542,379. OIL BURNER. JOHN R. FLANNERY, St. Louis, Mo. Filed May 19, 1924. Serial No. 714,400. 9 Claims. (Cl. 158—77.)



8. An oil-burner comprising a base, an apertured shell mounted upon the base, a water basin fixed within the shell, a fuel-supply stem projecting upwardly in the shell and through the basin, a tubular casting disposed within the shell for rotation upon the stem, a burner-disk provided with a multiplicity of openings fixed upon the casting, a fan also fixed upon the casting and disposed in spaced relation under the disk, a water wheel also carried by the casting and disposed in spaced relation under the fan, a water supply pipe discharging upon the wheel for effecting rotation of the casting and its carried disk and fan, a water coil disposed in the shell having communication with said water supply pipe and discharg-

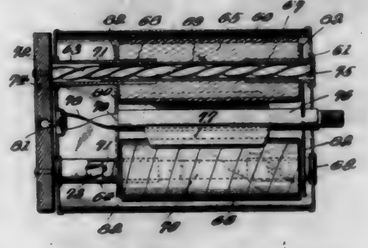
ing upon the disk, a perforated discharge pipe mounted upon the stem and disposed horizontally over the disk for supplying fuel to the disk, and a ring-shaped casting dis-

posed in spaced encircling relation about and partly above the plane of the shell for confining the flame of the disk.



1,542,380. STORAGE PLANT. CHARLES B. FOSTER, Indianapolis, Ind. Filed May 29, 1920. Serial No. 385,135. 6 Claims. (Cl. 214—16.)

1. In a storage plant, a tower provided with a vertically arranged shaft, a series of storage bins disposed vertically of said tower and arranged about the shaft, a passageway transversely through the base of said tower and communicating with said shaft to permit a conveying means to be positioned in said passageway beneath said shaft, means adapted to receive the contents from said conveying means and to raise said contents to the top of said tower, said means being adapted to discharge said contents into any desired bin disposed about said shaft, each of said bins having a door located at the base thereof and adapted to discharge into said passageway in the localized area of said shaft whereby a conveying means disposed in said localized area can receive the contents from any desired bin.

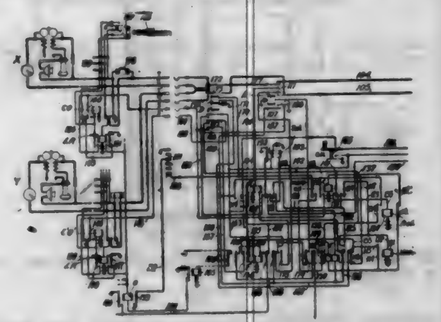


3. In a storage plant, a tower provided with a vertically arranged shaft, a series of storage bins disposed vertically of said tower and arranged about the shaft, a passageway transversely through the base of the tower and communicating with said shaft to permit a conveyance to be positioned in said passageway across the bottom of said shaft, each of said bins having a door located at the base thereof and adapted to discharge into the shaft whereby a conveyance positioned across the bottom of said shaft can receive the contents from any desired bin.

1,542,381. DISCHARGE-DEVICE SYSTEM. JOHN C. GARRIEL, New York, N. Y., and ARVID G. LANDEEN, Caldwell, N. J., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 13, 1924. Serial No. 719,098. 17 Claims. (Cl. 250—17.)

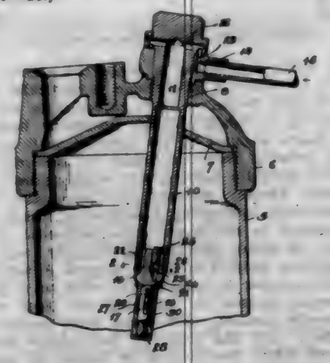
10. Signaling apparatus, including a plurality of electron tubes, each having grid, filament and plate electrodes, a power amplifier having an input and an output circuit and means connected in the input circuit of said power amplifier for negatively biasing the grid electrodes of all of said tubes.

1,542,382. SAFETY-RAZOR-BLADE STROPPER. GEORGE D. GALLAGHER, Washington, D. C., assignor, by mesne assignments, of twenty-five one hundred and fourths to Nannie T. Hoos, twenty-five one hundred and fourths to Ruth B. Walten, four one hundred and fourths to Marguerite G. Schanberger, all of Baltimore, Md., twenty-five one hundred and fourths to Callie F. Moore, Washington, D. C., and twenty-five one hundred and fourths to J. Marsh Matthews, Baltimore County, Md. Filed Sept. 22, 1921. Serial No. 502,479. 9 Claims. (Cl. 51—36.)



1. A device of the class described comprising a casing, a tube journaled therein and reciprocating wholly within said casing, a stropping roll mounted on said tube, a blade holder mounted in said casing, a spiral driver reciprocable through said tube, and means operable by the reciprocation of said spiral driver for rotating and reciprocating the rolls and positioning said blade holder.

1,542,383. AUTOMATIC TELEPHONE SYSTEM. ALFRED E. HAGUE, Brooklyn, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 16, 1923. Serial No. 632,311. 7 Claims. (Cl. 179—18.)

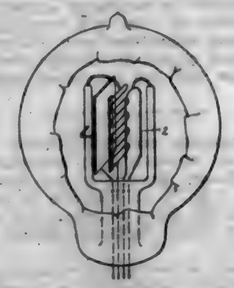


1. In a telephone system, subscribers' lines, a trunk line, a finder switch in which said trunk terminates, having a pair of sets of brushes, means for moving said brush sets over two rows of subscriber's line terminals simultaneously upon the initiation of a call, means for

testing terminals in both rows simultaneously and for stopping the finder when a calling line is reached in either row, means always including but a single relay for connecting the proper brush set to said trunk, means

for operating said relay to shift the trunk to one brush set when a calling line is reached by said set, and means for stopping said finder without operating said relay when a calling line in the other group is reached by the other brush set.

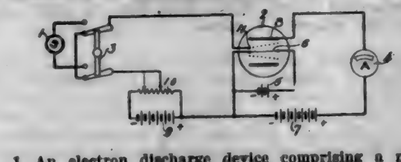
1,532,384. TORPEDO. ANDREW T. HALL, Newport, R. I., assignor to The Government of the United States. Filed Aug. 12, 1920. Serial No. 403,050. 8 Claims. (Cl. 60—46.)



3. In combination with the combustion flask of a torpedo, a water spray therein comprising a tubular member connected with the source of water supply, a spray member at one end of said tubular member, means normally closing the outlet to said spray member and fusible means associated with said closing means adapted to release the closing means on material increase in temperature.

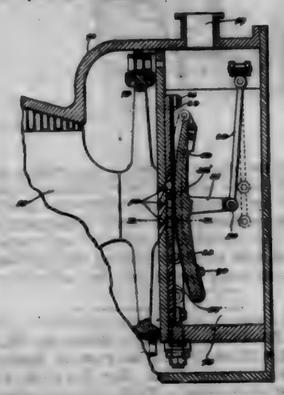
1,542,385. THERMIONIC CATHODE AND METHOD OF MAKING THE SAME. JAMES E. HARRIS, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 12, 1920. Serial No. 416,386. 31 Claims. (Cl. 250—27.)

11. An electron-emitting cathode containing platinum, nickel, barium oxide and strontium oxide.



21. An alloy comprising a metal of the platinum group and a metal which upon being baked with an oxide of an alkaline earth metal in air reacts with oxygen and said oxide to form a compound much more readily than does platinum.

29. An electron emitting element comprising a core of a refractory metal alloyed with a lesser amount of a metal, such as nickel, which volatilizes at a relatively

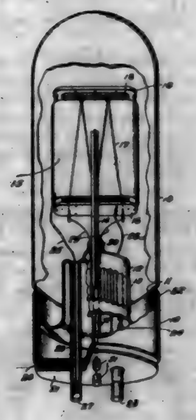


lower temperature than said refractory metal, and a coating containing an oxide of an alkaline earth metal applied to said core, said refractory metal being substantially inactive chemically with respect to said oxide.

1,542,386. VACUUM-TUBE DESIGN. RALPH V. L. HARTLEY, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 14, 1920. Serial No. 430,637. 5 Claims. (Cl. 250—27.)

1. An electron discharge device comprising a multipotential cathode, an anode and an equipotential control electrode, said control electrode having parts in such space relationship to parts of said cathode as to offer to the flow of electrons between the cathode and anode an impedance which compensates for the drop in potential along the cathode.

1,542,387. NOZZLE-CONTROL MECHANISM FOR STEAM TURBINES. HERBERT T. HERR, Philadelphia, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 3, 1923. Serial No. 610,488. 7 Claims. (Cl. 137—158.)

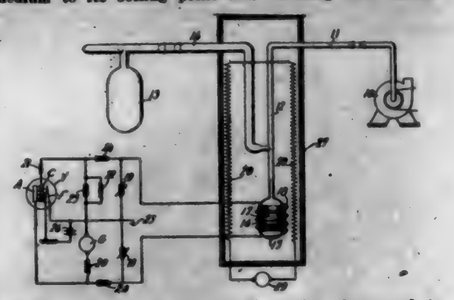


1. In a turbine, the combination of a nozzle block having a plurality of nozzle openings therein, a flexible member secured to one end of the block and adapted

to cover and uncover the nozzle openings, a convexly-faced rocker member secured to the other end of the flexible member and adapted, when rocked, to cause the flexible member to be wrapped or unwrapped thereabout to uncover or cover said nozzle openings, and flexible members cooperating with said convexly-faced member laterally of said first flexible member to maintain the latter taut and in contact with the nozzle block.

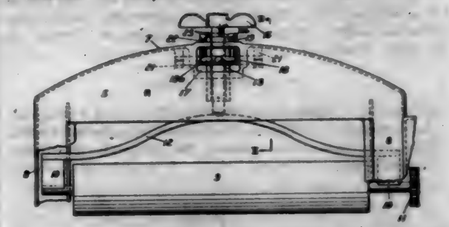
1,542,388. PROCESS FOR EMPLOYING WATER SOLUTIONS OF RUBBER AND ARTICLES SO PRODUCED. ERNEST HOPKINSON and WILLIS A. GIBBONS, New York, N. Y., assignors to Revere Rubber Company, Chelsea, Mass., a Corporation of Rhode Island. Filed Feb. 3, 1922. Serial No. 533,776. 16 Claims. (Cl. 18—58.)

2. The method of making rubber articles which comprises continuously building up a deposit of rubber solids on a form by disposing the surface of the form in contact with a body of latex, withdrawing moisture from that portion of the latex in contact with the form, and drying and vulcanizing the article.



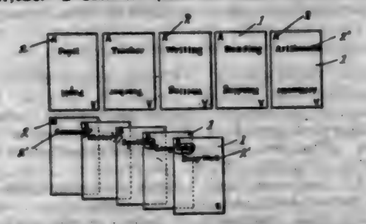
1,542,389. VACUUM-INSULATED TERMINAL. WILLIAM G. HOUSKEEPER, New York, N. Y., and WILLIAM R. BROOKS, East Orange, N. J., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 19, 1920. Serial No. 425,110. 5 Claims. (Cl. 250—27.)

1. An electron discharge device comprising an evacuated vessel having a stem, a base enclosing a portion of said vessel, an electrode supported by said stem, a tubular member within said stem communicating with said vessel and extending through said base and a lead wire for said electrode passing through said tubular member and being sealed into the outer end thereof.



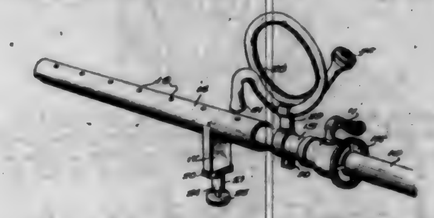
1,542,390. VACUUM PUMP. WILLIAM G. HOUSKEEPER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 9, 1921. Serial No. 483,472. 6 Claims. (Cl. 230—13.)

1. The steps in the evacuation of a vessel which consist in producing a vapor stream by inducing eddy currents in a supply of pumping medium to heat said medium to its boiling point and directing said stream



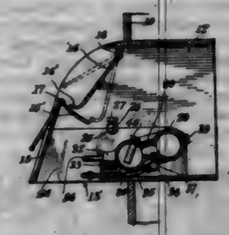
through a chamber communicating with the vessel to be evacuated.

1,542,391. WRINGER. CHESTER C. HOWE, New Kensington, Pa. Filed Sept. 23, 1922. Serial No. 590,004. 6 Claims. (Cl. 68—32.)



1. A wringer including a supporting frame, a roll movable vertically in said frame, a vertically movable block in said frame, a shaft threaded in said block and having a handle portion projecting beyond the frame, means engaged by the threaded shaft for transmitting pressure from said shaft to the roll, and a latch for normally holding said block against upward movement, whereby pressure may be applied to said roll, said latch comprising a supporting member pivotally mounted in the frame on a horizontal axis and rotatable in either direction on its axis, and having arms thereon adapted to move through a vertical arc when the member is rocked, said latch being provided with means thereon for engaging the block when it is in normal position, said means being moved out of engagement with the block by the arcuate travel of said arms when the member is rocked in either direction from the normal position.

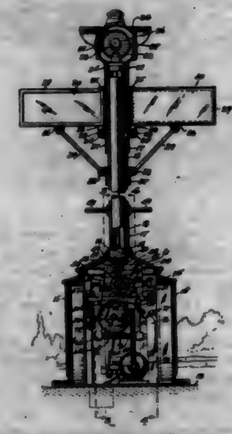
1,542,392. CARD GAME. ANNA L. R. JOHNSON, Marietta, Minn. Filed Mar. 27, 1922. Serial No. 547,024. 2 Claims. (Cl. 273—152.)



1. Card game apparatus, comprising a deck of cards divided into groups, legible means on each card to suggest but not name a group to which the card belongs, a character on each card, alike for all cards in a group but distinctive for different groups, and an index containing a list of the group designating characters, and in conjunction with each group designating character the name of the group which it designates.

1,542,393. GAS BURNER. DEMETRIOS K. KARAMANOS, Joliet, Ill. Filed Sept. 19, 1924. Serial No. 738,686. 3 Claims. (Cl. 116—100.)

2. A device of the character described comprising a burner pipe provided with a series of apertures, a control valve for controlling flow of gas into one end of said pipe, a pressure regulating valve arranged outwardly of the aperture nearest said control valve, a coiled pipe arranged over said burner pipe and having one end flared and arranged over said last named aperture, and a whistle carried by the opposite end of said coiled pipe and adapted to be actuated when the flame of the burner is extinguished while said control valve is open.



1,542,394. EXTERNAL HOT-BLAST BURNER. ADOLPH G. KAUFMAN, New York, N. Y. Filed Apr. 7, 1923. Serial No. 630,531. 8 Claims. (Cl. 158—4.)

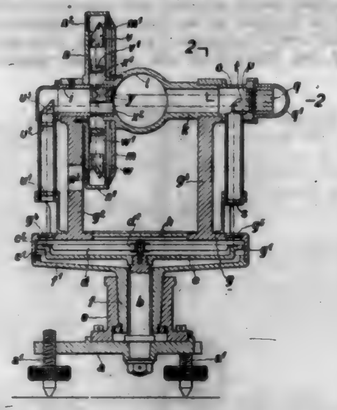
8. A combined fuel oil gas generator and burner comprising a unitary structure having a plurality of preheating chambers, an expansion chamber containing perforations, a nipple in said expansion chamber, said nipple extending nearly to its bottom and outward at a rearwardly inclined angle, a wick containing fuel trough adjacent said expansion chamber receptive of fuel from the perforations in said chamber in the initial stage of operation, means for controlling the heat delivered to said preheating chambers, removable closures at the ends of said chambers, tubular connections between said chambers, and removable plugs in said connections permitting entry thereto.

1,542,396. AUTOMATIC TRAFFIC-SIGNAL MECHANISM. CHARLES H. KAYSER, Montclair, N. J. Filed Jan. 9, 1924. Serial No. 685,079. 7 Claims. (Cl. 116—63.)

2. An automatic traffic signal mechanism, comprising a supporting means provided with a vertically disposed rotatable shaft, visible signal means supported and operated by said shaft, means for imparting rotative impulses to said shaft to alternately display desired signals to the traffic to be controlled, the same including a ratchet-wheel, a gravity controlled lever mechanism including a drive-pawl for actuating said ratchet-wheel, a rotary trip-wheel, said trip-wheel having a plurality of trip-studs for raising and tripping said lever mechanism, means whereby said trip-studs may be adjusted in relation to each other to regulate the time of their active cooperation with said lever mechanism during each rotation of said trip-wheel, means for ro-

tating said trip-wheel, an audible signal element, means for sounding said audible signal element, a plurality of additional trip-studs on said trip-wheel to cooperate with and actuate said sounding means, and means for relatively adjusting said additional trip-studs in correspondence with the adjustment of said first mentioned trip-studs whereby said audible signal is actuated simultaneously with each actuation of said visible signals.

1,542,396. BALL GAME. ARTHUR V. KLINK, Danbury, Conn. Filed Nov. 4, 1922. Serial No. 599,055. 8 Claims. (Cl. 273—88.)

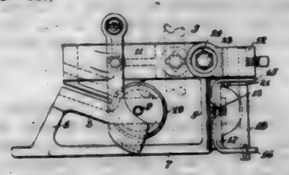


1. A game apparatus comprising figures of ball players arranged to represent a batter, a catcher and an umpire in their normal positions, and a bat held in front of the catcher provided with a ring in an upright position.

1,542,397. THEODOLITE WITH COMPASS. ALBERT KÖNIG, Jena, Germany, assignor to the Firm Carl Zeiss, Jena, Germany. Filed Apr. 20, 1923. Serial No. 633,474. 3 Claims. (Cl. 88—2.6.)

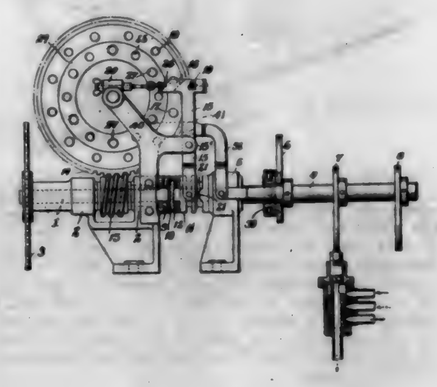
1. The combination of a fundamental body, a pedestal body disposed on the fundamental body rotatably about a vertical axis, a horizontal circle connected with the fundamental body, a part disposed on the pedestal body

rotatably about a horizontal axis, this part being adapted to receive a telescope, a magnetic needle, disposed inside the said horizontal circle, and optical means comprising a reading microscope and being adapted to ren-



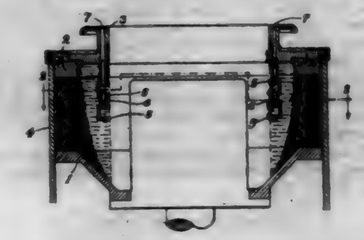
der visible simultaneously the said needle and the horizontal circle at such a position of the said part that a telescope placed within this part would be directed upon approximately the magnetic meridian.

1,542,398. ELECTROMAGNETIC DEVICE. PHILIP K. MCGALL, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 31, 1920. Serial No. 434,183. 5 Claims. (Cl. 200—97.)



1. An electromagnetic device comprising an operating winding, an armature, switch springs, a member for actuating said springs and operated by the movement of the armature in one direction, means for retarding said member to cause it to actuate the springs a predetermined interval after the armature has completed its movement, and means for rendering said retarding means ineffective to delay the action of said member on the movement of the armature in the opposite direction.

1,542,399. SLUB CATCHER. JOHN O. MCKEAN, Westfield, Mass., assignor to Foster Machine Company, Westfield, Mass., a Corporation of Massachusetts. Filed Sept. 20, 1924. Serial No. 738,890. 6 Claims. (Cl. 28—65.)

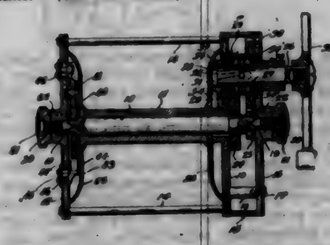


1. A slub catcher comprising an integral resilient yoke having two branches, one branch having a lateral member, the other branch provided with a lateral pin, a comb pivoted on said pin in position to coact with said lateral member, and means for springing one branch to vary the distance between the comb and its coacting member.

1,542,400. MECHANISM FOR CONTROLLING THE OPERATION OF MACHINES AND APPARATUS. GUSTAV TER MEER, Hanover, Germany. Filed Apr. 30, 1921. Serial No. 465,827. 11 Claims. (Cl. 74—14.)

1. In an automatic controlling apparatus, the combination of, a driving shaft, a control shaft having a plurality of cams mounted thereon in fixed position against rotation relative thereto each for governing a separate step in the cycle of operations to be performed by the controlled apparatus, and means for alternately connecting and disconnecting one of said cams with respect to the apparatus controlled thereby to omit or include a step in the cycle, said means being controlled from said driving shaft.

1,542,401. OVERFLOW MANIFOLD FOR CENTRIFUGAL SEPARATORS. GUSTAV TER MEER, Hanover-Linden, Germany. Filed Mar. 11, 1925. Serial No. 14,678. 5 Claims. (Cl. 233—47.)

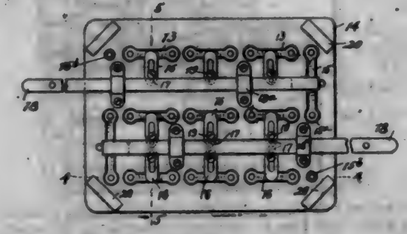


1. A centrifugal separator having an imperforate peripheral wall, a plurality of annular outlets spaced inwardly from said wall at equal distances from the axis of rotation and at axially spaced points, and means for conducting liquid from each of said outlets and entirely disposed at a greater distance from the axis of rotation than are any of said outlets.

1,542,402. ELASTIC-FLUID TURBINE. HERMAN A. MESSINGER, St. Petersburg, Fla., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 17, 1924. Serial No. 756,428. 7 Claims. (Cl. 253—77.)

1. Means for securing a lashing wire to a turbine blade having a hole therein comprising a wedge adapted to engage with the lashing wire and with the side of the hole in the blade.

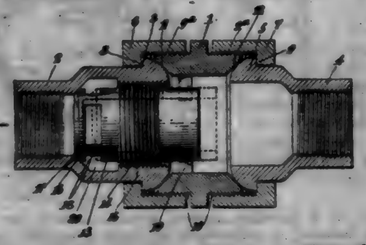
1,542,403. FISHING REEL. GEORGE F. MILES, Torrington, Conn. Filed May 8, 1924. Serial No. 711,806. 3 Claims. (Cl. 242—84.7.)



1. In a fishing reel, a rotatable spindle, a spool secured thereto, a plurality of gears secured to said spindle, a second spindle offset laterally from the first spindle and slidable longitudinally of its axis, a crank for operating said second spindle, a sleeve embracing the second spindle provided with a longitudinal slot and a central flange having a notch in alignment with said slot, means for holding said sleeve against sliding movement, a pair of gears mounted to rotate on said sleeve on opposite sides of said flange and meshing with the first mentioned gears, said gears being provided with recesses, a pin carried by the second spindle projecting through said slot and adapted to be moved by sliding movement of the spindle into the notches in the flange or gears, and means for yieldingly holding the spindle in different positions.

1,542,404. ARTIFICIAL BAIT. FRED PAULSON, Geneva, Ill. Filed May 31, 1923. Serial No. 642,387. 4 Claims. (Cl. 43—43.)

4. An artificial bait comprising a body portion, hooks on said body portion, and means whereby said bait may be caused to dive, spin or skim the surface, comprising a pair of planes independently adjustable about a horizontal transverse axis, said planes being close together for a considerable portion of their length when adjusted to the same angle, the axis of said planes being in advance of the front end of the body.

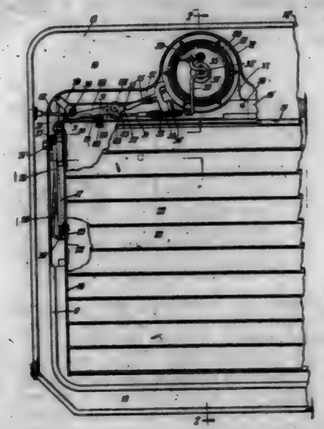


1,542,405. APPARATUS FOR AND METHOD OF APPLYING CROSS CONNECTERS TO STORAGE-BATTERY TERMINAL POSTS. WARD BURTON PETTIBONE, Cleveland, Ohio, assignor to Willard Storage Battery Company, Cleveland, Ohio, a Corporation of West Virginia. Filed June 17, 1922. Serial No. 568,951. 6 Claims. (Cl. 113—59.)

1. A device for facilitating the application of previously formed cross connecters to the terminal posts of a multi-cell storage battery, comprising a cross connecter holder adapted to be placed over a battery and having a plurality of recesses into which cross connecters may be placed, said recesses having an arrangement corresponding to the arrangement of the cross connecters on a completed battery of a number of cells arranged in a predetermined manner whereby the connecters may be assembled simultaneously on the terminal posts.

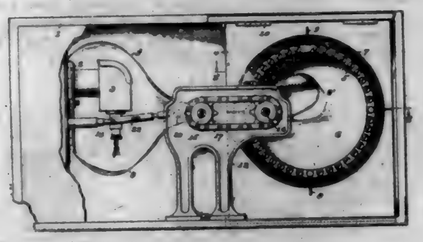
5. The method of applying previously formed cross connecters to the terminal posts of a storage battery having a number of cells, which comprises inserting the cross connecters in a holder with the former arranged in accordance with the arrangement that they are to have on the finished battery, placing the holder with the cross connecters over the battery with the ends of the cross connecters and ends of the terminal posts exposed through the holder, and then lead burning the cross connecters and the terminal posts together.

1,542,406. PIPE UNION. OTTO J. PFEIFFER, New York, N. Y., assignor to Nason Manufacturing Company, a Corporation of New York. Filed Sept. 29, 1921. Serial No. 504,198. 7 Claims. (Cl. 251—8.)



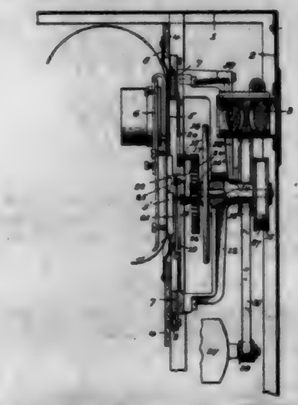
3. A valve union for pipe sections, comprising a body portion and two members, each adapted to connect with a section of pipe, independent connections between each member and the body to permit such member to move relatively to the body independently of the other member, a valve operable independently of the coupling or uncoupling of pipe sections, and seat connections to prevent leakage located interiorly between said members and the body portion.

1,542,407. SHUTTER APPARATUS FOR RADIATORS. JAMES F. RALSTON, Chicago, Ill., assignor to Pines Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed Dec. 22, 1923. Serial No. 682,317. 15 Claims. (Cl. 236—35.)



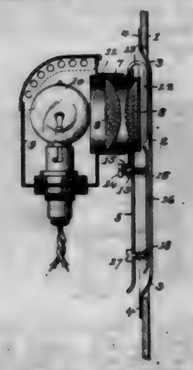
1. A shutter apparatus for a radiator, comprising a shutter for controlling the passage of air through said

radiator, thermostatically controlled means for operating said shutter, spring means against the force of which said operating means act, and means for varying



the tension of said spring means, said varying means having only two positions in each of which it is held by said spring means.

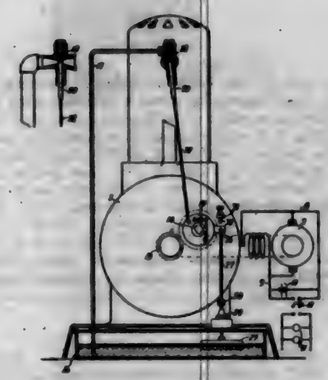
1,542,408. MOTION-PICTURE MACHINE. WILLIAM C. READSKER, Chicago, Ill., assignor, by direct and mesne assignments, to Claremont Laboratories, Inc., a Corporation of New York. Filed Sept. 10, 1921. Serial No. 499,657. Renewed May 15, 1924. 14 Claims. (Cl. 88—18.7.)



1. In a portable motion picture machine, an enclosing housing a supporting standard arranged longitudinally in the housing and formed with a central opening, a cluster of supporting rollers journalled on one side of said standard and adapted to support the roll portion of a picture film in encircling relation to said opening of the standard, a film supply sprocket drum and a film takeup sprocket drum having a single transverse carrying shaft journalled in the enclosing housing and carrying the film take-up drum in line with said supporting rollers with the film supply drum in spaced lateral relation to said take-up drum, an auxiliary film supply sprocket drum arranged in the interior of the aforesaid cluster of supporting rollers and adapted to unwind the picture film through a space between adjacent rollers and feed said film in the form of a supplementary oblique loop to the film supply drum aforesaid, means for supporting said auxiliary drum, and operative connections between said auxiliary drum and the supply and take-up drums aforesaid.

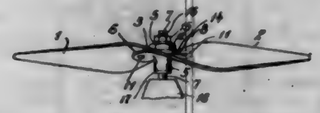
1,542,409. MOTION-PICTURE MACHINE. WILLIAM C. READSKER, Chicago, Ill., assignor, by direct and mesne assignments, to Claremont Laboratories, Inc., a Corporation of New York. Filed Sept. 10, 1921. Serial No. 499,658. Renewed May 15, 1924. 31 Claims. (Cl. 88—18.4.)

1. In a motion picture machine, the combination of a plate formed with a light aperture, a shaft arranged in right angle relation to said plate and a distance removed from the aperture thereof, a bladed light controlling shutter on said shaft, and an intermittent film feeding mechanism, the same comprising a carriage in parallel relation to said aperture plate, a frame carrying film engaging claws on said carriage, a cam on the aforesaid shaft provided with peripheral concentric and eccentric portions adapted to engage said carriage and impart intermittent reciprocation thereto, and a stud arranged eccentrically on the face of said cam, the claw carrying frame having an inclined lug on one face adapted for engagement with the stud of the cam aforesaid to receive intermittent motion therefrom in a direction at right angles to that of the aforesaid carriage.



1,542,410. MOTION-PICTURE MACHINE. WILLIAM C. READSKER, Chicago, Ill., assignor, by direct and mesne assignments, to Claremont Laboratories, Inc., a Corporation of New York. Filed Sept. 10, 1921, Serial No. 499,659. Renewed Sept. 27, 1924. 4 Claims. (Cl. 88—17.)

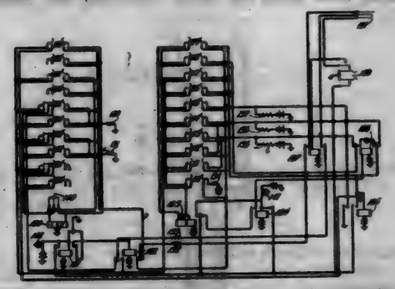
1. In a motion picture machine, a plate having a light aperture, a film confining gate hinged to said plate at one side of said aperture, a pressure member comprising a movable plate formed with a light aperture



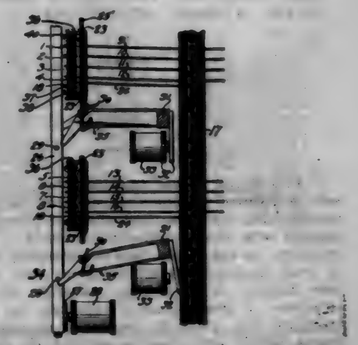
and mounted on the rear side of said gate by headed guide studs and interposed springs adapted to resiliently move said plate towards the gate, and a pair of transversely spaced pressure fingers of a flat form arranged at the front side of the gate and fixedly connected to said plate by return bends.

1,542,411. PRIME-MOVER DYNAMO PLANT. CHARLES B. REDDIG, Kew Gardens, Richmond Hill, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 28, 1923. Serial No. 641,802. 4 Claims. (Cl. 290—31.)

1. In combination, an internal combustion engine, a generator driven thereby, a storage battery to be charged by the generator, a fuel supply tank, an ignition timer, and a throttle valve for the engine, and means including the throttle valve and the timer for controlling the speed of the engine in response to the height of the fuel in said tank.



1,542,412. AERONAUTICAL PROPELLER. SYLVANUS A. REED, New York, N. Y., assignor to The Reed Propeller Co. Inc., New York, N. Y., a Corporation of New York. Filed May 14, 1924. Serial No. 713,122. 7 Claims. (Cl. 170—173.)

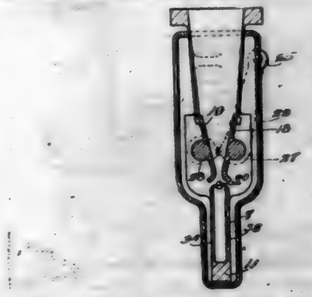


1. An aeronautical propeller having blades formed of an alloy of magnesium.

1,542,413. TELEPHONE-EXCHANGE TESTING SYSTEM. JOHN B. RETALLACK, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 9, 1924. Serial No. 711,970. 12 Claims. (Cl. 179—175.)

12. In a testing system arranged to test trunk indicating apparatus ordinarily operated to indicate the number of a trunk automatically selected, means to control arbitrarily said trunk indicating apparatus to indicate any trunk number within its scope and means to indicate the progressive operation of said indicating apparatus.

1,542,414. AUTOMATIC TELEPHONE SWITCH. CHARLES D. RICHARD, West New Brighton, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 7, 1922. Serial No. 586,617. 7 Claims. (Cl. 179—27.5.)

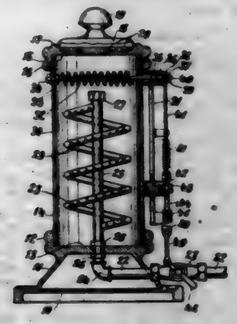


1. In a switching mechanism, sets of active contacts, an individually removable support, sets of passive contacts arranged on said individually removable support and disposed coordinately to said active contacts, a camming member for each set of said active contacts, slidably arranged in a plurality of guiding slots in said support, and a cam for operatively engaging said member to effect interengagement between said contacts at their crossing point.

1,542,415. CARBURETOR. EDWARD E. RICHARDSON, Elyria, Ohio, assignor to The R. & S. Non-Deflecting Valve Company, Elyria, Ohio, a Corporation of Ohio. Filed Feb. 9, 1921. Serial No. 443,526. 1 Claim. (Cl. 261—47.)

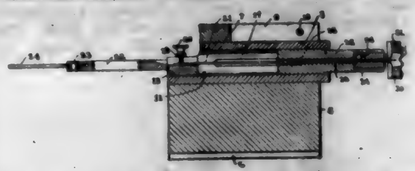
In a carburetor, the combination with a mixing chamber, of a fuel jet at the approach end of the chamber, and a throttle valve intermediate the ends thereof, said chamber having a discharge portion of gradually enlarged cross section towards its discharge end, and an approach portion of gradually enlarged cross-section towards its discharge end, a pair of movable valve plates constituting opposite walls of said chamber, spaced parallel trunnions carried in the intermediate walls thereof, supporting the plates at their mid portions and rotatable to cause adjacent ends of each of said plates on the approach side of the valve to meet to practically obstruct the passage through the chamber, or to move outwardly to variably open the passage

therethrough, said approach portion terminating in a narrow outlet presented to the meeting ends of said rotatable valve plates but spaced therefrom, said chamber



discharge portion presenting its inlet end to the other ends of said plates, but spaced therefrom, whereby air is supplied to the fuel mixture in the chamber around the ends of the plates.

1,542,416. DRAFT REGULATOR. DANIEL J. SCANLAN, St. Louis, and JOHN JOS. KRANE, St. Louis County, Mo., assignors of one-fifth to Kathryn A. Cleary, St. Louis County, Mo. Filed Jan. 22, 1923. Serial No. 614,100. 2 Claims. (Cl. 236—10.)



1. In a device of the type described, the combination with a tubular structure, of a cradle-shaped structure having a leg depending from the base thereof formed integrally with and extending transversely of said tubular structure, an expansible chamber removably secured within said cradle-shaped structure, a stem connected to said chamber and extending outwardly of said tubular structure, a lever mounted exteriorly of said tubular structure and pivotally connected to said stem, and means within said chamber affected by the change of temperature within the tubular structure for axially varying the expansible chamber to operate said lever.

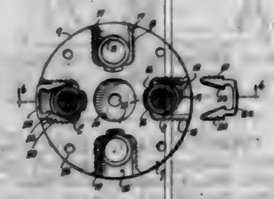
1,542,417. AUTOMATIC VALVE-CONTROLLING DEVICE. EDMUND SCHMAL, New York, N. Y. Filed Nov. 19, 1924. Serial No. 750,741. 2 Claims. (Cl. 126—85.)

1. The combination with a gas heater and a supply pipe leading thereto, said pipe being provided with a valve, a lever for operating said valve, a spring drawn link acting on said lever to close the valve, a plunger engaging said link to retain the valve open, a thermostatic torsion element in said heater, and means actuated by said element upon the accession of heat to displace said plunger and permit the valve to close.

1,542,418. FOLLOWING WORK REST. JOSEPH L. SCHMIDLING, Milwaukee, Wis., assignor of one-half to Edward Spragg, Milwaukee, Wis. Filed Dec. 26, 1922. Serial No. 608,970. 5 Claims. (Cl. 82—2.)

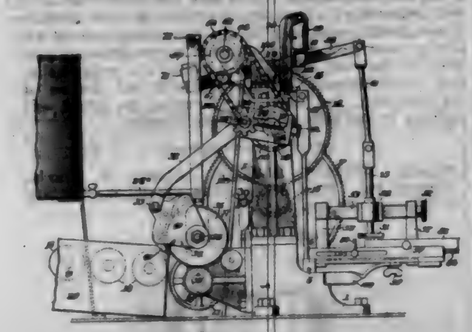
1. A device of the class described comprising a substantially rigid supporting member provided with a bore; a work feeding member slidably mounted in said bore; a work holding and supporting member carried by said first supporting member, adapted to rigidly support said work in close proximity to a cutting tool; and means for sliding said feeding member for feeding the work through said work supporting member to said tool.

1,542,419. SHOE-TREE. RALPH D. SMALL, Chicago, Ill. Filed Dec. 6, 1924. Serial No. 754,247. 4 Claims. (Cl. 12—128.3.)



1. A shoe tree including a toe piece divided longitudinally of the tree into sections; a wedge interposed between and engaging abutments provided upon said sections to spread said sections apart, and two links, one individual to and connected at its outer end with each toe section, said links having sliding connection at their inner ends with said wedge.

1,542,420. GARMENT BAG. ABRAHAM STONE, Brooklyn, N. Y. Filed May 1, 1924. Serial No. 710,245. 1 Claim. (Cl. 206—7.)



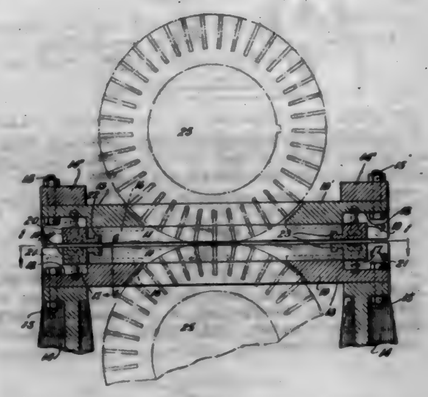
In combination, a garment bag having a plate connected thereto, the upper end of said plate being inturned, a hook carrier comprising a substantially rectangular member passing through the inturned end of said plate so as to be revolubly supported, the said hook carrier having an upwardly bent portion in the upper part thereof, a sleeve loosely connected to said carrier at the said upwardly bent portion of the upper end thereof, and a hook revolubly connected to said sleeve, said hook being adapted to turn about an axis perpendicular to said sleeve.

1,542,421. CABLE BOX. HERMAN L. STRONGSON, Brooklyn, N. Y., assignor, by mesne assignments, to The Thomas & Betts Co., Elizabeth, N. J., a Corporation of New Jersey. Filed Apr. 29, 1922. Serial No. 557,366. 15 Claims. (Cl. 247—25.)

1. In cable anchorages, boxes, and the like, a box having a socket depression made in a wall thereof to support a cable end, said socket including spaced parallel side walls, and a forked plug slidable along the walls to embrace the cable, and held in position by surface engagement between the plug forks and the box wall.

1,542,422. RUBBER-PUNCHING MACHINE. HERMAN O. STUBBS, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed June 26, 1920. Serial No. 391,941. 11 Claims. (Cl. 164—22.)

1. A machine for forming blanks from resilient material comprising in combination, a support for a moving strip of material, a die for cutting blanks from the strip, an ejector adapted to remove the blanks from the strip, and means for supporting the strip while the blanks are being removed adapted for forming a discharge opening for the blanks and for varying the size of the opening.

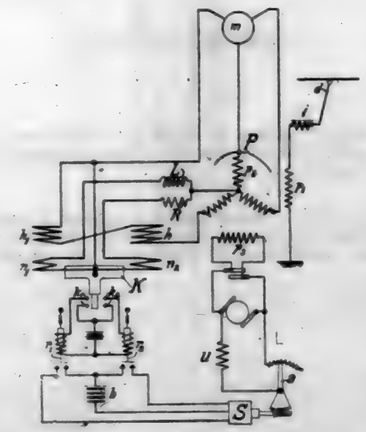


1,542,423. MEANS FOR PREVENTING LEAKAGE PAST THE PISTONS OF INTERNAL-COMBUSTION ENGINES. GEORGE A. TAYLOR, Boston, Mass. Filed Feb. 10, 1921. Serial No. 444,055. 4 Claims. (Cl. 74—109.)

1. An improved piston ring which includes a series of spring members located at an end face of the ring and having their ends integral with the body of the ring, said members having portions intermediate their ends which project beyond the remainder of the face of the

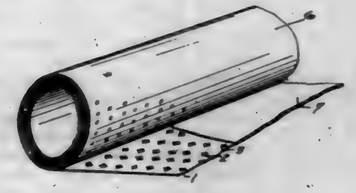
ring and are adapted to engage one wall of the piston ring groove and hold said ring against movement in an axial direction.

1,542,424. SHEET-METAL-SLITTING MACHINE. ARTHUR J. TOWNSEND, Canton, Ohio. Filed Jan. 15, 1923. Serial No. 612,785. 5 Claims. (Cl. 164—66.)



1. A sheet metal slitting machine including slitting rolls with spaced cutting disks, stripping bars extending through between adjacent disks, transverse supporting bars for the ends of the stripping bars in front and in rear of the rolls, and transverse clamping bars retaining the ends of the stripper bars.

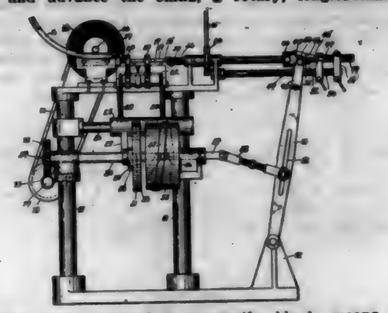
1,542,425. WRENCH. CHARLES L. VAN INWAGEN, Rutherford, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 5, 1922. Serial No. 527,075. 6 Claims. (Cl. 81—90.)



1. A tool comprising a casing having longitudinal apertures extending therethrough, bushings to fit said apertures, each of said bushings being provided with an opening, pins adapted to fit said openings in said bushings, and adjustable means for retaining said pins in the openings of said bushings in a desired position.

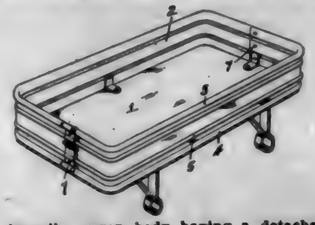
1,542,426. ALTERNATING-CURRENT POWER-TRANSMISSION PLANT. KALMAN VON KANDO, Budapest, Hungary. Filed Sept. 17, 1920. Serial No. 411,018. 19 Claims. (Cl. 192—238.)

1. The method of regulating alternating current induction motors which consists in varying the impressed electromotive force with the varying load in response to a change in the load conditions substantially in direct proportion to the square root of the load.



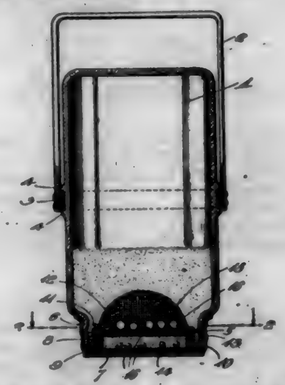
1,542,427. NONHEAT-CONDUCTING COVERING. HENRY R. WARDELL, New York, N. Y., assignor to Johns-Manville, Incorporated, a Corporation of New York. Filed Oct. 16, 1923. Serial No. 668,793. 3 Claims. (Cl. 154—45.)

1. A non-heat-conducting covering comprising, in combination, a plurality of superposed sheets of material of relatively low heat conductivity, which said sheets have a plurality of portions partly severed from the main body to form a plurality of small tabs which are bent away from the planes of the sheets far enough to form means of spacing apart from said perforated sheets proximate portions of adjacent sheets.



1,542,428. MACHINE FOR TURNING BLANKS FOR CROCHET HOOKS AND OTHER ARTICLES. WILLIAM R. WATROUS, Chester, Conn., assignor to C. J. Bates & Son, Chester, Conn., a Firm composed of Carlton J. Bates and Hamilton C. Bates. Filed July 11, 1923. Serial No. 650,853. 2 Claims. (Cl. 142—17.)

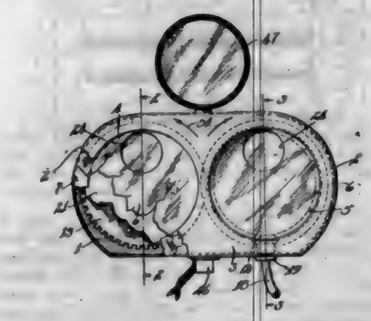
1. In a machine for turning blanks, the combination with a table onto which blanks are fed, means, including a pair of upper gripping-jaws, adapted to engage the blank and move it transversely across the table, a pair of lower gripping-jaws adapted to receive the blank as it leaves the table and, with the upper jaw, firmly support and advance the blank, a rotary, longitudinally-



movable chuck adapted to grasp the blank, means for opening and closing the chuck, and a cutter against which the blank is advanced by said chuck.

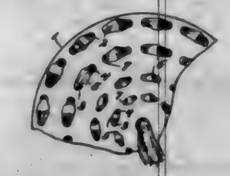
1,542,429. JUVENILE WAGON BODY. JOHN WEBER, Toledo, Ohio, assignor to The American National Company, Toledo, Ohio, a Corporation of Ohio. Filed Nov. 8, 1924. Serial No. 747,414. 3 Claims. (Cl. 296—28.)

1. A juvenile wagon body having a detachable sheet metal side wall formed with upper and lower edge rolls and composed of a plurality of sections secured together in end joining relation with the registering rolls of adjoining ends telescoping, and with the intermediate portions of the ends lapping each other, and with one of said joints disposed centrally in each end portion of the side wall, and means for securing the joined end portions of the body wall sections together.



1,542,430. POISON DUSTER. ALBERT B. WEVER, Chipley, Fla. Filed Oct. 3, 1924. Serial No. 741,866. 5 Claims. (Cl. 43—145.)

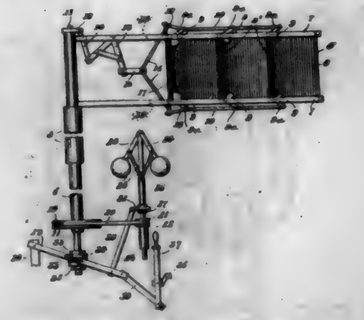
1. A powder duster comprising a receptacle having a mouth, a cap closing said mouth and having a discharge opening, a screen carrying rim held within said mouth



by said cap and provided with an outstanding bead, and a ring surrounding said rim between said bead and the outer end of the mouth to hold said rim against movement into the body of the receptacle.

1,542,431. SIGNAL DEVICE FOR MOTOR VEHICLES. FRANK M. WHITE, Chicago, Ill. Filed Feb. 19, 1923. Serial No. 620,027. 3 Claims. (Cl. 177—337.)

1. The combination with a motor vehicle having a driving mechanism and a steering mechanism, of a housing arranged to be mounted on said motor vehicle, means within the housing connected with the driving mechanism for visually indicating the relative speed and direction at which the motor vehicle is driving, said means comprising a pair of apertured shutters arranged to rotate in opposite directions from one another, a pair of incandescent lights disposed in said housing, one for each of said shutters, and switch operated means controlled by said steering mechanism for operating said incandescent lights selectively as said steering mechanism is turned to the left or right.

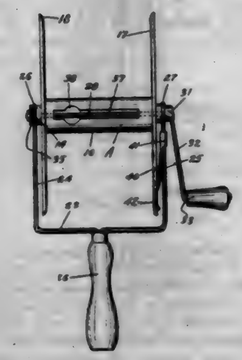


1,542,432. ARTIFICIAL FLOWER. MARY F. F. WILSON, New Rochelle, N. Y. Filed Oct. 4, 1924. Serial No. 741,776. 3 Claims. (Cl. 41—13.)

1. An artificial flower comprising a base provided with perforations, a ribbon threaded through the perforations to provide loop portions on the upper side of the base.

1,542,433. AUTOMATIC WIND MOTOR. STEFAN ZGLICZYNSKI, Baltimore, Md. Filed May 20, 1924. Serial No. 714,565. 4 Claims. (Cl. 170—26.)

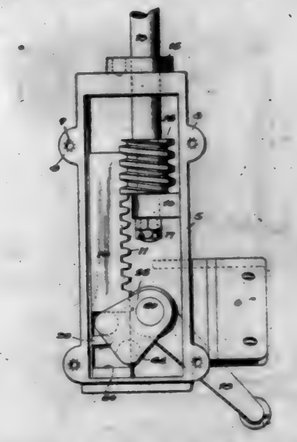
4. In a wind motor, a vertical bearing member, a rotatable shaft journaled in said bearing member, a wind wheel carried by said shaft, a plurality of blades hingedly carried by said wheel, a pair of bell crank shape abutments for each blade, pivotally carried by said wheel, a governor, means for driving said governor from said shaft, and means for connecting said governor to said



abutments so that the latter will be moved into inoperative positions successively, for causing the blades to become inoperative in a step by step manner.

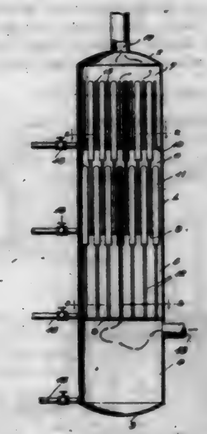
1,542,434. COVERING OR CAPSULE FOR BOTTLES, JARS, OR THE LIKE, AND PROCESS FOR FABRICATING THE SAME. GUSTAV BONWITT, Berlin, Germany. Filed Mar. 8, 1924. Serial No. 697,952. 7 Claims. (Cl. 18—57.)

1. The method of manufacturing sealing coverings for bottles, jars, boxes, cases, or the like, consisting in making the respective shapes of a film containing compound-ethers, and desesterificating said shapes, substantially as set forth.



7. As new articles of manufacture: sealing coverings for bottles, jars, boxes, cases, and the like, consisting of desesterificated shapes made of films that contained compound-ethers, substantially as set forth.

1,542,435. CLOTHESLINE REEL. JOHN CARLSON, St. Paul, Minn., assignor to Arlington Machine Works, Inc., St. Paul, Minn. Filed Jan. 19, 1922. Serial No. 530,256. 6 Claims. (Cl. 242—96.)

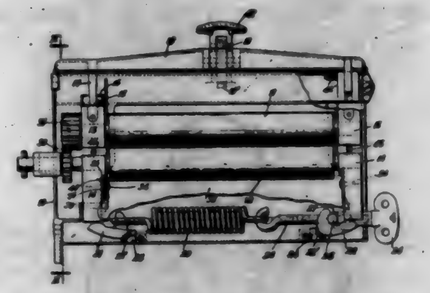


1. A reel comprising a cylindrical drum having planiform ends, square shanks issuing outwardly from the faces of said ends, reel heads having openings corresponding to said shanks adapted to be placed over the same and seated against said drum ends, the corners of said shanks being turned over to securely hold the reel heads in place.

1,542,436. STEERING DEVICE. CLYDE L. CRAIG, Washington, Ohio. Filed Aug. 9, 1922. Serial No. 580,799. 4 Claims. (Cl. 74—79.)

4. A steering mechanism comprising a rack having a U-shaped recess, an arm having laterally projecting lugs arranged in said recess and adapted to engage the walls thereof, and a worm connected to said rack.

1,542,437. MOISTURE TRAP. ROBERT E. DAVENPORT, Fort Worth, Tex. Filed Jan. 28, 1925. Serial No. 5,393. 3 Claims. (Cl. 183—34.)

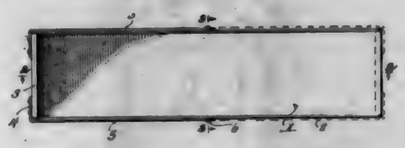


1. In an apparatus of the character described, in combination, a casing divided into a plurality of compartments, tubes leading from one compartment to a compartment there-above and closed baffle tubes positioned above the open ends of the first mentioned tubes adapted to reverse the direction of flow of the gas into the chamber next above the chamber from which it passes.

1,542,438. SOAP. ROBERT E. DIVINE, Chicago, Ill. Filed Nov. 7, 1923. Serial No. 673,369. 3 Claims. (Cl. 87—5.)

1. A soap containing a soap and from one-twentieth to one per cent of an aromatic amine.

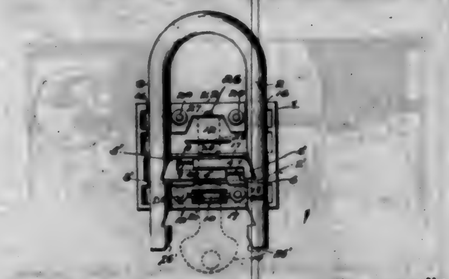
1,542,439. CLOTHES WRINGER. HERMAN W. DOUGHTY, Binghamton, N. Y., assignor to the Nineteen Hundred Washer Company, Binghamton, N. Y., a Corporation of New York. Filed Apr. 10, 1923. Serial No. 631,059. 11 Claims. (Cl. 68—32.)



2. In a clothes wringer provided with a pair of rolls, means for resiliently pressing one of said rolls toward the other, comprising a pair of slidable bearings for said pressed roll, in which the ends thereof are mounted, a pair of levers, one of said levers being associated with each of said bearings so that one arm of the lever contacts with the bearing, and a single, adjustable, spring device connected to the other arms of said levers and adapted to cause said levers to exert an equal force on both of said bearings, the angle between the two arms of each lever being such that the effective leverage thereof decreases as the pressed roll moves away from the other roll, and vice versa.

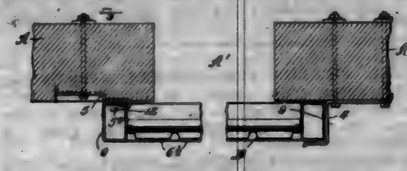
1,542,440. IRON ALLOY. GEORGE A. DARSDALE, Indianapolis, Ind., assignor to George A. Claritton, Chicago, Ill. Filed Nov. 16, 1921. Serial No. 515,571. 3 Claims. (Cl. 75—45.)

1. A homogeneous, dense, tough, malleable iron casting containing about 0.5% sulfur and materially less manganese than sulfur, said alloy containing carbon in excess of 1.5% and total metalloids sufficiently low in amount to produce a white iron casting and having a tensile strength above 50,000 lbs. per square inch.



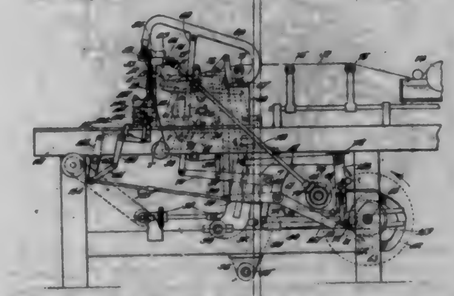
1,542,441. PRINTER'S GALLEY. EDMUND PAUL EHRLINGER, Janesville, Wis. Filed July 26, 1924. Serial No. 728,455. 2 Claims. (Cl. 276—40.)

1. A printer's galley comprising a body having a bottom and upturned sides, an end member, and means secured to said end member and pivotally joined to the central position of said body.



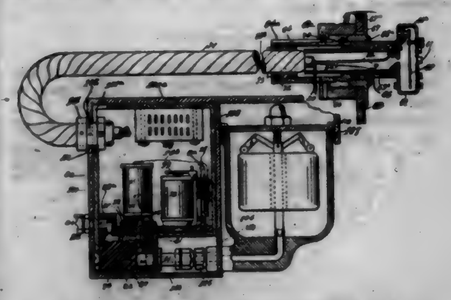
1,542,442. PADLOCK. SAMUEL R. FRAIM, Lancaster, Pa. Filed May 28, 1924. Serial No. 716,401. 2 Claims. (Cl. 70—108.)

1. A padlock comprising a casing provided with channels to receive a shackle, a pair of spring actuated locking bolts, said bolts having angular extensions, bevelled on their upper and flat on their lower sides and adapted normally to protrude into said channels, each of said bolts having a spring plunger mounted in one end and bearing on the angular extension of the



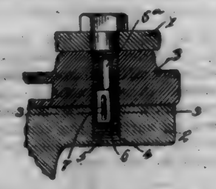
other bolt, one of said extensions extending upwardly and the other downwardly, said bolts being adapted to slide upon each other and engage said shackle in locked relation.

1,542,443. DOOR. MILLARD GILMORE, Oak Park, Ill. Filed Dec. 31, 1921. Serial No. 526,106. 3 Claims. (Cl. 189—46.)



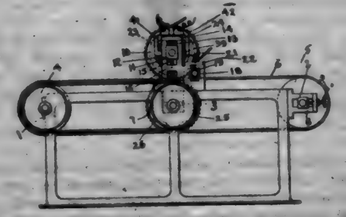
1. A door comprising corrugated plates extending cross-wise with respect to each other, and a marginal binding-member comprising an integral hollow sheet-metal body of substantially rectangular cross-section which is flangeless at its outer sides and which has projecting flanges at its inner periphery, said binding-member being mitered and bent to the form of the door and said flanges being interposed between and riveted to said plates.

1,542,444. TAPE-APPLYING MECHANISM FOR BOX-COVERING MACHINES. GEORGE EDWARD GOODING, Boston, Mass., assignor to John T. Robinson Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 1, 1923. Serial No. 665,791. 10 Claims. (Cl. 93—54.)



1. In a box covering machine, the combination with covering applying devices, of means for first placing a piece of tape on the box, said means comprising a shuttle, means on said shuttle for gripping the end of a continuous piece of tape, means for moving said shuttle transversely of the machine, and means adjustable transversely of the machine for severing a predetermined length of said tape.

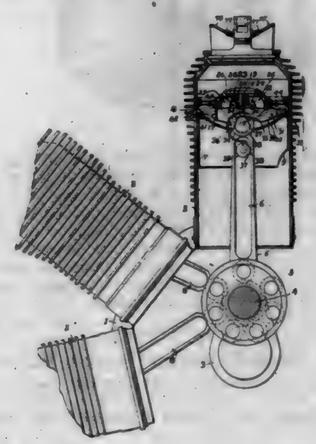
1,542,445. LOCKING-DEVICE CONTROL. EDWIN L. GRAUEL, Cincinnati, Ohio. Filed Nov. 4, 1922. Serial No. 599,068. 40 Claims. (Cl. 70—50.)



1. A lock control device comprising a member having two positions, an open position and one which is secured against tampering as by a lock, lock operating mechanism comprising two movable units, means for energizing one unit by moving the said member to open position and means for energizing the other by moving said member to secured position, both of said units requiring operation to effectuate a complete energization of the lock operating mechanism.

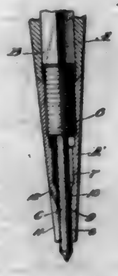
1,542,446. LOCKING DEVICE. EDWIN L. GRAUEL, Cincinnati, Ohio, assignor to The Graulock Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Oct. 11, 1923. Serial No. 668,030. 4 Claims. (Cl. 151—25.)

1. In combination with a part having a threaded hole, a bolt threaded to match said hole, one of said members having a device therein adapted to jam the threaded engagement between the members upon revolution in one direction, and means for rendering said device ineffective upon an inversion of said members.



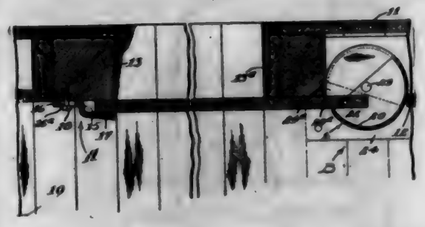
1,542,447. LEATHER-IRONING MACHINE. DANA E. HARDING, Danvers, Mass., assignor to Harding Engineering Company, East Boston, Mass., a Corporation of Massachusetts. Filed Apr. 11, 1922. Serial No. 551,731. 2 Claims. (Cl. 149—19.)

1. A leather ironing machine comprising an endless conveyer, a roll around which the conveyer passes and with which it makes contact, a hollow ironing roll arranged to bear on the work pieces carried by the con-



veyer directly opposite to the first named roll, and means for heating the ironing roll comprising a heating unit and a body of liquid enveloping said unit, in the hollow interior of said roll.

1,542,448. METHOD FOR TREATING ENGINE FUEL. WILLIAM HARPER, Jr., New York, N. Y., assignor to Skywing Aircraft Corporation, New York, N. Y., a Corporation of New York. Filed May 12, 1919. Serial No. 296,358. 9 Claims. (Cl. 123—47.)

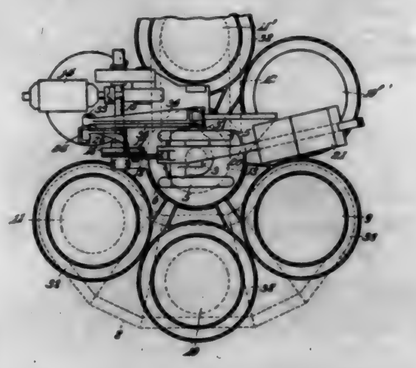


5. The method of separating fuel vapor from spray carrying lubricant material which consists in imparting centrifugal force to the mixture, and baffling the mixture by a movable element in such manner that the fuel is supplied for combustion and the condensed lubricant supplied to a wearing surface, the condensing being on a heated surface whereby volatile constituents are vaporized and mixed with the fuel vapor.

1,542,449. PENCIL. HUGO S. HASSELQUIST, Chicago, Ill., assignor, by mesne assignments, to Autopoint Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed June 4, 1921. Serial No. 474,948. 1 Claim. (Cl. 120—91.)

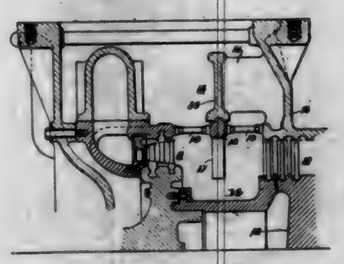
In a pencil, the tip portion having an axial bore, the extremity of the tip portion being slitted to provide resilient sections, the bore at the slitted portion being slightly tapered in the absence of the lead and the slitted portion being adapted to be expanded by the insertion of a lead so that the bore at the slitted portion is substantially cylindrical and bears against the lead throughout substantially the entire area of the slitted portion.

1,542,450. CAR-DOOR HOLDING AND SEALING DEVICE. ARTHUR H. HAUGEN, Tintah, Minn. Filed June 28, 1924. Serial No. 721,620. 2 Claims. (Cl. 20—30.)



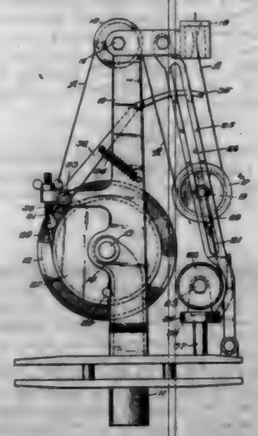
1. The combination with a car having a space between the lining thereof and an adjacent door post, of a door clamp and sealing guard comprising an upright semi-cylindrical shell axially mounted in said space and closely brushing the adjacent terminus of said lining, means for turning the shell, said shell, when turned into one position being adapted to encase the adjacent edge of the door and bear at one edge against the margin of said door for holding the door against said post, and, when turned to retracted position, to free the door, and releasable means for securing said shell against retraction.

1,542,451. PICKLING STEEL SHEETS. JOHN THOMAS HAY, Canton, Ohio, assignor to United Alloy Steel Corporation, New York, N. Y., a Corporation of New York. Filed Jan. 19, 1925. Serial No. 3,308. 10 Claims. (Cl. 148—8.)



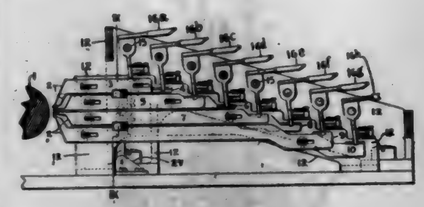
10. The method of pickling chrome steel sheets, which includes pickling the sheets in a solution containing 5% sulphuric and 2% hydrochloric acids, and then subjecting them to the action of 10% hydrochloric acid, then washing the sheets, and then subjecting them to the action of commercial nitric acid.

1,542,452. REVERSING MECHANISM FOR VALVES. OSSIAN HIVELY, Alliance, Ohio. Filed Sept. 10, 1924. Serial No. 736,944. 13 Claims. (Cl. 137—148.)



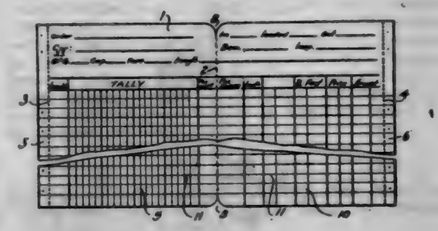
5. In combination with a rotary and vertically movable valve structure, a rotary shaft, means operated by the shaft to move the valve vertically, means to effect rotation of the valve structure including opposed parts, and means carried by the shaft for alternate engagement with said opposed parts to rotate the valve structure in opposite directions.

1,542,453. MARINE TURBINE. FRANCIS HODGKINSON, Swarthmore, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 4, 1921. Serial No. 489,891. 5 Claims. (Cl. 253—70.)



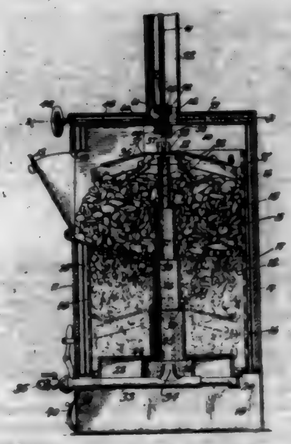
1. In a steam turbine having an ahead section and a reversing section with a common exhaust chamber, a deflector arranged within the chamber and between the sections and provided with blading whereby steam discharged from the ahead section and impinging upon the reversing section has its direction so changed as to assist in rotation of the rotor and which effectively prevents steam discharged from the reversing section from impinging upon the ahead section.

1,542,454. BRAIDING CARRIER. ARTHUR C. HOPKINS, Niles, Mich., assignor to National Standard Company, Niles, Mich., a Corporation of Michigan. Filed May 26, 1923. Serial No. 641,613. 3 Claims. (Cl. 96—13.)



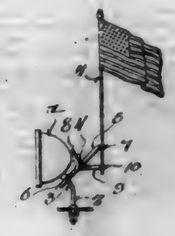
1. In a braider, a carrier for feeding wire and the like comprising a frame, a reel journalled in said frame, a brake operably connected to said reel, a sheave over which a loop of the wire runs, a spiral spring, a cylinder enclosing the same, a flexible member connecting said cylinder and sheave for retracting the latter, said sheave being movable to engage a part of said brake to release the same when the sheave is drawn against the action of its spring, and a spring for normally setting said brake release, said sheave being movable parallel to the wire leaving said sheave.

1,542,455. SHORTHAND MACHINE. EBENEZER HOWARD, Welwyn Garden City, England. Filed Aug. 13, 1923. Serial No. 657,179. 9 Claims. (Cl. 197—9.)



1. In a short-hand machine, the combination of a row of keys, a spindle rigidly fixed to the frame work of the machine on which such keys when depressed turn, a series of short arms and a series of connecting bars, each of said short arms being rigidly attached to one of said keys by a connecting bar, said connecting bars being of different lengths and disposed parallel with said spindle and being so arranged that though two or more of them may function in parts of the same circumferential area, yet any or all of them may be simultaneously set in motion by their appropriate keys and carried the necessary distances without colliding; a row of type bars placed below but occupying less width than the row of keys, each of said typebars having a notch, each of said short arms engaging with its appropriate notch so that on the depression of the keys singly or simultaneously a type bar or type bars will move forward to the platen and impress its or their characters on the paper.

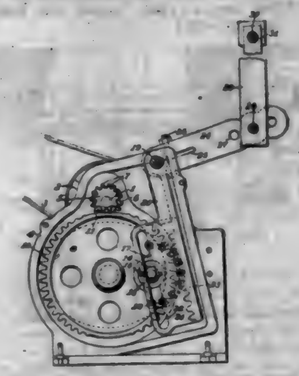
1,542,456. BLANK-FORM BOOK. FRANK L. JOHNS, Tacoma, Wash. Filed Apr. 24, 1923. Serial No. 634,303. 1 Claim. (Cl. 283—63.)



A blank form book comprising a pad of doubled sheets bound together at one edge to form a narrow book wherein each doubled sheet forms two pages with the creased line forming the outer edges of both pages, each page being perforated adjacent its bound inner edge, the upper one such page only being adapted to be used while bound in the book, said page being provided with horisontal lines and with spaces for the record of items taken one by one in promiscuous order, the second page of each such sheet being unusable while in the book but being adapted to be unfolded, only after both pages have been removed from the book, to form a continuous loose-leaf page with the first page, and having horisontal lines continuous with the horisontal lines of the first page and suitable spaces for the summarising of the items on the first page, line by line, and for the extension of such summarised items.

1,542,457. INCINERATOR. EDWARD KENNE, Jr., Buffalo, N. Y. Filed Feb. 13, 1924. Serial No. 692,508. 25 Claims. (Cl. 110—18.)

1. An incinerator comprising a combustion chamber adapted to receive the pile of refuse to be consumed, means for burning the pile of refuse from the top downwardly, and means for removing the ashes from the top of the pile.



1,542,458. FLAG BRACKET. ALFRED W. KLUG, Milwaukee, Wis. Filed Aug. 9, 1924. Serial No. 731,006. 1 Claim. (Cl. 248—37.)

A device of the character described comprising an arm provided with forked members at its lower end for straddling the post of a lamp, a loop at its upper end, a hook projecting upwardly from said arm for engaging the socket of the lamp, a second arm carried by the first arm, and a loop carried by the free end of said second arm and cooperating with the first mentioned loop for holding the staff of a flag or other emblem.

1,542,459. OPERATING MEANS FOR PUMP JACKS. HENRY J. KUHLMAN, Colesburg, Iowa. Filed Nov. 5, 1923. Serial No. 672,881. 5 Claims. (Cl. 74—14.)

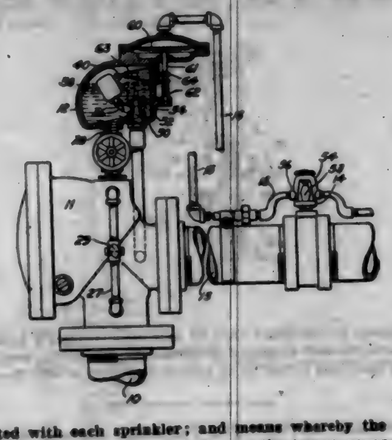
1. In combination, a rotatable body having a crank-pin thereon, a medially pivoted device having on one member a longitudinal rack and a longitudinal slot opposite thereto, and a rack-sector pivotally mounted on

said crank-pin and meshed with said rack, said crank-pin extending loosely into said slot.

1,542,460. METHOD OF MAKING AND USING ARCH-SUPPORTING INSOLES. ALFRED G. LACOE, Brockton, Mass. Filed Sept. 6, 1924. Serial No. 736,302. 6 Claims. (Cl. 36—76.)

2. The herein described method of forming arch supporting insoles which consists in permanently securing a strip of material to the bottom of the insole at points, adjacent the opposite ends of the shank, at a greater distance from one another measured along the insole than along said strip, and permanently securing said strip to said insole at one or more points intermediate said first named points.

1,542,461. LIFTING DEVICE FOR MOVABLE WEIRS AND THE LIKE. GEORG LÖBBE, Georgensgmund, Germany. Filed Apr. 11, 1922. Serial No. 551,746. 4 Claims. (Cl. 61—22.)



1. A lifting gear for weirs and the like, comprising in combination a screw-thread gearing composed of cooperating rotatable and non-rotatable members, means to rotate the rotatable members, a movable closing member, pliable motion-transmitting members connected at one end with the non-rotatable members of said screw-thread gearing, and at the other end with the said closing member, and guiding means for said pliable members.

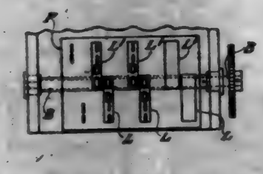
1,542,462. SPRINKLER SYSTEM. ALBERT J. LOMBARDIER, Providence, R. I., assignor to General Fire Extinguisher Company, a Corporation of New York. Filed Oct. 14, 1922. Serial No. 594,473. 31 Claims. (Cl. 169—20.)

1. A fire extinguisher sprinkler system comprising distribution piping having jet discharging sprinklers with

thermally responsive discharge control means, a supply valve adapted to be opened automatically; a target asso-

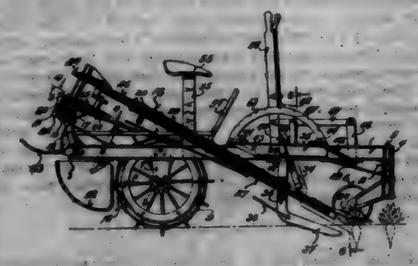
ciated with each sprinkler; and means whereby the impact of a jet from the sprinkler on the target opens the supply valve.

1,542,463. INTERNAL-COMBUSTION ENGINE. WALTER H. LYBERMAN, Los Angeles, Calif., and GUY A. AMIDON, Brighton, Colo. Filed Aug. 2, 1922. Serial No. 579,805. 2 Claims. (Cl. 123—74.)



1. An internal combustion engine comprising a cylinder having a combustion chamber in one end thereof, a reciprocating piston within the cylinder, a second piston forming with the first piston a primary compression chamber, an unobstructed longitudinal elongated by pass in the cylinder at one side thereof, an opening throughout its entire length into the interior of the cylinder, and situated approximately intermediate the ends of the reciprocating piston when the same is on upper dead center, said cylinder having an exhaust port in the wall opposite the by pass, and also having an intake port therein slightly below the exhaust port, said reciprocating piston having a relatively long skirt which extends below the by pass and inlet port when said piston is arranged at upper dead center, said piston skirt having a port in its upper end on the by pass side of the cylinder and also having an inlet port adjacent its lower end and on the exhaust side of the cylinder, said inlet port of the piston being in alignment with the inlet port of the cylinder when the reciprocating piston is arranged at upper dead center, and said port communicating while the reciprocating piston is arranged in proximity to upper dead center position.

1,542,464. WAVE MOTOR. ISAAC M. MCNEIL, Venice, Calif. Filed Mar. 1, 1924. Serial No. 696,859. 8 Claims. (Cl. 74—54.)

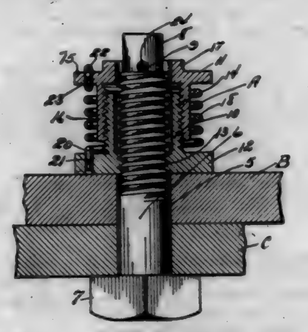


2. In combination, a pivoted arm, a shaft, a ratchet wheel fixed to the shaft, a member mounted for reciprocating movement on the shaft and operatively connected to the arm, and yieldingly supported chains mounted on the members to alternately engage the ratchet wheel when the member is reciprocated to effect undirectional rotation of the wheel.

1,542,465. INDICATOR APPARATUS. CHARLES DALRYMPLE MACGILL, Glasgow, Scotland, assignor to Barr and Stroud, Limited, Glasgow, Scotland. Filed Aug. 16, 1921. Serial No. 492,800. 2 Claims. (Cl. 235—1.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

2. Indicator apparatus comprising a casing, a longitudinal window in the casing, a direct driven member, a gear driven member, a shutter, two groups of transverse apertures in the shutter, carry-over gear for operating the gear driven member and the shutter, two transverse strips of numeral markings on the surface of the gear driven member, each of the markings consisting of numerals arranged consecutively in duplicate pairs, for the purposes set forth.

1,542,466. BEET HARVESTER. WILLIAM MAY, Belgium, Wis. Filed Mar. 1, 1924. Serial No. 696,289. 6 Claims. (Cl. 55—108.)

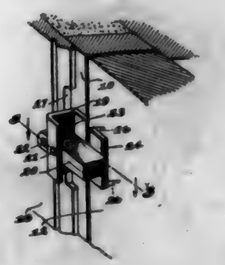


1. A beet harvesting machine comprising a main frame supported by wheels, a cradle having parallel motion with reference to said frame and adapted to be

raised and lowered, beet diggers carried by said cradle, beet elevating mechanism pivoted to the rear portion of said frame and extending downwardly and forwardly to a point adjacent said beet diggers, and means carried by said cradle for adjusting the elevating means relatively to said diggers.

2. A beet harvester comprising side frames supported by wheels, a cradle movable with reference to said side frame, beet diggers carried by said cradle, beet elevating means pivoted rearwardly of said frame, and top cutting means carried by said elevating means, and movable therewith.

5. A beet harvester comprising a main frame, beet diggers supported therefrom, beet elevating mechanism extending upwardly from adjacent said diggers and having a pair of beet top engaging chains having parallel adjacent working stretches, a plurality of wholly independent bars positioned upon the outer side of each of such working stretches and bearing inwardly, a plurality of U-shaped guides for said bars, springs mounted between a portion of said guides and the ends of said bars, said guides having inwardly projecting ledges for supporting the working stretches of said chains.



1,542,467. SELF-TIGHTENING BOLT. MATHEW M. MORATTA, Princeton, Ind. Filed Mar. 10, 1924. Serial No. 698,292. 1 Claim. (Cl. 85—32.)

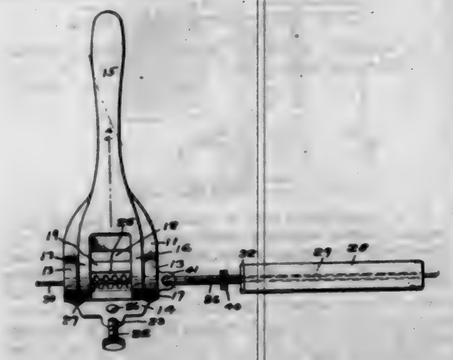
In a self-tightening nut and bolt, the combination with a bolt including a threaded shank having a diametrically extending opening therethrough adjacent to the outer end thereof, a nut including an inner nipple section having a body portion threaded upon the shank of the bolt and a sleeve provided with external threads, an outer nut barrel section including a body portion and an internally threaded barrel portion arranged to engage the threads of the sleeve portion of the inner nipple nut section, a castellated head formed on the body portion of the outer barrel section, a coil spring coiled about the nut sections and between the body portions thereof, means for anchoring the inner end of the spring to the body portion of the inner nipple nut section, the body portion of the outer barrel nut section having an inclined notch therein, a hook formed on the outer end of the spring arranged to detachably engage in said notch, and a cotter pin arranged to extend through the opening in the shank of the bolt to engage with the castellated head of the outer barrel nut section.

1,542,468. DOOR BOLT. WILLIAM A. MUELLER, Washington, D. C. Filed Aug. 22, 1924. Serial No. 733,606. 5 Claims. (Cl. 292—67.)

1. A locking device in combination with a door frame and door, comprising a U-shaped portion, a plate attached to the outer end of one leg of said U-shaped portion, and extending at right angles therefrom, said plate

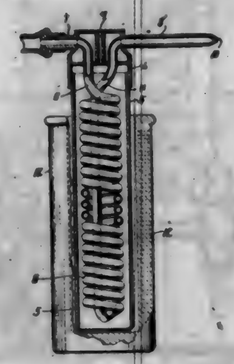
secured to the inner face of said door frame, a bolt received in said U-shaped portion, and means for supporting said bolt either in or out of the path of said door.

1,542,469. AUTOMOBILE FENDER. BERNARD NELSON, Chicago, Ill. Filed Dec. 3, 1924. Serial No. 753,635. 8 Claims. (Cl. 280—153.)



1. An automobile fender comprising a plurality of assembled successive sections, each section having its lateral edges reinforced by open-ended members at which successive sections are separably joined together.

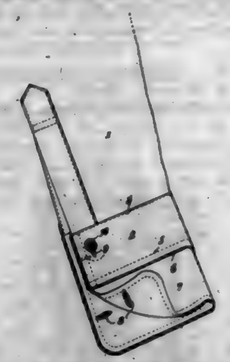
1,542,470. COMBINATION FRUIT TOOL. CARL C. NORDQUIST, Menominee, Mich. Filed Nov. 15, 1924. Serial No. 750,099. 7 Claims. (Cl. 146—3.)



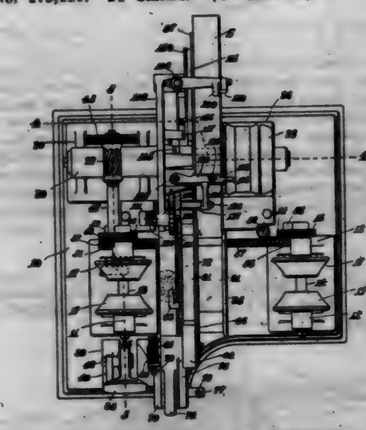
1. A fruit tool comprising a body portion, a handle secured thereto, a plurality of levers pivotally carried by said body portion and having gripping jaws, springs urging said jaws towards each other, and means for opening said jaws.

1,542,471. SAW SET. EDWARD NUSSELE, Denver, Colo., assignor of one-half to Augustus F. Klasing, Denver, Colo. Filed Aug. 7, 1924. Serial No. 730,682. 8 Claims. (Cl. 76—61.)

1. A saw-set comprising a pair of handles which are directly pivotally connected and carry laterally extending jaws having recesses, plates reversibly mounted within the recesses and having setting teeth at their opposite ends, and means to prevent the saw-set from slipping upon the saw.



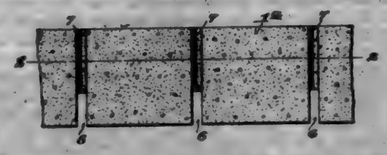
1,542,472. WARM-AIR SYRINGE. THOMAS F. O'NEILL, New Haven, Conn., and RAYMOND J. MILLER, New York, N. Y. Filed Nov. 25, 1924. Serial No. 752,103. 2 Claims. (Cl. 128—257.)



1. A warm-air syringe, comprising a tubular casing adapted to be entered into an electric heater, said casing provided with a removable head, said head provided with inlet- and outlet-nipples, a coil within said casing, one end of the coil connected with the inlet-nipple, and the other end of the coil connected with the outlet-nipple.

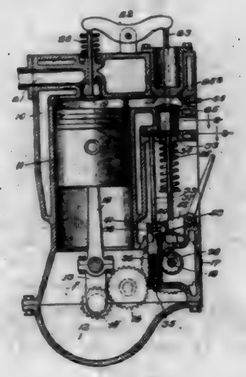
1,542,473. COMBINATION CUFF. RUDOLF B. PIHLSON, Quincy, Ill. Filed Jan. 23, 1924. Serial No. 687,977. 2 Claims. (Cl. 2—123.)

1. In a combination shirt cuff, a straight cuff section, and a cuff extension foldable upon a line inwardly of and close to the outer edge of the straight cuff for giving either a straight or French cuff effect and the connection between the straight cuff and extension being spaced inwardly of and close to the outer edge of the straight cuff and at the inner side of the straight cuff.



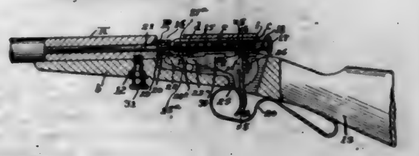
1,542,474. WRAPPING MACHINE. GEORGE W. PROUTY, Milton, Mass. Filed June 21, 1921. Serial No. 479,410. 14 Claims. (Cl. 242—6.)

1. In a wrapping machine, in combination, mechanism for feeding a strip of wrapping material to the work and wrapping the same thereabout, means for relatively traversing the work and wrapping mechanism as the wrapping progresses, and means controlled by the wrapping operation of said wrapping mechanism for cutting said strip.



1,542,475. SHINGLE AND METHOD OF MAKING. ROYCE A. RUSSE, Washington, D. C., assignor to The Ruberoid Co., a Corporation of New Jersey. Filed Dec. 14, 1922. Serial No. 606,860. 5 Claims. (Cl. 108—8.)

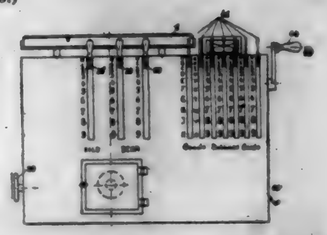
5. In a folding strip shingle, a flexible base having spaced cuts formed in one side edge and with the inner ends of the cuts spaced from the opposite side edge, a



coating of crushed mineral matter affixed to the base, and indentations formed in the mineral matter in the parts thereof alined with the cuts to provide hinging means.

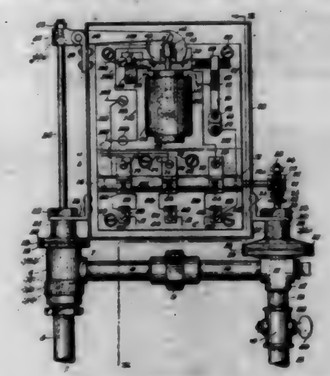
1,542,476. INTERNAL-COMBUSTION ENGINE. CHARLES E. SARGENT, Clinton, Iowa. Filed Nov. 15, 1922. Serial No. 601,080. 1 Claim. (Cl. 123—79.)

In an internal combustion engine, a combustion chamber, an inlet passage and an outlet passage leading thereto, inlet and outlet valves controlling said passages, an air passage and a mixture passage leading to said inlet passage, a distributing valve controlling the air and mixture passages, a cam shaft, a pair of spiral gears for driving said rotary valve from said cam shaft, and means for moving one of said gears axially to shift the timing of said rotary valve with respect to the timing of the inlet valve.



1,542,477. FIREARM. ARTHUR J. SAVAGE, San Diego, Calif. Filed Sept. 10, 1919. Serial No. 322,903. 9 Claims. (Cl. 42—16.)

1. In a fire arm, the combination, with a barrel provided with a rearward extension, a breech bolt movably mounted in the barrel extension, a pivoted spring-pressed trigger, and a sear provided with a beveled shoulder and operatively associated with the trigger to be lifted in the path of the exploded shell, and a shoulder on the trigger formed and disposed in position to limit a rearward movement of the breech bolt.

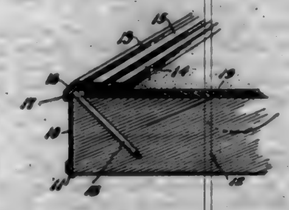


2. In a firm arm, the combination with a barrel; of a reciprocating breech bolt, a trigger, a pivoted sear operated by the trigger, a firing pin mounted to reciprocate in the breech bolt, the sear being disposed in position to engage with the firing pin to hold it in retracted position, and means upon the trigger cooperating with the breech bolt to hold it locked against rotation when the sear is engaged with the firing pin; the breech bolt being released from such locked condition by actuation of the sear due to the movement of the sear by the firing movement of the trigger.

1,542,478. SALES-CONTROL APPARATUS. KORNELIUS SCHIMMEL, Vienna-Atzgersdorf, Austria, and RUDOLF JOKISCH, Prague-Karolinenthal, Czechoslovakia. Filed Aug. 9, 1921. Serial No. 490,844. 12 Claims. (Cl. 265—6.)

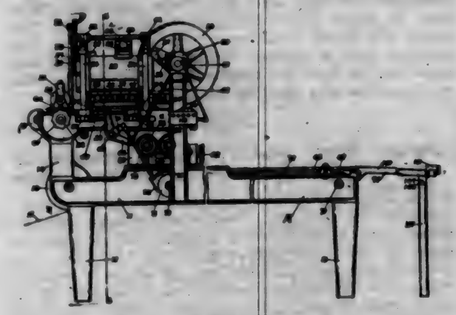
1. In combination with a closed casing having slots and a steelyard weighing mechanism in said casing provided with travelling poises and means for adjusting the same, a weight registering device, a pivoted setting lever extending through one of said slots in the said casing and operatively connected with the said adjusting means and the said weight-registering device so as to operate the same upon each adjustment, indicating devices for indicating and registering respectively the kinds and prices of the goods sold, additional pivoted setting levers on the same shaft with said first mentioned setting lever and also extending through others of said slots in the said casing, and means operatively connecting the said additional setting levers with the said registering devices.

1,542,479. AUTOMATIC CONTROL FOR REFRIGERATING MACHINES. CHARLES SCHWEMLE, Milwaukee, Wis., assignor to Refrigo Corporation, Milwaukee, Wis., a Corporation of Wisconsin. Filed May 29, 1924. Serial No. 716,811. 8 Claims. (Cl. 62—4.)



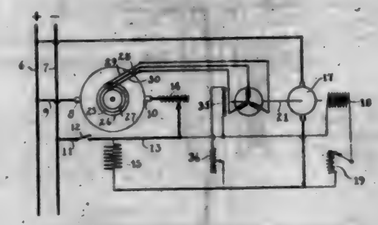
2. In a refrigerating apparatus, the combination with a water circulating system for a compressor and an electric wiring system for a compressor motor, of a valve normally seated by water pressure for controlling the flow of water through the circulating system, a lever operatively connected to said valve, a solenoid coil, a movable core for said solenoid engaging said lever for unseating said valve when the coil is energized, a circuit for the solenoid coil, thermostatic means for closing the circuit to the solenoid coil, a pivoted pawl for engaging said core to hold said valve unseated, means connected to hold said valve unseated, means connected to said pawl for normally retaining it in a position for engaging said core, a magnet for moving the pawl out of engagement with said core for permitting said valve to seat, a circuit for said magnet, thermostatic means for closing the circuit to said magnets, a switch for controlling the flow of current through the electric wiring system, a water pressure operated diaphragm in the circulating system, and means for connecting the switch to said diaphragm whereby the latter will close the said switch when the valve is unseated and will open said switch when the valve is seated.

1,542,480. PIPE THIMBLE. EMMA Y. SCRUGGS, Hahira, Ga. Filed Feb. 16, 1925. Serial No. 9,581. 2 Claims. (Cl. 126—314.)



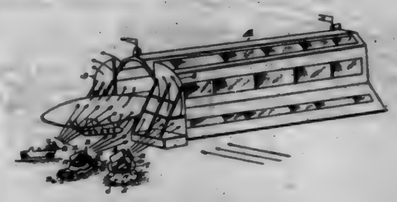
2. A pipe thimble consisting of a rectangular casing open at one end and having apertured sides, and a tapering tubular extension at its opposite end.

1,542,481. EDGE MOLDING. WALTER J. SPIRO, White Plains, N. Y. Filed Apr. 23, 1924. Serial No. 708,447. 10 Claims. (Cl. 20—74.)



1. An edge molding adapted to embrace faces at an angle to eath other and provided upon its inner face at its vertex with means for retaining a concealed fastening device thereon.

1,542,482. BOTTLE-CAP PRINTING AND MAKING MACHINE. JOHN STASZAK and FRANK SZTUKOWSKI, Cudahy, Wis. Filed Dec. 29, 1923. Serial No. 683,425. 10 Claims. (Cl. 91—13.)

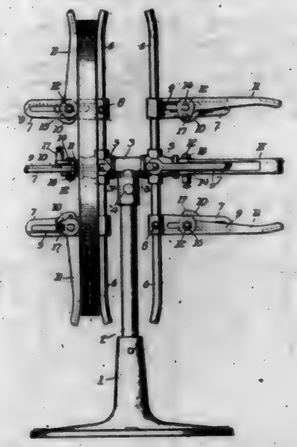


1. A machine of the character described, comprising a stand, a deck supported above the stand at one end thereof and having a printing bed, guides rising from the deck, a cross-head movably mounted between the guides, electrotype holders on the cross-head, detachable electrotypes on the holders, an ink spreading plate above the bed and through which move the electrotypes, inking mechanism movable over the plate, means for feeding cardboard over the bed, guides on the stand and deck for the cardboard, means for cutting the cardboard into disk forms at the printed areas thereof, means for actuating the cross-head, and mechanism for coating the disks with a waterproofing substance.

1,542,483. MOTOR-CONTROL SYSTEM. LEIGH J. STEPHENSON, Oakmont, Pa., assignor to B. V. Becker, Leigh J. Stephenson, George B. Burrage, William T. Fenton, and Lynn A. Williams, trustees, all of Chicago, Ill. Filed Feb. 20, 1920, Serial No. 360,132. Renewed Oct. 4, 1924. 6 Claims. (Cl. 171—225.)

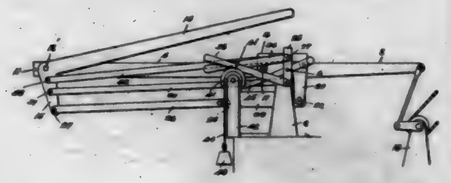
6. The combination with a motor having an alternating current end and a direct current end and a field winding for the direct current end of said motor, of a second motor of smaller capacity than said first named motor connected in series with said field winding, the said second motor being a direct current motor and means for causing said second motor to operate at a speed substantially constantly proportional to the speed of said first named motor, comprising an alternating current generator driven by said second motor and supplying current to the alternating current end of said first named motor.

1,542,484. AIRCRAFT-HOUSING DEVICE. A. LEO STEVENS, Belleville, Ill. Filed Jan. 25, 1924. Serial No. 688,461. 8 Claims. (Cl. 244—2.)



1. Means for assisting in the housing of aircraft under adverse wind conditions, said means comprising means for inducing a flow of air upwind of said adverse wind flow, and means for adjusting said second named means around a vertical axis.

1,542,485. SUPPLY REEL FOR FEEDING COILED WIRE AND LIKE FLEXIBLE STRIP MATERIAL. WALTER N. STEVENSON, Evanston, Ill., assignor of one-half to Edwin V. Swangren, Maywood, Ill. Filed June 10, 1922. Serial No. 568,308. 8 Claims. (Cl. 242—14.)



1. A supply reel for supporting and feeding out coils of flexible material including a plurality of rotatably

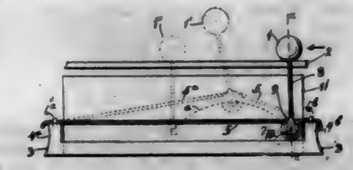
mounted reel arms, coil-supporting cross arms mounted on said reel arms and perpendicular thereto, blocks lon-

gitudinally adjustable on said cross arms and arranged to be secured thereto, and keeper arms pivotally mounted on said blocks.

1,542,486. MECHANICAL MOVEMENT. WILLIAM E. WHITE, Clifton Forge, Va. Filed Sept. 3, 1924. Serial No. 735,639. 3 Claims. (Cl. 74—54.)

1. In a device of the class described, an auxiliary lever fulcrumed intermediate its ends, a main lever fulcrumed at one end between the fulcrum of the auxiliary lever and one end of the auxiliary lever, a pivotal connection between the intermediate portion of the main lever and said end of the auxiliary lever, means for applying power to the other end of the main lever, a bell crank lever fulcrumed on the other end of the auxiliary lever and including a weight arm overhanging the auxiliary lever, the bell crank lever comprising a short arm, a ratchet wheel supported for rotation, a pawl coacting with the ratchet wheel, a swinging arm whereunto the pawl is connected, means for connecting the swinging arm to the short arm of the bell crank lever, and means for swinging the bell crank lever from the main and auxiliary levers.

1,542,487. TENSION DEVICE. JOHN D. BEATTY, Ivanhoe, N. C. Filed Oct. 5, 1923. Serial No. 666,769. 5 Claims. (Cl. 267—73.)



1. A device of the class described, comprising relatively movable members, each of which has a pulley journaled therein, and a resilient loop engaged with the pulleys, each of said members comprising separable parts permitting the loop to be removed and renewed.

1,542,488. PROCESS FOR THE MANUFACTURE OF SULPHURIC ACID BY THE CONTACT PROCESS. OSBORNE BENJAMIN, Woburn, Mass., assignor to Merrimac Chemical Company, Woburn, Mass., a Corporation of Massachusetts. Filed Sept. 24, 1923. Serial No. 664,557. 6 Claims. (Cl. 23—176.)

1. In processes for the manufacture of sulphuric acid by the contact process, the step which consists in passing steam from a source of supply into heat transfer relation to relatively hotter sulphurous gases and returning the resulting superheated steam to said source of supply.

1,542,489. GOLF-PRACTICING APPARATUS. HENRY R. CREVER, St. Augustine, Fla. Filed Feb. 20, 1922. Serial No. 537,911. 4 Claims. (Cl. 273—35.)

1. In apparatus described fixed points horizontally distanced from each other, a curvable guide, adapted to vary its length under varying stresses, extending from one of said points to the other, and a projectile in combination with a member adapted to slide along said guide and to vary the length and outline of the same in the course of a flight of the projectile.

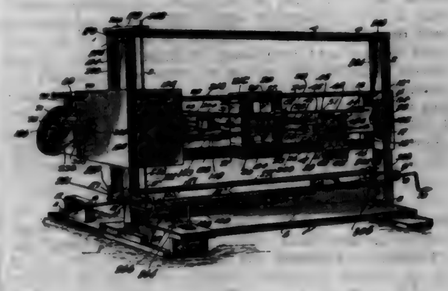
1,542,490. LINK. HORACE O. CLARK, Waukegan, Ill. Filed July 19, 1923. Serial No. 652,612. 1 Claim. (Cl. 59—91.)

A link of the class described comprising a body having overhanging arms of like outline, there being an inwardly projecting rib along the inner edge of the body, the rib having a straight and continuous longitudinal edge, the ends of the arms overhanging said longitudinal edge of the rib and being spaced apart to define an entering throat extended unbrokenly between the arms, there being openings located partly in the body and partly in the arms, the openings forming lugs at the ends of the arms, the lugs projecting inwardly toward said longitudinal edge of the rib, the openings forming notches in the inner edges of the arms, the arms being wider at the lugs than at the notches, the link being widest across the rib, and the arms tapering to the lugs, thereby to render the arms bendable at the notches to decrease the space between the lugs and said longitudinal edge of the rib, and the rib being of such length and shape as to reinforce the body against bending when the arms are bent as aforesaid.

1,542,491. LIQUID-FUEL BURNER. WILHELM CLASEN, Berlin, Germany, assignor to Richard Kahn Aktiengesellschaft, Berlin, Germany, a Corporation of Germany. Filed Sept. 24, 1923. Serial No. 664,572. 5 Claims. (Cl. 158—108.)

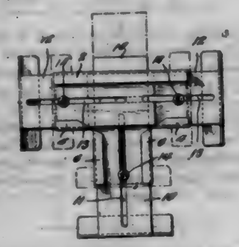
1. A burner, comprising in combination, a fuel pipe nipple, a cup-shaped part surrounding the nipple, an injector tube projecting into said cup-shaped part, a second cup-shaped part closed at its upper side and arranged above the first cup-shaped part and said injector tube respectively, the second cup-shaped part being arranged to form a mixing chamber into which the injector tube directly discharges and provided with lateral burner openings in the side wall, and air ducts between said cup-shaped parts, leading the outer air to the intake end of the injector tube.

1,542,492. INTERLOCKING MEANS FOR USE IN THE CONSTRUCTION OF CONCRETE REENFORCEMENT FRAMES AND OTHER ANALOGOUS PURPOSES. GEORGE EDWARD CLUETT, Epsom, Auckland, New Zealand. Filed Feb. 27, 1924. Serial No. 695,493. 1 Claim. (Cl. 287—50.)



An interlock for fastening together the members of concrete reenforcements and analogous constructions, comprising a clip consisting of an elongated, open, spring metal link bent into double loop form with its loops arranged at angles to each other and adapted to straddle the respective members to be fastened; and a key laid across within one loop and formed of such cross-sectional shape as to have intersecting major and minor axes of different lengths, whereby said key may be given a quarter-turn about its longitudinal axis so as to bring its major cross-sectional axis into the line of the clip length and thus tighten the loops upon said members; said link having its ends loose and overlapping, so that it will be capable of springing out to permit the turning of the key and then retaining the key in turned position by its resilience.

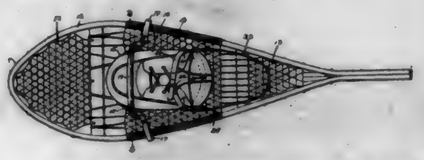
1,542,493. COTTER PIN. JAMES R. COLEMAN, Washington, D. C. Filed July 22, 1924. Serial No. 727,462. 6 Claims. (Cl. 74—8.)



1. A device of the character described comprising a shank, and a split band joined intermediate its ends to one end of said shank, the ends of said band having bifurcations engaging said shank.

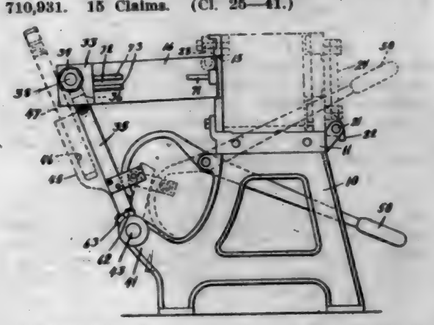
1,542,494. AUTOMATIC POWER-OPERATED PNEUMATIC SURFACER. LEON L. COLLINS, Pleasantville, N. J. Filed Sept. 26, 1922. Serial No. 590,619. 26 Claims. (Cl. 125—8.)

1. In a device of the character stated, supporting carrier bars, a supporting head secured to said bars, a tool carriage pivotally mounted on said supporting head, a plurality of pneumatic hammers mounted in said tool carriage, a plurality of stone working implements mounted therein, and means for manually rotating said implements in unison with respect to said tool carriage.



1,542,495. ADJUSTABLE RACK. WALTER R. EBERT, Milwaukee, Wis., assignor, by direct and mesne assignments, to Adjustable Rack Company, a Corporation of Wisconsin. Filed Nov. 16, 1923. Serial No. 675,190. 1 Claim. (Cl. 45—1.)

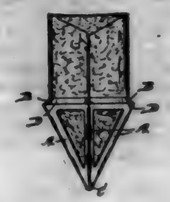
An adjustable rack comprising a base having arms and a leg, the arms being provided with opposite horizontal guide flanges, and the leg being provided with opposite vertical guide flanges, all of the flanges lying on the same side of said base; a sheet supporting arm slidably mounted between the vertical flanges of the leg of the



base, said sheet supporting arm carrying means for holding an article and means for locking the arm in adjusted vertical position; and laterally extending sheet retaining arms slidably mounted in the horizontal flanges, said sheet retaining arms carrying means for retaining said article and means for locking said arms in adjusted horizontal position.

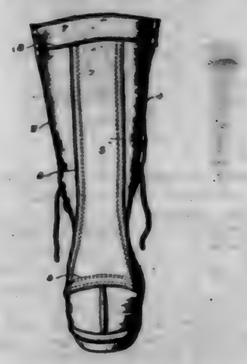
1,542,496. SNOWSHOE. JOSEPH F. FOSTER, Jackman, Me. Filed Nov. 12, 1923. Serial No. 674,217. 2 Claims. (Cl. 208—184.)

1. A snow shoe having a heelless foot pocket bearing on a portion of the open mesh tread or filling of the shoe, said pocket being formed to receive the fore part of a foot and provided with strap guides at opposite sides of its toe portion, and a confining strap extending across the toe portion of the pocket and slidable lengthwise in said guides, said strap having free end portions each threaded through a plurality of meshes of the said tread portion and frictionally engaged with the thongs thereof to adjustably anchor the strap ends, so that the midlength portion of the strap constitutes an arched loop of variable length which cooperates with said guides in confining the pocket against objectionable endwise and sidewise displacement, and in permitting the rear portion of the pocket to rise variably from the tread portion.



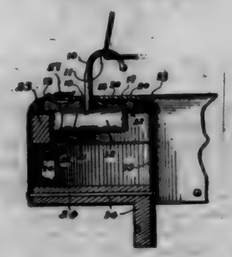
1,542,497. BLOCK-MAKING MACHINE. MAX FREEDMAN, Chelsea, Mass. Filed May 3, 1924. Serial No. 710,931. 15 Claims. (Cl. 25—41.)

1. A block making machine including a mold box having a rigid back-plate formed with a pair of horizontally-aligned core-receiving apertures therein, cores slidable in said apertures, an operating lever having means to support its lower end pivotally and having horizontally-spaced ears at its upper end disposed between the outer ends of said cores, said cores and ears having aligned apertures therethrough, and a bolt loosely passed removably through said aligned apertures, thereby directly connecting said cores and lever.



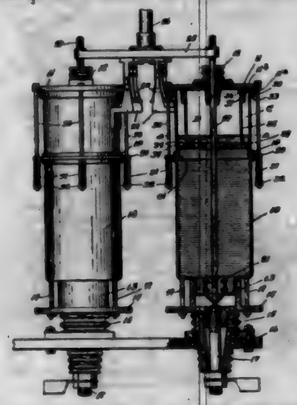
1,542,498. METAL SHOE FOR CONCRETE AND OTHER PILES. LUPTON GARDINER, Mongonui, North Auckland, New Zealand. Filed Mar. 7, 1924. Serial No. 697,554. 1 Claim. (Cl. 61—78.)

A one-piece metal shoe for concrete and other piles, comprising a top frame, a central point, and metal side strips tapering downward from the frame to said point; said frame being shaped to form a continuous rim which projects outward beyond the surface of the pile for which the shoe is made, the upper surface of the rim



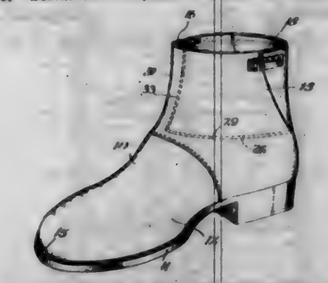
curving inward to the pile surface while the lower side of the rim is made uniformly flat with the taper of the side strips.

1,542,499. BOOT AND SHOE CONSTRUCTION. JOSEPH GARGAN, Peabody, Mass. Filed Apr. 15, 1924. Serial No. 706,763. 2 Claims. (Cl. 36—45.)



1. A shoe structure comprising a vamp, and an upper formed of a plurality of sections, each of substantially equal width, said sections being permanently secured to each other at points removed from the central back portion of the upper.

1,542,500. SELF-LUBRICATING TEXTILE RING. SAMUEL SEAVEY GORDON, Providence, R. I. Filed Mar. 8, 1924. Serial No. 697,843. 3 Claims. (Cl. 118—59.)

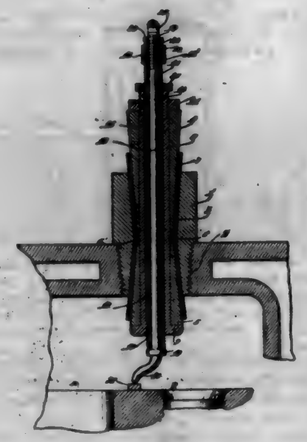


1. In a device of the character described, a traveller, a ring having a guiding surface to engage the traveller, said ring including a reservoir for liquid lubricant, a capillary lubricant duct forming communication between said reservoir and guiding surface and being inclined in the direction of movement of the traveller.

1,542,501. CIRCUIT INTERRUPTER. AUSTIN EDWIN GREENE, Medford Hillside, Mass., assignor, by mesne assignments, to Condit Electrical Manufacturing Company, a Corporation of Massachusetts. Filed July 10, 1922. Serial No. 573,803. 27 Claims. (Cl. 200—150.)

1. An oil receptacle for an electric switch constructed and arranged to provide a lower oil-containing compartment and an upper oil-catching compartment both arranged for intercommunication at the upper portions thereof, said oil-catching compartment having a bottom normally sealed against passage of gas therethrough.

1,542,502. SHOE FOR FOUNDRYMEN AND THE LIKE. RUSSELL H. GUERRANT, Chicago, Ill. Filed Oct. 18, 1920. Serial No. 417,832. 10 Claims. (Cl. 36—50.)



1. A shoe having an upper divided at the rear, and a connecting piece seamed to the inner side of one of the rear edges of said upper and to the outer side of the opposite edge, the adjacent portion of the divided upper being adapted to be overlapped with said connecting piece therebetween and with only a single seam on the inside of the shoe.

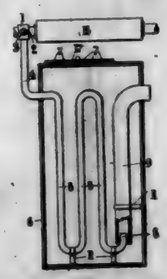
1,542,503. MEAT HOOK. CHRISTIAN HAIBLE, Post Falls, Idaho. Filed Oct. 20, 1924. Serial No. 744,692. 3 Claims. (Cl. 294—26.)

1. The combination with a hook and its shank having a threaded portion and a handle on the shank, of a plate loose on the shank and a finger piece on said plate, and means for rigidly securing said plate in relation to the handle.

1,542,504. SPARK PLUG. WILLIAM A. HEIDE, Detroit, Mich. Filed Jan. 29, 1923. Serial No. 615,727. 3 Claims. (Cl. 123—169.)

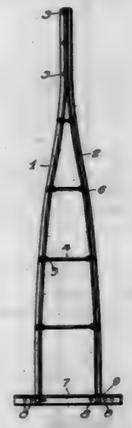
1. A spark plug including a shell, opposed tapered plugs therein, a tubular tie bolt extending through the plugs and constituting means for adjusting the plugs toward each other, a tubular core adjustable longitudinally within the tie bolt and having a longitudinal groove extending to one end thereof, an electrode mounted for rotation within the core, a collar on the electrode bearing against the core, an offset terminal on the electrode, and means engaging the electrode and core for holding the electrode against movement relative to the core.

1,542,505. GOLF TEE. GEORGE R. JACOBUS, Hawthorne, N. J. Filed Aug. 6, 1924. Serial No. 730,362. 4 Claims. (Cl. 273—33.)



1. A golf tee comprising a stem having a conically tapering point, a cylindrical body, an inset conical upper portion, and a head having a concave upper surface suited to receive a golf ball, said head being tight fitted to the upper portion of the stem.

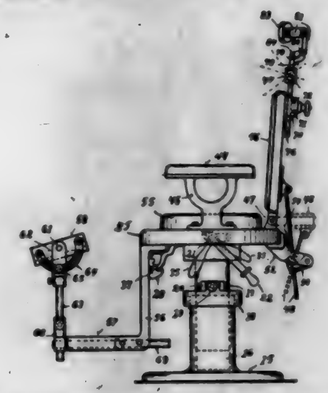
1,542,506. HEATING DEVICE. ADRIAN DENMAN JONES, Chagford, England. Filed June 2, 1924. Serial No. 717,888. 2 Claims. (Cl. 257—136.)



1. A heating device using exhaust gases of internal combustion engines comprising a chamber, a conduit in said chamber and connected to the source of supply of exhaust gases, and a pipe leading from said chamber,

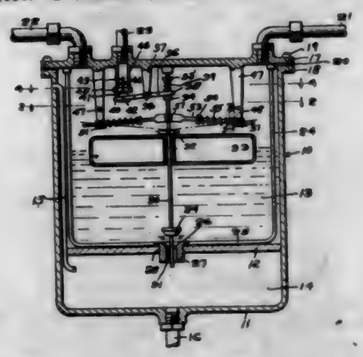
the end of the conduit projecting into the end of said pipe, the chamber having air inlet holes therein, the arrangement being such that the passage of exhaust gases

from the conduit into the pipe create a pressure below atmospheric pressure thus causing air to be drawn through the air inlet holes, and over the conduit.



1,542,507. ADJUSTABLE LINE POLE. MARTIN WILSON KEARNEY, Sheridan, Wyo. Filed Oct. 1, 1923. Serial No. 666,038. 1 Claim. (Cl. 189—24.)

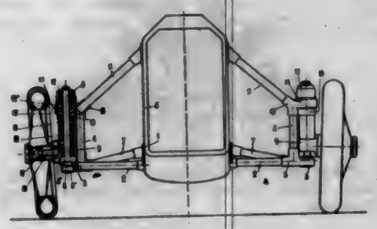
A pole comprising complemental metal bars having the upper portions thereof arranged adjacent each other and joined, the lower portions of said bars diverging, struts having their opposite portions screw-threaded varying in length corresponding to the spacing of the divergent portions of said bars, arranged between the same and engaged in openings formed in the adjacent portions of such bars, locking nuts engaged with said screw-threaded portions of the struts and bearing upon adjacent portions of the opposite sides of the divergent portions of the bars, and a bracing arm having several series of spaced longitudinally disposed openings formed therein adapted to have adjustable connection with the lower extremities of said first bars.



1,542,508. CHAIR. FREDERICK KOENIGKRAMER, Cincinnati, Ohio. Filed Aug. 2, 1922. Serial No. 579,195. 7 Claims. (Cl. 155—26.)

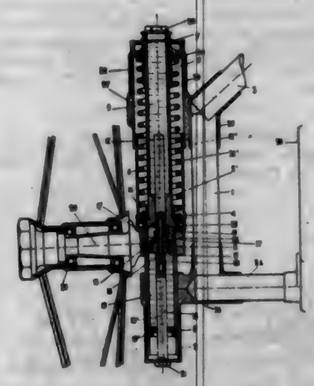
1. A chair comprising a base provided with a cylinder, a vertically adjustable hydraulic plunger mounted in said cylinder and serving as a chair pedestal, an axle journaled to the upper end of said plunger serving as a pump shaft and provided with a hand lever operable to actuate a hydraulic pump within said plunger to raise and lower said plunger, a chair seat member comprising a seat, back, and foot-rest, pivotally mounted upon and above said axle, a vertically disposed toothed segment carried by said seat member, a latch bar carried by said pedestal and yieldingly actuated to normally engage one of the

teeth of said segment, a hand lever adapted to retract said latch bar when it is desired to adjust said seat member upon said axle, and resilient means to limit the movement of said chair seat member relative to said plunger at opposite extremities of its movement.



1,542,509. VACUUM-FEED DEVICE. ALBERT KUENY, Danbury, Iowa. Filed Aug. 6, 1924. Serial No. 730,486. 4 Claims. (Cl. 103—236.)

1. A vacuum feed device comprising, a tank having separate receiving and discharge chambers, an outlet pipe connected with the discharge chamber to lead to the float chamber of a carburetor, a liquid fuel supply pipe leading into the receiving chamber, a suction pipe leading into the receiving chamber and adapted for connection with the suction side of an internal combustion engine, an air inlet leading into the receiving chamber, a valve controlling communication between the receiving chamber and the discharge chamber, a valve to cover and uncover the air inlet, a substantially vertical rod carrying the first named valve and arranged within the receiving chamber, a float mounted upon the substantially vertical rod to move longitudinally thereof and adapted to contact with the valve carried by the rod to shift the rod downwardly, a stop mounted upon the rod and to engage with the float when the same reaches the end of its upward travel whereby the float shifts the rod upwardly, means whereby the second named valve is shifted by the movement of the rod, supports arranged within



the receiving chamber and attached to a part thereof and being free from connection with the float, locking rods pivotally connected at their inner ends with the valve rod and slidably engaging the supports, and yielding means to oppose the swinging movement of the locking rods and serving to hold the same in positions above or below dead center when shifted thereto.

1,542,510. MOTOR CAR. VINCENZO LANCIA, Turin, Italy. Filed Dec. 5, 1922. Serial No. 605,103. 14 Claims. (Cl. 280—106.)

1. In a motor car, a structure for mounting the front wheels of the car, said structure comprising, a cross member having its central portion secured to the vehicle frame, uprights secured to the cross member near its ends, connecting ties between the uprights and the vehicle frame, and means at the ends of said structure for resiliently mounting the front wheels.

1,542,511. SHOCK ABSORBER. VINCENZO LANCIA, Turin, Italy. Filed Dec. 13, 1922. Serial No. 606,723. 8 Claims. (Cl. 280—96.2.)

1. A shock absorber comprising supports, a hollow member mounted to move in said supports and having a bored intermediate partition, said supports and member being attachable to parts whose respective motion is to be damped, resilient means positioned between said supports and member, a stem fastened to one of said supports and snugly slidable through said bored partition and extending into said hollow member, a piston on said stem snugly slidable in the hollow of said member, said member and piston providing two end chambers and an intermediate chamber to be filled with liquid, and means for putting said intermediate chamber into communication with the two end chambers, the last said means providing a throttled flow of liquid when the said supports and member are relatively moved.

1,542,512. ILLUMINATED LEVEL. JAMES ANTHONY LETT, Portsmouth, Ohio. Filed July 17, 1924. Serial No. 726,567. 3 Claims. (Cl. 240—8.4.)

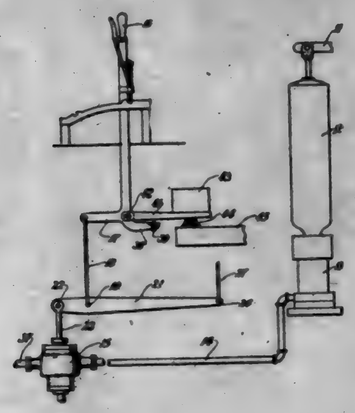
1. In a device of the class described, a level stock having longitudinal and transverse vials, the stock being provided with a straight bore leading to the longitudinal vial from one edge of the stock, and being provided with an angular bore leading from said edge of the stock to the transverse vial, the stock having a chamber disposed between the bores and opening through said edge of the stock, the stock having passages communicating with the chamber and with the bores, lamp carriers in the bores, lamps mounted on the carriers and disposed in operative relation to the vials, a battery in the chamber, a circuit located in the chamber, the passages and the bores and including the battery and the lamps, and a switch in the circuit and operative to light one lamp at a time, the carriers and the lamps being removable independently of the battery.

1,542,513. PRODUCTION OF ESTERS OF FATTY ACIDS. RALPH H. MCKEE, New York, N. Y., assignor to Intarvin Company, New York, N. Y., a Corporation of New York. Filed Mar. 28, 1923. Serial No. 628,371. 3 Claims. (Cl. 167—7.)

1. An artificial food product for use in treating diabetes and acidosis comprising a dihydroxy-alcohol ester of a fatty acid of odd-number carbon atoms of high molecular weight having a melting point below the melting point of the fatty acid.

2. An artificial food product for use in treating diabetes and acidosis comprising a glycol ester of a fatty acid of odd-number carbon atoms of high molecular weight.

1,542,514. GOLF TEE. WILLIAM F. MAHONY, Washington, D. C. Filed Feb. 11, 1924. Serial No. 692,072. 6 Claims. (Cl. 273—33.)



2. A golf tee having a mat portion and a plurality of rows of tees of different heights extending across the mat.

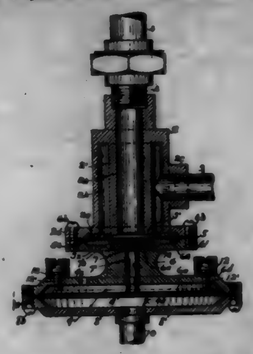
1,542,515. BRAKE CONTROL. EZRA B. MEAD, Ottumwa, Iowa, assignor to Ottumwa Iron Works, Ottumwa, Iowa, a Corporation of Iowa. Filed July 14, 1924. Serial No. 725,812. 7 Claims. (Cl. 303—49.)

1. A brake control, comprising in combination a brake applying power source, a brake releasing power source, a manipulative device, a connection between said manipula-

tive device and said brake releasing power source, said connection being actuated by said device, and means independent of said connection and brake releasing power

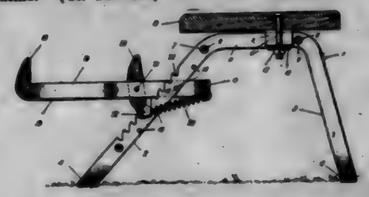
source for maintaining a recognizable relation between the force exerted upon said device by an operator and the extent of braking action.

1,542,516. BASEBALL GLOVE. HARRY A. MYERS, Philadelphia, Pa., assignor to George A. Reach, Philadelphia, Pa. Filed May 9, 1924. Serial No. 712,008. 2 Claims. (Cl. 2—19.)



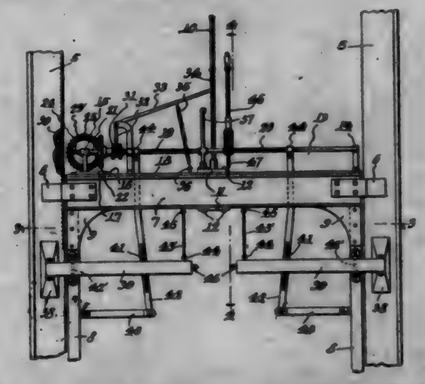
2. A base ball glove of the fingered type having seamed finger crotches, said glove having a palm portion provided with integral tabs which bridge said crotch seams on the inner faces, and means securing said tabs to the inner faces of the crotches.

1,542,517. DIAPHRAGM VALVE. HOWARD W. PARTLOW, Utica, N. Y. Filed Jan. 25, 1924. Serial No. 688,556. 3 Claims. (Cl. 137—153.)



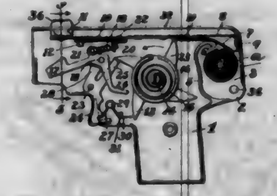
1. A diaphragm valve comprising a chamber, a diaphragm therein, a disk concentrically secured to the diaphragm, said chamber having an upstanding part formed with a bore, a valve-actuating stem slidably guided by and in the bore of said upstanding part, the lower end of the stem being freely supported on the disk,

a circular series of adjustable stops carried by the chamber to engage the marginal portion of the disk, said stops being adjustable exteriorly of the chamber, and



valve means carried on the upper end of the stem and normally resting on the upper end portion of the upstanding part.

1,542,518. MILKING STOOL. JOHN PETERS, Mingo, Kans. Filed Dec. 20, 1924. Serial No. 757,219. 2 Claims. (Cl. 31—57.)

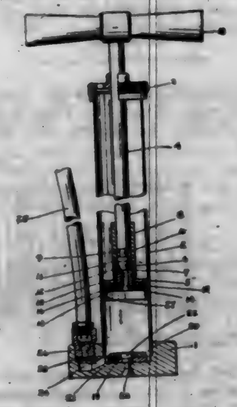


2. In a milking stool, the combination of a supporting structure; a pail-holding bracket pivoted on said structure and provided with means adapted to clamp pails of varying diameter on said bracket; and means adapted to automatically adjust said bracket relative to said structure, and said clamping means relative to a pail on said bracket.

1,542,519. FRICTION SAFETY STOP. ORAL F. RAINBOLT, Lyons, Ind. Filed July 28, 1924. Serial No. 728,722. 5 Claims. (Cl. 187—78.)

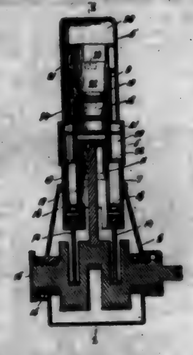
5. An automatically operated stop device for an elevator operating between guides, and having an elevating cable, a shaft mounted on the elevator, said shaft having threaded portions, a shaft operating member, member slidable on the shaft and adapted to be moved into engagement with one of the guides for imparting rotary movement to the shaft, means having connection with the cable for moving the shaft operating member to its active positions, arms carrying gripping members pivotally supported by the elevator, and arms having threaded portions moving over the threaded portions of the shaft for moving the first mentioned arms to cause the gripping members to grip the guides.

1,542,520. TOY PISTOL. ROBERT EDWIN REARDON, Elkton, Md., assignor to Victory Sparkler Specialty Company, Elkton, Md., a Corporation of Delaware. Filed Oct. 29, 1924. Serial No. 746,571. 16 Claims. (Cl. 42—57.)



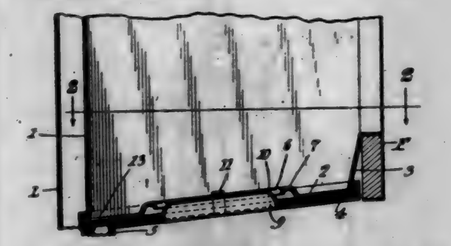
6. In combination in a toy pistol, a star wheel for feeding the cap strip, a spring for operating the star wheel and a trigger acting both as a detent and as a release for the star wheel, substantially as described.

14. In combination in a toy pistol, a main frame, a chamber and guide-way for a cap strip, a closure member consisting of a side wall and a top wall, a pivotal mounting for the side wall and means to interlock with the top wall for holding the closure in place, substantially as described.



16. In a toy pistol using cap strips, a rotary cap advancing member having an operating spring contained therein and concentric therewith.

1,542,521. PUMP. THEODORE H. REYNOLDS, Cincinnati, Ohio. Filed Mar. 24, 1923. Serial No. 627,489. 4 Claims. (Cl. 230—27.)

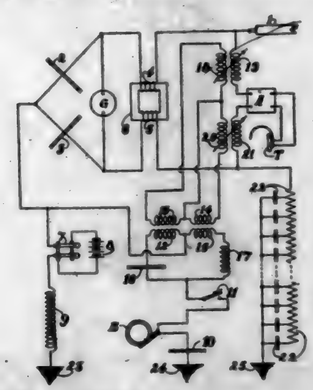


1. In a device of the class described the combination of a barrel, a reciprocating piston in the barrel comprising a flexible washer, and a sliding plate at the base of the barrel for engagement with the inner face of the flexible washer for effecting positive annular seating of the washer upon the barrel.

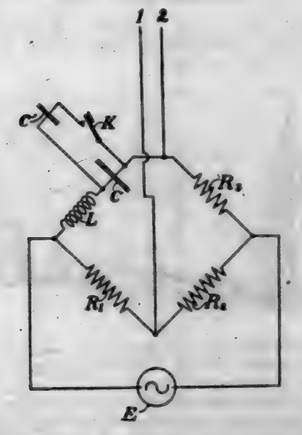
1,542,522. GAS ENGINE. EDWARD F. REYNOLDS, Santa Barbara, Calif. Filed Aug. 18, 1923. Serial No. 657,117. 1 Claim. (Cl. 123—60.)

In an internal combustion engine of the two-cycle type, a cylinder provided with an enlarged base portion and an enlarged head chamber, an air and a fuel chamber surrounding the cylinder having ports communicating therewith, a pair of oppositely disposed pistons reciprocately mounted in the cylinder, one of the pistons having a skirt for receiving the other piston and provided with ports for controlling the entrance of air and fuel into the cylinder through the ports of the air and fuel chambers, a port in the fuel chamber communicating with the enlarged base portion of the cylinder, an enlargement formed on the skirt for acting on the fuel in the fuel chamber, a tube connecting the head chamber with the air chamber, a crank shaft and means connecting the pistons with the crank shaft.

1,542,523. DRIP PAN. RUDOLPH A. RIEK, Rhinelander, Wis. Filed Mar. 27, 1925. Serial No. 18,852. 4 Claims. (Cl. 62—69.)



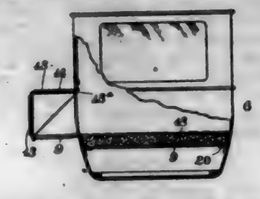
4. In a refrigerator, the combination with an ice tank having an opening in the bottom thereof for the downward flow of air, and a drain opening, of a drip pan extending under and surrounding the bottom of the ice tank but spaced therefrom, an opening in the bottom of the pan for the downward flow of air leaving the tank, a flange surrounding said opening and projecting into the opening in the bottom of the tank, and bendable tongues extending upwardly from the pan and through the bottom of the tank for supporting the pan from the tank.



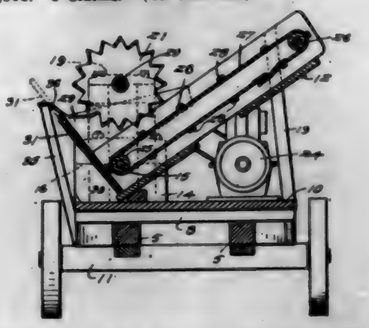
1,542,524. APPARATUS FOR THE ELECTRICAL TRANSMISSION OF INTELLIGENCE. LESTER J. RICE, Washington, D. C. Filed Jan. 26, 1921. Serial No. 440,179. 4 Claims. (Cl. 178—60.)

1. In combination with a duplex alternating and direct current signalling apparatus including a cable and an artificial line, an inductance coil connected to the

cable, an inductance coil connected to the artificial line, a receiving apparatus connected between said cable and line, said inductance coils being electromagnetically coupled to offer a high impedance to the currents of incoming alternating current signals, so that the major portion of such currents pass through the receiving apparatus but said coils neutralizing each other for outgoing alternating current signals to offer a low impedance for such signals.



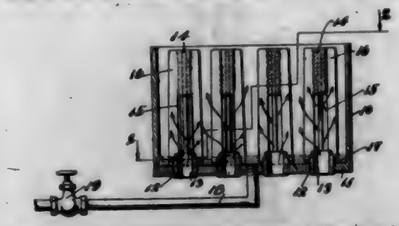
1,542,525. METHOD FOR REDUCTION OF INTERFERENCE FROM HARMONICS. LESTER J. RICH, Washington, D. C. Filed Jan. 26, 1921. Serial No. 440,180. 4 Claims. (Cl. 178—66.)



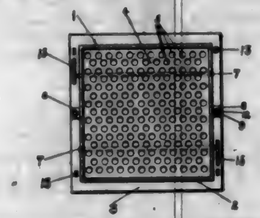
1. In an apparatus used for the production of alternating current signals, a Wheatstone bridge interconnecting the source of alternating current and the like, means operable to balance or unbalance said bridge for the fundamental frequency of the source to transmit signals to the line.

1,542,526. AUTOMOBILE BED. AMOS S. ROBINSON, Columbus, Ohio. Filed July 23, 1924. Serial No. 727,826. 6 Claims. (Cl. 296—69.)

1. A vehicle body having a transverse fixed rear seat and an opening in the side wall of the body portion only opposite an end of said seat, a closure for said opening adapted to be extended beyond the side of the vehicle body to provide room for a bed portion cooperating with and as an addition to said seat to form a bed extending transversely of the vehicle.

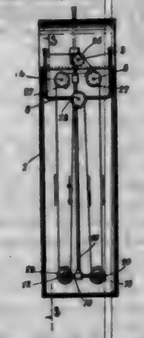


1,542,527. CUTTING MACHINE. MILLARD F. ROSS, Hutchinson, Kans. Filed Mar. 28, 1923. Serial No. 628,301. 4 Claims. (Cl. 146—81.)



1. A device of the character described comprising a portable base, an inclined hopper arranged thereon, a gate valve at the lower end thereof and perpendicular to the plane of the floor of the hopper, an endless belt in the hopper, a saw above the hopper at its lower end to sever the material as it is manually fed to the saw, side walls secured to the lower end of the hopper and together with the gate valve constituting a chamber to receive the cut material and hold the same until the valve is raised to permit the discharge of the material from the hopper.

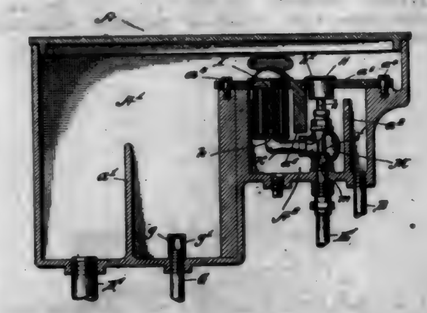
1,542,528. LIQUID-FUEL BURNER. WILLIAM PAUL RUDKIN, Oklahoma City, Okla. Filed Sept. 23, 1924. Serial No. 739,320. 10 Claims. (Cl. 158—92.)



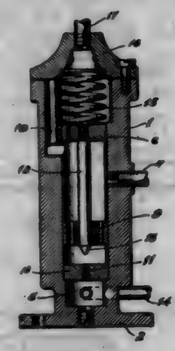
5. A liquid fuel burner comprising a fire box having an apertured base, a heat conductor disposed therein with a tubular portion located in said aperture and extending upward from from said base and radiating conducting blades extending from said tubular portion to the upper part of the conductor, said conductor being provided with air discharge openings disposed intermediate of said blades and above said tubular portion.

1,542,529. AIR FILTER. KARL G. RUNBACK, New York, N. Y.; Hilma Sofia Runbäck, executrix of the said Karl G. Runbäck, deceased, assignor to Midwest Air Filters, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 17, 1924. Serial No. 699,870. 3 Claims. (Cl. 183—48.)

1. A filter comprising a frame; a perforated plate in said frame; a screen in said frame adjacent said plate and consisting of two sets of members, the members of one set being directly connected to and spaced closer together than the members of the other set; and a pair of spring rods secured at each end in said frame and adapted to force the screen against said plate and secure them in said frame.



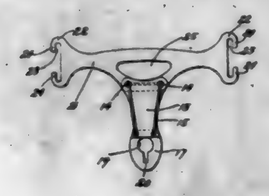
1,542,530. MACHINE FOR TREATING CINEMATOGRAPH FILMS. GEORGES AUGUSTIN SALINS, Vincennes, France, assignor to Pathe Cinema, Anciens Etablissements Pathe Freres, Vincennes, Seine, France. Filed Aug. 20, 1920. Serial No. 404,764. 6 Claims. (Cl. 95—94.)



1. A machine for treating cinematograph films comprising a treating vat, parallel upper shafts arranged in the upper part of said vat, in the longitudinal direction of the same, lower longitudinal shafts arranged in the lower part of the vat film supporting rollers placed end to end upon said shafts and means for feeding the film through the vat and around the rollers.

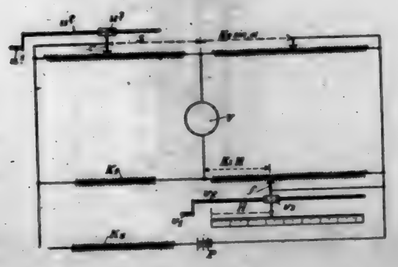
1,542,531. LIQUID-FUEL-FEEDING DEVICE FOR ROTARY OIL BURNERS. JOHN SCHEMINGER, Jr., Providence, R. I., assignor to Aetna Automatic Oil Burner, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 20, 1923. Serial No. 658,444. 7 Claims. (Cl. 158—36.3.)

1. In combination with a liquid fuel supply tank, a pump, and a separating device, a suction pipe connecting said pump with said tank, a return pipe connecting said pump with said separating device, a surplus fuel return pipe connecting said separating device with said tank, and a fuel feed pipe connecting said separating device with a burner or the like; said separating device comprising a receptacle having a main and an auxiliary liquid chamber therein, the latter having a top-plate or cover and provided with a receiving chamber at one side and a separating chamber on the other side thereof, and means in said separating chamber whereby a part of the liquid drawn from said tank is fed to a burner or other device while the larger portion is returned to the tank; said means comprising a lift valve slidably fitted in an opening through the top of the separating chamber and adapted to be opened by fluid pressure, an outlet valve of smaller capacity than said lift valve arranged below said opening and controlling the admission of fuel to said feed pipe, a strainer suspended in said separating chamber, and a pipe leading from said strainer to said feed pipe; said outlet valve being movable with and controlled by said lift valve for opening and closing the outlet through said feed pipe when said lift valve is raised and lowered.



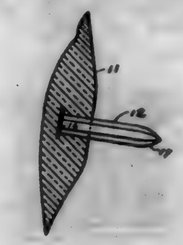
1,542,532. LIQUID-FUEL FEEDING DEVICE. JOHN SCHEMINGER, Jr., Providence, R. I., assignor to Aetna Automatic Oil Burner, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 17, 1924. Serial No. 707,268. 5 Claims. (Cl. 251—144.)

1. A liquid fuel feeding device comprising a casing having a differential bore, reduced in size at the lower end thereof, a piston valve slidably fitted in said bore and carrying a depending valve stem which passes through a partition or guide-plate secured within the casing so as to divide the oil space or chamber below said valve into upper and lower compartments, said guide-plate having a liquid fuel passage therethrough into the lower compartment, a spring interposed between said valve and the top of the casing and tending to normally hold said valve in closed position, a fuel supply pipe leading into said upper compartment, a partition plate within said casing below said guide-plate having an opening or discharge port therethrough on



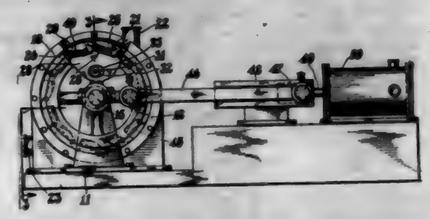
which the free end of said valve stem may be seated to close said port, a fuel feed-pipe connecting said discharge port with a burner or other device for supplying oil thereto, and a discharge pipe at the upper end of the casing through which surplus fuel may be returned to the supply tank.

1,542,533. NECKTIE FRAME. PAUL A. SCHLEMP, New York, N. Y. Filed Apr. 24, 1924. Serial No. 708,641. 2 Claims. (Cl. 24—56.)



1. A necktie frame comprising a stiff and flexible strip, an elongated opening in said strip centrally of its length, open slots formed at the ends of said strip, extensions on said strip adjacent the slots, a plate extending from one longitudinal side of said strip adjacent the elongated opening, hollow rivets securing said plate on the strip, said plate having openings at its lower end, an elastic cord passing thru said hollow rivets and the openings, an oval ear having openings therein, said elastic cord passing thru the lower openings on the plate and the openings in the ear thereat being knotted, said ear having an additional opening and a slot communicating with said opening, said cord permitting the rotation of said ear to a concealed position behind the plate member, the plate and strip providing a frame for the forming of a four-in-hand necktie knot thereon.

1,542,534. APPARATUS FOR ASCERTAINING THE ALTITUDE OF AERIAL TARGETS. EUGENE SCHNEIDER, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint Stock Company of France. Filed Mar. 14, 1923. Serial No. 625,042. 6 Claims. (Cl. 88—2.2.)



1. An apparatus for measuring the altitude of a moving aerial target comprising supporting means, a telemeter mounted on the supporting means and having an adjusting member, a movable indicator carried by the supporting means, means for moving the indicator as a function of the sight angle of the target, means for moving the indicator proportionally to the altitude of the target, and means operatively connected to said adjusting member for returning the indicator to normal position.

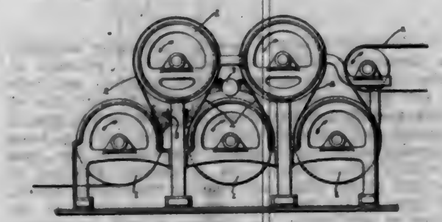
1,542,535. ARTIFICIAL TOOTH. LAKE H. SPRINGLE, Brooklyn, N. Y. Filed May 14, 1924. Serial No. 713,226. 2 Claims. (Cl. 32—9.)

2. In an artificial tooth or facing a hollow pin imbedded in the lingual side thereof, said pin being formed of a blank having thereon multiple pointed leaves to be assembled into the body of the pin, the pointed portions of said leaves forming the apex of the pin.

1,542,536. TURBINE. ANTONI SWAROCKI, Detroit, Mich. Filed May 26, 1924. Serial No. 715,793. 2 Claims. (Cl. 253—136.)

1. A turbine comprising a casing, a rotor therein, a shaft on which said rotor is fixed, a series of pockets formed in the periphery of said rotor, leaves hinged in said pockets for varying the effective depth thereof, a disk mounted on said shaft for rotary adjustment, and cam elements on said disk for bearing on the inner faces of said leaves and adapted to adjust the latter outward to decrease the depth of said pockets.

1,542,537. TAMPING GROUSER FOR TRACTORS. VERNON A. VAN HORN, Big Rapids, Mich. Filed Sept. 5, 1922, Serial No. 586,075. Renewed Nov. 26, 1924. 4 Claims. (Cl. 301—44.)

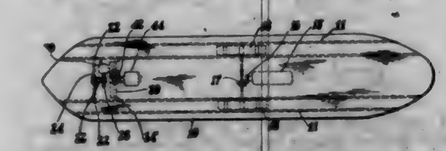


3. In combination with a wheel having a relatively wide rim, of a plurality of grousers detachably connected to the rim in spaced apart relation and across the rim, each of said grousers comprising a bar having integral spaced apart fingers extending therefrom at the opposed sides of the bar, said fingers being recessed on their under sides so as to be spaced at their outer portions from the outer side of the rim.

1,542,538. PROCESS OF PURIFYING ACETONE. HERMAN F. WILKIE, Baltimore, Md., assignor to U. S. Industrial Alcohol Co., Inc., a Corporation of West Virginia. Filed Nov. 4, 1921. Serial No. 512,765. 11 Claims. (Cl. 260—134.)

2. The process of purifying acetone comprising treating it with an acid, distilling and collecting the first and last portions of the distillate containing impurities, and treating the middle portion of the distilled acetone with an oxidizing agent.

1,542,539. ART OF RENDERING PAPER IMPERVIOUS. WILBUR L. WRIGHT, Fulton, N. Y., assignor to Oswego Falls Corporation, Fulton, N. Y., a Corporation of New York. Filed Apr. 10, 1920. Serial No. 372,952. 8 Claims. (Cl. 91—68.)

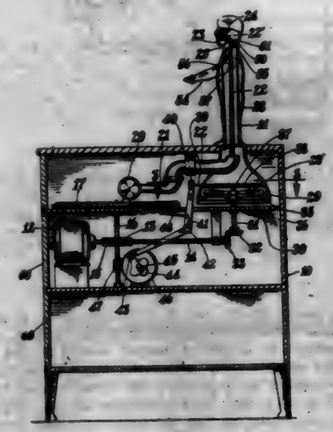


1. Paper material embodying, and rendered grease and water proof by, a casein-chromate composition.

8. In the method of producing impervious paper material, those steps which consist in applying to the paper material a substance or substances that quickly react under the action of violet or ultra-violet rays to render such paper material impervious, and thereafter exposing such material to the direct action of artificially produced violet or ultra-violet rays.

8. In a paper making machine, in combination, paper making machine rolls for advancing the paper material web in process of producing paper therefrom, and means for generating and applying on both sides of said web the shorter wave length light rays to cause reaction of substances carried by said web to render the paper produced from said web impervious.

1,542,540. SHIP PROPULSION AND CONTROL MEANS. LOUIS ZSIKI, Wharton, N. J., assignor of one-third to George Pitiu, Wharton, N. J. Filed Jan. 2, 1925. Serial No. 32. 5 Claims. (Cl. 115—16.)

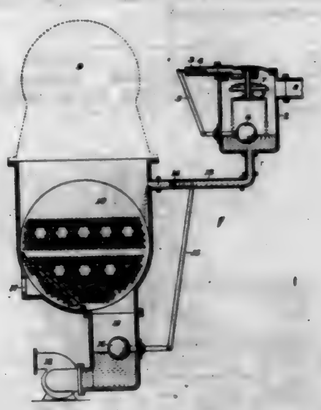


1. In a ship, a pair of water conduits extending longitudinally through the ship, propeller wheels in said conduits, and means for driving said propeller wheels, valves controlling the respective conduits, and means for adjusting said valves in unison either in a common direction or in opposite directions.

1,542,541. MANUFACTURE OF CELLULOSE ETHERS. HENRY DREYFUS, London, England. Filed Mar. 1, 1922. Serial No. 540,809. 44 Claims. (Cl. 260—152.)

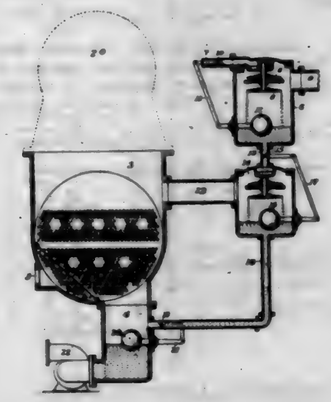
1. Process for the production of a cellulose ether by etherifying treatment of a cellulosic body, characterized in that the total quantity of water employed, disregarding that formed in the reaction itself, is restricted to an amount between nil and about 100 per cent relatively to the weight of the cellulosic body, said restriction of water being effected by the employment of a substance capable of combining with and removing water by chemical reaction with formation of an oxygen containing metallic compound.

1,542,542. TALKING MANIKIN. EDUARDO ECHEVARRIA, Granite City, Ill. Filed Oct. 8, 1924. Serial No. 742,312. 4 Claims. (Cl. 46—40.)



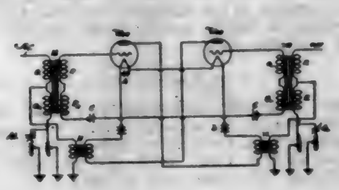
1. In combination, a manikin, a sound reproducing device including a motor, a sound conducting tube leading from the said device to the mouth of the manikin, a fan driven by said motor, an air conduit leading from said fan to the neck of the manikin, a hinged lower jaw on said manikin, a flap fixed to said jaw and normally extending across the said conduit, and a valve operable by said motor for controlling the flow of air through said conduit.

1,542,543. SUBMARINE MINE. GIOVANNI EMANUELE ELIA, Westminster, London, England, assignor to Vickers Limited, Westminster, England, a British Company. Filed Dec. 1, 1924. Serial No. 753,144. 8 Claims. (Cl. 102—8.)



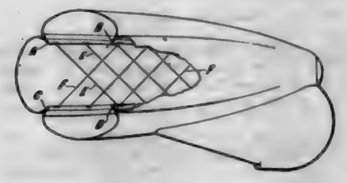
1. A submarine mine comprising, a buoyant casing, a flotation chamber, a line attaching said buoyant casing to said flotation chamber, means for securing said buoyant casing to said flotation chamber until the latter has been anchored, means acting thereafter to release the buoyant casing from said flotation chamber, and means for arresting the ascent of said buoyant casing at a predetermined point.

1,542,544. SEPARATION OF AIR AND DISSOLVED GASES FROM LIQUIDS. WILLIAM S. ELLIOTT, Pittsburgh, Pa. Filed Nov. 26, 1920. Serial No. 426,665. 4 Claims. (Cl. 60—94.)



1. In a power plant, the combination with a prime mover and a condenser serving the prime mover, of a heater arranged to discharge heated water to the condenser under conditions in which the water upon its entrance to a region of vacuum in the condenser is caused to violently boil or flash at the expense of its contained heat, said condenser having an outlet for the removal of air therefrom, substantially as described.

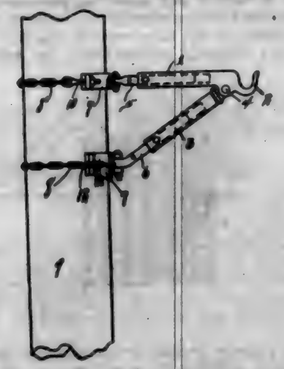
1,542,545. SEPARATION OF AIR AND DISSOLVED GASES FROM LIQUIDS. WILLIAM S. ELLIOTT, Pittsburgh, Pa. Filed Nov. 26, 1920. Serial No. 426,666. 4 Claims. (Cl. 60—94.)



1. In a power plant, the combination with a prime mover and a condenser serving the prime mover, of a heater for the make-up water, an evaporator connected with the condenser and with the heater, and a liquid connection leading from the evaporator to the condenser, said condenser having an outlet for the removal of air therefrom, substantially as described.

1,542,546. DEVICE FOR REPEATING ALTERNATING-CURRENT TELEGRAPH SIGNALS BY MEANS OF VACUUM TUBES. JOHN P. FERRITER, Oceanport, and WRIGHT H. JOHNSON, Red Bank, N. J. Filed Aug. 29, 1923. Serial No. 660,023. 1 Claim. (Cl. 178—70.)

In combination with a vacuum tube duplex amplifier, an alternating current telegraph line, a plurality of pairs of three-electrode vacuum tube detectors, each tube of said pairs having its filament in series with that of another, each pair having an iron core transformer of primary and secondary windings, said primary being connected to said line and to the grid of one tube, said secondary being connected to an artificial line and to the grid of the other tube, another transformer having its primary and secondary windings connected to the plates of said tubes, the primary of said transformer being also connected to another set and to a transformer corresponding to the first mentioned transformer, the latter being also connected to said second set and to the primary of a transformer corresponding to said second mentioned transformer, for the purpose of providing means for impressing a substantially sustained signalling alternating current the half-waves of which have their amplitudes modified according to any predetermined signalling flow.

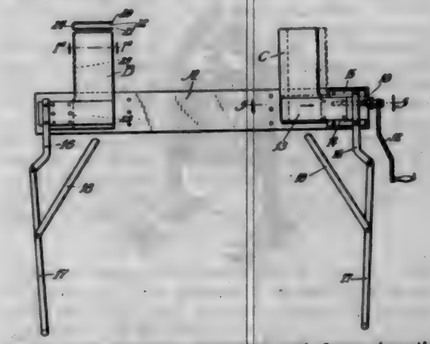


1,542,547. KITE BALLOON. HERBERT GRAY GIBBS, London, England. Filed Dec. 17, 1924. Serial No. 756,379. 3 Claims. (Cl. 244—4.)

1. An elastic kite balloon, in which the gas is maintained at the desired degree of pressure by means of tension members, four rigging bands on the interior of the balloon, two on the starboard side and two on the port side, elastic tension members connecting the upper starboard rigging band to the lower port rigging band, and elastic tension members connecting the upper port rigging band to the lower starboard rigging band.

1,542,548. HOISTING IMPLEMENT. DANIEL E. GORDON, Fort Worth, Tex. Filed Nov. 8, 1923. Serial No. 673,458. 2 Claims. (Cl. 248—30.)

1. A hoisting implement comprising a pair of brackets for engaging a post or upright object, chains caught in the ends of said brackets and means for adjusting the chains on said post for binding said brackets to a post, a telescopic hoisting arm provided with a hook on the outer end thereof and means for pivotally connecting the inner end to one of said brackets for permitting a horizontally swinging motion of the arm, a telescopic

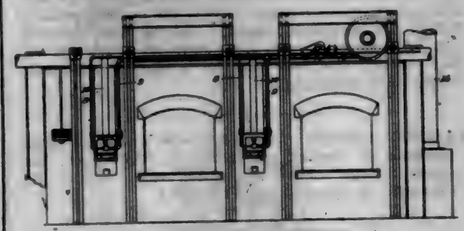


bracing arm pivotally connected to said hoisting arm, and means for pivotally connecting said bracing arm to the other bracket for permitting a horizontal swinging motion of the bracing arm.

1,542,549. PROCESS FOR THE ELECTROLYTIC DEPOSITION OF METALLIC CHROMIUM. RICHARD GRAH, Sheffield, England, assignor to Elecrom Limited, Sheffield, England. Filed Apr. 2, 1924. Serial No. 703,602. 6 Claims. (Cl. 204—1.)

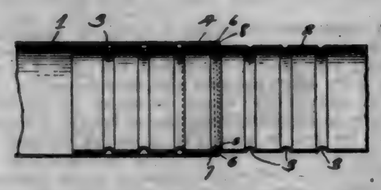
1. A process of electrolytically depositing metallic chromium consisting in providing a bath containing a mixture of chromic oxide and a non-oxidising acid in the proportions by weight of oxide of chromium more than half the weight of the acid, maintaining the relative proportions substantially constant during the operation, adding a suitable conducting acid which produces a non-colloidal solution, and maintaining the temperature constant.

1,542,550. VISOR-COVER STRETCHING AND FRAME-INSERTING MACHINE. WILLIAM C. GRUNOW, Chicago, and OTTO JOHNSON, Brookfield, Ill., assignors to Grigsby-Grunow-Hinds Co., Chicago, Ill., a Corporation of Illinois. Filed July 26, 1922. Serial No. 577,781. 11 Claims. (Cl. 69—1.)



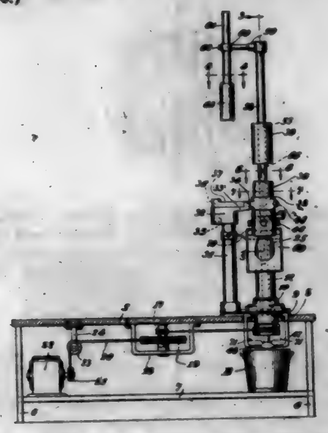
1. In a visor cover stretching and frame inserting machine, a pair of arms for insertion in a bag-like visor cover constructed to engage the inside of the cover substantially throughout the length of the sides to be engaged, and means for forcibly separating the arms after the cover is applied to stretch the cover and hold it thus for insertion of a frame.

1,542,551. AUTOMOBILE TAG. HOWARD E. HAGAN, Omaha, Nebr. Filed Apr. 6, 1925. Serial No. 20,956. 2 Claims. (Cl. 40—2.)



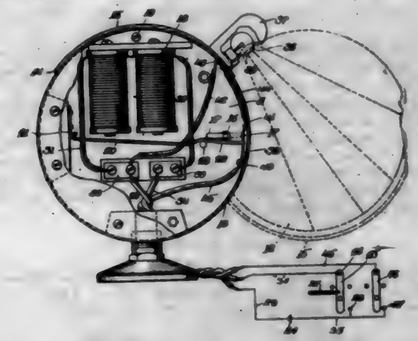
1. A tag of the specified class, flexible, resilient and approximately plane, having its forward end portion divided by slits into three forwardly extending arms, whereof one extends between the other two and has a terminal finger extending backward.

1,542,552. FURNACE. CLARENCE E. HAWES and BOYD M. JOHNSON, Metuchen, N. J., assignors to The Carborundum Company, Niagara Falls, N. Y., a Corporation of Pennsylvania. Filed Feb. 16, 1924. Serial No. 693,282. 4 Claims. (Cl. 263—42.)



1. A furnace, comprising a heating chamber having a combustion chamber associated therewith, a pre-heating chamber, a pair of flues beneath the floor of said pre-heating chamber and each having its top wall formed thereby, said top walls having openings therein establishing communication between said flues and pre-heating chamber, and means for conducting the waste gases from said combustion chamber to one of said flues and for conducting them from the other of said flues out of the furnace, substantially as described.

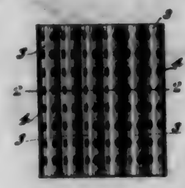
1,542,553. STOVEPIPE CONNECTION. GEORGE HENRY HORNBECK, Cuba City, Wis. Filed Nov. 6, 1924. Serial No. 748,137. 2 Claims. (Cl. 285—186.)



2. A pipe connection comprising an outer pipe section, an inner pipe section extending into the outer pipe section in spaced relation thereto, a split sleeve disposed within the end of the outer section and surrounding the inner section, a bead carried by the outer end of the sleeve and engaging the end of the outer pipe section and disposed in one of a plurality of annular grooves carried by the inner pipe section, and a split reinforcing ring disposed within the bead.

1,542,554. FRUIT-SLICE-CUTTING MACHINE. EUGENE ROBERT JAGENBURG, New York, N. Y. Filed Dec. 10, 1924. Serial No. 754,905. 17 Claims. (Cl. 146—6.)

1. In a machine for cutting an annular fruit slice into a plurality of portions, knives for producing spaced cuts in the fruit slice, extending radially from the inner and outer edges thereof, and additional means for cutting through the fruit slice on a circular line intersecting said radial cuts.



1,542,555. SIGNAL. LABAN E. JONES, Anaconda, Mont., assignor of one-half to Michael L. McDermott, Anaconda, Mont. Filed Sept. 30, 1921. Serial No. 504,333. 4 Claims. (Cl. 177—329.)

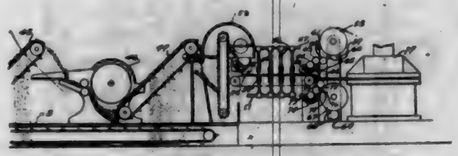
1. A signal device providing a casing, an oscillatable shaft passing through the casing and having a laterally projecting arm therein; a semaphore arm pivoted to the casing by the shaft; means to limit the movement of said arm; an electromagnet within the casing; an armature responsive to the magnet and having its free end adjacent to the arm in a position to contact the arm in either of its positions, whereby to oscillate said shaft in both directions by an impulse imparted by the armature to the arm when the magnet is energized to alternately obscure and exhibit the semaphore.

1,542,556. DUST SEPARATOR. ANDREW JORDAHL, New York, N. Y. Filed Feb. 28, 1923. Serial No. 621,733. 4 Claims. (Cl. 183—75.)

1. A filtering member comprising a plurality of rows of tubes extending in a common direction in contacting relation with each other, each row forming two walls with spaced outwardly extending portions of the tubes extending across the faces of the two walls of the tubes, and each tube having a series of spaced apertures on each side of each of said extending portions of the tube providing fluid passages through the walls of the filtering member formed by the tubes whereby the fluid in passing through the filtering member will be deflected from

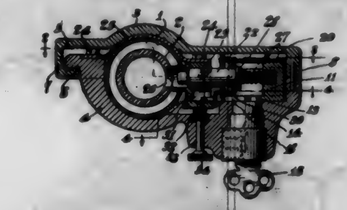
the direct passage normal to the filtering member and fluid currents entering the apertures of the tubes on opposite sides of the extending portions of the tubes will impinge upon each other within the tubes and be deflected and pass through apertures on opposite sides of the extending portions through the other sides of the tubes.

1,542,557. PROCESS FOR MAKING WATERPROOF FELTED COMPOSITIONS. LESTER KIRSCHBRAUN, Chicago, Ill. Filed Sept. 10, 1919. Serial No. 322,831. 7 Claims. (Cl. 92—40.)



1. A process of making felted fibrous compositions consisting in feeding an open mesh fabric backing over a paper forming machine forming thereon fibrous stock in an aqueous vehicle thereby causing the stock to felt and interlock with the fabric backing, and simultaneously with said operation introducing a waterproof pitchy binder.

1,542,558. FRUIT AND LIKE PRESS. ABRAHAM S. KIRSHNER, Philadelphia, Pa. Filed Aug. 16, 1924. Serial No. 732,366. 4 Claims. (Cl. 100—44.)

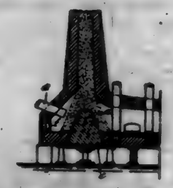


1. A device of the character stated comprising a pair of detachably connected parallel supports of channel iron, which supports are curved inwardly at their upper portions, a removable, relatively short head provided with angular seats to receive the converging ends of said supports, and means for rigidly and removably securing said supports to said seats.

1,542,559. COMPOSITION BOARD AND METHOD FOR MAKING THE SAME. ROGER S. KOFF, Duluth, Minn., assignor to Intercontinental Development Company, a Corporation of Maryland. Filed July 30, 1921. Serial No. 488,604. 13 Claims. (Cl. 154—28.)

1. The method of making a fibre board from wood bark which comprises removing water from the bark, shredding the bark, removing the cork-like impurities from the fibres, arranging them in a layer, applying a binder, and compressing the fibres and binder.

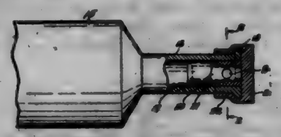
1,542,560. LOCK. WILLIAM F. KRAUTTER, Chicago, Ill., assignor of one-half to William D. Krautter, Chicago, Ill. Original application filed June 2, 1921, Serial No. 474,681. Divided and this application filed Dec. 28, 1922. Serial No. 608,787. 2 Claims. (Cl. 70—46.)



1. In a lock, the combination with the bolt thereof; of a spring for pressing the bolt into locking position; a key actuated bolt withdrawing member serving, in one adjustment, to place the bolt in unlocking position and in an alternative adjustment, adjusting said spring to function; a restraining member for holding the bolt in withdrawn position against the force of said spring when the key actuated member is adjusted to place said spring in bolt locking adjustment; a detent for holding the restraining member in functioning position; and a spring for holding the detent in functioning position, said detent being withdrawable from its functioning position in opposition to said latter spring to permit the first aforesaid spring to place the bolt in locking position, said restraining member being movable, when the detent is withdrawn, by the first aforesaid spring into holding engagement with the detent to prevent the return of the detent to functioning position, said key actuated member having restoring engagement with the restraining member when the key actuated member is adjusted to place the bolt in unlocking position.

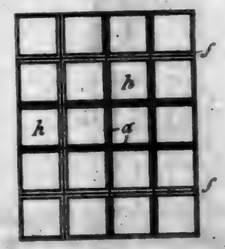
1,542,561. SANITARY COVER FOR PILLOWS. BENJAMIN LASKIN and HERBERT J. BIERMAN, Philadelphia, Pa. Filed Nov. 4, 1924. Serial No. 747,767. 2 Claims. (Cl. 5—354.)

1. An article of the character stated comprising a protective casing or covering of sheet rubber closed upon three sides and having an open end, which end is provided with a hem having a continuous row of spaced openings therethrough, a closure or cap of sheet rubber for said casing having closed sides and top and an open bottom, which latter is provided with a hem, and a plurality of fastening mediums carried by the hem portion of said cap which mediums are in register with said casing openings when the cap is inserted over the casing mouth, whereby said hem parts may be separably attached together by said mediums cooperatively engaging through said openings.



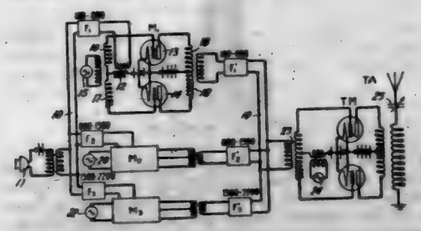
1,542,562. FURNACE FOR MELTING AND TREATING ORES AND METALS GENERALLY. TOUSSAINT LEVOS, Heer, Belgium. Filed Apr. 15, 1924. Serial No. 706,649. 4 Claims. (Cl. 204—64.)

4. In an electrically heated melting furnace, the combination of a refractory cone having a rounded top, located at the central portion of the hearth of the melting furnace, whereby the ore in course of being melted is distributed uniformly around said cone, pairs of electrodes for heating said melting furnace by electric arcs and electric resistances, and poles for the return of the electric current located respectively facing said pairs of electrodes, and located in said cone of refractory material.



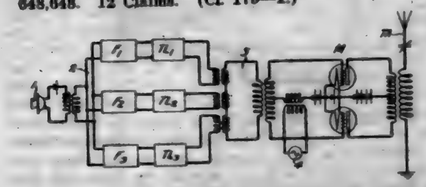
1,542,563. COLLAPSIBLE TUBE. ROBERT H. LIEBERTHAL, Bridgeport, Conn., assignor to The All-In-One Manufacturing Company, Incorporated, Bridgeport, Conn. Filed Aug. 3, 1923. Serial No. 655,466. 3 Claims. (Cl. 221—60.)

1. A collapsible tube having a discharge nozzle provided with a longitudinal passage and a discharge opening leading from said passage, said nozzle being provided with an exterior flange adjacent its outer end, and a movable cap embracing the outer end of the nozzle and provided with means engaging said flange to prevent removal of the cap from the nozzle, said cap being provided with an opening adapted by movement of the cap to be brought into and shifted from alignment with the discharge opening, a portion of said flange being omitted



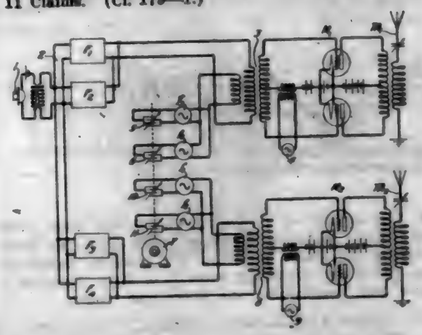
to provide spaced opposed shoulders, and a lug carried by the cap adapted to coact with said shoulders to limit the movements of the cap and properly position the opening therein.

1,542,564. GRID WINDOW. PAUL LIEBE, Tempelhof, Germany. Filed Sept. 13, 1923. Serial No. 662,450. 6 Claims. (Cl. 72—99.)



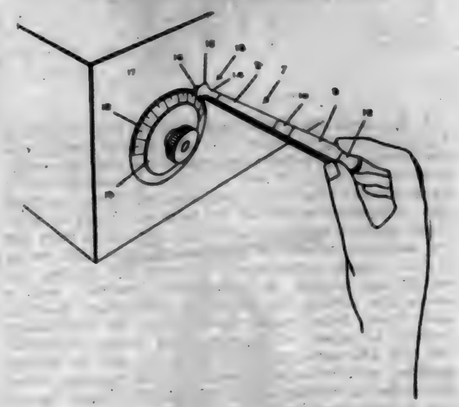
1. A non-metallic frame member for grid windows provided externally with circumferential grooves and adapted to be glazed.

1,542,565. SECRET SIGNALING. ROBERT C. MATHES, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 30, 1923. Serial No. 648,647. 9 Claims. (Cl. 179—1.)



1. The method of transmission of waves having a band of frequency components occurring in a characteristic order, which comprises dividing said band into sub-bands, inverting the frequency order of the components of certain of the sub-bands while keeping the respective sub-bands within substantially the same frequency limits as they occupy before inversion, and transmitting all of said sub-bands simultaneously.

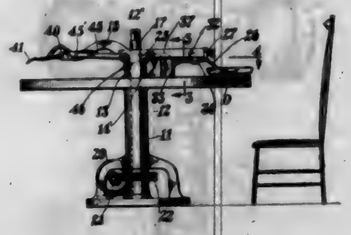
1,542,566. SECRET SIGNALING. ROBERT C. MATHES, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 30, 1923. Serial No. 648,648. 12 Claims. (Cl. 179—1.)



1. The method of secret transmission of waves, the frequency components of which comprise a considerable frequency range, which comprises dividing said waves into sub-bands of frequency components, producing relative time shifts in the sub-bands, and then transmitting all of the sub-bands over the same path.

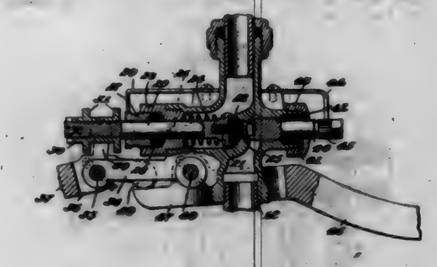
1,542,567. SECRET SIGNALING. ROBERT C. MATHES, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 30, 1923. Serial No. 648,649. 11 Claims. (Cl. 179—1.)

4. The method of secret transmission of speech, comprising dividing the speech waves into sub-bands of frequencies, transmitting over one path a plurality of sub-bands non-adjacent in frequency, and transmitting over another path a plurality of sub-bands including frequency components intermediate, in frequency, those transmitted over the first-mentioned path.



1,542,568. RADIO DIAL ADJUSTER. CHARLES A. MILLER, Washington, D. C. Filed Dec. 29, 1922. Serial No. 609,615. 4 Claims. (Cl. 74—7.)

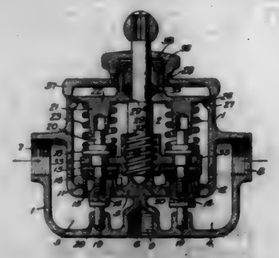
1. An implement for adjusting a dial comprising a handle normally removed from the dial and adapted to be manipulated and rotated by hand, means on the handle to frictionally engage the dial for turning the dial by the rotation of the handle, and means on the handle for pivotal connection with a portion beyond the edge of the dial, the last-named means being yieldable so that the first-named means can be moved with the handle to engage the dial.



1,542,569. AUTOMATIC FEEDING TABLE. ANGELO MONDI, Salina, Pa. Filed Jan. 5, 1924. Serial No. 684,471. 5 Claims. (Cl. 45—26.)

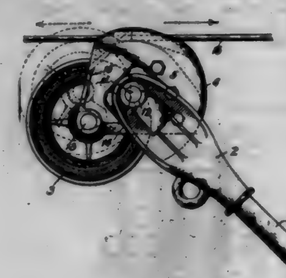
1. A device of the class described comprising a vertical shaft, a support in which said shaft is rotatably mounted, a pair of arms fixed to and radiating from said shaft, spoon and fork element on the respective arms, and means for imparting up and down movements to said spoon and fork elements at certain points in

the travel of said arms, said means comprising cam elements fixed to said support in position to be engaged by said arms as the latter move with the said shaft.



1,542,570. SUPPLY VALVE FOR DRINKING FOUNTAINS. PHILIP MUELLER and ANTON C. SCHUERMANN, Decatur, Ill., assignors to Adolph Mueller, trustee, Decatur, Ill. Original application filed Nov. 12, 1919, Serial No. 337,490. Divided and this application filed Oct. 15, 1923. Serial No. 668,635. 11 Claims. (Cl. 251—134.)

2. A supply valve for drinking fountains comprising a valve body, a normally spring-closed valve in said body, a forked valve operating lever pivoted on said body, an adjustable winged nut on the valve stem engaging said forked lever, and a second valve operating lever pivoted on said body and engaging said first-mentioned lever, said first-mentioned lever adapted to actuate the valve independently of the second lever.

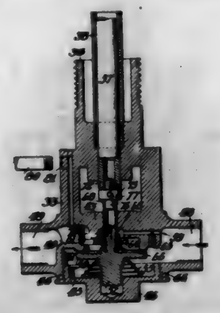


1,542,571. MIXING VALVE. PHILIP MUELLER and ANTON C. SCHUERMANN, Decatur, Ill., assignors to Adolph Mueller, trustee, Decatur, Ill. Filed Nov. 1, 1924. Serial No. 747,334. 6 Claims. (Cl. 277—18.)

1. In an apparatus of the character described, the combination of a casing provided with hot and cold water inlets and an outlet and having its interior divided into two chambers connected to said inlets, respectively, and a mixing chamber connected with the outlet and having two ports communicating, respectively, with the hot and cold water chambers, a detachable closure for the mixing chamber, a rotable stem extending through said closure and having its inner end seated in a bearing within the casing, said stem being provided within the casing with a threaded section, a yoke engaging the threaded section of said stem and having arms extending across the ports connecting the mixing chamber with the hot and cold water chambers, a valve controlling each of said ports and having a stem extending freely through the adjacent arm of the yoke, an abutment on each valve stem in the path of the yoke arm as it moves away from the valve head, a

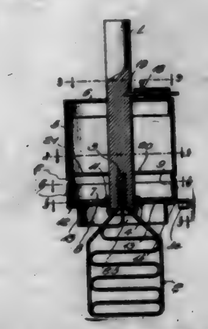
spring surrounding each valve stem between said abutment thereon and the mixing chamber closure, and means connected to the rotatable stem outside the casing for rotating the stem to move the yoke away from or toward the ports between the mixing chamber and the hot and cold water chambers.

1,542,572. TROLLEY SHOE. JAY F. O'NEAL, Waterloo, Iowa. Filed June 2, 1922. Serial No. 565,309. 12 Claims. (Cl. 191—59.1.)



1. A device of the class described comprising a shoe adapted to be inserted between the ordinary harp and trolley wheel of an electrically propelled vehicle, said shoe being weighted on one side of its pivot and light on the opposite side thereof and being adapted to pivotally support the trolley wheel in the light side and when so supporting the trolley wheel the lighter side is heavier than the opposite side.

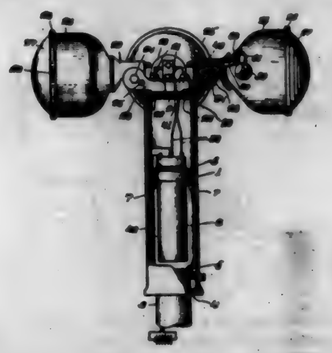
1,542,573. THERMOSTATICALLY-CONTROLLED VALVE. ARTHUR E. PAIGE, Philadelphia, Pa. Filed Aug. 20, 1924. Serial No. 733,067. 14 Claims. (Cl. 236—33.)



1. In a gas water heater; the combination with a water container; of a burner arranged to heat the water in said container; a main gas valve controlling a main fuel gas conduit leading to said burner; a bypass conduit leading to said burner, around said main valve; an auxiliary valve controlling said bypass conduit; a spring tending to close said main valve; a spring tending to close said auxiliary valve; a single thermostatic element, extending in said container, and

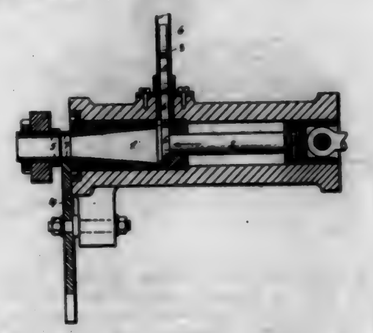
in operative relation with both said valves, arranged to continually hold said auxiliary valve open, to a variable extent, and thereby vary the effective area of said bypass, in accordance with the temperature of the water in said container, and arranged to open said main valve at a predetermined temperature, and permit said main valve to be closed, at a predetermined temperature, by its spring; and means adjustable to variably

determine the temperatures at which said valves shall be respectively operated in coordinated relation; whereby the heating effect of said burner is automatically determined and controlled to regulate the temperature of the water in said container and compensate for variations in such temperature, consequent upon withdrawal of hot water and influx of cold water with respect to said container.



1,542,574. PORRIDGE MIXER. WATSON PARK and EMMA LURA PARK, Fair Ground, Ontario, Canada. Filed Mar. 31, 1924. Serial No. 703,318. 5 Claims. (Cl. 259—144.)

1. A device of the class described comprising a handled stirrer, a receptacle provided with a removable top and a bottom having discharge apertures, the top and bottom of said receptacle having centrally disposed apertures through which the handle of said stirrer extends, and means for detachably clamping said receptacle upon said handle with the bottom of said receptacle adjacent the stirrer proper, said means also clamping said top upon said receptacle.

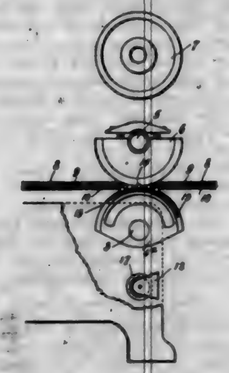


1,542,575. LAMP SUPPORT. GEORGE ELLIOT PERRY, Chicago, Ill., assignor to William F. Cummings, Chicago, Ill. Filed Sept. 8, 1921. Serial No. 499,319. 5 Claims. (Cl. 240—52.)

2. A lamp support having a reflector holder with a shouldered opening therethrough, a rod extending into said opening and carrying a lamp socket at one end and being internally threaded at the other end, a screw threading into the rod and having a head adapted to abut against the shoulder in the opening of the holder,

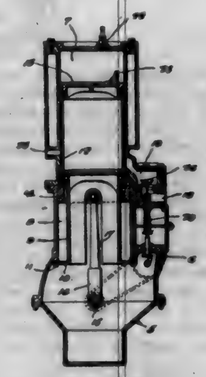
and a plug for clamping the head of the screw against the holder and permitting access to the screw for the purpose of adjusting the same.

1,542,576. PROCESS AND DEVICE FOR MAKING FORM PIECES OF WOOD. FRITZ PFLEUMER, Dresden-A, Germany, assignor to Naamlooze Vennootschap "Ago" Maatschappij tot het Verwerken, Veredelen en Drogen Van Hout, ter Apel (Gron.), the Netherlands. Filed Mar. 8, 1923. Serial No. 623,771. 1 Claim. (Cl. 144—309.)



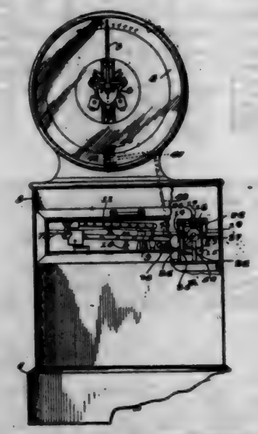
A process and device for the manufacture of pressed pieces of wood which is pressed in dry or moist air by means of pressing forms and pressing stamps and immediately after compression forced into tubes to prevent expansion; the said process and device being characterized by the fact that the wood, in form of short pieces, is pressed into rings and the individual pieces of wood within the rings are treated from the outside (through the end grains) with hot air or steam for the purpose of hardening them, and that the said pieces of wood are not removed from the rings until they have become perfectly dry and hard.

1,542,577. ADDRESSING OR LIKE PRINTING MACHINE. SAMUEL GEORGE WILLIAM PHIPPS, London, England, assignor to Roneo Limited, London, England, a British Company. Filed May 21, 1924. Serial No. 714,783. 5 Claims. (Cl. 101—49.)



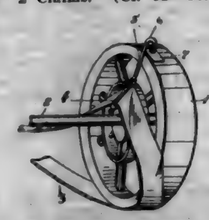
1. In addressing or like printing machines wherein envelopes are printed from stencil cards between a

segmented inking roller and a segmented presser roller means whereby the name and address of the sender, or other matter, may be printed upon the flap or back



part of an envelope, label or the like, while the printing of the address upon the front or face of the envelope is being effected.

1,542,578. INTERNAL-COMBUSTION ENGINE. BYRON R. POOL and ANDREW E. POOL, Norris City, Ill. Filed Dec. 28, 1923. Serial No. 683,189. 1 Claim. (Cl. 123—50.)

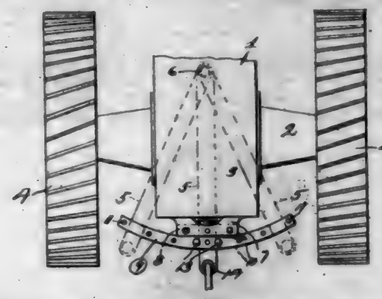


In an internal combustion engine, a crank case, a comparatively long cylinder carried thereby, a valved fuel intake disposed between the ends of said cylinder, a stationary piston attached to said crank case at its lower end and extending up into said cylinder, said stationary piston being of a diameter less than that of the cylinder, the cylinder being increased in diameter at its lower end to provide an annular space between its inner wall and the stationary piston, a movable piston mounted for reciprocation within said cylinder, the wall of said movable piston being interposed for sliding movement between the wall of the cylinder and said stationary piston, the lower end of said movable piston being increased in thickness to provide an annular rib, said rib being in slidable contact with the wall of the enlarged portion of the cylinder, the wall of said movable piston being formed intermediate its ends with a multiplicity of fuel intake points adapted for coaction with the aforesaid fuel intake, a baffle mounted on the upper end of said movable piston adapted to be disposed opposite the valved fuel intake at predetermined intervals, an operating means for the movable piston for alternatively compressing fuel charge between the two pistons and then between the movable piston and the top of said cylinder.

1,542,579. WEIGHING SCALE. ELMER C. POOL, New Castle, Pa., assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Dec. 26, 1919. Serial No. 347,643. 36 Claims. (Cl. 265—48.)

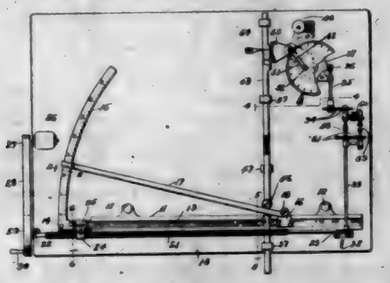
1. In a weighing scale, in combination, a frame, a scale beam, a plurality of weights arranged side by side above the scale beam, a support on the frame for the weights above the beam, and mechanism operating in the frame for lifting the weights from the support and lowering them onto the beam.

1,542,580. DEVICE FOR REPLACING BELTS. GEORGE H. PRICE, Corsicana, Tex. Filed Apr. 7, 1924. Serial No. 704,606. 2 Claims. (Cl. 64—51.)



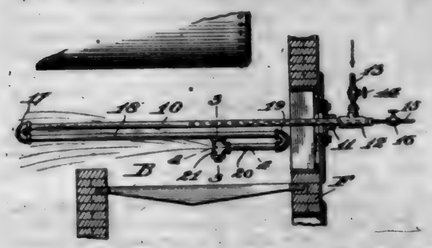
1. A belt applying device including a wheel engaging plate having a hobbed surface; a bar pivoted to said plate and bent at right angles thereto; a second bar pivoted to the free end of the first bar and having its opposite end bent in parallel relationship to the body thereof to engage a belt.

1,542,581. TRACTOR DRAWBAR. WILLIAM R. PHILIPP, Meservey, and JAY T. GRIGGS, Goodell, Iowa. Filed July 22, 1924. Serial No. 727,448. 1 Claim. (Cl. 280—33.12.)



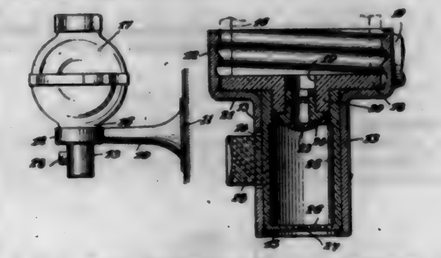
The combination with the rear end of a pivoted tractor draw bar movable in a horizontal plane and extending beyond the rear side of a differential, of a guide bracket for the rear end of said draw bar, said guide bracket comprising horizontally disposed registering arcuate members, one of said members having its ends provided with downwardly extending integral spacing lugs engaging the other arcuate bar, the lug carrying

bar being provided with a horizontally disposed integral extension, a horizontally disposed bracket carried by the differential casing and secured to the upper side of the



extension and spaced pins extending through registering apertures in the arcuate bars at opposite sides of the draw bar.

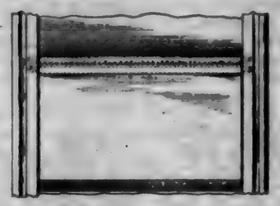
1,542,582. CAM-FORMING MACHINE. PAUL A. RAICHE, Providence, R. I. Filed Jan. 16, 1924. Serial No. 686,682. 5 Claims. (Cl. 33—27.)



1. In an automatic cam-forming machine, a tool, a pivoted tool-carrying arm, means for rotating the work relatively to the tool, a traveling inclined bar adapted to be set at different angles to its path of travel, a segment, a rack bar moved by said inclined bar to rotate said segment and to act upon said arm to determine the rate of movement of said arm relative to the speed of rotation of the work whereby the tool is caused to develop the shape of the cam on the work.

1,542,583. GASEOUS-FUEL BURNER. JOHN V. ROBERTS, Los Angeles, Calif. Filed June 12, 1924. Serial No. 719,524. 1 Claim. (Cl. 158—63.)

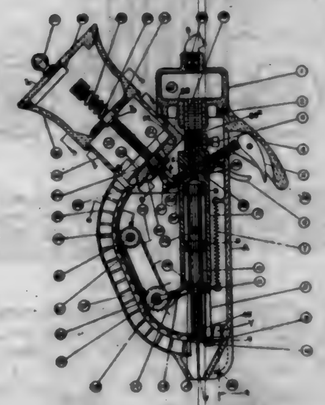
A gaseous fuel burner comprising an elongated tubular member that is arranged to form a pair of relatively long legs, one of which is disposed directly above the other and a third relatively short leg that is disposed directly beneath the front end portion of the lower one of said long legs, a reducing nipple on the forward end of the upper one of the longer tubular legs, a fluid fuel supply pipe connected to said reducing nipple and into and through the upper longer leg for approximately half its length, a fluid pressure supply pipe connected to said reducing nipple, a short vertically disposed hollow cylindrical burner head connected to the rear end of the short tubular lge, said burner head being disposed forwardly with respect to the rear end of the fuel supply pipe in the upper one of the long legs, plugs removably seated in the upper and lower ends of the cylindrical burner head and said burner head being provided its rear wall with a centrally arranged horisontally disposed slot that occupies the same plane with the center of the short leg to which said burner head is connected, so that the fluid fuel mixture that discharges through the short lower tubular leg, passes directly across the chamber within said burner head and discharges through the jet orifice formed by said horisontally disposed slot.



1,542,584. LIQUID-DISPENSING DEVICE. WILLIAM H. ROSS, Jersey City, N. J. Filed Oct. 6, 1924. Serial No. 741,901. 6 Claims. (Cl. 221—94.)

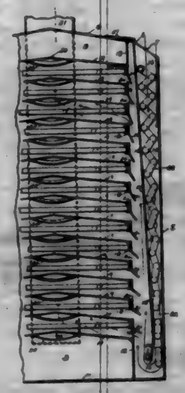
1. In a liquid dispensing device, in combination, a reservoir support having three openings therein, means for frictionally holding a flap valve over one support opening, a flap valve, means for frictionally holding a removable bag reservoir within the support and exterior of the flap valve and a bag having a slit valve opposite one support opening and an integral plunger extending through the remaining support opening.

6. In a liquid dispensing device, in combination, a reservoir support having three openings therein, a removable check valve over one support opening and a removable bag reservoir exterior of the check valve and within the support, the sides of the bag practically abutting upon the sides of the support and having a slit valve in alignment with one support opening and having an integral plunger extending through the other support opening.



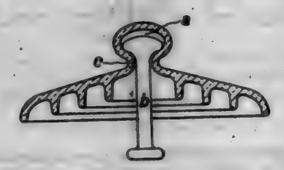
1,542,585. LISTING DEVICE. ANDREW F. ROSENBERGER, Chicago, Ill., assignor, by mesne assignments, to Acme Card System Company, a Corporation of Illinois. Filed May 28, 1914, Serial No. 841,451. Renewed Sept. 10, 1919. Serial No. 322,986. 3 Claims. (Cl. 129—16.)

1. The combination with a frame adapted to receive a plurality of overlapping cards, said frame having spaced flanges, of a card support having an open loop



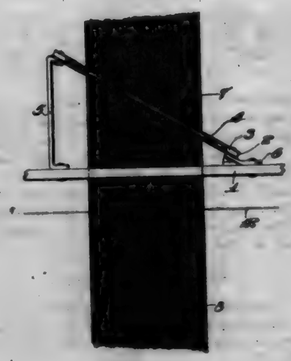
flexible hinge portion and means for holding said card support in said frame comprising a resilient member adapted to extend through the open loop of the card support with its ends projecting therefrom, said card support and hanger being bendable whereby the ends of the latter may be sprung into position beneath said flanges.

1,542,586. AUTOMATIC PORTABLE NAILING MACHINE. DAVID N. RUBIN, Winthrop, and BENJAMIN SHAPIRO, Boston, Mass. Filed Oct. 25, 1922. Serial No. 596,777. 5 Claims. (Cl. 1—48.)



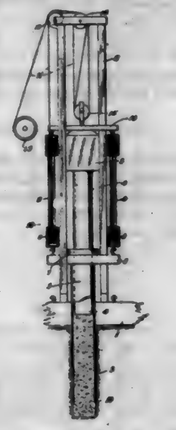
1. In a tacking machine, in combination, driving mechanism, operating mechanism for said driving mechanism, controlling means for said operating mechanism, a tack hopper, a tack raceway leading from said hopper to said driving mechanism, and means operated by said controlling means for forcing the tacks one by one from said hopper into said raceway.

1,542,587. DEHYDRATOR. HENRIK J. SCHMIDT, Jacksonville, Fla., assignor to Florida Dehydrating and Preserving Co., Jacksonville, Fla., a Corporation of Florida. Filed Dec. 21, 1923. Serial No. 682,092. 5 Claims. (Cl. 34—39.)



1. In a dehydrating apparatus; downwardly tapering, cold air intake passages located on opposite sides of the apparatus; means for heating the air passing through these passages; upwardly tapering, hot air distributing passages located adjacent to and communicating with the first mentioned passages; the walls separating said cold air and hot air passages constructed of thin metal so as to allow radiation from one passage to another; and the tapers of said passages such, that the combination of the tapers with the radiation through the thin metal walls will cause a relatively even temperature of the air through the whole length of the hot air distributing passages.

1,542,588. METHOD OF MAKING SUSPENSION INSULATORS OF GLASS. ERICH SCHOTT, Jena, Germany, assignor to the Firm Jenaer Glaswerk Schott & Gen., Jena, Germany. Filed Feb. 6, 1925. Serial No. 7,438. 1 Claim. (Cl. 49—81.)



Method of making suspension insulators of glass, consisting in this that a glass body is first shaped in such a way as to receive a hollow space, adapted to receive a clapper, that thereupon a clapper is inserted and finally the glass is pressed round the clapper, so that after the hardening of the glass the said clapper cannot be pulled out from the said hollow space.

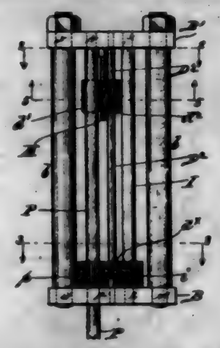
1,542,589. NECKTIE FABRIC. CHARLES SEIDMAN, Philadelphia, Pa. Filed Sept. 27, 1923. Serial No. 665,077. 1 Claim. (Cl. 139—384.)

As a new article of manufacture a fabric for neck ties having selvage edges throughout its length said fabric having the weft threads woven diagonally with respect to the lines of warp threads and having the respective ends of the fabric cut in parallelism with the line of said weft threads, the neck band portion of the fabric being narrowed and the opposite ends thereof flaring.

1,542,590. FORMING CAST-IN-PLACE PILES. JOSEPH HARRY THORNLEY, New York, N. Y. Filed Mar. 6, 1923. Serial No. 623,097. 10 Claims. (Cl. 61—5.)

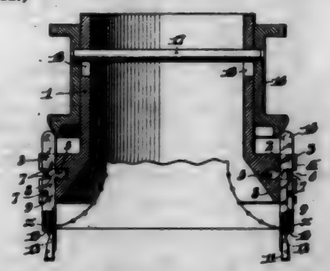
1. The process of withdrawing from the ground a form surrounding a formed concrete pile, and dividing the reaction pressure from said withdrawal between the formed concrete pile and the surface of the ground in a substantially constant predetermined proportion.

1,542,591. SEPARATOR STRIP FOR CONCRETE FLOOR CONSTRUCTION. ARLANDO M. VANDIVIER, Indianapolis, Ind. Filed Feb. 29, 1924. Serial No. 695,885. 1 Claim. (Cl. 72—101.)



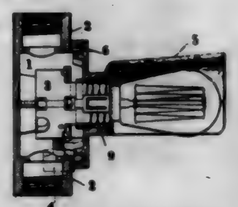
A pattern and guide strip comprising a strip of flat metal having a straight edge and having a plurality of tongues each struck up to extend transversely of the strip and leave an opening in the strip, one wall of which is provided with an offset shoulder in a plane below the plane of the top of the tongue, the bottoms of said tongues being in the same plane as the bottom of the strip and the tongues being adapted to project from opposite sides of the strip.

1,542,592. METHOD AND APPARATUS FOR MAKING LAMP FILAMENTS. ANTON VELTING, Maspeth, N. Y. Filed Oct. 31, 1923. Serial No. 671,850. 4 Claims. (Cl. 153—65.)



1. The method herein set forth of convoluting filaments for incandescent electric lamps of the character designated, consisting in passing the filament wire over a fixed mandrel and between a plurality of formative dies having peripheral thread-grooves of like pitch and depth and relatively positioned to afford a spiral matrix by and between their opposed surfaces and said fixed mandrel, holding said mandrel fixed during such operation and removing the completed filament from the mandrel, substantially in the manner and for the purpose set forth.

2. Apparatus for convoluting filaments for incandescent lamps of the character designated, comprising a fixed mandrel independent of the completed filament, and a plurality of formative dies each with its own pinion and



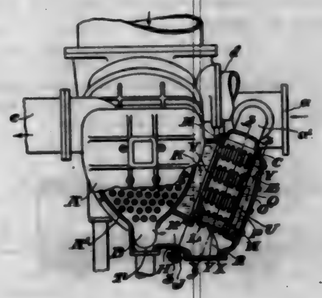
having peripheral thread-grooves of like pitch and depth and relatively positioned to afford a spiral matrix by and between their opposed surfaces and said fixed mandrel, substantially in the manner and for the purpose set forth.

1,542,593. DEVICE FOR TRANSFERRING KNITTED WEBS. LOUIS N. D. WILLIAMS, Ogonts, Pa. Filed Feb. 23, 1923. Serial No. 620,590. 9 Claims. (Cl. 66—82.)

1. A device for transferring knitted webs including means adapted to be aligned with the needles of a knitting machine to impale the fabric stitches upon said needles, said means being supported with capacity for lateral movement relative to the needles to place the fabric stitches within the needle hooks.

1,542,594. LIGHTING FIXTURE. JOHN A. AMOS, St. Louis, Mo., assignor to Oliver Electric and Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed June 9, 1924. Serial No. 718,765. 3 Claims. (Cl. 240—73.)

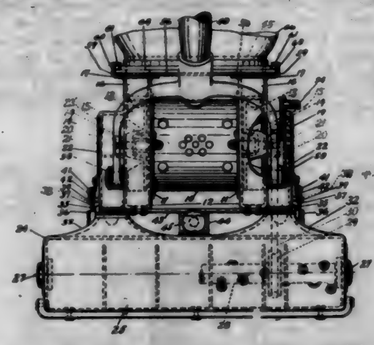
1. In a lighting fixture, the combination of a housing a lamp socket therein, a switch in the housing having an operating stem extending to the exterior of the housing through an open ended slot in said housing, and a lamp



shield having an integral base portion forming a cover for the housing, said cover portion being provided with a lug forming a stop limiting movement of the switch stem in the housing slot.

1,542,595. DOOR. BENJAMIN H. ANIBAL, Cleveland, Ohio. Filed June 4, 1923. Serial No. 643,291. 2 Claims. (Cl. 296—48.)

2. A vehicle door having a transparent upper portion consisting of a triangular stationary panel and a movable panel having parallel sides and of parallel upright guides for said movable panel.



1,542,596. CONDENSING UNIT. PAUL A. BANCEL, Nutley, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Apr. 10, 1923. Serial No. 631,106. 5 Claims. (Cl. 257—43.)

1. A condensing unit comprising a surface condenser having condensing elements and a shell larger at the top and smaller at the bottom with a vapor inlet at the top and an outlet at the bottom, and a cooler having devaporizing and cooling elements and a casing larger at the bottom and smaller at the top with a vapor inlet at the bottom and an outlet at one end, one side of the cooler casing being removably connected against the side of the condenser shell with provision for a water space between the condenser and cooler, and connections for passing water through the condensing elements of the condenser, and through the cooling and devaporizing elements of the cooler.

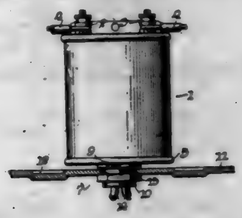
1,542,597. SUCTION CLEANER. ALBERT H. BATES, Elgin, Ill., assignor, by mesne assignments, to The Hoover Company, North Canton, Ohio, a Corporation of Ohio. Filed May 13, 1922. Serial No. 560,536. 3 Claims. (Cl. 15—8.)

2. In combination with a suction-cleaner provided with two distinct suction-creating devices each having an inlet-conduit, a cleaning-nozzle provided with two discharge-passages arranged symmetrically with respect to

the length thereof and registering with said inlet-conduits, said cleaning-nozzle being held resiliently in contact with said inlet-conduits.

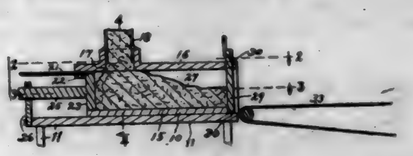
1,542,598. MEANS FOR PLUGGING CRUCIBLES. EDWARD F. BROTRUP, Jersey City, N. J., assignor to Metal & Thermit Corporation, Chrome, N. J., a Corporation of New Jersey. Filed Jan. 29, 1923. Serial No. 615,499. 8 Claims. (Cl. 263—48.)

1. Means for plugging the tap-hole of a crucible containing hot molten metal, said means consisting of solid metallic material in calculated amount to insure melting thereof by the molten metal in a predetermined time.



1,542,599. COMBINATION GAS ANCHOR AND SAND SETTLER WITH PERFORATIONS. HOWARD B. Blanton, Iowa Park, Tex. Filed Aug. 18, 1924. Serial No. 732,820. 3 Claims. (Cl. 103—220.)

1. In a devicee of the character described, the combination with a pump casing and a sand trapping chamber, of a separating barrel interposed between said cas-



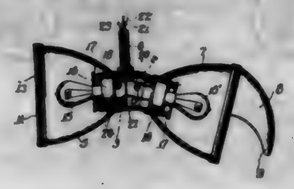
ing and trapping chamber, said barrel being substantially square in cross section and having a cylindrical passage way therein communicating with said pump casing and sand trapping chamber, a plurality of longitudinally extending oil conducting channels formed in the ways of said barrel opening exteriorly of the barrel at their upper ends and interiorly of the barrel at their lower ends, and said passage way reducing in diameter towards its lower end.

1,542,600. TRANSFORMER HOUSING AND MOUNTING MEANS. EDWARD C. BOSCHEN, Chicago, Ill. Filed June 22, 1921. Serial No. 479,459. 2 Claims. (Cl. 247—1.)

1. As a new article of manufacture a transformer including a metallic sealed casing having a metallic nipple of a standard size rigidly secured thereto and provided with means whereby it may be secured in a similar standard opening in a metallic electrical apparatus housing and insulated conductors connected to a winding in the casing and extending therefrom through the nipple.

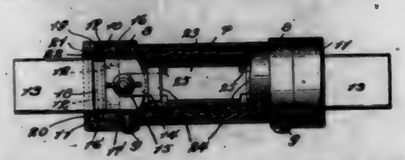
1,542,601. ART OF PRODUCING GYPSUM BLOCKS. OTTO E. BORNHAUSER and JOHN EDWARD HERMAN, Sandusky, Ohio. Filed June 5, 1924. Serial No. 718,004. 8 Claims. (Cl. 18—47.5.)

1. In the art of making gypsum blocks, a process comprising the mixing of solid matter consisting largely of calcined gypsum with water or liquid the quantity of which is greater to such an extent than the amount of liquid required for moistening the solid matter other than said calcined gypsum that the amount of liquid in excess of the liquid required for said moistening shall be not over about one and one-half times and not appreciably less than the amount of water of crystallization in the raw gypsum used in producing said calcined gypsum and thereby producing a nonpourable mass, then supplying a predetermined amount of the mixture from said mass to the interior chamber of a mold for forming the desired block, and then exerting pressure on the body of material supplied to the mold and thereby completing the formation of said block.



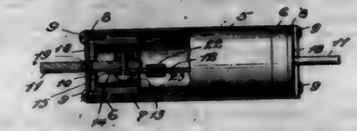
1,542,602. HEEL. LEON BUCKNER, New York, N. Y. Filed Sept. 27, 1921. Serial No. 503,540. 4 Claims. (Cl. 36—36.)

1. A heel provided with a recess extending therethrough, part of the recess being enlarged to form a socket, in combination with a ball-headed nail, provided with a shoulder below the head, the nail being driven in through the recess in the heel into the shoe so that the shoulder contacts against the shoe and the head of the nail engages in the socket, the recess being shaped



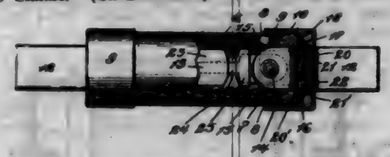
so that the heel can be removed without injury thereto by pulling it away from the shoe, the nail remaining in the shoe.

1,542,603. BOWLING-ALLEY LAMP. GUSTAVE BURKHARDT, Chicago, Ill. Filed Nov. 20, 1922. Serial No. 601,999. 9 Claims. (Cl. 40—132.)



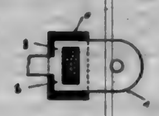
1. In a bowling alley lamp, a fixture support having a forwardly extending tubular portion parallel with the alley and a rearwardly and downwardly inclined tubular extension adapted to be disposed directly above and in front of the head pin position, illuminating means in the tubular portions, that in the inclined portion being adapted to illuminate the pins, and means extending in front of the other tubular portion bearing a designation of the alley visible from the other end of an alley to which it is applied.

1,542,604. ELECTRIC FUSE. HENRY T. BUSSMANN, St. Louis, Mo. Filed May 7, 1919. Serial No. 295,368. 13 Claims. (Cl. 200—132.)



1. In a refillable fuse, a casing, a closure, a knife blade terminal, a detachable link holding means therefor, a member permanently fitted upon the casing having its interior arranged to permit the terminal and link holding means to pass through and to removably position it therein against rotational movement.

1,542,605. ELECTRIC FUSE. HENRY T. BUSSMANN, St. Louis, Mo. Filed May 7, 1919. Serial No. 295,369. 8 Claims. (Cl. 200—132.)

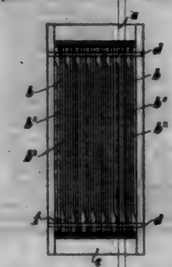


1. In an enclosed fuse, a casing, a member permanently attached to the casing, a flat-blade terminal adapted to be passed through said casing, a closure and means extending through the end face of the member for detachably securing the closure.

1,542,606. ELECTRIC FUSE. HENRY T. BUSSMANN, St. Louis, Mo. Filed May 7, 1919. Serial No. 295,372. 15 Claims. (Cl. 200—132.)

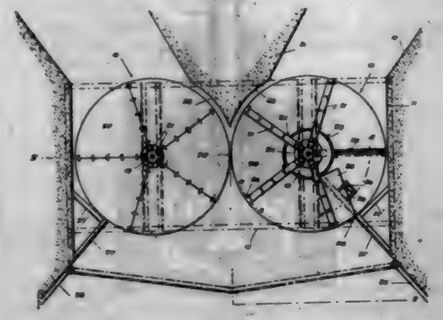
1. In an enclosed knife blade fuse, a casing, a flat blade terminal, a member permanently attached to the casing and adapted to prevent the rotation of the terminal and means seated on said member for wedging the terminal and holding it against longitudinal movement.

1,542,607. ELECTRIC FUSE. HENRY T. BUSSMANN, St. Louis, Mo. Original application filed May 7, 1919, Serial No. 295,369. Divided and this application filed Jan. 17, 1922. Serial No. 529,966. 2 Claims. (Cl. 200—135.)



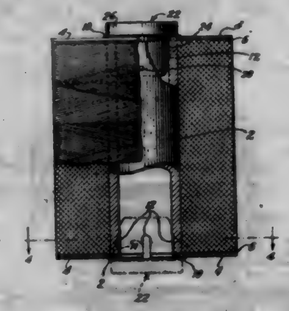
1. A fuse link having an area of reduced cross section, and an area of greater cross section, said area of greater cross section having a portion for terminal connection, the remaining portion of the area of greater cross section having an aperture therein.

1,542,608. ELECTRIC FUSE. HENRY T. BUSSMANN, St. Louis, Mo. Original application filed May 7, 1919, Serial No. 295,368. Divided and this application filed Jan. 17, 1922. Serial No. 529,969. 1 Claim. (Cl. 200—135.)



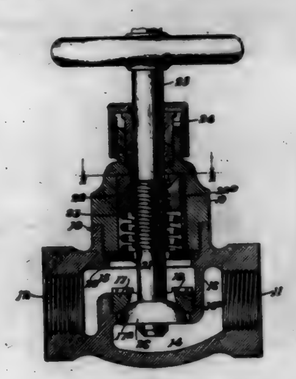
A fuse link having end portions and an intermediate portion, the end portion being of substantially uniform reduced cross section and an arc shield upon an end portion thereof.

1,542,609. REED FOR WEAVERS' LOOMS. ERNST BUSCHMANN, Ronsdorf, Germany. Filed Jan. 12, 1924. Serial No. 685,937. 5 Claims. (Cl. 139—192.)



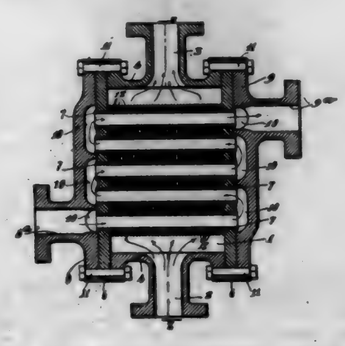
1. In a reed structure of the type set forth, a frame including transverse top and bottom bars, and a reed supported therein comprising a plurality of reed blades all extending and operable in the same plane, certain of these blades being rigidly supported at both ends in said top and bottom bars respectively, certain other blades being fixed only at the upper ends in said top bar, and still others fixed only at their lower ends in said bottom frame bar.

1,542,610. WATER MOTOR. FRANK CHAPMAN, Winamac, Ind. Filed May 1, 1924. Serial No. 710,348. 1 Claim. (Cl. 170—115.)



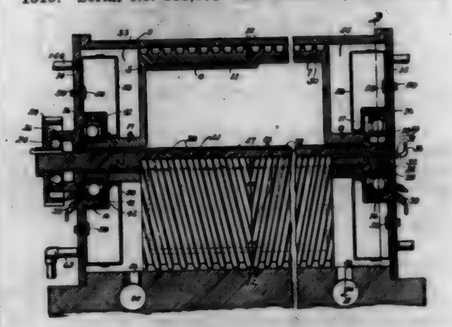
A water motor comprising a rotor rotatable about a vertical axis and having vertically spaced disks and a cylindrical central portion, radial blades between the disks and hinged at their upper edges to the corresponding disks above the blades to swing rearwardly and upwardly toward said disks, the inner ends of said blades extending to the central portion of the rotor, a water deflector extending between the disks to said central portion of the rotor and having slots for the passage of disks and the blades when swung rearwardly and upwardly, and stops carried by the corresponding disks below the blades for the contact of the lower edge portions of the blades when the blades are swung forwardly to operative position.

1,542,611. SPOOL. ROBERT K. CLARK, Springfield, Mass., assignor to The American Thread Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 19, 1924. Serial No. 750,798. 6 Claims. (Cl. 242—118.)



1. A spool comprising a tube, a head for one end of the tube comprising an annular disk, and means for securing the disk to said end of the tube in fixed position relatively thereto comprising a member having an annular portion having a plurality of lugs projecting upwardly from its inner periphery, each of said lugs having an outward projection adjacent its end embedded in the inner surface of said tube, the ends of said lugs being passed through said annular disk, inserted in said end of the tube, and then pressed outwardly against the inner surface of said tube to cause said projection to be pressed into said inner surface said member engaging said disk so as to hold it fixed relatively to said tube.

1,542,612. VALVE. LLOYD D. COLLAR, Alameda, Calif., assignor to Collar Valve Corporation, Oakland, Calif., a Corporation of California. Filed Jan. 30, 1924. Serial No. 689,546. 2 Claims. (Cl. 251—38.)

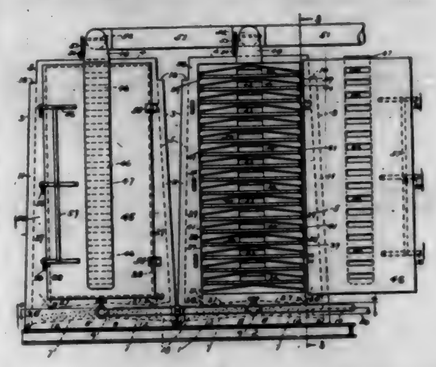


1. A valve comprising a valve body having inlet and outlet chambers, a partition wall between said chambers, said wall being formed with a valve opening surrounded by a divergent convex valve seat, a cylindrically bored bonnet on the valve body mounted on the body at right angles to the longitudinal axis of the inlet and outlet chambers and in alignment with said valve opening, a sleeve in said bonnet and mounted therein for reciprocating movement only, an annular member in the valve body at the bottom of the bonnet, an expansion spring in the bonnet and interposed between the sleeve and said annular member, a valve stem reciprocably mounted in the bonnet and threaded through said sleeve, a valve member having a divergent convex face carried at the lower end of said stem for co-operation with said convex valve seat.

1,542,613. HEAT EXCHANGER. EDWIN R. COX, Los Angeles, Calif. Filed Oct. 31, 1921. Serial No. 511,602. 4 Claims. (Cl. 257—262.)

1. In a heat exchanger, a plurality of fin plates, each of said plates having a plurality of similarly spaced transverse tapered orifices and laterally projecting converging lips surrounding said orifices, a plurality of tubes extending through aligned orifices of said fin plates and with the lips of each orifice nested into its aligned adjacent orifice, and means wedging said lips firmly between the tube wall and lips of the adjacent fin plates.

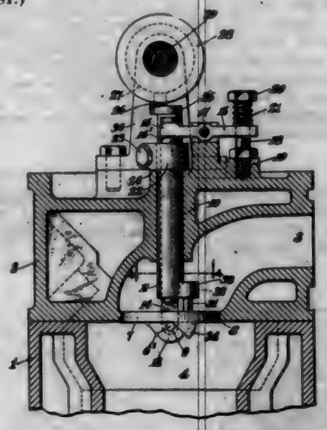
1,542,614. ROTARY ENGINE. LEWIS M. ELLIS, Toledo, Ohio, assignor, by direct and mesne assignments, to Winslow Safety High Pressure Boiler Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 7, 1919. Serial No. 288,173. 10 Claims. (Cl. 121—70.)



1. In a rotary engine, a casing formed with two parallel intersecting cylindrical chambers, rotors in each of said cylinders having intermeshing herringbone teeth formed thereon, each of said herringbone teeth extending 180 degrees about the periphery of said rotors, each of said rotors comprising two hollow cylinders, one of said cylinders having a reduced flange thereon adapted to engage in said other cylinder.

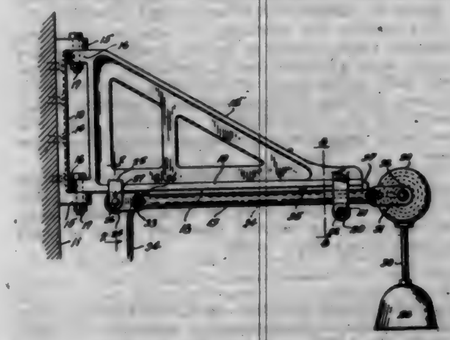
1,542,615. COMPOSITION OF MATTER FOR MAKING FLUSH TANKS, WATER-CLOSET SEATS, AND COVERS. EDWARD FRANCIS GERMAIN, Saginaw, Mich., assignor, by mesne assignments, of three-fourths to L. Germain, jr., trustee, Pittsburgh, Pa. Filed June 19, 1923. Serial No. 646,474. 4 Claims. (Cl. 106—31.)

2. A composition of matter, containing fourteen to seventeen parts of gilsonite, ten to sixteen parts of fine asbestos, and three to six parts of long asbestos fibre, substantially as described.



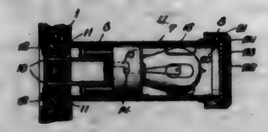
1,542,616. DEHYDRATOR. CHARLES A. GREEN, Whitehouse, Fla., assignor, by mesne assignments, to Florida Dehydrating and Preserving Co., Jacksonville, Fla., a Corporation of Florida. Filed Aug. 26, 1922. Serial No. 584,450. 8 Claims. (Cl. 34—39.)

1. In a dehydrating apparatus; an air heating chamber, having means for heating the air passing through it; means for dividing the heated air into two currents; tapered hot air passages for evenly distributing these currents; the inner walls of said tapered hot air passages



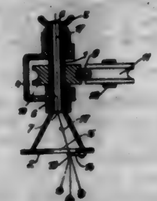
provided with horizontal rows of passages communicating with the dehydrating compartment; and said rows of passages so situated as to direct the currents directly under each tray in the dehydrating compartment.

1,542,617. VALVE MECHANISM. FREDERICK M. GUY and ORMOND D. HEAVENRICH, Ypsilanti, Mich. Filed Oct. 8, 1921. Serial No. 506,264. 15 Claims. (Cl. 123—81.)



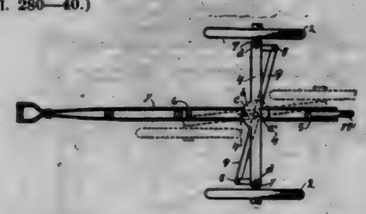
1. In a valve construction, the combination of a member having a passageway and a port therein with a valve seat of spherical curvature extending around the edge of the port, a disc valve having a spherical seating surface about its edge, formed about the same center as said seat, adapted to fit within said port, said center being in the axis of said port, at a short distance from the plane normal to said axis midway between the upper and lower edges of the port, means providing a center of rotation for said valve, situated at the center of curvature of the valve, means supporting said center means, adjustable in the axial direction of said port, and means for swinging said valve about said pivot, through said port, to open and close the same.

1,542,618. ADJUSTABLE BRACKET. WILLIAM LINDHOLM, Bridgeport, Conn. Filed Nov. 9, 1923. Serial No. 673,741. 2 Claims. (Cl. 248—1.)



1. In a supporting bracket, a support adapted to be secured to a vertical wall, an arm pivoted to said support and adapted to swing in a horizontal plane, said arm having a straight lower edge, a supporting means projecting below said edge adjacent the outer end of the arm, a tubular support mounted to reciprocate on said supporting means longitudinally of said lower edge, the outer end of said tube being split to provide spaced arms, a support mounted between said arms, the inner end of the tube being also split to form spaced arms, a roller mounted between said arms and adapted to run on said lower edge, and means to prevent said roller moving away from said arm.

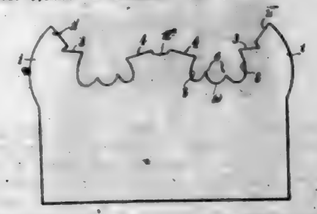
1,542,619. LAMP MOUNTING. ALBERT B. LOCKE, Chicago, Ill. Filed July 26, 1922. Serial No. 577,716. 2 Claims. (Cl. 40—131.)



1. A lamp mounting for a switch panel having front and back plates, comprising a lamp socket support to be removably secured to the panel back plate, a tubular lamp housing detachably secured to the support and arranged to extend through the panel front plate, and a designation holder at the end of the housing to close the same and carry marks of identification.

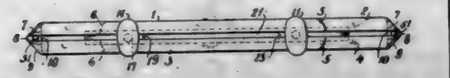
1,542,620. SPINNING AND PIECING APPARATUS. BERNARD LOEWE, Zurich, Switzerland. Filed May 13, 1924. Serial No. 713,068. 3 Claims. (Cl. 117—1.)

1. In a spinning machine, spinning devices comprising each a spinning tube provided with spinning eyes, at least one disc capable of rotating about the axis of said tube, a filament guide mounted on said disc in an eccentric manner relatively to the axis of said spinning eyes so as to polish and even the filaments during their passing through said guide and the next spinning eye.



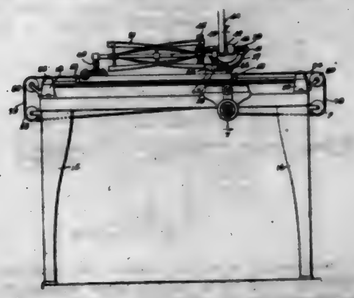
1,542,621. CART. ABRAHAM J. LONGSTRETT, FRANK A. CALIFF, and FRED J. BLAKESLEE, Grand Rapids, Mich. Filed Feb. 8, 1924. Serial No. 691,893. 3 Claims. (Cl. 280—40.)

1. In combination with the wheels, the axletree and the supporting beam of a cart, a plate secured to the supporting beam of the cart longitudinally thereof and having upwardly extending arms integral therewith, said supporting beam and plate supported upon the axletree, a cross plate immediately above the longitudinal plate and having its ends securely attached to the ends of the axletree, and integral arms extending upwardly from



the plate at the ends of the axletree, the axletree and the cross plate pivotally connected with the supporting beam, a wheel bearing pivotally connected with each end of the axletree, and a rod so connected with said pivotal end bearings that when the axletree and the plate are carried around parallel with the supporting beam the wheels will be, also carried into a position parallel with the supporting beam.

1,542,622. SLEEVELESS ONE-PIECE ROBE. MARY R. LUCK, Dallas, Tex., assignor of one-half to N. R. McElroy, New Orleans, La. Filed Feb. 12, 1925. Serial No. 8,809. 2 Claims. (Cl. 2—74.)



1. A sleeveless one-piece robe as described composed of a single sheet of material, having parallel opposite side edges, said piece being provided at its opposite top corners with arch-shaped projecting portions forming lapels when folded over, said sheet having a central upwardly projecting portion in its top edge adapted to be joined to the ends of said lapels, recesses between the central projecting portions and said lapels for arm holes and smaller recesses in the arm hole portions to form pleats when the robe is sewn together.

1,542,623. AUTOMOBILE BUFFER DEVICE. GEORGE ALBERT LEON, Allenhurst, N. J. Filed May 31, 1923, Serial No. 642,450. Renewed Nov. 20, 1924. 20 Claims. (Cl. 293—55.)

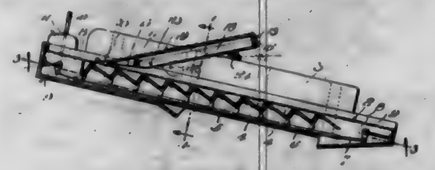
14. The automobile buffer front member formed of wide steel strip and having integral angularly folded portions.

1,542,624. GRINDING MACHINE. JAMES D. MCCLELLAND, Mount Vernon, N. Y. Filed Aug. 23, 1921. Serial No. 494,590. 2 Claims. (Cl. 51—95.)

1. A machine for sharpening lawn mower blades while arranged in tubular form, comprising a frame, a sliding member arranged on said frame adapted to slide longitudinally of the frame, a pair of guide rails for causing the sliding member to move in a straight line, a pair of belts, said belts being connected to the opposite ends of said sliding member, a plurality of guides for guiding said belts to a central position beneath said sliding member, a pair of drums operatively associated with said belts for causing one belt to be pulled while the other is released and thereby cause a movement of said sliding member, a pair of supports mounted in said sliding member for rotatably supporting a group of lawn mower blades arranged in tubular formation, means for adjusting one of said supports laterally so that the edge of said blades will move in a plane parallel to the movement of said sliding member, a grinding member carried by said frame, means for adjusting said grinding member toward and from the path of movement of said blades, and a support arranged adjacent the grinding member adapted to engage the under face of each of said blades as it is being operated on by said grinding member, said blades being positioned to be engaged by said grinding member one at a time.

1,542,625. SLED ATTACHMENT FOR AUTOMOBILES. HAROLD L. MACGOWN and HARRY G. CLARK, Gorham, N. H. Filed Apr. 5, 1923. Serial No. 630,105. 4 Claims. (Cl. 180—5.)

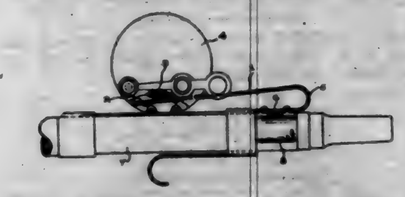
1. An attachment for automobiles consisting of a unit comprising a frame, means to mount the frame to rock in a vertical plane, a follower idler wheel mounted in said frame at the rear end adapted to track a drive wheel of an automobile, a traction chain adapted to run about said follower wheel and about the drive wheel of the automobile, means to actuate said chain from the automobile wheel, and a sled runner on said frame at the front end and pivoted thereon to rock vertically, said idler at the bottom thereof being at an elevation to position said traction chain to run on the ground substantially in alinement with said runner.



1,542,626. BITUMINOUS EMULSION. HUGH ALAN MACKAY, London, England, assignor to Asphalt Cold Mix Limited, London, England. Filed Apr. 11, 1923. Serial No. 631,471. 17 Claims. (Cl. 134—1.)

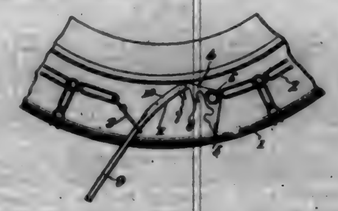
4. A process for producing an aqueous bituminous emulsion, which consists in melting bitumen and adding thereto with agitation first a proportion of a higher fatty acid in the region of 2½–5% by weight on the bitumen, and then a dilute solution of alkali at a temperature of about 215°-225° F., the heating and agitation being maintained until emulsification has taken place.

14. A bituminous emulsion comprising bitumen, water, and a proportion of fatty acid in the region of 2½%–5% by weight on the bitumen in the form of an alkali soap, the whole being an intimate admixture which is liquid in the cold and pours readily.



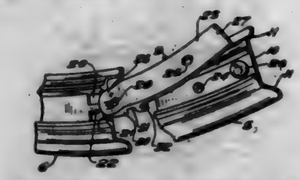
1,542,627. COAL WASHER AND SEPARATOR. WILLIAM F. MARTIN, Harrisburg, Pa. Filed Jan. 10, 1925. Serial No. 3,461. 3 Claims. (Cl. 82—56.)

1. A device of the class described comprising an inclined frame having parallel side walls, an inclined screen substantially co-extensive with said frame and secured thereto below the upper edges of said side walls, a second relatively small frame over said screen inclined in the opposite direction and having at least its lower portion received between said side walls, said walls and the side members of said second frame having transversely alined openings, a rod passing through said openings and constituting a pivot about which the second frame may be tilted, a cross bar upon which the upper end of said second frame rests, the ends of said cross bar resting upon the upper edges of the aforesaid side



walls and being adapted to be slid longitudinally thereof to support the second frame at different inclinations, means for normally securing said cross bar against sliding on said side walls, and a relatively coarse screen secured to said second frame and having a flexible lower end extending beyond the same onto the first named screen.

1,542,628. AUTOMATIC THUMBER. JOHN MASON and HERMAN MUELLER, Chicago, Ill. Filed Oct. 27, 1924. Serial No. 746,166. 1 Claim. (Cl. 242—84.5.)

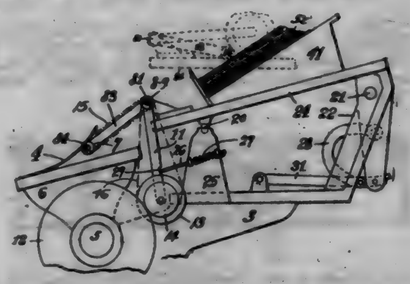


In a reel brake, the combination with a fishing rod and a reel mounted thereon, of a resilient shank provided at one extremity with a brake element for bearing contact with the coiled portion of a fishing line carried upon the reel and at the remote extremity with a return bend provided at the end of the bent back portion with a resilient clip for frictional sliding engagement with the fishing rod.

1,542,629. TIRE-CHAIN TOOL. MARK HERBE MARSUBER, Cheyenne, Wyo. Filed May 4, 1923. Serial No. 636,603. 3 Claims. (Cl. 254—78.)

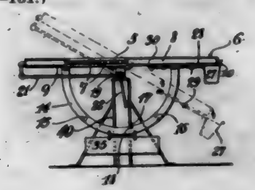
3. A non-skid tire chain applying tool formed of a bar having a shank adapted to be grasped by the hand and having a hook engaging element at its inner end for engagement with the hook of a non-skid chain, and the bar having its inner end portion disposed at a substantial angle to the shank and connected to the shank by a curved portion bowed toward the portion of the chain it engages and the concave surface of which is adapted to engage and guide a link of a chain into engagement with the hook as the bar is moved in the chain tightening direction.

1,542,630. COLLAPSIBLE TIRE RIM. JAQUELIN M. MEREDITH, Norfolk, Va., assignor of one-third to Harry C. Inman, Berwyn, Md., and one-third to Temple A. Nuckols, Norfolk, Va. Filed July 10, 1924. Serial No. 725,281. 5 Claims. (Cl. 301—33.)



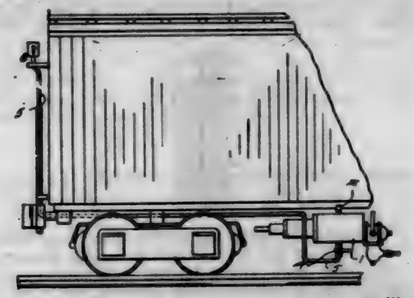
1. A collapsible tire rim composed of a number of segments having joints between adjacent ends, the ends of one segment being provided with a projecting tongue having an opening therethrough and an under transverse seat recess in rear of said tongue, and the end of the adjacent segment having a transverse slot with a longitudinal projection extending from the inner side wall thereof and an end cross bar to respectively and separably engage the opening in the said tongue and the said seat recess so as to form a double lock when the segments are normally positioned.

1542,631. SPARK PLUG. LEWIS MORRISON and THOMAS L. MORRISON, East Leavenworth, Mo. Filed July 13, 1923. Serial No. 651,314. 2 Claims. (Cl. 123—169.)



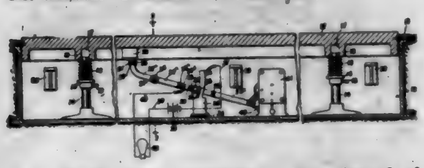
1. A spark plug comprising a body shell, a protecting cup at the lower end of the body shell, said protecting cup and body shell provided with registering recesses forming a slot, at their engaging portions, and a locking strip inserted through said recesses, the ends of said locking strip being bent back and engaging the outer surfaces of the body shell and cup.

1,542,632. PRINTING PRESS. LEWIS E. MORRISON, Newark, N. J., assignor to Klymax Feeder Company, a Corporation of New Jersey. Filed Aug. 14, 1924. Serial No. 731,945. 5 Claims. (Cl. 101—287.)



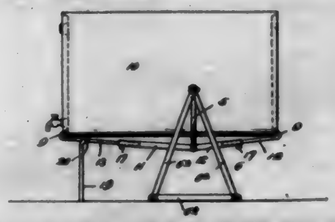
1. The combination of a press, a rotatable disk thereon, paper transferring means, a shaft in the same, a double pulley carried on said transferring means, a belt for driving said shaft from one of said pulleys, and means pivoted on said transferring means and in frictional driving contact with the said disk for driving the other of the said double pulley.

1,542,633. WORKTABLE FOR LITHOPRINTING. KNUD MUNCK, New York, N. Y., assignor to New York Blue Print Paper Co., Inc., a Corporation of New York. Filed Dec. 9, 1924. Serial No. 754,719. 2 Claims. (Cl. 101—131.)



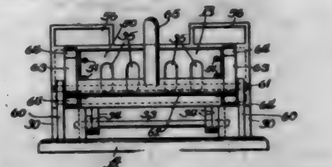
1. The combination of a stone table adapted to receive hot gelatine for the purpose set forth, means for tilting said stone table to cause the surplus gelatine to run off therefrom, a receptacle for said surplus gelatine automatically operable into receiving position when the said table is tilted, supporting means for said table and means for constantly cooling the said stone table to cause the gelatine to form a film thereon.

1,542,634. BRAKE RELEASE. MARION A. NYE, Erie, Pa. Filed Jan. 2, 1923. Serial No. 610,370. 1 Claim. (Cl. 303—70.)



In combination with the plug opening of an auxiliary reservoir of an air brake system, an attachment consisting of a normally open cut-off valve applied to said opening, a release pipe extending from said valve, and said release pipe extending upwardly and adjacent its upper end having a release valve, said valve constituting the sole valve in said pipe whereby the pipe intermediate said valves is unrestricted.

1,542,635. CIRCUIT CLOSER. CARL JOHANNIS NYMAN, Winsted, Conn., assignors of one-half to Ralph W. Allen, Winsted, Conn., and one-half to Arthur B. Wellman, Torrington, Conn. Filed Apr. 7, 1923. Serial No. 630,672. 3 Claims. (Cl. 200—33.)



1. A circuit closer, comprising a lever formed of a plurality of insulated sections and pivoted adjacent one end, a sliding and spring pressed roller mounted in the intermediate section of the lever and arranged at one side thereof, and a fixed contact projecting upwardly at the side of the lever on which the roller is located and with which the said roller engages when the lever is swung from normal position, said fixed contact having on its lower part an insulating block with which the contact roller engages when the lever is in normal position.

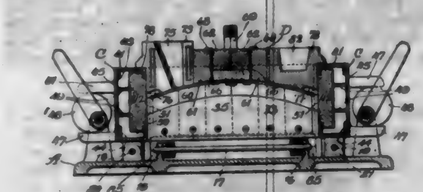
1,542,636. BARREL SUPPORT. ALFRED OLSON, Clark, S. Dak. Filed Dec. 26, 1923. Serial No. 682,775. 1 Claim. (Cl. 248—52.)

A barrel stand comprising a pair of substantially triangular uprights disposed in transverse spaced parallelism, connecting members between the bottoms of said uprights, an arcuate cradle having its opposite ends pivoted to the upper ends of said uprights, longitudinally extensible barrel engaging devices extending in opposite directions from the center of said cradle, one of said devices being of a length greater than the remaining one to dispose the cradle at a point slightly beyond the transverse center of the barrel, and a depending prop pivoted at its upper end to the long barrel engaging device inward of the free end of the latter.

1,542,637. CASTING MOLD. CLIFTON D. PETTIS, New York, N. Y. Filed May 7, 1923. Serial No. 637,165. 34 Claims. (Cl. 22—126.)

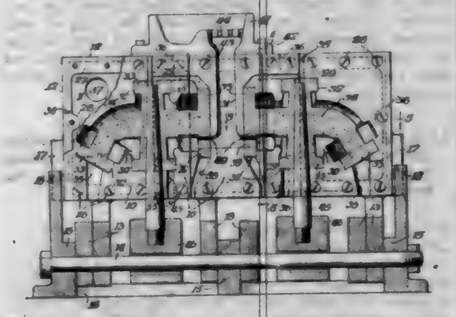
1. A casting mold comprising a bottom section, relatively movable side sections, and a metal plate adapted to be supported by certain of said sections and to form with said sections a molding receptacle when said sections are in closed position.

1,542,638. CASTING MOLD. CLIFTON D. PETTIS, New York, N. Y. Filed May 12, 1923. Serial No. 638,638. 17 Claims. (Cl. 22—130.)



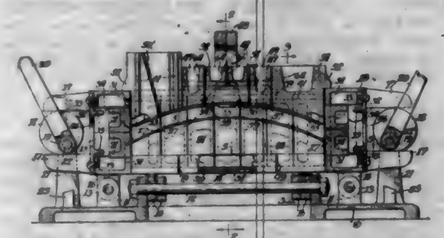
1. A multiple casting mold, comprising a plurality of bodily removable self-supporting repetition molding sections adapted to be assembled to form a plurality of permanent molding receptacles divided transversely by the sections, a flask holding said sections in predetermined assembled relationship to form such a plurality of molding receptacles, and a preformed self-supporting pouring gate cooperating with all of said receptacles.

1,542,639. CASTING MOLD. CLIFTON D. PETTIS, New York, N. Y. Filed Apr. 11, 1924. Serial No. 706,778. 34 Claims. (Cl. 22—99.)



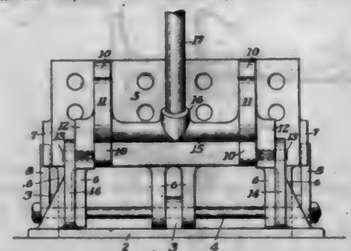
1. A mold for making castings, comprising an openable multi-part drag having a molding cavity therein formed

partially by each of the parts but open at the top, a closure for said cavity forming a continuous span be-



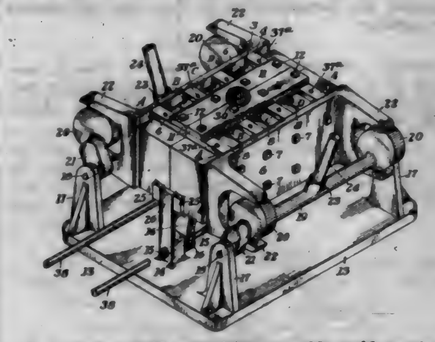
tween the parts of the drag, and means on said drag for clamping said closure in position by the closing of the drag.

1,542,640. PERMANENT CASTING MOLD. CLIFTON D. PETTIS, New York, N. Y. Filed Nov. 8, 1924. Serial No. 747,481. 36 Claims. (Cl. 22—152.)



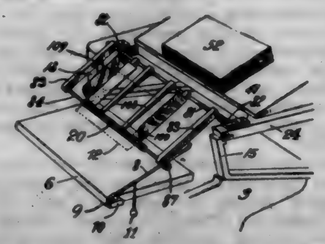
1. A permanent mold for iron and like castings comprising two hollow metal members having abutting inner walls provided with matrix portions of substantially uniform thickness spaced from the outer walls thereof, said hollow members having openings in their outer walls for the circulation of air therethrough and narrow slits dividing the inner walls thereof into separate sections and communicating with the matrix, substantially as described.

1,542,641. PERMANENT CASTING MOLD. CLIFTON D. PETTIS, New York, N. Y. Filed Nov. 28, 1924. Serial No. 752,547. 25 Claims. (Cl. 22—116.)



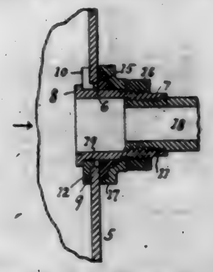
1. In a permanent mold for castings, mold members movable to and from closed position and each comprising a box-like metal frame or receptacle and a series of hollow metal blocks arranged side by side therein and each comprising side flanges and an inner wall forming a portion of the mold cavity and a portion of the parting surface of the mold member, said frame having means engaging a wall of said blocks, and a removable plate provided with means engaging the flanges of the blocks to removably hold the latter in position, substantially as described.

1,542,642. MOLD. CLIFTON D. PETTIS, New York, N. Y. Original application filed Nov. 8, 1924, Serial No. 747,481. Divided and this application filed Apr. 1, 1925. Serial No. 19,811. 11 Claims. (Cl. 22—92.)



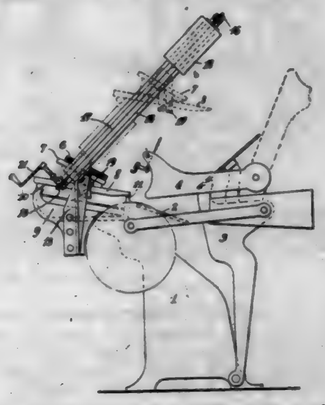
6. In a permanent casting mold, the combination of a base, a plurality of mold members pivotally mounted on said base and having outwardly projecting lugs, rock arms on said base, and eccentric cams on said arms engaging said lugs for opening and closing said members, the pivotal axes of said rock arms lying outside the peripheries of said cams, substantially as described.

1,542,643. MOLD AND METHOD OF MOLDING. CLIFTON D. PETTIS, New York, N. Y. Filed Apr. 10, 1925. Serial No. 22,180. 8 Claims. (Cl. 22—177.)



8. A casting mold comprising openable mold members, each comprising a plurality of sections, and a fluid supply connection to each of said sections, substantially as described.

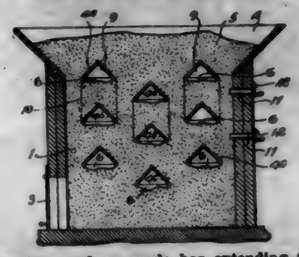
1,542,644. PAPER-TRANSFERRING MECHANISM. S. HAINES PLUM, 2d, Madison, and PERCY L. SIBOLE, Newark, N. J., assignors to Klymax Feeder Company, a Corporation of New Jersey. Filed Aug. 30, 1924. Serial No. 735,060. 6 Claims. (Cl. 101—287.)



1. The combination of a press having a platen, paper transferring means, a shaft in the latter over which shaft and in contact with which the paper passes onto the platen from the said transferring means and means on the platen for operating the said shaft.

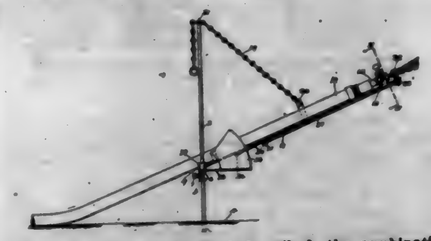
1,542,645. PIPE FITTING. HERMAN SAUCKE, New York, N. Y. Filed June 16, 1923. Serial No. 645,761. 4 Claims. (Cl. 285—50.)

4. In a pipe fitting the combination with a receptacle inaccessible from the exterior provided with an aperture, of a flanged nipple having a threaded stem projecting from the aperture the flange being of smaller diameter than the aperture, a notched washer mounted on the stem between the flange and inner portion of the receptacle adjacent the aperture to prevent withdrawal of the nipple, said washer having a hub to coact with the aperture, a packing arranged on the outer portion of the receptacle opposite the washer, a cap to position the packing against the wall of the receptacle, and a nut engaging the threaded stem to force the cap against the packing.



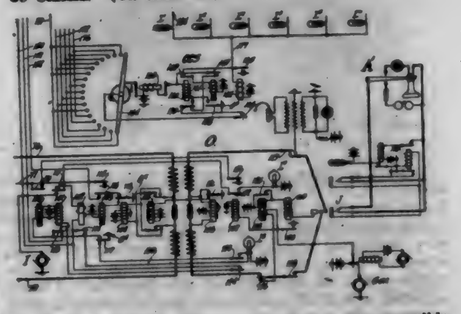
1,542,646. PRINTING PRESS. PERCY L. SIBOLE, Newark, N. J., assignor to Klymax Feeder Company, a Corporation of New Jersey. Filed Dec. 18, 1923. Serial No. 681,315. 2 Claims. (Cl. 271—61.)

1. The combination with a printing press, of a paper feeding device therefor, mechanism for moving said device into and out of operative relation with the press comprising upwardly extending guiding means secured to the press, a conveyor mounted in said guiding means, means on said conveyor engaging said feeding device for the purpose aforesaid and a handle for operating the conveyor.



1,542,647. CALCINING METHOD AND APPARATUS. CHARLES F. SPARKS, St. Louis, Mo. Filed June 12, 1922. Serial No. 567,855. 2 Claims. (Cl. 263—30.)

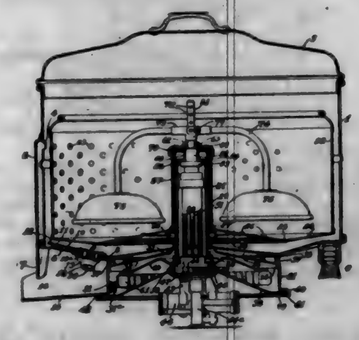
1. In a calcining apparatus, the combination of a calcining chamber having a lower outlet for withdrawing the calcined material, a transversely disposed bar extending through the chamber and presenting a channel on its underside to receive the heating medium at a relatively high temperature, and enable the same to come in direct contact with the material within the calcining chamber, a second transversely disposed bar at a higher level than the lower bar and presenting a channel on its underside, means for connecting the two bars so as to enable the heating medium to pass from the channel of the lower bar into the channel of



the upper bar, and an angle bar extending transversely through the chamber below said first named bar and having a channel on its underside, the ends of said channel extending through the walls of the chamber and enabling a cooling medium to pass through the same and come in direct contact with the material below the bar.

1,542,648. LAWN SPRINKLER. EDWIN E. THOMAS, Portland, Oreg., assignor of one-half to W. C. Alvord, Portland, Oreg. Filed July 30, 1919. Serial No. 314,232. 10 Claims. (Cl. 299—71.)

6. In a device of the kind described, the combination with a bifurcated supporting frame, a vibratory hose-carrier-arm carried between the legs thereof, and automatic means for vibrating said arm, of means for pendulously supporting said arm on said frame



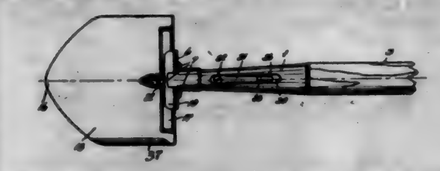
1,542,649. MULTIOFFICE TELEPHONE SYSTEM. BERNARD D. WILLIS, Oak Park, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed May 3, 1921. Serial No. 466,446. 39 Claims. (Cl. 179—27.)

1. In a telephone system, a register set accessible to a calling automatic subscriber for registering the digits in a called telephone number, an indicating device

for displaying the registered number to an operator, means for causing all such digits as have been registered to be displayed after a definite time interval has elapsed, and means for displaying the complete number at once in case all the digits thereof are registered before the expiration of the time interval.

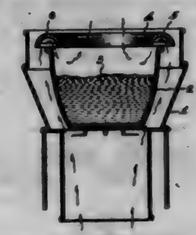
1,542,650. WASHING MACHINE. FRANK A. ADAMS, Rochester, N. Y., assignor to George F. Merrell, Incorporated, Rochester, N. Y., a Corporation of New York. Filed May 27, 1922. Serial No. 564,234. 17 Claims. (Cl. 68—19.)

1. The combination of a receptacle, a motor having a cylinder extending upward therein from the bottom, a piston rod extending from the cylinder, a perforated basket within the receptacle adapted to rotate about said cylinder, an agitator carried by the piston rod arranged to operate within the basket, a motor having a wheel for rotating the basket, a conduit for conducting fluid to the motors, and valve mechanism for controlling the supply of both motors.



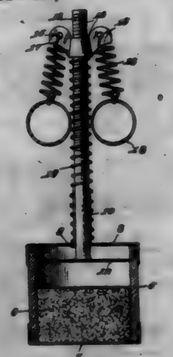
1,542,651. ICE CHUTE. JACK ALESSANDRO, Waco, Tex. Filed Aug. 16, 1924. Serial No. 732,479. 8 Claims. (Cl. 193—40.)

1. In an ice chute, an inclined platform, means for holding a block of ice on the platform against sliding movement, a casing embracing the platform and having an opening permitting discharge of the ice, a closure for said opening, and means for operatively connecting the closure with the holding means whereby when the closure is open the holding means will be released to permit the block of ice to slide downwardly on the platform and outwardly through the opening.



1,542,652. COMBINATION TOOL. CHARLES S. ANDERSON, Port Angeles, Wash., assignor of one-half to Theodore F. Rixon, Beaver, Wash. Filed Oct. 2, 1923. Serial No. 666,068. 2 Claims. (Cl. 294—51.)

1. A convertible tool, consisting in a socket, a handle in said socket formed with a screw-threaded aperture, a channeled receiver rigidly secured on said socket, a blade having a square shoulder on its upper edge adapted to seat in said receiver in two relatively angular positions ninety degrees apart, and a threaded rod pivotally



connected to said shoulder and engageable by said handle to seat said blade-shoulder in said receiver under tension in either of its two said positions.

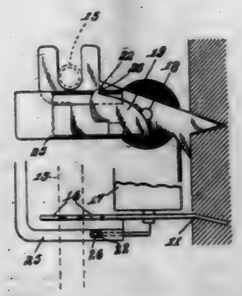
1,542,653. ATTACHMENT FOR PLUMBERS' POTS. FERDINAND ARMBRUST, Jamestown, R. I. Filed Jan. 25, 1924. Serial No. 688,545. 3 Claims. (Cl. 126—343.5.)

1. An attachment for plumbers' pots, which includes a baffle ring adapted to be disposed on the top edge of a pot and having its lower surface concave to deflect the heat to which the pot is subjected downwardly on the metal within the pot, the outer edge of the said ring extending over the outer edge of the pot, and the inner edge of said ring extending over the inner edge of the pot.

1,542,654. FILLING CUP. WILLIAM ARMOUR, Edinburg, Ind. Filed July 21, 1924. Serial No. 727,529. 2 Claims. (Cl. 91—43.)

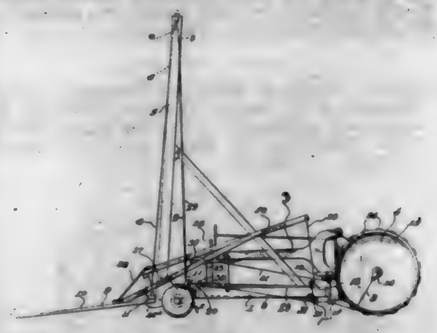
1. In a device of the character described comprising an open ended casing adapted to be brought into contact with a surface to be treated and to receive a wood filler element therein, a cap mounted upon the upper end thereof, a spring pressed plunger reciprocable through the cap, a follower carried thereby and adapted to be brought into engagement with the filler to exert pressure thereon, an adjustable element on the plunger, and finger engaging contractile elements carried by the adjustable element.

1,542,655. STEAM HUMIDIFIER. ELWOOD B. AYERS, Philadelphia, Pa., assignor to Proctor & Schwartz, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 14, 1923. Serial No. 657,458. 1 Claim. (Cl. 299—58.)



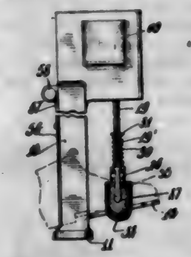
The combination in a humidifier, of two standards, one of greater height than the other, each standard having an integral cylindrical projection; two inclined drums, one drum being located within the other, each drum extending into the cylindrical projections of the standards; and a steam pipe extending through the inner drum and coupled to the standards, the lower standard having a waste passage formed therein and communicating with the outer drum, said outer drum being perforated at the upper side, the steam pipe having a series of perforations at the under side, the inner drum being perforated at the upper side and at the under side.

1,542,656. MARLINSPIKE. EDWARD BALOD, New York, N. Y. Filed Oct. 25, 1924. Serial No. 745,941. 4 Claims. (Cl. 117—6.)



1. A marlinspike including a tapered shank having a longitudinally extending groove therein for forming a space into which a strand may be inserted to extend said strand between other adjacent strands when making a splice, said shank having a head formed at one end provided with a notch in one end thereof in which a spliced strand may be wedged, the other end of the head being capable of engaging a cable and acting as a fulcrum for drawing the wedged strand taut.

1,542,657. SHADE BRACKET. CASSIUS A. BARNES, Los Angeles, Calif. Filed July 14, 1924. Serial No. 725,991. 4 Claims. (Cl. 156—24.)

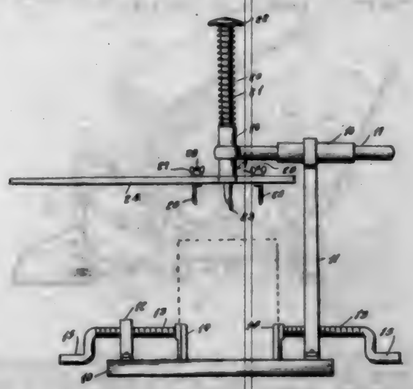


1. A bracket of the character described comprising a body portion having an opening therein, a U-shaped member projecting upwardly from the upper edge of said body and at one corner thereof, and an upturned extension projecting from the lower edge of the body and arranged at one side and in spaced parallel relation with said body for the purpose specified.

1,542,658. HAYSTACKER. HILDRED C. BUCKWITH, Linton, Ind. Filed Sept. 24, 1921. Serial No. 502,900. 7 Claims. (Cl. 214—118.)

1. In a haying tool, propelling means including traction wheels, a hay receiver and carrier, ropes connected to said receiver and carrier, means on said wheels for engaging said ropes and winding them about the wheels to raise said carrier into hay delivering position, and means for normally maintaining said ropes out of engagement with said last named means.

1,542,659. SHOE-SHINING MACHINE. PIETRO BENINCASA, New York, N. Y., assignor of thirty per cent to Antonio Tedesco, Brooklyn, N. Y. Filed July 14, 1924. Serial No. 725,807. 6 Claims. (Cl. 15—36.)



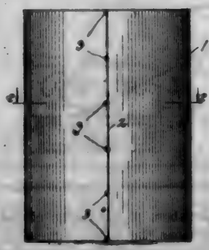
1. A shoe shining machine comprising a frame, a motor supported thereon, a flexible shaft attached at its upper end to said motor, and a brush on the lower end of the said shaft, said brush being attached to the shaft by a universal joint connection, and a resilient device preventing free angular adjustment of the brush with respect to the shaft.

1,542,660. RAILWAY TIE AND RAIL-FASTENING MEANS. KYLE E. BOYD, Lindside, W. Va. Filed June 7, 1924. Serial No. 718,565. 5 Claims. (Cl. 238—243.)

1. A rail fastening means including a clamp having the body portion provided with an elongated slot terminating at one end in a lateral notch, means for securing the clamp to a tie passing through said slot, and a second securing means engaging the clamp and tie beyond said slot.

1,542,661. CAN OPENER. JOE B. BRADSHAW, Stanford, Ky. Filed Apr. 4, 1924. Serial No. 704,197. 1 Claim. (Cl. 30—3.)

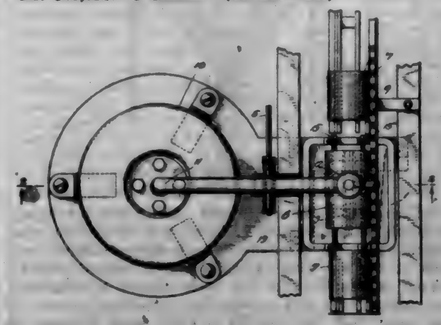
A device of the class described comprising a supporting arm, a plunger slidably mounted by said arm, a spring coacting with said plunger and said arm to normally maintain the plunger elevated, a handle bar carried by the plunger on the side of the arm opposite to the spring, a centering point on the plunger extending below the handle bar, and cutter means extending from the handle bar and below the same said centering means being integral with the plunger, and said plunger adjacent the centering means having screw threads engaging the handle bar whereby the latter is secured to the plunger.



1,542,662. CAN BODY AND METHOD FOR PRODUCING SAME. JULIUS BRENSINGER, Fairfield, Conn., assignor to The Max Ams Machine Company, Bridgeport, Conn., a Corporation of New York. Continuation of application Serial No. 448,827, filed Mar. 1, 1921. This application filed Jan. 22, 1923. Serial No. 614,337. 4 Claims. (Cl. 113—116.)

1. The method of producing a can body, which consists in interlocking opposed edges of a blank by means of a side seam extending the major central portion of the length of the body, and in overlapping the opposed edges of the blank at the end portions thereof, and in permanently securing the overlapped end portions together by electrically welding the same.

2. A can body having a side seam extending the major central portion of its length and unseamed portions at its ends formed by overlapping edges, the unseamed overlapped edges being permanently connected by electric welds at the ends of the body.

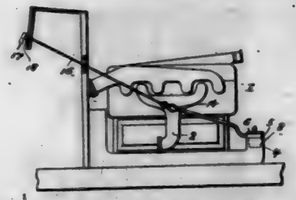


1,542,663. CAN BODY AND METHOD OF PRODUCING SAME. JULIUS BRENSINGER, Fairfield, Conn., assignor to The Max Ams Machine Company, Bridgeport, Conn., a Corporation of New York. Filed June 18, 1922. Serial No. 568,070. 4 Claims. (Cl. 113—112.)

1. As a new article of manufacture, a can body formed from a blank having overlapping ends constituting a lap seam extending throughout the length of the can body, said overlapping ends permanently secured together by electric welds at a plurality of points throughout the length of the can body and said lap seam covered by a body of solder throughout its length.

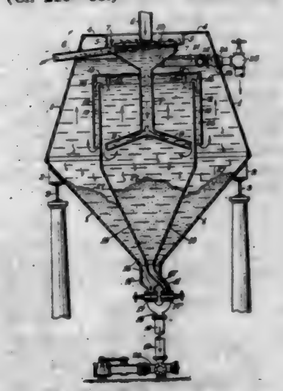
3. The method of producing a can body, comprising bending a blank into shape with the ends of the blank overlapping to form a lap seam longitudinally of the body, then permanently securing said overlapping ends together by welding them electrically, and then covering the welded lap seam throughout its length with solder.

1,542,664. METHOD AND MEANS FOR SOLDERING THE SEAMS OF METALLIC BODIES. JULIUS BRENSINGER, Fairfield, Conn., assignor to The Max Ams Machine Company, Bridgeport, Conn., a Corporation of New York. Filed Mar. 22, 1922. Serial No. 545,718. 8 Claims. (Cl. 219—12.)



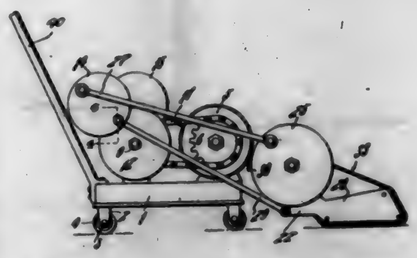
1. The method of soldering the seam of a metallic body which consists in applying molten solder to said seam and at the same time subjecting the seam to the heating action of an electric current.

1,542,665. FUEL ECONOMIZER. GEORGE B. CALHOUN, LEWIS WHITE, and LEMON HAYES, West Frankfort, Ill.; said Lemon Hayes and said George B. Calhoun assignors to Arthur Williams and Bert Peterson, both of West Frankfort, Ill. Filed July 28, 1924. Serial No. 727,776. 1 Claim. (Cl. 123—119.)



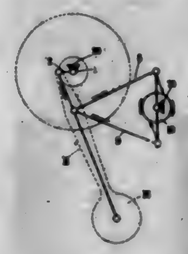
In a device for the purpose set forth and in combination with an internal combustion engine including the intake manifold and the breather pipe therefor, of a means for conducting tthe vapor from oil in the breather pipe to the intake manifold at the juncture of the straight and angular branches thereof comprising a tubu-

lar member having an outer shouldered portion received and frictionally engaging with the breather pipe, a pivoted plate providing a closure for the tubular member, spring means normally influencing the plate toward the tubular member, means for latching the plate



on the tubular member, a normally closed spring influenced air inlet pipe for the tubular member, a vapor conducting pipe between the tubular member and the manifold, a valve controlling the passage through said pipe and an operating rod for the valve.

1,542,666. CONTINUOUS CLARIFYING APPARATUS. FRANK J. CASABLANCA and MANUEL F. GALDO, Cardenas, Cuba, assignors to The Continuous Clarifier and Settler Co., Habana, Cuba, a Corporation of Cuba. Filed Nov. 27, 1923. Serial No. 677,343. 1 Claim. (Cl. 210—58.)

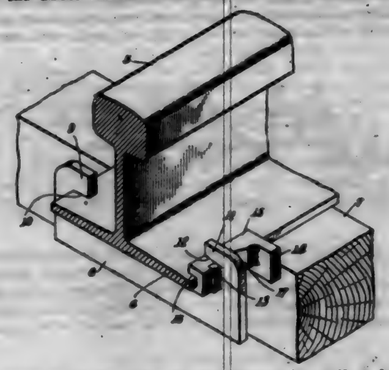


An apparatus for continuous clarification of liquids comprising a large diameter outer tank having a conical bottom and a flat cover plate; an inside cylindrical tank, open at the top, also having a conical bottom, and arranged concentric with the outer tank; a cylindrical bell, placed over and outside the cylindrical portion of the inside tank and leaving a short space between its top and the top edge of the tank, and also leaving a narrow circular space between the tank and the bell sides; a central down-take inlet tube passing through the cover plate of the outside tank and also through the bell and discharging into the inner tank, having a funnel-shaped upper part and smaller branched tubes in its lower end; a circular trough around the upper part of the funnel, to receive foam overflowing from said funnel and provided with a sloping bottom and with a discharge tube; a valve controlled nozzle with two passages, located at the extreme lower end of the conical bottoms, one communicationg with the bottom of the inner tank and the other communicating with the bottom of the outer tank, to discharge the solid matter accumulated in the conical bottom of each tank; an outlet located horizontally inside the outer tank near the top and provided with a series of openings at the same level for outlet of the clear liquid, and a valve to control the same.

1,542,667. FLOOR-SURFACING MACHINE. AXEL B. CHRISTENSEN and ANDREAS B. ANDREASSEN, Port Washington, N. Y. Filed Oct. 27, 1924. Serial No. 746,127. 2 Claims. (Cl. 51—175.)

1. A machine of the character described comprising a wheel platform, a pair of spaced brackets rising from the platform, bearings formed on the upper ends of said brackets, a shaft journaled in the brackets, a disk wheel keyed to each end of said shaft, an eccentrically mounted wheel secured to each of the disk wheels and extending therefrom in substantially opposite directions, a floor surfacing unit arranged in advance of the platform, and connecting rods securing said floor surfacing unit to the eccentrically mounted wheels in a manner whereby the floor surfacing unit will be caused to reciprocate upon rotation of the eccentrically mounted wheels.

1,542,668. METHOD AND MEANS FOR TRANSMITTING POWER. GEORGE CONSTANTINESCO, Weybridge, England. Filed June 26, 1922. Serial No. 570,986. 5 Claims. (Cl. 74—58.)



2. An automatic variable speed gear for transmitting power to a driven shaft which has to be rotated against a variable resisting torque, comprising in combination a driving crank, a freely supported mass capable of oscillation, a pair of unidirectional driving devices adapted to drive a driven shaft alternately in the same direction and means for splitting the motion of said driving crank between said oscillating mass and said unidirectional driving devices.

1,542,669. BOLTLESS RAIL ANCHOR. ADONIRAM J. COOK, Westerlo, N. Y., assignor to The P. & M. Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 1, 1924. Serial No. 753,209. 2 Claims. (Cl. 238—320.)

1. An anti-creeping device for rails consisting of a metallic plate and a wedge, said plate having lugs or jaws at the ends, a seat for a wedge, said seat formed

by cutting the metal of the plate and bending outwardly the metal between the cuts, and an edge to engage the under surface of a rail, and said wedge having

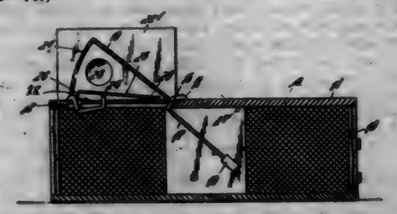
a groove to fit the edge of the flange of a rail, a head, and a notch adapted to be engaged by the metal of the plate which is bent outwardly.

1,542,670. COMBINED ROCK PICKER AND HARROW. BAPTISTE COTE, St. Ignatius, Mont. Filed Aug. 26, 1923. Serial No. 659,784. 3 Claims. (Cl. 55—17.)

1. A machine of the character specified including gathering teeth, a reel disposed forwardly of and above the gathering teeth and adapted to coact therewith, and means by which the gathering teeth and reel may be adjusted with respect to each other and to the ground.

2. In a machine of the character specified, pivoted gathering teeth, a bar disposed beneath these teeth, means for adjusting the bar to raise or lower the teeth, a reel disposed forwardly of and above the gathering teeth and adapted to coact therewith, and means for raising and lowering said reel with respect to said teeth and the ground.

1,542,671. RUNNING SHOE. BURNIE J. CRAIG, Cleveland, Ohio. Filed Apr. 18, 1922. Serial No. 555,080. 4 Claims. (Cl. 36—50.)



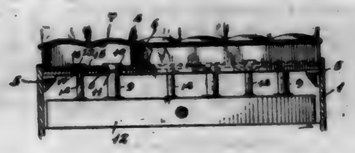
1. A running shoe comprising a flexible light upper having a light sole secured thereon, a rigid gripping spike on said sole and projecting therefrom, said spike having a flat head, means for securing the head of the spike to the sole, the shank of said spike being non-circular in cross section and having distinctly defined front and back portions, the front of the spike being more or less sharp to part the surface of the ground as the shoe strikes it and the back of the spike having no portion projecting rearwardly beyond the side edges of the spike.

1,542,672. WATCH SUPPORT. GEORGE B. CRAPO, Marion, Mass. Filed May 15, 1923. Serial No. 639,174. 4 Claims. (Cl. 211—24.)

1. A folding watch support, comprising an annular base, a pair of converging arms hinged to the base, a watch receiving hook formed on the upper ends of said converging arms, a bracing member extending between the converging arms near the base, and a spring arm carried by the base for engaging said bracing member to retain the converging arms in an upright position or folded on the base.

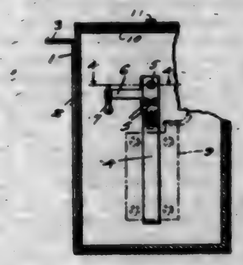
1,542,673. TRAP. JOSEPH L. DALE, Wise, Va. Filed Feb. 9, 1924. Serial No. 691,777. 2 Claims. (Cl. 43—70.)

1. In a trap of the character described, a receptacle having an opening in the top thereof, a trapping compartment mounted for pivotal movement through said opening, said compartment being open at both ends, a bait holder arranged at one side of the receptacle and closing the adjacent end of the compartment, means including a sliding bolt normally projecting through said compartment and engaging said receptacle to hold the compartment elevated above the top thereof, said means being adapted to be actuated by the animal upon entering the compartment to release the latter, whereby said compartment gravitates to a lowered position within the receptacle, a shaft supporting the compartment for pivotal movement, a weight on one end of the shaft for automatically returning the compartment to its normal position after the animal has passed from the compartment into the receptacle and means for limiting the pivotal movement of said compartment.



1,542,674. COMBINED PILLOW AND CHEST SUPPORTER. ALICE O. DARLING, Tilton, N. H. Filed Jan. 11, 1921. Serial No. 436,500. 2 Claims. (Cl. 5—338.)

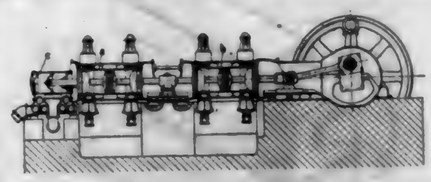
2. A device of the character described comprising a pillow to receive the forehead of a reclining person, a support for the chest of the person, and a flexible strap connecting the lower edges of the pillow and support, the adjacent edges of the pillow and support being normally spaced apart to form a breathing opening to receive the face of the person but adapted to be folded



one upon the other, the pillow and support being of such rigidity that the face of a person lying face downward upon the pillow and support will be supported a substantial distance above the connecting strap to permit free breathing, the upper surface of the pillow being flat and the upper surface of the support being downwardly inclined from that edge adjacent the pillow, the upper edge of the support adjacent the pillow being on substantially the same plane as the upper surface of the pillow when the pillow and support are in their normally spaced position.

1,542,675. SEAT. LUTHER B. DEMUTH, New Philadelphia, Ohio. Filed Feb. 27, 1924. Serial No. 695,509. 4 Claims. (Cl. 155—179.)

1. In a device of the character described, an inflatable body, a conduit for connecting the interior of the inflatable body with a source of pressure, an outwardly opening normally closed check valve controlling said conduit and normally preventing any flow through said conduit into said inflatable body, and an additional conduit continuously connecting the interior of the inflatable body with said source of pressure fluid, said second named conduit having a bore of less area in cross section than the bore of the first named conduit.

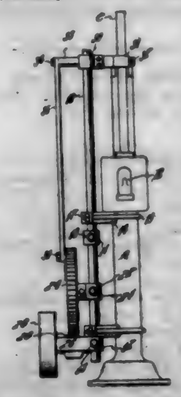


1,542,676. BATTERY CASE. FREDERICK C. DRAKE, JOHN W. HOUGH, HARRY J. IDDINGS, and LEROY D. PIERSON, Mapleton, Iowa. Filed Apr. 26, 1923. Serial No. 634,849. 1 Claim. (Cl. 136—166.)

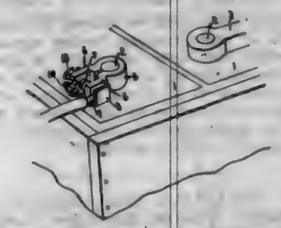
In combination, a case having connectors therein of resilient material fastened at opposite side walls thereof, a battery supported by and within the case, said battery at two sides having plates, conductors disposed completely exteriorly of the battery, said conductors connecting the plates to terminals of the battery, laterally extending terminal arms on the connectors, said arms and the connections of the conductors to the plates being on opposite sides of the zones of contact of the connectors and plates.

1,542,677. TWO-CYLINDER DOUBLE-ACTING FOUR-CYCLE GAS ENGINE. RUDOLF DRAWE, Charlottenburg, Germany, assignor to Ehrhardt & Sehmer Aktiengesellschaft, Saarbrucken, Saargebeit, Germany, a Corporation of Germany. Filed Mar. 9, 1925. Serial No. 14,252. 5 Claims. (Cl. 123—63.)

1. A two-cylinder four-cycle gas engine in which the fuel gas is alternately applied to both sides of the piston and which is arranged for scavenging and charging in such way that the entire air is subjected to pressure and continuously conducted through the cylinder, except that during a part of the suction-stroke the air is throttled so as to enable the gas to be drawn in, characterized by the combination with such type of engine of a reciprocating-piston scavenging pump actuated by the reciprocating piston-rod of the engine, means being provided whereby the scavenging period is prolonged to such an extent that it commences at the beginning of the exhaust stroke and is maintained up to the end of this stroke.

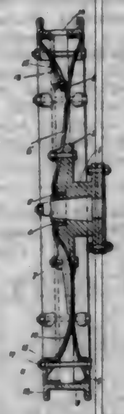


1,542,678. SEWED ARTICLE AND METHOD OF MAKING SAME. WALTER DERIGINAS, Baltimore, Md. Filed Jan. 31, 1924. Serial No. 689,655. 16 Claims. (Cl. 2—247.)



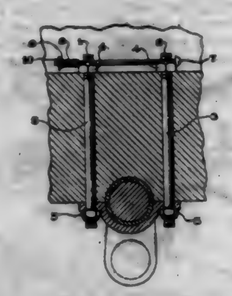
10. In an article of apparel, a pocket patch covering a pocket in said article of apparel, said pocket patch provided with a folded extension at one edge only.

1,542,679. PUMP JACK. THOMAS DUNN, St. Charles, Mo. Filed May 17, 1924. Serial No. 714,118. 1 Claim. (Cl. 74—14.)



In a device of the character described, an upright supporting frame, means for mounting said frame upon a pump casing including plates disposed between the pump casing and the frame and recessed for conforming engagement therewith, clamping plates disposed outwardly of the frame, and coacting with said first named plates, substantially U-shaped bolts, embracingly engaging the pump casing and connected with said clamping plates, and a drive mechanism for the pump roof including a cross head slidable along the frame and connected with the pump rod, a rotary element journaled on the frame, a transmission mechanism for driving the rotary element, a link connection between said rotary element and cross head, and an expansion spring engaging against the cross head and against a stationary part of the pump.

1,542,680. BATTERY TERMINAL CONNECTER. CHARLES M. EBBELING, Cleveland, Ohio. Filed July 17, 1922. Serial No. 575,703. 2 Claims. (Cl. 173—259.)



1. A terminal connecter adapted for use with a storage battery terminal post and comprising a split collar adapted to surround said post and provided with a pair of ears one on each side of the split in said collar and each apertured, a bolt comprising a head arranged to overlie one of said ears and a shank arranged to pass through said apertures and itself transversely apertured adjacent said head to permit insertion of a wire through said shank between said head and the adjacent ear, and a nut arranged to screw-threadedly engage said shank beyond said ears and, in coaction with said bolt, to simultaneously clamp said collar to said post and said wire in position.

1,542,681. WHEEL. ELMER S. EBHARD, Curwensville, Pa. Filed Apr. 25, 1924. Serial No. 708,013. 3 Claims. (Cl. 301—63.)

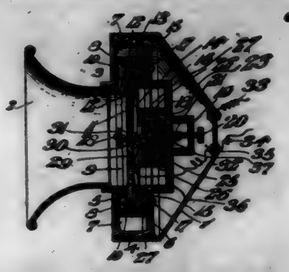
2. A wheel of the class described comprising a hub member formed with a flange having a corrugated outer face, said flange having an annular groove with a curved outer wall adjacent its center, a disc corrugated to fit the corrugations on the flange and having an inwardly curved central part for engaging the groove, bolts connecting the disc with the flange, a rim section carried by the disc, a ring member having its inner edge abutting the ends of the corrugations on the disc, a rim section carried by the ring member and bolts for connecting the disc and ring member together.

1,542,682. BOLT. OWEN EVANS, Binger, Okla. Filed Aug. 12, 1922. Serial No. 581,476. 1 Claim. (Cl. 151—32.)

A pair of bolts for connecting bearings of a motor casing, each of which having oppositely threaded ends and one end of each bolt having oppositely threaded ends and one end of each bolt having an opening therethrough, castellated nuts screwed on the ends of the bolts, a pin passing through the referred to openings in the bolts and received in the castellations of the nuts adjacent thereto, a spring on the pin contacting with one of the nuts and influencing the pin to cause the head thereof to contact with the nut on the opposite bolt, and means holding the spring on the pin.

1,542,683. TRANSPLANTING POT. JAMES M. EVERETT, Lake Wales, Fla., assignor of one-half to Charles M. Hunt, Lake Wales, Fla. Filed Feb. 2, 1924. Serial No. 690,233. 3 Claims. (Cl. 47—37.)

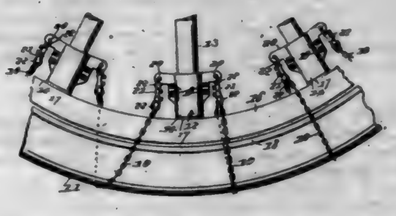
1. A transplanting pot including imperforate side wall sections, the adjacent vertical edges of which are spaced from each other throughout the height of the pot, a hinge connecting the sections at the bottom and means sealing the bottom of the pot.



1,542,684. PROCESS FOR OBTAINING MAGNESIA FROM DOLOMITE. EDGAR EVERHART, Atlanta, Ga. Filed Dec. 29, 1924. Serial No. 758,744. 2 Claims. (Cl. 23—67.)

2. That method for obtaining magnesia from dolomite which consists in first reducing the dolomite to drive off the carbon dioxide, slacking the reduced dolomite, introducing acetic acid to neutralize the lime, separating out the calcium acetate and treating the residual magnesia mass separated from the lime with carbonic acid whereby to dissolve only the magnesia.

1,542,685. TELEPHONE TRANSMITTER. HILBERT L. FALK, New Orleans, La. Filed Sept. 30, 1921. Serial No. 504,445. Renewed Oct. 9, 1924. 18 Claims. (Cl. 179—124.)

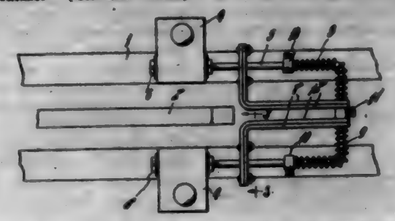


1. In a transmitter, a diaphragm resiliently supported at its outer periphery, a body of silicon granules supported at the rear of said diaphragm, means for exert-

ing pressure upon said body of granules, a front silicon button bearing on the front portion of said granules, a threaded stem projecting from said front button through

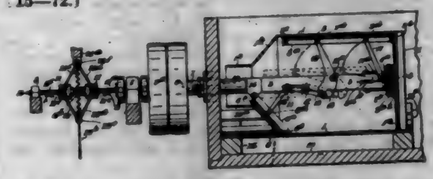
said diaphragm, an adjusting nut on the outer portion of said stem and bearing on said diaphragm, and a nut on said stem in the rear of said diaphragm.

1,542,686. NONSKID-CHAIN ATTACHMENT. CHARLES FATH, Canton, Ohio. Filed Sept. 19, 1922. Serial No. 589,169. 1 Claim. (Cl. 152—14.)



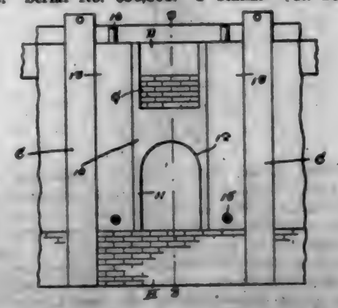
A wheel attachment for retaining chain sections in position upon a tire comprising a pair of clamp members each having an intermediate concaved portion provided at its outer end with an outstanding lip, the concaved portions adapted to receive a spoke between them and the lips adapted to bear against the felly of the wheel when the device is applied, the clamp members being provided at the side edges of the concaved portions with outstanding flanges adapted to receive securing devices, whereby the concaved portions are drawn in close contact with the surface of the spoke, the flanges upon one of the clamp members being provided at their inner ends with outstanding arms disposed at right angles to the longitudinal dimension of the concaved portion and uniformly spaced from the lip, and means provided upon the arms for connection with chain sections.

1,542,687. PLASTERING DEVICE. ABRAHAM FINN, Elizabeth, N. J. Filed Aug. 1, 1924. Serial No. 729,580. 9 Claims. (Cl. 72—128.)



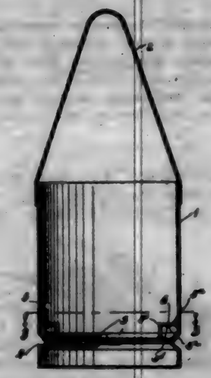
1. A device of the class described comprising a platform, a wall encircling said platform, manually operable means for moving said wall below the surface of said platform, and automatic means for returning said wall to normal position upon the release of said manually operable means.

1,542,688. CHECK. JOSEPH FOURNIER, Somersworth, N. H. Filed Nov. 28, 1924. Serial No. 752,779. 2 Claims. (Cl. 139—164.)



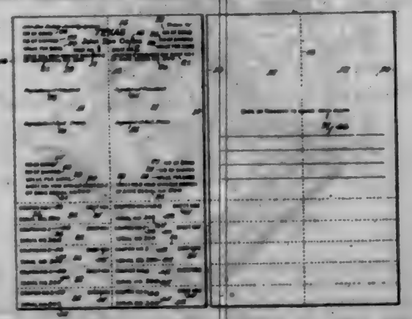
1. A picker stick check comprising a U-shaped member, a pair of angle members having openings therein through which the bight and limbs of the U-shaped member pass, means for holding the angle members in spaced relation so as to permit the picker stick to pass between them and springs on the U-shaped member and engaging the angle members for yieldingly holding the members against outward movement.

1,542,689. APPARATUS FOR CLEANING ARTICLE INTERIORS. WILLIAM FRANKLAND, Rochester, Victoria, Australia, and THOMAS EDMOND MALONEY, Paddington, Sydney, New South Wales, Australia. Filed Nov. 27, 1922. Serial No. 603,596. 3 Claims. (Cl. 15—72.)



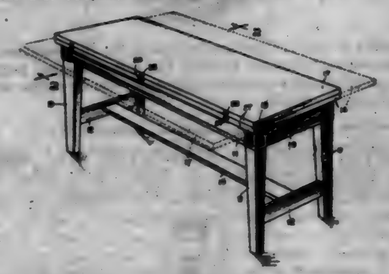
2. In combination, a hollow stem, collapsible brushes carried thereby, means for rotating said stem together with the brushes, a tube extending into said stem, a connection between said tube and certain of the brushes for collapsing and expanding the same on longitudinal movement of the tube, a rod extending through said tube and the stem and slidable relatively to the tube, connections between said rod and the other brushes for collapsing and expanding the same on movement of the rod, the end of the tube extending beyond the driving means and the rod extending beyond the tube, and means for yieldably shifting the outer ends of said tube and rod away from each other.

1,542,690. OPEN-HEARTH-FURNACE DOOR FRAME. ANDREW GANTZ, Youngstown, Ohio. Filed Aug. 11, 1923. Serial No. 656,801. 1 Claim. (Cl. 263—44.)



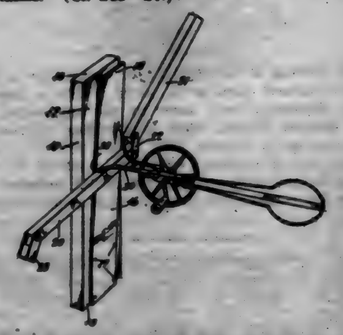
In a furnace structure, a plurality of upright beams, horizontally disposed beams located inwardly of the upright beams, tie rods connecting the upper ends of the upright beams, metallic door members located between the upright beams, brick work surrounding the door members and filling the spaces between the upright beams and extending upwardly to the horizontal beams, and an arch of brick formation extending between the horizontal beams, each door member being formed with an arch shaped opening and provided at its top with upstanding spaced pedestals of less thickness than the body of the door member to define a horizontal legde and to further define an opening between the pedestals, and a movably mounted door for closing the opening.

1,542,691. MILK COOLER AND AERATOR. LEONARD PAUL GEHRKE, Spencer, Wis. Filed Mar. 22, 1923. Serial No. 626,953. 2 Claims. (Cl. 31—4.)



1. A milk cooler and aerator comprising a vessel having an inner rib near its lower end, a valve bottom comprising a plurality of leaves, hinges connecting said leaves to the vessel, said leaves normally engaging and being supported by said rib, said leaves being capable of upward swinging movement in order to open through impact with the milk, and said leaves being perforated.

1,542,692. SAFETY TRANSFERABLE FINANCIAL CERTIFICATE. WALTER H. GENTRY and CARL F. FORTUNE, Abilene, Tex. Filed June 4, 1923. Serial No. 643,234. 4 Claims. (Cl. 283—37.)

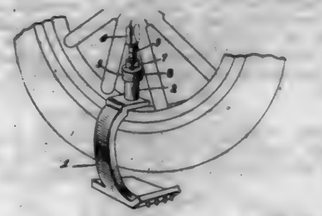


1. A safety transferable financial certificate comprising a rectangular body portion formed of a pair of complemental severable transmitting sections correspondingly numbered and each having one face provided with means to constitute a designation therefor and with the designation of one section different from that of the other section, each of said sections further having said face provided with means to constitute a complete valid certificate when the separated sections are in matched relation and an incomplete invalid certificate when the sections are out of such relation, the said last mentioned means of one section including a designation corresponding to the said designation for the other section, and said body portion having its back provided with indicia having a part thereof extending transversely of one section and the remaining part extending transversely of the other section to indicate for recording below said indicia and transversely of both sections data relating to the transfer of the complete valid certificate.

1,542,693. TABLE. SAMUEL GORDON and NATHAN ECKSTEIN, New York, N. Y. Filed Nov. 15, 1924. Serial No. 750,145. 1 Claim. (Cl. 45—118.)

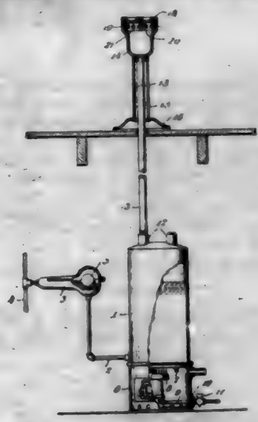
In a table having a pair of longitudinally spaced cross-rails and a pair of longitudinally spaced side-rails forming the sides and ends of a compartment, a bottom closure for said compartment, a top for said compartment consisting of a plurality of superimposed hinged stacked leaves of substantially equal size, one of said leaves being slidably connected to the top of said table whereby it may be slid from normal closed position to permit access to said compartment and to permit of the other of said leaves to be folded down over the said compartment and thereby increase the size of said table.

1,542,694. TOOL HOLDER. MILTON A. GOWING, Portland, Oreg. Filed Jan. 30, 1924. Serial No. 689,516. 2 Claims. (Cl. 248—20.)



1. A tool-holder of the class described consisting in a back-member hingedly connected to a support, a strip connected at one end to said member and separable at its opposite end therefrom to receive a tool-handle therebetween, and a pair of separable gripping-bars for the shank of said tool, one of said bars being secured to said strip and the other bar being hingedly connected to the secured bar.

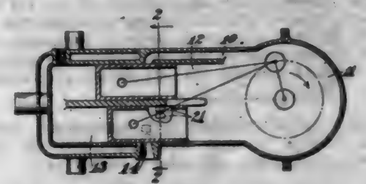
1,542,695. JACK. CHARLES E. GREGORY, Hamilton, N. Dak. Filed May 3, 1923. Serial No. 637,522. 1 Claim. (Cl. 254—94.)



A wheel engaging and raising jack comprising a stand having at its upper end a vertically disposed sleeve, a

head having a pendant threaded shank arranged and movable rectilinearly in said sleeve, and a guide and adjusting nut superposed on the upper end of the sleeve and interiorly threaded and receiving and engaging the

threaded shank and having a portion for the engagement of means employed in turning the nut and also having a pendent portion laterally engaging and turnable with respect to the sleeve.

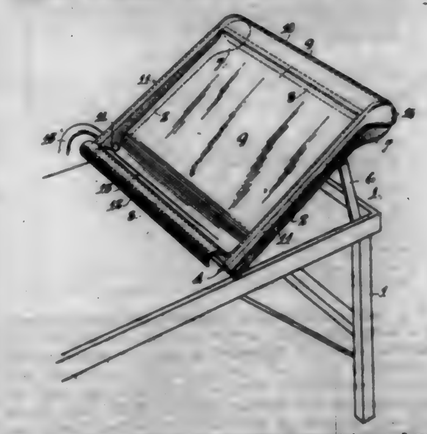


1,542,696. METHOD OF HUMIDIFYING AIR. ROBERT W. HARDIE, Fanwood, N. J. Filed Oct. 8, 1924. Serial No. 742,841. 4 Claims. (Cl. 126—350.)

1. The method of humidifying air, consisting in maintaining a uniform quantity of water within a closed receptacle, vaporizing said water by the application of a heating element thereto while maintaining the temperature of said water between 180° F. and 212° F., passing the vapor into an auxiliary receptacle, muffling the vapor so as to substantially remove its initial pressure, and diffusing the vapor into the atmosphere in restricted quantity.

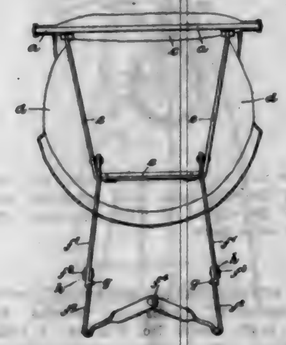
1,542,697. TWO-STROKE-CYCLE ENGINE. LESLIE HAYWOOD HOUNSFIELD, Croydon, England. Filed Jan. 30, 1923. Serial No. 615,801. 6 Claims. (Cl. 123—53.)

6. In a horizontal, four-cylinder two-stroke cycle, internal-combustion engine of the three-port type having crank-case compression with the combustible mixture, the combination of a casing having two compression chambers each constituting a crank-case therein, two pairs of parallel horizontal cylinders arranged side by side within said casing, whereof the one cylinder of one pair is arranged above the other cylinder of the same pair and both cylinders of a pair open at one end into one of said crank-cases, two combustion chambers, one common to each pair of cylinders, at the end of the casing remote from the crank-case, the lower cylinder of each pair having only in its upper part an inlet port and in its lower part at the side of said inlet port remote from the crank-case an exhaust port, the upper cylinder of each pair having a transfer port which communicates with the upper part of the allotted crank-case, pistons operable one in each cylinder and arranged to control said ports, means for controlling said pistons, a supply chamber for combustible mixture situated between said cylinders and opening directly into said inlet ports, the



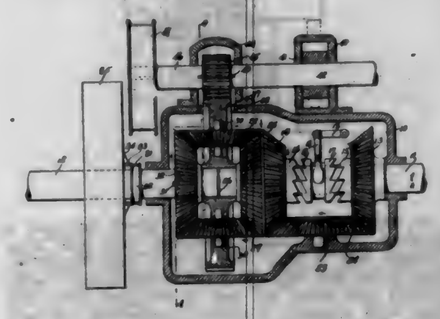
wall of which supply chamber is constituted in part by parts of the walls of said cylinders, and a supply conduit for combustible mixture free from pockets lying between said cylinders and opening into said supply chamber, whereby the combustible mixture will be heated by the cylinders on its way to the latter, substantially as described.

1,542,698. AUTOMATIC STACKER-TOOTH POINT. HARRY C. JOHNSON, Mason City, Nebr. Filed May 16, 1924. Serial No. 713,819. 2 Claims. (Cl. 214—144.)



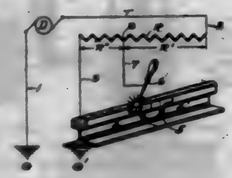
1. In combination with a stacker tooth having a beveled end, of a point shell disposed on said bevel end, said shell being of hollow construction having an elongated upper slot and a substantially short lower slot, and a retaining finger pivoted in the shell and extended through the elongated upper slot so that it may be disposed either in a vertical position or reclining on the beveled end of the stacker tooth.

1,542,699. EMBALMING ACCESSORY. EPHRAIM R. JONES, Corbin, Ky. Filed Oct. 20, 1924. Serial No. 744,761. 5 Claims. (Cl. 27—23.)



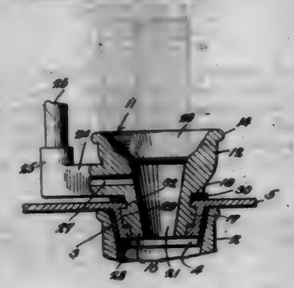
1. A device of the class described comprising a frame, a drain pan removably mountable on the frame, said drain pan having flanges to fit the frame, an inclined and depressed drain body portion, a cross trough portion into which the drain body portion delivers, the said pan having a drain aperture at one end of said trough.

1,542,700. FOLDING STOOL AND THE LIKE. RALPH JOSEPH, London, England. Filed May 12, 1924. Serial No. 712,804. 3 Claims. (Cl. 190—8.)



1. A combined folding stool and hand bag wherein the folding frame which forms the mouth of the bag is adapted when opened out horizontally to form the seat frame of the stool whilst the folding stool legs are attached to said frame and are adapted to be folded up and covered by the outer covering of the bag.

1,542,701. TRANSMISSION GEARING. TAYLOR M. JOYNER, St. Cloud, Minn. Filed Jan. 12, 1922. Serial No. 528,782. 6 Claims. (Cl. 74—34.)

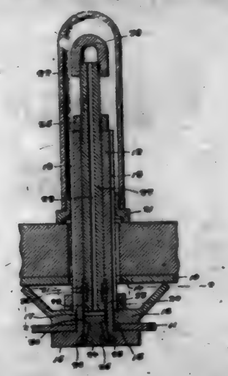


1. A change speed gearing comprising a housing, a pair of alined shafts, an idling gear, a plurality of gears loosely mounted on one of said shafts and manually operated means for connecting the idle gear with either of the loosely mounted gears, a gear keyed to the other of said shafts, a gear interposed between said loosely mounted gears and said keyed gear, means carried by said interposed gear for connecting the loosely mounted gears with the keyed gear, fluid actuating means for retarding the action of the interposed gear to establish driving connection between the loosely mounted gears and the keyed gear, said manual means adapted to control said fluid retarding means.

1,542,702. METHOD OF AND APPARATUS FOR CONTROLLING ARC WELDING. ROGER L. KINGSLAND, Fairmont, W. Va. Filed Aug. 15, 1921. Serial No. 492,439. 11 Claims. (Cl. 219—8.)

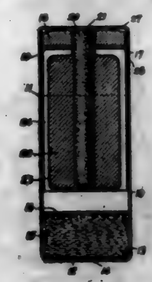
1. An arc welding system comprising a source of energy, a resistance connected across the source of energy and connections for supplying energy to a welding arc connected to one end of the resistance and to a point intermediate the ends of the resistance, one portion of the resistance limiting the maximum current flowing to the welding arc and the other portion of lower resistance than that of the first portion limiting the maximum voltage across the arc when welding.

1,542,703. WATER-CLOSET. WALTER JOSEPH KIRKHAM, Helena, Ark. Filed May 29, 1924. Serial No. 716,712. 1 Claim. (Cl. 285—30.)



In a device of the class described, a flush tank comprising a bottom having an integral spout provided in its interior with circumferential grooves, the upper walls of which are formed by the bottom of the tank, the bottom being provided with notches communicated with the grooves, and a valve seat extended into the spout, the seat having lateral cam ribs insertable through the notches into the grooves, the seat having an external shoulder, and a gasket interposed between the shoulder and the bottom of the tank, the ribs cooperating cam-wise with the grooves, when the seat is rotated, to bind the gasket between the shoulder and the bottom of the tank, the gasket and the shoulder cooperating to prevent a distortion of the bottom of the tank, due to the cam action of the ribs.

1,542,704. VALVE FOR INNER TUBES. JOHN M. KIRKPATRICK, Anaconda, Mont. Filed Apr. 25, 1924. Serial No. 709,008. 1 Claim. (Cl. 152—12.)



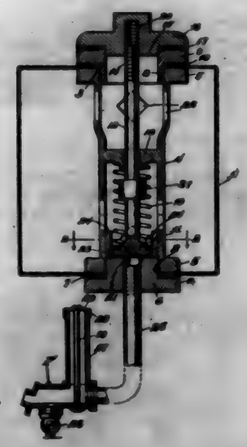
In a tire valve, the combination of a casing having a tapered valve seat, a tapered valve member movable rectilinearly in the casing and having a longitudinal

bore extending through and beyond the outer end of the casing and a lateral bore and a chamber in its side and communicating with the said lateral bore, gaskets

carried by the valve and arranged at opposite sides of the chamber, and a nut on the valve and opposed to the casing.

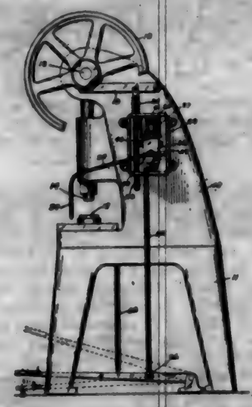
1,542,705. DRY-CELL BATTERY. HARRY M. KORETSKY, and BORIS H. TEITELBAUM, Brooklyn, N. Y.; said Teitelbaum assignor to said Harry M. Koretsky and Israel Koretsky, New York, N. Y. Filed Dec. 17, 1919. Serial No. 345,642. 2 Claims. (Cl. 136—113.)

1. In a dry cell battery, the combination of an outer container of cellular material, an electrolyte carried within the bottom portion of this container, a coating of frangible material holding the electrolyte in place as aforesaid and preserved from deterioration during the inactive period of the battery, a second container telescopic within the first mentioned container and carried normally within the outer end thereof spaced from the electrolyte, said second container being of a metallic nature, a depolarizing member carried within the metallic container and spaced from the wall thereof, the electrolyte aforesaid being forceable into the space between the depolarizing member and the metallic container when the two containers are telescoped fully one within the other, and means to establish metallic connection between the second mentioned container and the bottom portion of the first mentioned container.



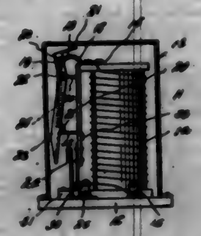
1,542,706. ATTACHING DEVICE. ARCHIE C. LANG, Leetsdale, Pa. Filed Apr. 8, 1924. Serial No. 705,059. 1 Claim. (Cl. 24—84.)

An attaching device formed from a single strand of wire bent upon itself at points spaced from its end extremities to form eyes in the form of curved loops, the end extremities of the strand wire diverging from each other in opposite direction and being disposed approximately parallel with each other and being located between the said loops, the intermediate side portions



of the wire located between the said end extremities and one of the said loops being outwardly bowed and the axis of the strand of wire throughout its length lying in the same plane.

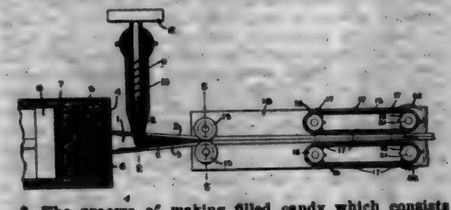
1,542,707. AUTOMATIC LUBRICATING SUPPLY SYSTEM. GROVER H. LANGFELDT, Normal, Ill. Filed June 13, 1923. Serial No. 645,184. 1 Claim. (Cl. 184—103.)



In combination with a normally closed tank and a discharge conduit leading therefrom, said tank being provided with a filling opening in a wall thereof opposed to the wall with which the conduit coacts, a shell bridging said walls, the wall of the shell being provided with openings, a member intersecting the shell intermediate the ends of the shell and providing a guide, a valve within the shell for controlling the flow through the conduit, a stem carried by the valve and extending lengthwise of the shell and through the guide, a cap for closing the filling opening, said cap having a threaded socket with which the outer end of the stem engages to move the valve into open position upon rotation of the cap when being applied, a spring within the shell and interposed between the valve and the guide for automatically moving the valve into closed position when the cap is removed, and an enlargement carried by the stem and coacting with the guide to limit the movement of the valve from its seat, the shell and valve being provided with interlocking means to hold the valve and stem against rotation.

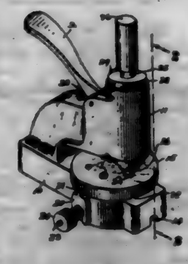
1,542,708. SAFETY ATTACHMENT FOR POWER PRESSES. IVAR C. LARSON, Providence, R. I., assignor, by mesne assignments, to George S. Cooper, Providence, R. I. Filed July 6, 1921. Serial No. 483,200. 8 Claims. (Cl. 192—134.)

1. In a power press, a work-shaping plunger, plunger starting mechanism, manually-operable means for controlling the operation of said plunger-starting mechanism, and a feeler member permitted to gravitate into protecting position by the operation of said manual starting means, and means responsive to the contacting of said feeler with an obstruction in the working zone for rendering the operating stroke of said manual means ineffective.



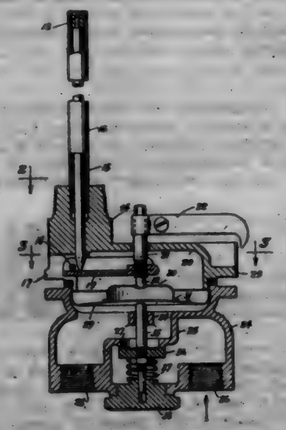
1,542,709. CIRCUIT BREAKER. WILHELM L. LARSON, Oslo, Minn. Filed June 7, 1922. Serial No. 566,518. 1 Claim. (Cl. 200—87.)

A circuit breaker comprising an electromagnet, a stationary contact arranged alongside the magnet, an armature also disposed alongside the magnet and interposed between same and stationary contact, a plate connected to and extending from one end of the magnet, an L-shaped lever pivotally mounted on said plate, a contact arm for cooperation with the stationary contact, a link on the armature and pivotally connected to the L-shaped lever and the contact arm, a finger on the contact arm and extending through an opening in the armature and having a stop portion arranged to cooperate with the armature and a retractile spring interposed between and connected to the contact arm and the L-shaped lever.



1,542,710. PROCESS OF MAKING FILLED CANDY. WILLIAM B. LASKEY, Brooklyn, N. Y. Filed Apr. 23, 1924. Serial No. 708,348. 8 Claims. (Cl. 107—54.)

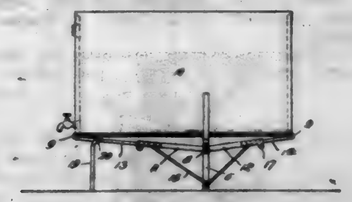
1. The process of making filled candy which consists in forming a continuous strip of candy material, applying filling material continuously to said strip, and then progressively folding the strip with the filling material thereon into tubular shape.



8. The process of making filled candy which consists in forming a continuous trough-shaped strip of candy, placing filling material continuously in said trough-shaped strip as fast as it is formed and then folding the edges of the strip together.

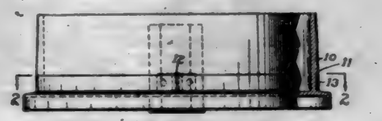
1,542,711. PORTABLE PUNCH. WILLIAM A. LOEVER, Los Angeles, Calif. Filed Jan. 4, 1923, Serial No. 610,686. Renewed Oct. 28, 1924. 12 Claims. (Cl. 164—94.)

1. A punch comprising the combination of a frame, a holding member slidably mounted therein, a punch slidably mounted in said holding member and arranged so that its downward movement therein is limited, and means on said frame for lifting said holding member and thereby extracting said punch from the stock.



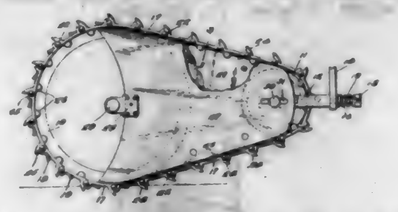
1,542,712. THERMOSTAT CONTROL FOR WATER HEATERS. WILLIAM ALFORD MERRICK, Los Angeles, Calif. Filed Mar. 10, 1924. Serial No. 698,049. 19 Claims. (Cl. 236—48.)

1. A thermostat control, the combination of a thermally expansible member, a dished spring diaphragm tending to maintain itself on one side of its neutral



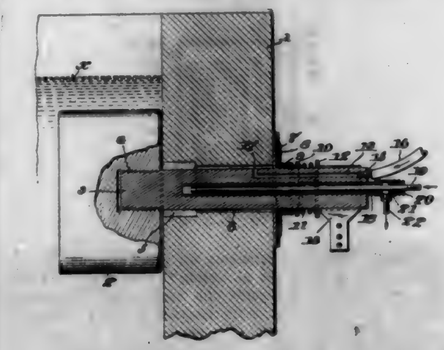
point and arranged to be moved past its neutral point to the other side, a push member comprising a resilient disk engaged at its outer rim with said diaphragm, a lever for transmitting motion from said thermally expansible member to said push member, a post mounted on said lever by threads and engaging said push member at the center thereof, an adjustment handle on said post having a finger operating over a scale temperature indicia thereon, said post being arranged to move said push member whereby to push said diaphragm over its neutral point, a valve casing having intake and outlet chambers side by side and separated by a partition wall having a valve port, said diaphragm closing one side of said casing, a valve disk for said port having a stem disposed to be engaged and moved by said diaphragm and means tending to maintain said valve closed.

1,542,713. BARREL SUPPORT. ALFRED OLSON, Clark, S. Dak. Filed Dec. 26, 1923. Serial No. 682,774. 2 Claims. (Cl. 248—56.)



1. A barrel stand including a pair of uprights, a transverse member rigidly connecting the uprights at their lower ends, a transverse cradle member carried by the upper ends of the uprights and adapted for supporting reception of a barrel, a longitudinal rod centrally intersecting the cradle and rigid with the latter, said longitudinal rod comprising forward and rear arms adjustable in length, and provided upon their outer ends with inwardly extending hooks designed to engage with the chines at the opposite ends of the barrel, means to maintain the arms of the longitudinal rod at any adjusted length whereby the hooks may be maintained in engagement with barrels of different sizes, the forward arm of the longitudinal rod being of greater length than the rear arm thereof whereby the cradle member is positioned to one side of the transverse axis of the barrel when the hooks are engaged with the chines of the latter, and a folding leg carried by the longer forward arm of the longitudinal rod to sustain the barrel in a horizontal tilted position.

1,542,714. REENFORCED-WIRE-DRAWING BLOCK. CHARLES H. OSLUND, Worcester, Mass., assignor to The O & J Machine Company, Worcester, Mass., a Corporation of Massachusetts. Filed Nov. 3, 1923. Serial No. 672,686. 4 Claims. (Cl. 205—20.)

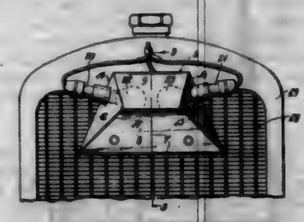


1. As an article of manufacture, a drum for a wire drawing machine of cast iron and having a circumferential groove located at the top of the concave curve thereof which receives the wire first and a hardened steel layer located in said groove to sustain the greatest wear the drum having an uninterrupted surface above said layer and continuous therewith for receiving the wire.

1,542,715. TRACTOR CHAIN. DARNEY P. OWENS, Lake Worth, Fla. Filed July 10, 1924. Serial No. 727,062. 2 Claims. (Cl. 305—10.)

2. A tractor chain comprising a plurality of identically constructed links arranged side by side, each link having an opening at one side, a tongue projecting from the opposite side and adapted to be received by said opening of the adjacent link, each link having thickened portions adjacent the edges thereof, said thickened portions having bores therethrough with the bores of the adjacent links arranged in alignment when said links are associated, a pivot pin passed through said bores for pivotally connecting the adjacent links together at a point whereby said tongues are forced from said openings when the chain is flexed, a curved edge projecting from one side of each link directly adjacent the tongue thereof and cooperating with the said thickened portions of the adjacent link to provide means for effectively engaging the ground to promote traction, and to also limit the pivotal movements of said links in one direction, and spaced parallel lugs carried by each link and arranged to embrace the tractor wheel to prevent casual separation of the chain therefrom while the chain is in use.

1,542,716. MEANS FOR PROTECTING FURNACE ELECTRODES. WILLIAM H. PAYNE, Pittsburgh, Pa. Filed Apr. 18, 1923. Serial No. 632,849. 9 Claims. (Cl. 204—64.)



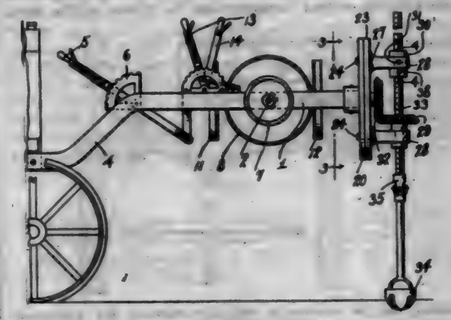
1. The combination with an electric furnace, of a stationary electrode of carbonaceous material extending through the wall thereof, and means for maintaining a circulation of non-oxidizing gas around a portion of the electrode inside said wall to prevent oxidation thereof.

1,542,717. TRUSS. ISAAC M. PEASE, Cincinnati, Ohio. Filed June 4, 1923. Serial No. 643,318. 3 Claims. (Cl. 128—106.)

2. In a device of the class described, a truss spring, studs carried by the truss spring, slides mounted on the truss spring, the studs constituting means for limiting the movement of the slides toward each other, means on the truss spring for limiting the sliding movement of the slides away from each other, a link mounted pivotally on one stud, and a connecting element assembled with the link and engaged with the other stud and pads fastened to the slides.

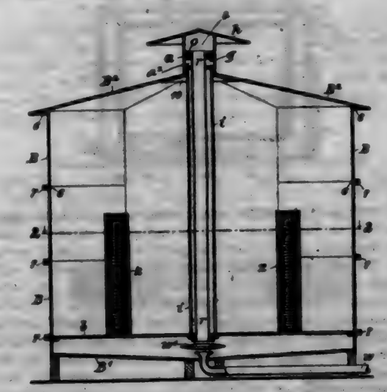
1,542,718. NONGLARING HEADLIGHT FOR VEHICLES. JAMES DAVID PEMBERTON and JAMES ARTHUR BURNEY, Plant City, Fla. Filed Nov. 6, 1923. Serial No. 673,139. 3 Claims. (Cl. 240—7.)

1. In a non-glaring headlight for vehicles, a source of light; and a casing enclosing said source having a vertical rear wall, the side edges of which converge upwardly, a top wall inclined downwardly from the upper edge of said rear wall and its side edges converging forwardly and inwardly, and forwardly inclined side walls joining the ajacent converging edges of said rear and top walls, said rear wall projecting below the forward edge of said top wall, and said top and side walls constituting shields to prevent the direct forward projection of light rays from said source into the eyes of an approaching driver.



1,542,719. TIRE-CHAIN CARRIER. LEWIS PENWELL, Helena, Mont., assignor to Lewis Fred Penwell, Helena, Mont. Filed Oct. 31, 1923. Serial No. 671,954. 8 Claims. (Cl. 152—14.)

1. The combination with the step of a vehicle of a tire chain carrier receptacle horizontally pivotally secured at one end to the under surface of said step in alignment with the rear wheel, the pivotal securing means also permitting of lateral sliding displacement of said receptacle in a path parallel to the axis of the pivot.

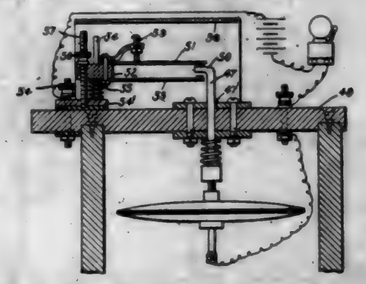


1,542,720. FENCING MACHINE. WALTER B. PHILLIPS, Clinton, Ill. Filed May 26, 1922. Serial No. 563,972. 1 Claim. (Cl. 255—19.)

In a mechanism of the character described, a frame, a disk arranged at one end thereof and fixed to the frame, rack teeth on the disk, a rotatable disk arranged in opposed relation to the first disk, a lever carried thereby and provided with latch elements engageable in the rack teeth whereby to hold the rotatable disk in an

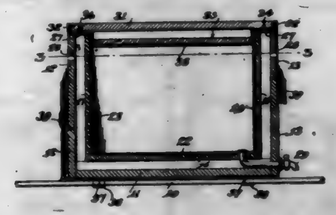
adjusted position about its axis, bearings carried by the rotatable disk and a rotatable shaft journaled in the bearings.

1,542,721. SYSTEM OF GRAIN VENTILATION. CHARLES PIENING and MICHAEL HEINEKEN, Hamburg, Germany. Filed June 23, 1924. Serial No. 721,947. 3 Claims. (Cl. 98—26.)



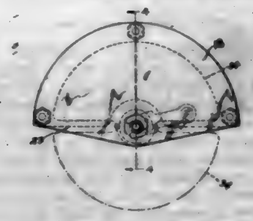
2. The combination with a receptacle having a closed bottom, a perforated partition above said bottom, an extension above the top, a partition dividing the extension into upper and lower compartments for the inlet and outlet of air, an imperforate tube leading from the space above the partition in the extension to below the partition in the receptacle, and a perforated tube concentric with the first mentioned tube and opening to the space below the partition in the extension.

1,542,722. THERMOSTATIC CIRCUIT CLOSER. WILLIAM K. PINNELL, Sedalia, Colo. Filed May 25, 1922. Serial No. 563,547. 1 Claim. (Cl. 200—139.)



In a device of the class described, a thermostatic element, a stem controlled thereby and including a device extending laterally from the stem, a plurality of contact members between which said device is movable upon the expansion or contraction of the thermostatic device, a vertically movable element for mounting the contact members, guiding devices for said vertically moving element, one of said devices last named being threaded and all of these guiding devices passing loosely through the vertically movable element, resilient means for imparting thrust to said element, and an adjustable device en-

gaging the threaded guiding device for limiting the extent of movement of the vertically movable element under resilient action and varying the distance between one of said contact elements and the device on the stem,

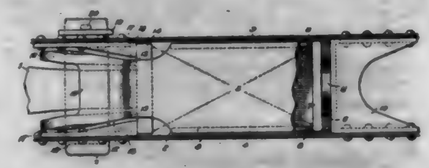


means on the vertically movable element for independently adjusting the other contact element, and means for completing a circuit through said stem and either of the contact elements and the mounting means thereof.

1,542,723. REFRIGERATOR. FRED D. PRATT, Green Bay, Wis. Filed Nov. 29, 1924. Serial No. 752,962. 2 Claims. (Cl. 217—5.)

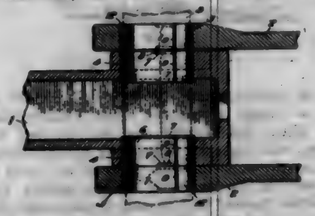
1. A refrigerator device comprising an outer shell open at the top, an inner shell of nonconductive material open at the top and spaced from the outer shell, a sheet metal lining for the inner shell with its upper portion outstanding and extended over the outer shell and constituting a closure for the space between the shells, a closure for the inner shell formed of a sheet metal body having upstanding outer portions to engage within said lining member and outstanding portions extending from the upstanding portions of the body and bearing upon the outstanding portions of the lining, an outer cover member bearing upon the outstanding portions of the lining, and a member of nonconductive material bearing upon the sheet metal body and spaced from the outer cover member.

1,542,724. RADIO APPARATUS. OSBORNE L. PRICE, Frederick, Md. Filed May 31, 1922. Serial No. 564,734. 3 Claims. (Cl. 250—41.)



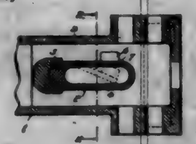
3. A variable condenser comprising in combination a framework consisting of front and rear plates of insulating material substantially semi-circular in contour bounded by an angled edge, connecting posts terminating in said insulated plates, stationary plates mounted on said connecting posts and spaced one from another with one of said plates lying directly in contact with the inner face of said front plate throughout the area thereof, bearing apertures positioned directly adjacent the angled edges of said insulating plates, a rotating spindle mounted in said apertures and carrying movable plates arranged to be rotated with said spindle in a horizontal plane with said front insulated plate forming the sole support for said condenser with reference to an adjacent surface.

1,542,725. COFFIN. ALFRED C. RAY, Butte, Mont., assignor of one-eighth to Otto Schubert, Basin, Mont. Filed May 15, 1924. Serial No. 713,551. 4 Claims. (Cl. 27—31.)



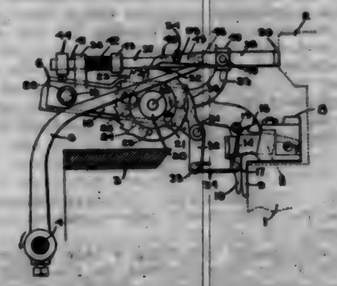
1. A coffin including a case, a jacket surrounding the case, a lid closing the case and provided with a cover sealed to the jacket, and a combined reinforcing bar and handle secured to the cover to extend longitudinally of the lid medially thereof throughout the major portion of the length of the lid.

1,542,726. DRAFT GEAR. WILLIAM J. REGAN, Wilkinsburg, Pa., assignor to The McConway & Torley Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed June 2, 1923. Serial No. 642,933. 4 Claims. (Cl. 213—65.)



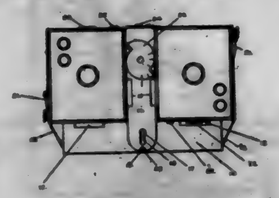
1. A draft gear involving a yoke device provided with a casing and having a pair of horizontally alined slotted arms terminating at their rear ends in spaced relation to the forward end of said casing, said arms being integrally united in advance of said casing by vertically alined webs extending forwardly from and integrally united to said casing and adapted to transmit draft strains from said arms to said casing, said webs converging at their forward ends and terminating adjacent the forward ends of the slots of said arms, a follower movably mounted between said webs in advance of said casing and to the rear of said arms, a car coupler extending between said arms and movable longitudinally with respect to said yoke device, and a key operatively connecting said coupler and arms for transmitting draft strains to the latter, said casing having an opening at its rear end and being provided with a detachable closure for said opening.

1,542,727. RAILWAY DRAFT APPLIANCE. WILLIAM J. REGAN, Wilkinsburg, and ENOCH GEORGE, Jr., Pittsburgh, Pa., assignors to The McConway & Torley Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Sept. 12, 1923. Serial No. 662,265. 14 Claims. (Cl. 213—62.)



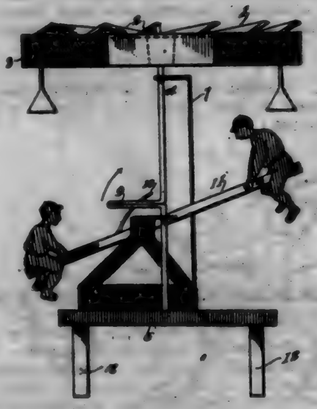
1. In a railway draft appliance, the combination with a draft member having a key receiving slot therein, of a bushing mounted on said draft member and extending into said slot, said bushing being split and adapted to be bent so as to be entered in said slot, and being provided with means co-operating with said draft member to maintain said bushing in assembled position, said means being adapted to be moved from assembled position by a bending of the bushing.

1,542,728. RAILWAY DRAFT APPLIANCE. WILLIAM J. REGAN, Wilkinsburg, and ENOCH GEORGE, Jr., Pittsburgh, Pa., assignors to The McConway & Torley Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Sept. 12, 1923. Serial No. 662,266. 7 Claims. (Cl. 213—62.)



1. In a railway draft appliance, the combination with a draft member having a slot adapted to receive a key forming an element of the draft appliance, of a bushing mounted on said draft member and extending into the slot thereof, said bushing being adapted to cause said key to be positioned nearer one end of said slot than the other.

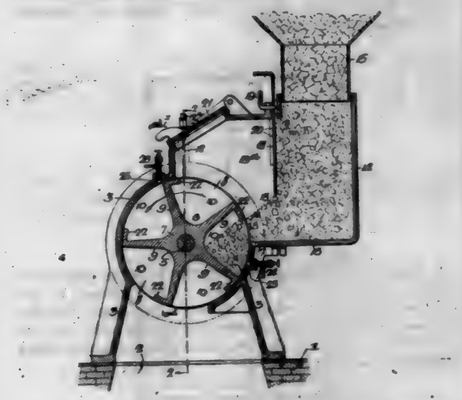
1,542,729. INTERMITTENTLY-OPERATED TEMPLE THREAD CUTTER. ALONZO E. RHOADES, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Oct. 23, 1924. Serial No. 745,283. 6 Claims. (Cl. 139—266.)



1. A loom comprising automatic filling replenishing mechanism, and transfer controlling means therefor, a temple stand, a temple reciprocably mounted thereon, a filling parting device carried by said temple, resilient means normally tending to hold said parting device in operative position and means operable by or through the movement of the lay for actuating said parting device, a rotatable spring actuated timing device mounted directly upon said temple stand, means operable by the movement of the lay for rotating said timing device step by step against the action of its spring, means operable by said timing device to withdraw said parting device from, and thereafter to retain said parting device out of, operating position and means operable by said transfer controlling means to release said timing device upon call for transfer and thereby restore said parting device to operative position.

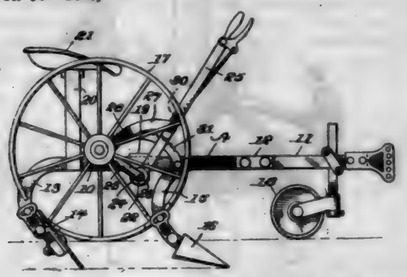
1,542,730. DEVICE FOR MAKING STEREOSCOPIC PHOTOGRAPHS. JOHN C. NORMAN RICHARDS, Lincoln, Nebr. Filed Sept. 5, 1922. Serial No. 586,289. 4 Claims. (Cl. 95—96.)

1. Means for holding two similar cameras spaced in position for producing negatives of a stereoscopic nature, said means including a base for supporting the two cameras and a spacing element secured to said base in perpendicular relation thereto, said spacing element being adapted to laterally space the two cameras.



1,542,731. GYRATING TOY. WALTER PAUL SCHORTMANN, Springfield, Mass. Filed Jan. 27, 1923. Serial No. 615,370. 1 Claim. (Cl. 272—31.)

A toy of the class described comprising in combination, a rotatable fan top horizontally disposed with the greater portion of the extremities of the fan blades non-enclosed except at one tip of each of the blades, a central member for the fan top, a shaft journaled and secured to said member so as to rotate therewith, a horizontally disposed arm extending from the shaft, a see-saw mechanism disposed at the side of the shaft and having one side overbalanced whereby one end of the see-saw will be normally up and the other end normally down, a curved and resilient arm extending upwardly from the see-saw on the side thereof that is normally down, said arm being ex-

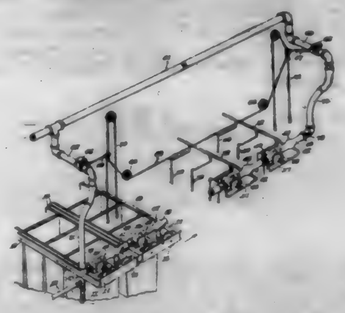


tended beyond the center of gravity of the see-saw over to the up side of the see-saw, and whereby the arm of the shaft will engage therewith and swing the see-saw up during one half period of the rotation of the fan and the shaft arm, and allow the see-saw to swing down during the second half period of the rotation, a fulcrum support for the see-saw and means for bracing the support and the shaft together, and means for holding the support and shaft.

1,542,732. COAL FEEDER FOR GAS PRODUCERS. CHARLES A. SCHRANZ, Philadelphia, Pa., assignor to Walter Wood, trading as R. D. Wood & Company, Philadelphia, Pa. Filed Apr. 14, 1922. Serial No. 552,808. 7 Claims. (Cl. 214—35.)

1. The combination in a coal feeder for gas producers, of a housing; a drum mounted in the housing capable of being rotated; and a chute at one side of the housing having an opening in its side to allow the coal to flow from the chute into the drum, the chute having a flat bottom which sustains the weight of the coal in the chute.

1,542,733. LISTER. ALBERT A. SCHULER, Zorn, Tex. Filed June 16, 1923. Serial No. 645,878. 2 Claims. (Cl. 97—166.)



1. A lister plow comprising a frame, plows carried thereby, a front wheel supporting the frame, rear wheels therefor, a sectional arched shaped axle for said rear wheels, said sections being mounted on the frame for partial rotation, means for rotating said sections of the axle whereby said frame is adjusted with relation to the ground, said means including a lever for each section of the axle, said lever being pivotally mounted on said section, a curved arm connected with said lever, and a resilient connection between the curved arm and the adjacent section of the axle for the purpose specified.

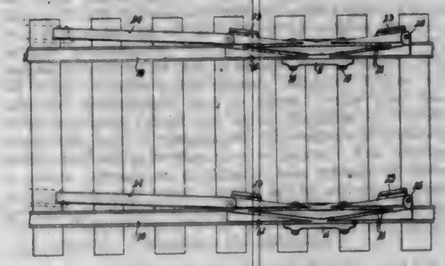
1,542,734. SHEET GRIPPER. HAROLD W. SHERRY, Columbia, La. Filed May 27, 1924. Serial No. 716,150. 2 Claims. (Cl. 101—408.)

1. A sheet gripper comprising a strip provided at one end with a clamp, a resilient fork bracket disposed along the strip and having one end portion secured in the clamp, the branches of the fork bracket being disposed beyond the opposite side edges of the strip and a set screw secured to the strip, at the median longitudinal dimension thereof and passing transversely through the stem portion of the fork bracket and a nut threaded upon the screw and bearing against the stem portion of the fork bracket at a point in the median longitudinal dimension thereof and adapted to move the inner edges of the branches of the fork bracket transversely with relation to the side edges of the strip.

1,542,735. AIR-FEEDING SYSTEM FOR ICE CANS. THOMAS SHIPLEY, York, Pa. Filed Apr. 18, 1923. Serial No. 633,024. 13 Claims. (Cl. 62—159.)

8. In a can ice plant of the type in which the cans travel in series from a filling station to a dumping station, the combination of a plurality of can units, each comprising a plurality of cans connected together; air pipes arranged to discharge within the cans; a supply manifold for the air pipes of each can unit; a tubular header made up of a plurality of readily separable sections, each section being connected with a corresponding supply manifold; two air supply connections, each adapted to be releasably connected with a corresponding end of the header; valves controlling the flow of air through said connections; controlling means for said valves constructed and arranged to prevent the valves from being in closed condition simultaneously; and valve means associated with each header section, and operable to close said header at either side of its connection with the corresponding manifold.

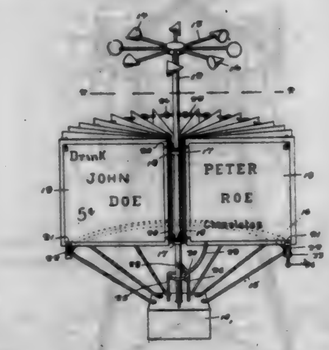
1,542,736. UNDERREAMER. WILLIAM P. SHUTT, Dolores, Tex. Filed Dec. 7, 1921. Serial No. 520,670. 10 Claims. (Cl. 255—77.)



1. An under-reamer comprising a body member provided with a slot extending from its lower end to a point remote therefrom bifurcating said body member into arms provided with cutting edges at their lower ends, a wedging member within said slot, telescopicnily arranged in relation to said body member, and the upper end of said wedging member seating against the inner

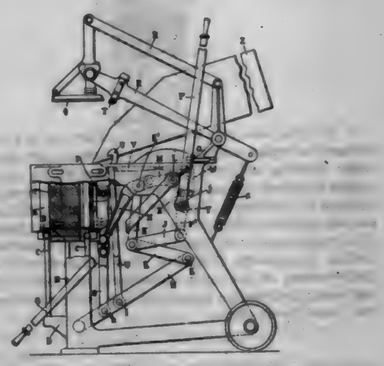
end wall of said slot when said parts are in fully telescoped position, means engaging the outer surface of said body member, comprising leaf springs each connected

intermediate its ends with said wedging member through said slot on opposite sides thereof and provided at their lower ends with cutting edges comprising a secondary reamer.



1,542,737. RERAILING DEVICE. JOHN W. SKATES, Carlin, S. Dak. Filed Dec. 27, 1924. Serial No. 758,420. 3 Claims. (Cl. 104—271.)

2. A car replacer comprising a frog made up of companion sections designed to unitedly embrace the head of a rail, means for holding said sections operatively associated, said frog having grooves extending throughout the length thereof, and relatively short grooves adjacent the ends thereof, said frog having an opening adjacent each end, an auxiliary rail, and a pin projecting from said rail and adapted to be received by either of said openings, whereby said rail can be pivotally associated with either end of the frog, as and for the purpose specified.

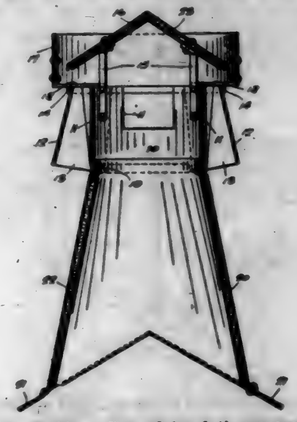


1,542,738. ADVERTISING DEVICE. JOHN M. SMITH, Raleigh, N. C. Filed Mar. 10, 1924. Serial No. 698,247. 4 Claims. (Cl. 40—104.)

1. In a device of the character described, a base, a vertical shaft journaled therein, a cup windwheel on the upper end of the shaft, stop collars on the shaft, rings loosely encircling the shaft above the stop collars, a stationary track, a plurality of sign plates pivoted and slidable upon said rings and carrying rollers traveling on the track, a cam mounted above the base, and a pivoted arm on the shaft traveling on said cam and

movable thereby into upwardly extended position whereby to engage a sign plate and swing it from one side of the shaft to the other.

1,542,739. PRESS FOR MOLDING PLASTIC SUBSTANCES. WILLIAM HERBERT SMITH, East Molesey, England, assignor to Triangular Construction Company Limited, East Molesey, England. Filed June 6, 1923. Serial No. 643,739. 8 Claims. (Cl. 25—45.)

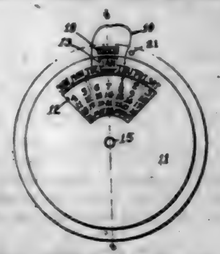


1. In a block molding press the combination of a mold adapted to contain the material to be molded a toggle mechanism adapted to apply pressure to the material, a second toggle mechanism adapted to eject the compressed material from the mold and a transmission member connected at different points to both said toggle mechanisms and fulcrumed about the point at which it is connected to the first while the second is operative.

1,542,740. VENTILATOR. EDWARD T. SPILLMAN, Columbus, Ohio, assignor to The V-W Ventilator Company, Columbus, Ohio. Filed May 31, 1924. Serial No. 716,973. 8 Claims. (Cl. 98—4.)

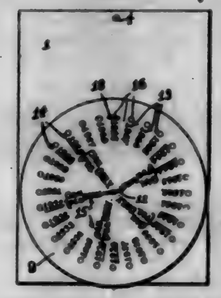
1. A ventilator of the type described, including a vertical cylindrical body having apertures in the wall thereof, shields secured externally of the body opposite the apertures and in upwardly and inwardly inclined relation to, and spaced from, the body, having tapering side

walls whose upper portions are spaced from the body, a hood spaced above the body, and a tubular supporting base on which said body is disposed, said base and said



hood having double walls and insulating spaces between said walls whereby to prevent condensation on the inner surfaces thereof, as described.

1,542,741. DEMOUNTABLE RIM. BOYD STEBBLTON, Baltimore, Ohio. Filed June 1, 1923. Serial No. 642,735. 1 Claim. (Cl. 301—35.)

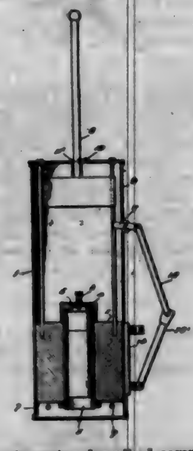


A demountable rim structure comprising a pair of continuous annular rings, one of which is provided at its inner surface and between its edges with an annular and angular groove, the said ring being beveled from its inner surface to its inner edge, the other ring having a wedge-shaped portion adapted to fit snugly in the bevel of the first mentioned ring, and the second mentioned ring having a plurality of spring clips adapted to be disposed transversely of the first mentioned ring, said clips having heads adapted to engage in the annular groove of the first mentioned ring.

1,542,742. PERPETUAL CALENDAR. FAYE A. STEVENSON, Lancaster, Ohio. Filed Feb. 25, 1924. Serial No. 694,906. 6 Claims. (Cl. 40—115.)

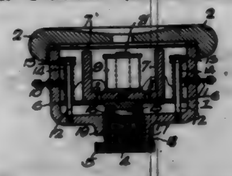
3. A calendar comprising a face-plate having slots therein, a member mounted to rotate in rear of said face-plate, said member being provided with legends denoting the months of the year so positioned as to be displayed one at a time through one of said slots in the face-plate, said member being further provided with a year slot adjacent its edge portion, a second member mounted to rotate in rear of said face-plate, said second member being provided with numerals denoting days of the month so positioned as to be displayed through another of said slots in the face-plate when said second member is rotated, said second member being further provided with a series of numerals designating years, said series of numerals being so positioned as to be displayed one at a time through said year slot in the first mentioned rotatable member when either of said rotatable members is turned.

1,542,743. REFERENCE CALENDAR. FAYE A. STEVENSON, Lancaster, Ohio. Filed Apr. 25, 1925. Serial No. 25,867. 1 Claim. (Cl. 40—115.)



A calendar comprising a face-plate having a number slot and month display means, a rotatable member positioned in the rear of said face-plate and provided with numerals indicating the days of the month, such numerals being visible through the number slot, a second rotatable member in the rear of the face-plate and having month designations arranged consecutively thereon and adapted to be indicated by said month display means, the second rotatable member being provided upon its rear face with a group of year designations arranged thereon in numerical order and having openings corresponding in number and arrangement to said year designations, and a locking element carried by the first named rotatable member and adapted to be inserted within a selected opening of the second named rotatable member so that the said members may be locked together to rotate as a unit.

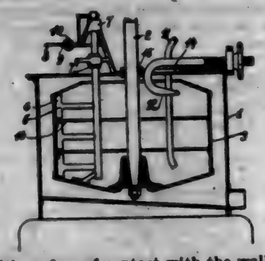
1,542,744. AUTOMOBILE STEERING GEAR. AUGUST SWIETERS, Fort Wayne, Ind. Filed Sept. 22, 1924. Serial No. 739,232. 3 Claims. (Cl. 280—94.)



1. In steering gear for an automobile, the combination of a front axle, knuckles pivoted thereto and carrying ground wheels and having opposite arms, a body fixed to the front axle, thrust means guided in said body and opposed at its ends to the said knuckles arms and having an intermediate abutment, and springs interposed between the said abutment and body portions located between the said abutment and the said knuckle arms; the said thrust means including rods guided in said body portions, and a turn buckle connecting the said rods and having an enlarged portion constituting an abutment for the inner ends of the springs.

1,542,745. BURGLAR ALARM. JOHN W. THOMPSON, Jr., Drakesville, Iowa. Filed Apr. 15, 1922. Serial No. 553,148. 1 Claim. (Cl. 116—87.)

A device of the character described comprising a casing, a casting arranged in the casing and provided with a bore, a cartridge holding tube arranged in the bore, a cap removably arranged upon one end of the cartridge holding tube, a spring pressed firing pin received in the cap and extending vertically in the casing, a plurality of guide rods connected with the casting and the upper end of the casing, a weight slidably mounted on the guide rod, adapted to engage the firing pin to detonate the cartridge contained in the cartridge tube, a rod carried by the weight and extending through the top of the casing and a pivoted latch carried by the casing and normally engaging the rod to hold the weight in an elevated position, and means for disengaging the latch from the rod to permit the weight to fall.



1,542,746. TELEPHONE INSTRUMENT. JOHN S. TIMMONS, Philadelphia, Pa. Filed June 28, 1921. Serial No. 481,040. 4 Claims. (Cl. 179—114.)

1. The combination in a telephone instrument of a case; a diaphragm; an electromagnet operatively associated with said diaphragm; a plate carrying said magnet; a plug threaded into the case and engaging the plate said plug constituting a bearing for said plate; and springs acting on the plate to force it away from the diaphragm.

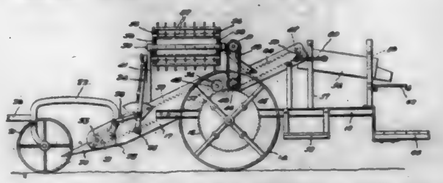
1,542,747. CENTRIFUGAL MACHINE. VINCENZO VERRENI, Rome, Italy. Filed Mar. 4, 1924. Serial No. 696,867. 2 Claims. (Cl. 210—70.)

1. A centrifugal machine, including a drum, means for rotating the drum, a paddle shaft entering the drum, a series of paddles carried by the shaft, means for manually adjusting the shaft to arrange the paddles in

contact with or free of contact with the wall of the drum, and means arranged beyond the drum for fixing the shaft in adjusted position.

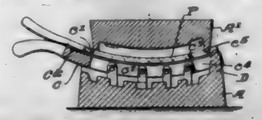
1,542,748. HAMMER. ISAAC SCOTT WALTER, Delaware, Ohio. Filed Jan. 5, 1924. Serial No. 684,028. 1 Claim. (Cl. 1—44.)

A glazier's hammer including a head, having a recess in one face, an angular extension upon the opposite face of the head providing a weight and constituting a striking portion, the flat face of which is opposite the center of the recess, a handle extending from one side of the head, and flat relatively thin angular extensions projecting from the other sides of the head, all of said extensions having flat faces occupying the same plane with the recessed face of the head, said flat extensions constituting means for driving points in either of three directions while the head is in sliding engagement with a supporting surface.



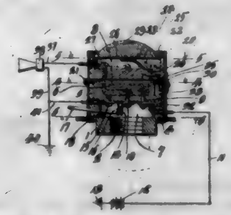
1,542,749. SIGNAL. CHARLES WEBER, Chicago, Ill. Filed Feb. 28, 1923. Serial No. 620,758. 2 Claims. (Cl. 116—45.)

1. In combination with a motor vehicle head light housing structure, a bracket at one side of the housing having spaced arms, a rotatable shaft supported by the housing structure and bracket, an opening on one end of the shaft positioned between said arms a signal member connected to the other end of the shaft and normally lying in a horizontal plane upon the housing structure, a reciprocating rack having cooperative engagement with the opening, a rod having loose connection with the rack, a handle at the other end of the rod for



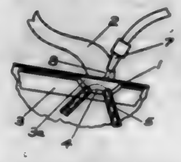
imparting movement thereto and impart movement to the shaft thru actuation of the rack for moving the signal member to a vertical position above the head light housing structure or into the position aligning with the housing structure.

1,542,750. POTATO-DIGGING MACHINE. LOUIS C. WERTS, Center, Colo. Filed July 19, 1921. Serial No. 485,908. 2 Claims. (Cl. 55—137.)



1. In a machine of the class described, a main frame, a second frame mounted thereon and extending upwardly and rearwardly with reference thereto, a conveyor mounted in the second frame and moving rearwardly, means for driving the conveyor, a transversely movable endless element mounted above the conveyor, means for driving said element, and a traveling element for receiving material from the conveyor said transversely movable element including toothed slats extending longitudinally of the conveyor and movable perpendicularly thereof, and at an angle with reference to the plane of its upper surface, providing a space converging rearwardly toward the upper end of the conveyor.

1,542,751. MOLD. WALTER AUDAER WILSON, Armley, Leeds, England. Filed Jan. 2, 1920. Serial No. 348,838. 3 Claims. (Cl. 25—27.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

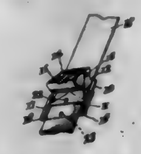


1. In the manufacture of jointless radiants, the combination of a face mold; a back mold; projections on one of said molds; and two plates located between said molds, one of said plates having a series of depressions, both plates being slotted longitudinally to receive the projections of the mold, so that one plate after the other can be removed from the mold after the radiant has been cast.

1,542,752. CIGAR LIGHTER. GEORGE J. WILLIAMS and EDWIN K. NELSON, Jr., Tampa, Fla. Filed July 24, 1924. Serial No. 727,945. 3 Claims. (Cl. 219—32.)

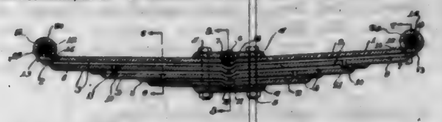
1. A device of the class described including a casing, a closure hinged to the casing, a heating element in the casing, a pair of spring arms electrically connected with the heating element, a push rod extending through the casing to engage one of the spring arms and terminating exteriorly of the casing so that when the closure is hinged to an open position it engages the rod to push one of the arms in engagement with the other.

1,542,753. METHOD OF WELDING ALUMINUM. SPENCER A. WILTSIE, Erie, Pa., assignor to Welds Ware Products Company, Erie, Pa., a Corporation of Pennsylvania. Filed Nov. 11, 1922. Serial No. 600,394. 4 Claims. (Cl. 219—7.)



1. The method of welding aluminum which consists in heating the body of the metal locally adjacent to the weld from a source of heat delivered to one side of the material, and then raising the temperature of the metal thus preliminarily heated in a local area to a welding temperature with a gas flame directed to the weld from the side of the material opposite to that subjected to the preliminary heat whereby the temperature necessary for the weld and which is injurious to the metal is so rapidly applied at the weld as to prevent extended diffusion and injury to the metal away from the weld.

1,542,754. SASH LOCK. MATTHEW WILLIAM WRAGG, Akron, Ohio. Filed Sept. 20, 1924. Serial No. 738,869. 1 Claim. (Cl. 292—202.)

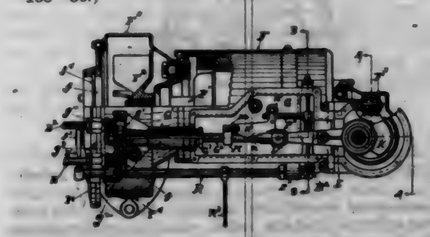


A device of the character described comprising a pivoted member carried by one side of the window frame, said member having an apertured semicircular lug, an attaching and pivoted member extending therethrough and anchored in the frame, a pair of right angularly disposed arms presenting respectively engaging faces for cooperation with the upper face of the meeting rail and the inner face thereof to lock the sash in a partially open position, against further opening from the exterior, one of said arms having an eccentric cam face, and a weighted arm projecting inwardly from said member for swinging said member to a position to engage the cam face with the upper inner edge of the meeting rail of the sash to automatically retain the sash in fully closed position.

1,542,755. ASH TRAY. MICHEL S. YASSUKOVITCH, New York, N. Y. Filed Dec. 18, 1924. Serial No. 756,775. 3 Claims. (Cl. 131—51.)

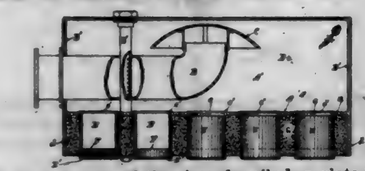
1. A receptacle of the character described, comprising a resilient base plate bent to form laterally projecting flanges with upwardly turned ears adjacent to and between said flanges, a clamping plate having its edges bent to form hooks, slidably engaging said flanges, a tray trunnioned in said ears, and a cigar or cigarette holder carried by said tray substantially as and for the purposes described.

1,542,756. SELF-LUBRICATING SPRING. ALBERT N. ANTHES, Quincy, Ill., assignor of one-half to Robert F. Gunther, Quincy, Ill. Filed Aug. 30, 1923. Serial No. 660,177. 3 Claims. (Cl. 267—50.)



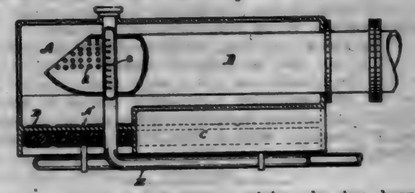
1. In a self-lubricating spring, the combination of main supporting leaves having vertical oil passages, said leaves having projections on their under side surrounding said oil passages to reenforce the leaves and to function as guides, and intermediate leaves having longitudinal slots extending substantially the entire length of the leaves and functioning as oil passages and also as means for engaging the above-mentioned guides of the main supporting leaves.

1,542,757. DISK SHARPENER. CORNELIUS E. BAKER, Indianola, Iowa. Filed June 26, 1924. Serial No. 722,574. 1 Claim. (Cl. 76—85.)



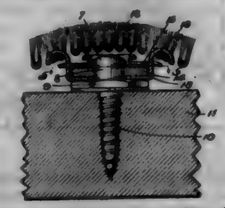
A disk sharpener comprising a bar having at one end a handle portion and at the other end a slightly offset bifurcated portion, a collar slidably mounted on said bar having spaced arms, offset on the same side of the bar as said offset portion, means for securing the collar at various points on the bar, and sharpener devices bolted on said arms.

1,542,758. FUEL-GAS-GENERATING PLANT. WILLIAM E. BAKER, Erie, Pa., assignor to Webb Engineering Company, Erie, Pa., a Common Law Trust. Filed Jan. 25, 1924. Serial No. 688,550. 3 Claims. (Cl. 158—36.)



1. In a fluid fuel generating plant, a pump barrel, inlet and outlet valve mechanism communicating therewith, a plunger operating in said pump barrel, a head on said plunger, a slidable block on said plunger, crank and shaft mechanism, a pitman pivoted to said block and to said crank, motor and gear mechanism to rotate said shaft and gear mechanism, a swinging arm having a series of ratchet shoulders thereon stationarily secured to said pump plunger adapted to be engaged by said block, and mechanism to vertically adjust said swinging arm.

1,542,759. FLUID-FUEL BURNER. WILLIAM E. BAKER, Erie, Pa., assignor to Webb Engineering Company, Erie, Pa., a Common Law Trust. Filed Mar. 3, 1924. Serial No. 696,542. 1 Claim. (Cl. 158—28.)



In an apparatus of the class described, a plate having a plurality of openings therethrough, a series of nipples secured in said openings, walls enclosing said plate and forming an enclosed chamber over one side of said plate and forming a flange-like projection around the face of said plate, a series of nipples secured in the openings in said plate, perforated discs of refractory material secured in the opposite end of said nipples, and refractory heat resisting material filling said flange-like projection around said nipples.

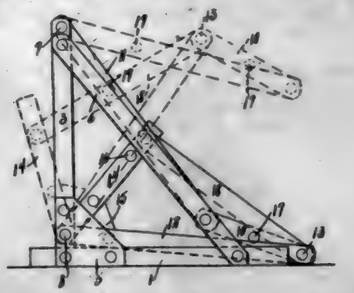
1,542,760. FLUID-FUEL BURNER. WILLIAM E. BAKER, Erie, Pa., assignor to Webb Engineering Company, Erie, Pa., a Common Law Trust. Original application filed Jan. 25, 1924, Serial No. 688,550. Divided and this application filed Aug. 28, 1924. Serial No. 734,719. 3 Claims. (Cl. 158—29.)

1. In a liquid fuel burner, a mixing chamber, burner nipples in the bottom thereof, an air conveying pipe extending into said mixing chamber, a generator tube suspended adjacent to said nipples to receive the flame therefrom and thence passing transversely through said mixing chamber and through the walls of said air conveying pipe, said tube being perforated within said air conveying pipe.

1,542,761. FASTENER. FRED S. CARR, Newton, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Massachusetts. Filed Feb. 1, 1923. Serial No. 616,292. 4 Claims. (Cl. 16—4.)

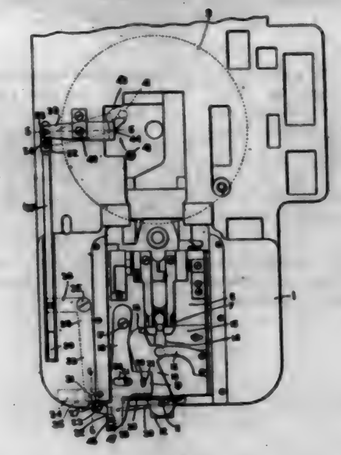
1. A fastener comprising, in combination, a stud having a head, a neck and a base, a casing presenting a stud-receiving aperture of sufficient diameter to admit

said base, said casing presenting outwardly thrown portions to engage the floor when said stud is entered in said socket and thereby to relieve the spring in said socket of pressure when the carpet above said casing is subjected to pressure.



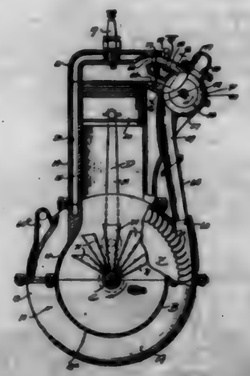
1,542,762. ARROW. IRA VINCENT COLE, Seattle, Wash. Filed Feb. 5, 1925. Serial No. 6,946. 11 Claims. (Cl. 124—26.)

7. An arrow having a feathered shaft, a nock member secured to the end of the shaft, said nock member presenting two jaws forming between them the nock, one of the jaws being pivotally mounted and swingable toward and from the other, and a spring acting on the pivotally mounted jaws and adapted to press it yieldingly against the bow string when the arrow is nocked.



11. An arrow comprising a feathered shaft comprising a nock at one end, an insert of relatively heavy wood set into the opposite end and a metal footing encircling said end and comprising a cylindrical portion in which the extremity of the shaft is received, two wings overlying the opposite sides of the shaft, and rivets connecting the wings and extending through the shaft.

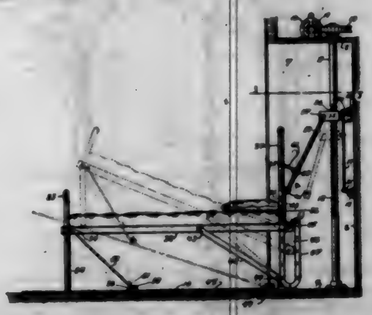
1,542,763. STRAIGHT-LINE-LIFT PUMP JACK. WILLIAM J. COLEGROVE and LEVI A. VANDERVOORT, Ranger, Tex., assignors to Oil Well Accessories Corporation, Ranger, Tex., a Corporation of Texas. Filed Feb. 5, 1924. Serial No. 690,825. 6 Claims. (Cl. 74—5.)



1. A pump jack comprising a frame, fulcrum bars and a combined fulcrum and lift bar carried thereby, and means operatively connected to said fulcrum bars and frame for reversing said fulcrum bars and simultaneously elevating the same.

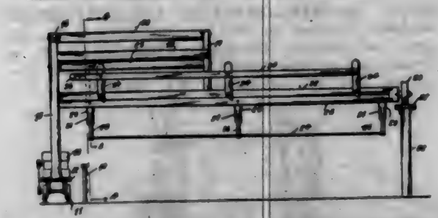
1,542,764. THREAD-TRIMMING DEVICE FOR BUTTONHOLE-SEWING MACHINES. JOHN W. CONNORS, Dedham, Mass., assignor to The Reece Button Hole Machine Company, Boston, Mass., a Corporation of Maine. Filed Dec. 26, 1924. Serial No. 758,105. 7 Claims. (Cl. 112—252.)

1. In a sewing machine, the combination with a bed frame, of work-holding means carried thereby, stitch-forming mechanism, a main cam by which the operation of the machine is controlled, a thread cutter carried by the work-holding means, a reciprocating slide on the bed frame, means to actuate the cutter by the movement of the slide, and means to operate the slide from the main cam.



1,542,765. INTERNAL-COMBUSTION ENGINE. FRANK B. H. GARSON, Lawrence, Mass. Filed June 8, 1923. Serial No. 644,198. 3 Claims. (Cl. 123—80.)

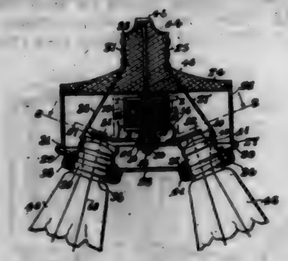
1. In an internal combustion engine, a casing including a cylinder chamber and a cylindrical valve chamber at one side of the cylinder chamber, said valve chamber having an inlet and an outlet spaced circumferentially of the valve chamber, the cylinder chamber having intake and exhaust ports communicating with the valve chamber between the inlet and outlet and in spaced relation



circumferentially of the valve chamber, a rotary valve member in said valve chamber having a circumferentially disposed peripheral pocket for controlling communication between the ports and inlet and outlet during rotation of the valve, a piston operating in said cylinder, a crank shaft connected with said piston, and means for imparting rotary movement to the valve in timed relation to movement of the piston.

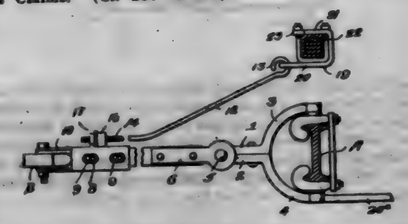
1,542,766. ELECTRICALLY-OPERATED DISAPPEARING BED. HARVEY H. HALL, Adams County, Colo. Filed Mar. 29, 1923. Serial No. 628,637. 4 Claims. (Cl. 5—133.)

1. The combination with a cabinet, of a bed frame pivotally associated towards its inner portion with the base of said cabinet for foldable closing up therein and opening out therefrom, a vertically disposed threaded actuating shaft mounted rearwardly of said bed frame, a traveling element in threaded association with said shaft, means for operating said shaft in reverse directions of rotation, and longitudinally rigid pivotal connecting means between said traveling element and the inner portion of said bed frame.



1,542,767. RACE-TRACK STARTING GATE. RICHARD R. HASSETT, Lexington, Ky. Filed Mar. 27, 1924. Serial No. 702,288. 4 Claims. (Cl. 20—24.)

1. Means for starting a race the same comprising a truck, a frame bracingly mounted thereon and having a portion overhanging the race track, a bar carried by the frame and extending completely across the race track, a starting line supporting frame pivoted to the said bar and counterweighted to automatically swing clear of the track, and catch means mounted upon the said bar and normally holding the frame carrying the starting line in operative position.



1,542,768. ELECTROMAGNETIC SWITCH. ALBERT J. HEITZ, Vincennes, Ind. Filed Mar. 26, 1924. Serial No. 702,074. 4 Claims. (Cl. 200—87.)

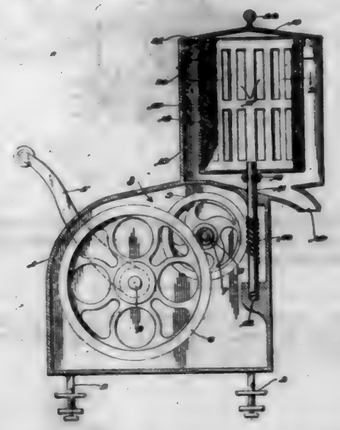
1. A switch for an electric lamp fixture comprising a metallic yoke, a magnet secured within said yoke at the open end thereof, a spring controlled armature arranged within the yoke and supported from the closed end thereof, a plurality of oppositely disposed independent contacts supported and insulated from said yoke and circuit forming connections coacting with one of said contacts for closing a circuit and energizing said magnet,

and circuit forming connections coacting with another of said contacts and with said armature for closing a circuit when said magnet is de-energized.

1,542,769. TOWING TONGUE. WILLIAM D. HENRY, Greenville, Ill. Filed June 3, 1921. Serial No. 474,881. 2 Claims. (Cl. 280—33.55.)

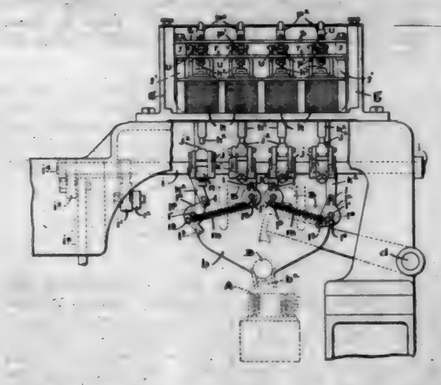
1. A towing tongue comprising a pole connected to the vehicle axle and consisting of two parts having relative longitudinal movement, and a draw bar connecting one of the parts to the vehicle spring.

1,542,770. BRACKET DEVICE FOR CONSTRUCTION OF TEMPORARY PLANK SEATS. JOHN H. HESS, Bloomington, Nebr. Filed Sept. 4, 1923. Serial No. 660,920. 5 Claims. (Cl. 155—2.)



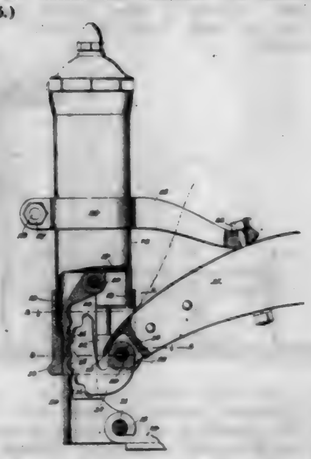
1. A bracket structure for use in constructing temporary stands, comprising an upright bracket member having its lower end forked for engagement upon a stringer, means on said upright member for holding a board to define a seat back, and a forwardly extending arm connected with said upright bracket member and designed to lie upon the stringer to form a support for a plank constituting a seat.

1,542,771. FRUIT-JUICE SEPARATOR. LOUIS N. HILLS, Hayden, Colo. Filed Feb. 6, 1922. Serial No. 534,482. 1 Claim. (Cl. 210—74.)



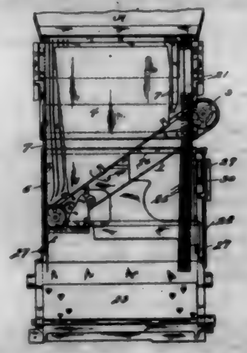
A juice separator comprising a casing, an outer cylinder upstanding therefrom, drive mechanism mounted in the casing including a crank handle arranged exteriorly

of the casing, a vertical shaft having connection with said drive mechanism, an inner cylinder mounted within the outer cylinder and supported for rotation by said shaft, said inner cylinder having its walls arranged in equal spaced relation with the outer cylinder and provided with a plurality of longitudinal slots arranged cir-



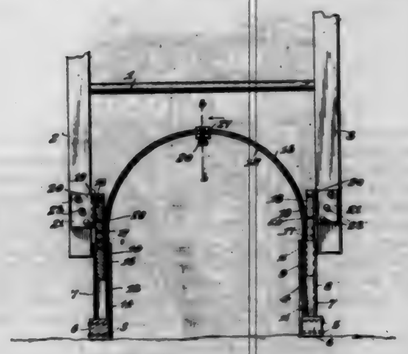
cumferentially thereof and disposed in alignment above and below the horizontal center of the cylinder, a removable screen supported by the inner cylinder, a cover for the outer cylinder having depending flanges arranged in spaced relation with the outer flange engaging the inner wall of the outer cylinder and the inner flange engaging the outer wall of the inner cylinder.

1,542,772. AUTOMATIC WEFT-REPLENISHING MECHANISM FOR LOOMS. DENIS M. HOLLINS, Blackburn, England, assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed June 14, 1924. Serial No. 720,020. 10 Claims. (Cl. 139—232.)



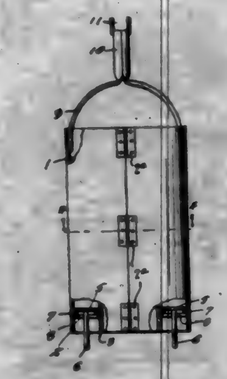
1. Automatic electrically operable weft replenishing mechanism for shifting shuttle box looms comprising a transfer circuit and a feeler circuit having in common branches provided with means for controlling the delivery to the transferrer of selected weft carriers corresponding to those of the respective shuttles, means operable by the box-selecting mechanism to complete a selected branch, means operable by the momentary completion of the feeler circuit, upon detection of exhaustion of filling in the active shuttle, to complete the transfer circuit and to break the feeler circuit and means successively operable by the transfer circuit when completed respectively, to cause the delivery of a selected weft carrier and to actuate the transferrer upon the next return of the same shuttle to the filling replenishing end of the loom.

1,542,773. MOUNTING FOR AUXILIARY SPRINGS. BRADFORD B. HOLMES, New York, N. Y. Filed Nov. 23, 1922. Serial No. 602,828. 12 Claims. (Cl. 267—65.)



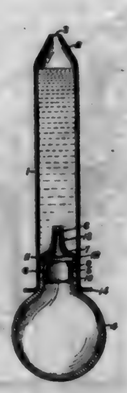
1. The combination with a leaf spring and a spring horn having a shackle bolt hole, of a base member straddling said horn; bushings threaded in said base member and engaging the sides of said spring horn to position the base member laterally thereon; a bolt passing through said bushings and the bolt hole in said spring horn; and an auxiliary cushion mounted on said base member and having a yielding element connected with said leaf spring.

1,542,774. MATRIX RELEASING AND DELIVERING MEANS. THOMAS S. HOMANS, Brooklyn, N. Y., assignor to Intertype Corporation, Brooklyn, N. Y., a Corporation of New York. Filed July 7, 1924. Serial No. 724,717. 8 Claims. (Cl. 199—19.)



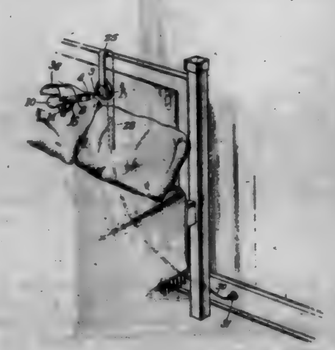
1. In a typographical machine having a plurality of magazines provided with escapements for delivering matrices therefrom, partitions for guiding matrices delivered from the magazines, and escapement-actuating means having portions thereof operative in groups in the planes of said partitions.

1,542,775. EQUALIZER FOR LADDERS. HARRY F. HUGHES, Dallas, Pa. Filed Feb. 18, 1925. Serial No. 10,069. 8 Claims. (Cl. 228—64.)



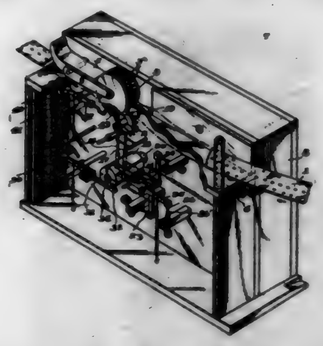
7. An equalising device for ladders comprising a pair of connected, spaced socketed supporting elements opposing each other and an arch-shaped, resilient automatically adjustable ladder carrier having vertical guide bars slidably mounted in and projecting upwardly from said elements and adjusted by the weight of the ladder to equalize the position thereof when one of said elements projects above the other.

1,542,776. WELL-DRILLING TOOL. CLIFTON M. INGRAM, Porter, Okla., assignor of one-half to Robert L. Dedmon, Porter, Okla. Filed Oct. 7, 1924. Serial No. 742,251. 2 Claims. (Cl. 166—19.)



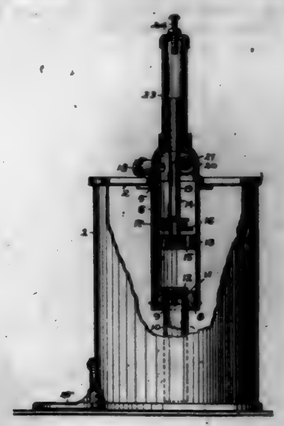
1. A device of the class described comprising two similar semi-cylindrical sections hingedly secured together and arranged to be secured in cylindrical formation, each of said sections comprising two walls spaced apart, and a valve mounted in the bottom of each section to control communication with the space between said walls.

1,542,777. SYRINGE. JOHN W. B. LADD, Boston, Mass., assignor to Randall-Faichney Corporation, Boston, Mass., a Corporation of Massachusetts. Filed Jan. 30, 1925. Serial No. 5,736. 4 Claims. (Cl. 128—231.)



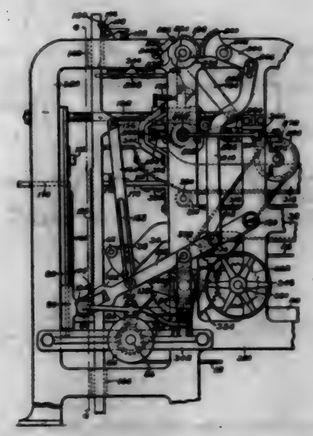
1. In a syringe, the combination of a barrel, a bushing received in said barrel, and presenting a capillary passage, and a flexible bulb having a chamber communicating by way of said passage with said barrel, said bulb having a wall interposed between a portion of said bushing and the surrounding wall of said barrel.

1,542,778. LIGHTING FIXTURE. THEODORE J. NELSON, Chicago, Ill., assignor to Colonial Lamp & Fixture Works, Chicago, Ill., a Corporation of Illinois. Filed June 16, 1920, Serial No. 389,294. Renewed Nov. 21, 1924. 21 Claims. (Cl. 240—53.)



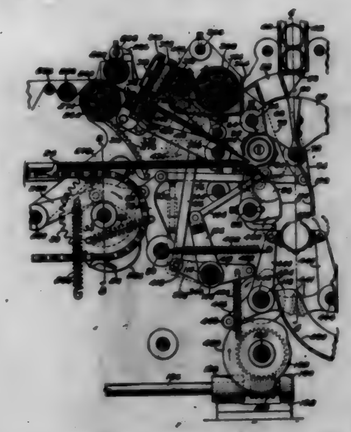
12. In a device of the class described, the combination of a lighting fixture and a counterweight connected by a flexible hanger so that the fixture is held in equilibrium, when the hanger is engaged over a support, said fixture comprising a lighting element spaced laterally from the flexible hanger and means at the opposite side of the flexible hanger for counterbalancing the lighting element.

1,542,779. TAPE TRANSMITTER. WILLIAM C. PETERMAN, Rutherford, N. J., assignor to the Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed May 28, 1923. Serial No. 642,681. 6 Claims. (Cl. 178—17.)



1. An automatic telegraph transmitter, comprising mechanism adapted to feed a perforated message strip or tape through the instrument, selecting contact devices controlled by said tape for transmitting current impulses over telegraph circuits, adjustable means for initiating each impulse, locking means for maintaining the circuit closed for any predetermined period after the initiation of each impulse.

1,542,780. PORTABLE DISPENSING DEVICE. CHARLES SPAETH, Cleveland, Ohio, assignor to The Marvel Equipment Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 12, 1922. Serial No. 551,812. 2 Claims. (Cl. 103—218.)



1. A dispensing device for oils and greases, comprising a sheet metal container having a pump body extending downwardly through its top, lugs extending from the pump body seated upon said top, a cylindrical extension for said body exposed above said top, operating means within said body having a crank outside said container, and a rigid bar extending across said top within said container providing a supplemental support for said pump, and means uniting one of said lugs and bar and top rigidly together.

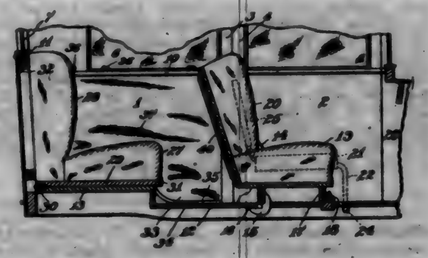
1,542,781. PACKAGING MACHINE. ADOLPH CHARLES VAN SLUYS, Nashua, N. H., assignor to Nashua Gummed and Coated Paper Company, Nashua, N. H., a Corporation of Massachusetts. Filed May 28, 1921. Serial No. 473,295. 31 Claims. (Cl. 93—5.)

1. In a machine for making a package by assembling one or more sheets with a core, the combination of means to hold one or more sheets assembled with the core, and means to rotate said holding means about the axis of the core to wind the sheet or sheets onto the core.

1,542,782. PACKAGING MACHINE. ADOLPH C. VAN SLUYS and WINTHROP L. PERRY, Nashua, N. H., assignors to Nashua Gummed and Coated Paper Company, Nashua, N. H., a Corporation of Massachusetts. Filed Nov. 2, 1922. Serial No. 598,502. 19 Claims. (Cl. 93—5.)

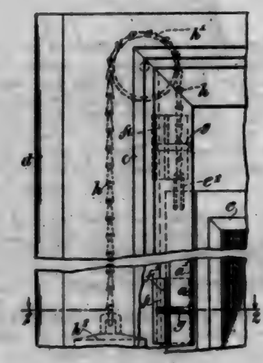
1. In a machine of the class described, the combination of means for rotating a core, means to cause the rotation of the core to effect the winding of a sheet about the core, and means to cause the introduction of a portion of a wrapper between portions of said sheet, whereby continued rotation of said core will effect the winding of a remaining portion of said wrapper about said sheet and core.

1,542,783. SUPPORTING PLATFORM OR TABLE. WALTER A. BILGER, Philadelphia, Pa., assignor to The American Pulley Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 25, 1922. Serial No. 596,814. 4 Claims. (Cl. 248—41.)



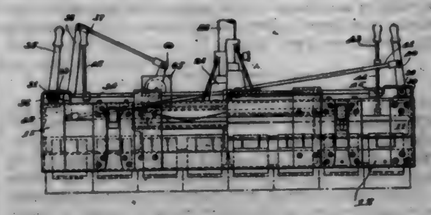
2. A supporting platform including in combination a supporting surface, channel section strengthening battens formed with flanking flange for the supporting surface, and hollow leg members therefor, each said leg comprising opposed counterpart rectangularly dished interfitting sheet metal units having reversely and laterally flanged upper parts adapted to be secured at opposite sides and to the aforesaid flanking flanges of the battens, and said dished units having portions terminating below the plane of the lateral flanges for engagement with the bottom face of the battens.

1,542,784. REFRACTORY CRUCIBLE. JOHN H. DUPPLER, Weehawken, N. J., assignor to Metal & Thermit Corporation, Chrome, N. J., a Corporation of New Jersey. Filed Apr. 10, 1923. Serial No. 631,158. 9 Claims. (Cl. 262—48.)



1. A crucible for use with molten metal, including as a component part of the crucible structure a deoxidising or purifying material in the form of a ferro-alloy that will be taken up by the molten metal.

1,542,785. AUTOMOBILE BODY. CHESTER A. FRICK, Muncie, Ind., assignor to Gascock Brothers Manufacturing Company, Muncie, Ind., a Corporation of Indiana. Filed Mar. 22, 1924. Serial No. 700,996. 6 Claims. (Cl. 296—10.)

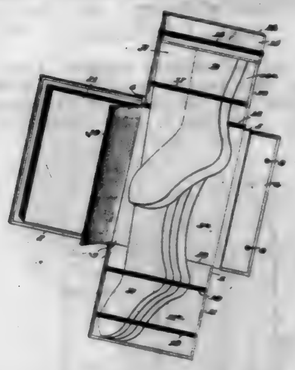


1. An automobile body, including a tonneau having a rear seating compartment, a rear seat arranged in said compartment having a removable seat cushion and removable side panel liners for the interior of said compartment having one face trimmed and the other untrimmed, said liners being so arranged as to be inserted in position to present either the trimmed or untrimmed face to the interior of the car.

1,542,786. METAL WINDOW FRAME. ALEXANDER F. FROMHOLD, New York, N. Y., assignor to S. H. Pomeroy Company, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 2, 1923. Serial No. 610,101. 3 Claims. (Cl. 189—75.)

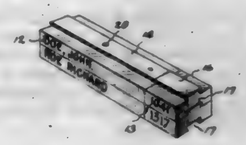
1. A metal window jamb having a main jamb member bent inward from its face with a curved portion at its edge, a pulley-stile also bent inward from its face with a curved portion at its edge overlapped by the curved portion of the main jamb member and interlocking therewith and forming a guide groove for the sash, and means to secure the parts together.

1,542,787. VALVE-OPERATING MECHANISM. CLAUD E. FULLER, New York, N. Y. Filed July 31, 1923. Serial No. 654,898. 2 Claims. (Cl. 294—62.)



1. An improved valve controlling mechanism comprising a valve, a control lever pivotally mounted thereon, a plurality of shafts arranged in the form of a parallelogram, and means interlinking the said shafts whereby the valve mechanism is controlled from either side of the parallelogram.

1,542,788. SAMPLE CASE CONTAINER, AND DISPLAY STRUCTURE. LASURE L. GOODMAN, Indianapolis, Ind., assignor to Real Silk Hosiery Mills, Indianapolis, Ind., a Corporation of Indiana. Filed Oct. 6, 1923. Serial No. 666,947. 7 Claims. (Cl. 150—24.)

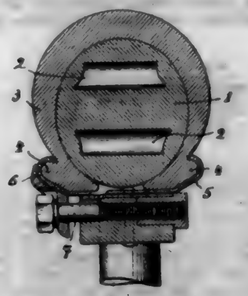


1. A sample-case including an article-carrying main section, upper and lower article-carrying sections there-

on, a second main section on one side of the first main section, article-holding leaves clamped between said

main sections, a flap on the other side of the first-named section, and means for detachably securing the flap to the second main section.

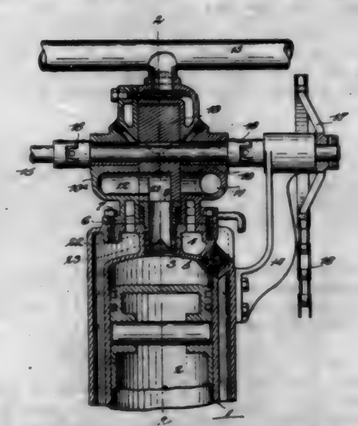
1,542,789. INTERCHANGEABLE DIRECTORY STRIP. GEORGE MACKINTOSH, Oceanside, N. Y. Filed Apr. 7, 1925. Serial No. 21,357. 7 Claims. (Cl. 40—64.)



1. In a building directory consisting of a stack of indicia bearing strips, a longitudinal sliding connection between the meeting faces of the strips for holding the same against transverse and vertical separation, and gravity actuated locking means for preventing relative sliding movement of the strips in a direction to disconnect the same, said locking means being releasable upon inversion of the stack.

1,542,790. MARINE PAINT. GEORGE W. RELYEA, Charleston, S. C. Filed Nov. 25, 1924. Serial No. 752,122. 1 Claim. (Cl. 134—40.)

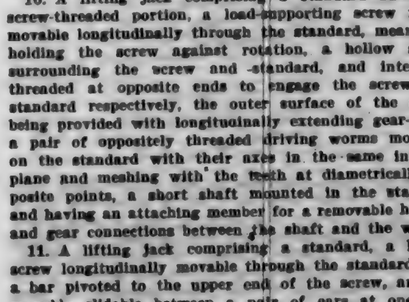
The composition of marine paint comprising 7½ pounds of red lead, 2 pounds of Paris green, ½ pound of white arsenic mixed with sufficient linseed oil, japan dryer and creosote of pine to provide a gallon of paint.



1,542,791. PROCESS FOR MANUFACTURING ELASTIC TIRES WITH RECESSES FILLED WITH AIR UNDER PRESSURE. CHARLES EDMOND VEIL-PICARD, Paris, France. Filed June 22, 1922. Serial No. 570,060. 2 Claims. (Cl. 18—59.)

1. Process of manufacture of a pneumatic tire comprising an india-rubber ring in the body of which are provided recesses arranged at right angle to the middle plane of this ring and tightly closed by means of india-rubber caps, the whole being enclosed within a casing or cover, this process comprising, before the setting of the caps upon the recesses, the provision in the surface of the ring formed of pure india-rubber, of a series of grooves adapted to cause the recesses to communicate the one with the other when they are covered by the caps, the introduction of air under pressure into the recesses through the medium of a needle introduced into a single of these recesses, and the vulcanization of the

ring thus inflated, this vulcanization having for effect to fill the said grooves so as to insulate the one from the other, the recesses filled with air under pressure.

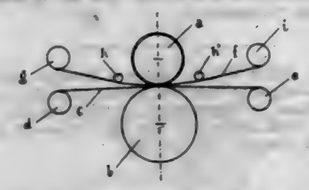


1,542,792. VALVE MECHANISM FOR INTERNAL-COMBUSTION ENGINES. AUGUST WILLENBOCK, Richmond Hill, N. Y., assignor of one-half to Frederick C. Hayes, Battle Creek, Mich. Filed Sept. 27, 1920. Serial No. 412,942. 2 Claims. (Cl. 123—190.)

1. In combination with the rotatable valve disk of an internal combustion engine, of a bearing therefor, a member having a seat for said disk, means for normally holding said member seated against the periphery of said valve disk, a well disposed below said seat, an inlet pipe leading to said well for supplying oil thereto, openings communicating with said well and said seat, a groove formed in the periphery of said valve disk for register with the openings in said member whereby to distribute oil about said bearing upon rotation of the valve disk, and an outlet pipe leading from said well for carrying off oil from said well when the same reaches a predetermined level.

1,542,793. OIL BURNER. ARTHUR E. BORNEMEIER, Lincoln, and MARTIN T. BORNEMEIER, Murdock, Nebr. Filed Dec. 29, 1924. Serial No. 758,655. 4 Claims. (Cl. 158—53.)

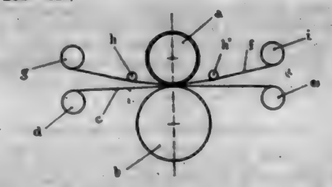
4. In an oil burner, an elongated vertically positioned cylinder for conducting a current of air upwardly, a second cylinder surrounding and spaced from first cylinder, the space between said two cylinders being adapted to conduct oil vapor upwardly and having an exit at its upper extremity, means for introducing combustible oil into the lower portion of the space between said two cylinders, the upper portion of said first cylinder being screw threaded on its inner surface, a nut engaging the screw threaded portion of said first cylinder, said nut being provided with an



aperture for the exit of air from said first cylinder, said nut being adapted to close the exit to the passage between said two cylinders, and a flame spreader surrounding the nut and the upper portion of said two cylinders, said flame spreader engaging said nut whereby the nut may be rotated, and a plurality of apertured ears extending radially from said flame spreader.

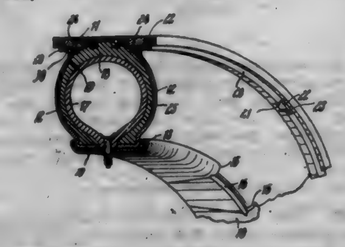
1,542,794. LIFTING JACK. CHARLES DAVIDSON ELLWOOD, Racine, Wis., assignor to Walker Manufacturing Company, Racine, Wis., a Corporation of Wisconsin. Filed Aug. 20, 1924. Serial No. 733,131. 11 Claims. (Cl. 254—102.)

10. A lifting jack comprising a standard having a screw-threaded portion, a load-supporting screw freely movable longitudinally through the standard, means for holding the screw against rotation, a hollow sleeve surrounding the screw and standard, and interiorly threaded at opposite ends to engage the screw and standard respectively, the outer surface of the sleeve being provided with longitudinally extending gear-teeth, a pair of oppositely threaded driving worms mounted on the standard with their axes in the same inclined plane and meshing with the teeth at diametrically opposite points, a short shaft mounted in the standard and having an attaching member for a removable handle, and gear connections between the shaft and the worms.



11. A lifting jack comprising a standard, a lifting screw longitudinally movable through the standard, and a bar pivoted to the upper end of the screw, and removably slidable between a pair of ears at one side of the standard, for holding the screw when desired against rotation while allowing it to move vertically.

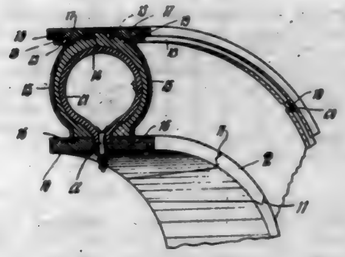
1,542,795. PROCESS FOR FINISHING TEXTILE MATERIALS. GEORGES GUSTAVE URBAIN MARIE MAIRESSE, Paris, France. Filed Mar. 19, 1924. Serial No. 700,825. 6 Claims. (Cl. 101—32.)



1. Process of finishing textiles, leather and other similar material which consists in passing the material between rollers, said rollers comprising an engraved roller and a smooth-surfaced pressure roller, heating said engraved roller, and interposing between the material to be finished and the engraved roller, a carrier-sheet coated with a thin layer of a fatty body, so that said fatty layer is pressed against the material as it passes between the rollers.

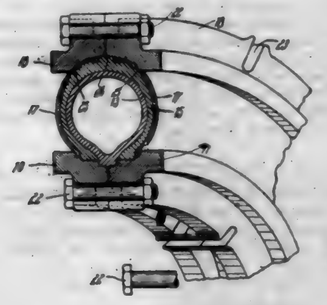
1,542,796. COLOR-PRINTING PROCESS. GEORGES GUSTAVE URBAIN MARIE MAIRESSE, Paris, France. Filed Mar. 19, 1924. Serial No. 700,326. 2 Claims. (Cl. 101—32.)

1. Process for color-printing textiles, which consists in passing the textile between rollers, one of said rollers being engraved and the other smooth-surfaced, heating said engraved roller, interposing between the material and the engraved roller, a carrier-sheet coated on one side with a color-bearing fatty body, melting the colored fatty body at the raised parts of the engraved roller by means of the heat from the roller, and arranging a sheet of loose fabric between the material to be color-printed and the said carrier-sheet coated on one side with a colored fatty body.



1,542,797. TIRE MOLD. THOMAS MIDGLEY, Hampden, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Feb. 26, 1923. Serial No. 621,425. 8 Claims. (Cl. 18—38.)

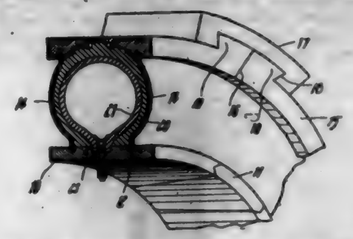
2. A mold for use in vulcanizing the outer casings of pneumatic tires under internal pressure having its side wall portions of a single thickness of sheet metal and its tread portion much thicker than the side por-



tions to provide recesses for the major molding operations on the tread, means to hold the mold closed at the tread and bead portions and arranged to leave the side portions free to resist only the internal pressure during vulcanization.

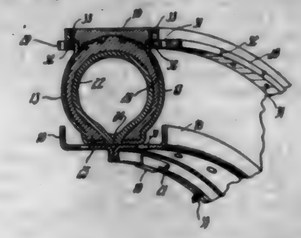
1,542,798. TIRE MOLD. THOMAS MIDGLEY, Hampden, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Mar. 2, 1923, Serial No. 622,264. Renewed Apr. 27, 1925. 3 Claims. (Cl. 18—38.)

2. A mold for the vulcanization of tire casings comprising a split base ring having circumferential grooves therein, a wedge joining the ends of such ring, a tread ring, a pair of pressed steel side plates fitting into the grooves, and means for holding the side plates in position relative to the tread ring.



1,542,799. TIRE MOLD. THOMAS MIDGLEY, Hampden, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Mar. 3, 1923. Serial No. 622,491. 8 Claims. (Cl. 18—42.)

2. A tire mold comprising a circumferentially split tread ring forming the outer periphery of the assembled mold, a circumferentially split base ring forming the inner periphery of the assembled mold, side plates bridging the gap between the tread and base rings, and means for holding the several parts in assembled relation.



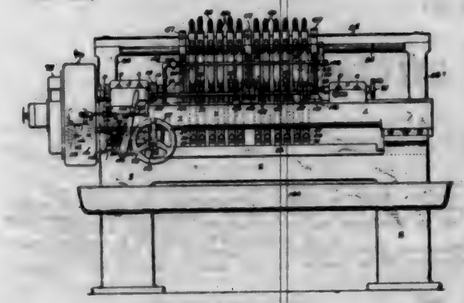
1,542,800. TIRE MOLD. THOMAS MIDGLEY, Hampden, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Mar. 5, 1923, Serial No. 622,764. Renewed Apr. 27, 1925. 3 Claims. (Cl. 18—38.)

1. A mold adapted for vulcanizing tire casings, comprising a transversely split base ring, a pair of side plates adapted to interfit with the base ring, means for holding the base ring in expanded position, a transversely split tread ring adapted to interfit with the

side plates, and means for holding the tread ring together to form a complete annulus and to retain the other parts in assembled relation.

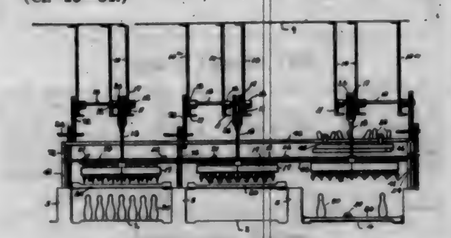
1,542,801. TIRE MOLD. THOMAS MIDGLEY, Hampden, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Mar. 17, 1923. Serial No. 625,728. 15 Claims. (Cl. 18—42.)

4. A mold adapted for vulcanizing tire casings comprising a tread ring, sheet metal side plates separable therefrom, and members adapted to hold the side plates firmly against the tread ring when a stack of molds is compressed in a heater.



14. A mold adapted for use in the vulcanization of tire casings, having side plates of substantially uniform thickthickness, curved to the shape of the tire, and carrying permanently attached thereto members adapted to contact one with another and support the molds when stacked one over another.

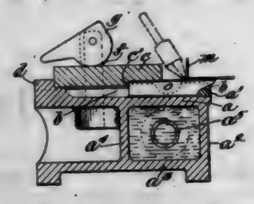
1,542,802. TIRE MOLD. THOMAS MIDGLEY, Hampden, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Nov. 8, 1924. Serial No. 747,424. 3 Claims. (Cl. 18—42.)



1. A tire mold comprising a pair of side plates each formed of a single metal sheet curved to conform to the shape of the tire, a ring fixed to each of said plates near its outer periphery and bent parallel to the plane of the mold to present a lateral thrust-receiving flange, and bead rings adapted to grasp the bead portion of the tire to be vulcanized, the side plates overlying the sides of the bead rings to present additional lateral thrust-receiving surfaces and having re-entrant bends adapted to fit around the outer circumferences of the bead rings.

1,542,803. LATHE. CHARLES GORDON, Milwaukee, Wis., and ALFRED W. REDLIN, Saginaw, Mich., assignors, by mesne assignments, to The Gordon Form Lathe Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 19, 1920. Serial No. 397,239. 42 Claims. (Cl. 82—10.)

1. In a lathe the combination of a work holder, a tool carrier movable transversely to the axial line of the work holder, a tool mounted and angularly movable on the carrier, automatic means for moving the carrier towards and from the work, and means for varying the angular relation of the tool to the carrier and work to maintain proper cutting and clearance angles of the tool to work of non-circular contour synchronously with the rotation of the work.

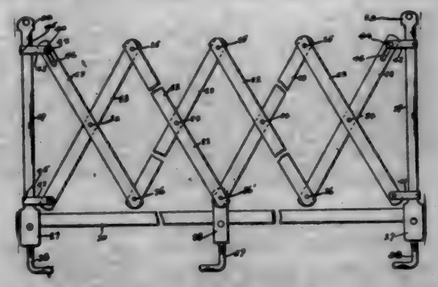


1,542,804. BOWLING-ALLEY SYSTEM. WALTER H. GRAY, Davenport, Iowa. Filed Aug. 12, 1921, Serial No. 491,680. Renewed Nov. 5, 1924. 10 Claims. (Cl. 46—54.)

1. In a device of the class described, the combination with a series of alleys and partitions at the rear ends thereof, pin-setting frames supported so as to be vertically movable over the rear ends of said alleys; pin retaining means carried by said frames, adapted to hold a set of pins in position for being set in their proper places on the alley; means for releasing said pins upon the pin-setting frame approaching to within a desired distance from the floor; and a pin delivering mechanism, movable transversely of the alleys, and capable of delivering a set of pins to one or other of the pin-setting frames, at will.

1,542,805. ART OF ASSEMBLING TUBE FRAMES FOR LOOMS. EDGAR F. HATHAWAY, Wellesley, Mass., assignor to Shawmut Engineering Company, Boston, Mass., a Corporation of Massachusetts. Filed Mar. 18, 1922. Serial No. 544,896. 7 Claims. (Cl. 113—99.)

1. The improvement in the art of assembling tube frames which consists in locating the individual tuft tubes in parallelism transversely of a longitudinal metallic holding strip by the aid of a spacing member, soldering the tubes to said strip and simultaneously cool-



ing the spacing member to prevent the applied heat of soldering from expanding the spacing member in order to maintain the tubes in a uniform spaced relation during the assembling operation, substantially as described.

1,542,806. TRANSMISSION. ADAM ZISKA, Jr., Milwaukee, Wis., assignor to Harley-Davidson Motor Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Aug. 18, 1919. Serial No. 318,373. 8 Claims. (Cl. 64—103.)

1. A transmission shaft housing comprising telescopically disposed tubular members, a nut threaded on the periphery of one member, a shoulder formed on the periphery of another of the members, and a compression spring interposed between the nut and the shoulder.

1,542,807. LUGGAGE CARRIER. EWALD F. PAWSAT, Sheboygan, Wis., assignor to Wald Manufacturing Company, Sheboygan, Wis. Filed July 8, 1922. Serial No. 573,668. 7 Claims. (Cl. 224—29.)

7. A luggage carrier end structure including an upright comprising an elongated strip of metal with the margins of the intermediate portions bent inwardly and brought together in tubular form, an integral foot at the lower extremity of said upright and disposed at right angles thereto.

Patents Nos. 1,542,808 to 1,543,057.

THE OFFICIAL GAZETTE

OF THE

United States Patent Office.

Vol. 335—No. 4. TUESDAY, JUNE 23, 1925. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Interference Notices.

U. S. Patent Office, *Washington, May 26, 1925.*

Ramco Manufacturing Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Ram Metal Products Co., Inc., 1848 Webster Avenue, New York, N. Y., for registration of a trade-mark and trade-marks registered November 24, 1914, Nos. 101,324, 101,325, and 101,326, to the Ramco Manufacturing Company, 332 State Street, Schenectady, N. Y., and a notice of such declaration sent by registered mail to said Ramco Manufacturing Company at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Ramco Manufacturing Company, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. Patent Office, *Washington, May 26, 1925.*

Steinberger & Kalisher, their assigns or legal representatives, take notice:

An interference having been declared by this Office between the applications of Steinberger Bros. Lobl Co. Inc., 295 Fifth Avenue, New York, N. Y., for registration of trade-marks and trade-mark registered May 14, 1907, No. 62,598, to Steinberger & Kalisher, 2001 Lyon Street, San Francisco, Calif., and a notice of such declaration sent by registered mail to said Steinberger & Kalisher at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Steinberger & Kalisher, their assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. Patent Office, *Washington, June 10, 1925.*

Phoenix Plumbago Mining Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Stuart Products Co., Inc., 100 Hudson Street, New York, N. Y., and 93 Sherman Avenue, Jersey City, N. J., for registration of a trade-mark and trade-mark registered August 29, 1905, No. 45,930, to Phoenix Plumbago Mining Company, 1712 North Ninth Street, Philadelphia, Pa., and a notice of such declaration sent by registered mail to said Phoenix Plumbago Mining Company at the said address having been returned by the post-office authorities as undeliverable, notice is hereby given that unless said Phoenix Plumbago Mining Company, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

WM. A. KINNAN, *Acting Commissioner.*

U. S. Patent Office, *Washington, June 10, 1925.*

The heirs, assigns, or legal representatives of Mark Tempest, take notice:

An interference has been declared by this Office between the application of Lillian J. Thompson, 1347 Washington Avenue, Tyrone, Pa., for registration of a trade-mark and trade-mark registered July 20, 1897, No. 30,414, to Mark Tempest, Olneyville, R. I. It prima facie appearing that the registrant is dead, notice is therefore hereby given to the said heirs, assigns, or legal representatives of said Mark Tempest that unless they shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

WM. A. KINNAN, *Acting Commissioner.*

U. S. Patent Office, *Washington, June 10, 1925.*

Jacob Beck & Son, Ltd., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Reid, Murdoch & Co., 314 North Clark Street, Chicago, Ill., for registration of a trade-mark and trade-mark registered June 30, 1903, No. 40,687, to Jacob Beck & Son, Ltd., 245–249 Congress Street west, Detroit, Mich., and a notice of such declaration sent by registered mail to said Jacob Beck & Son, Ltd., at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Jacob Beck & Son, Ltd., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

WM. A. KINNAN, *Acting Commissioner.*

Condition of Applications Under Examination at Close of Business June 12, 1925.

DECISIONS IN PATENT AND TRADE-MARK CASES.

Commissioner's Decisions.

H. D. Lee Flour Mills Company v. The R. D. Johnson Milling Company of Allegany County.

No. 913. Decided September 5, 1924.

Trade-Mark—Assignment of Mark Without Transfer of Business.

The naked transfer of a trade-mark without and aside from the business is an abandonment of the mark by the assignor, and no benefit of early use of the mark by the assignor can accrue to the assignee.

Appeal from the Examiner of Interferences.

Trade-Mark for Wheat Flour.

Registration of The R. D. Johnson Milling Company of Allegany County, No. 164,083, dated February 13, 1923.

Mr. Andrew B. Remick for H. D. Lee Flour Mills Co.

Mr. B. P. Fishburne for The R. D. Johnson Milling Co.

Fenning, *Assistant Commissioner:*

The Johnson Milling Company appeals from the action of the Examiner of Interferences canceling its Trade-Mark No. 164,083, issued February 13, 1923. The mark consists of the pictorial representation of an eagle together with "American Eagle" and other insignia. The Johnson Company has proven use of its mark since 1899. The Lee Flour Mills Company has proven use of a similar mark since about 1900. In order to carry its date back of that of the Johnson Company, the Lee Company relies on an assignment executed March 17, 1923, from the Liberty Mills of Texas to the Lee Company of—

the whole and entire right, title and interest in and to the following trade mark, including the goodwill attached thereto: "American Eagle", for wheat flour.

It is admitted that the Liberty Mills began use of the mark prior to 1899, probably 1894. The conditions of transfer are set out in the following testimony of Mr. Gustav Giesecke, president of the Liberty Mills:

XQ. 3. Do you know if the grade of flour which you state you made and sold under the American Eagle brand is identical in quality with that made by the H. D. Lee Flour Mills Co., and sold by them under the same trade mark, American Eagle? A. I do not.

XQ. 4. Have you furnished The H. D. Lee Flour Mills Co. with any formula, grain, directions, or other means whereby their American Eagle brand of flour might be made identical in quality with the American Eagle flour which you state you manufactured? A. I have not.

XQ. 5. Is not the good will of a product dependent upon the quality or character of the product? A. It is.

XQ. 6. Can you state how it was then possible for you to sell to The H. D. Lee Flour Mills Co. the good will of your flour without providing means whereby the quality of the flour would be the same? A. I sold them the trade-mark, and did not sell them the good will of my flour.

XQ. 7. Have you sold to The H. D. Lee Flour Mills Co. in connection with the sale of this trade-mark, any of your machinery or equipment? A. I have not.

XQ. 8. Outside of the trade-mark and its good will, did you sell them any of your business? A. I did not.

XQ. 9. Didn't you understand that you were simply selling the American Eagle trade-mark? A. I sold them the trade-mark and the good will thereto.

XQ. 10. By the word thereto you mean the good will of the trade-mark? A. Certainly.

XQ. 11. When you sold this trade-mark and the good will attached to the trade-mark did you intend to absolutely discontinue its use, and have you done so? A. I did and I have.

XQ. 14. How many other trade-marks were you using along with the American Eagle trade-mark? A. About twenty (20).

XQ. 16. Then shortly before you sold the American Eagle trade-mark in question you were using it and some other 19 trade-marks in the southwest Texas? A. We were.

XQ. 17. Have you noticed any decline in the income from your business since you sold the American Eagle trade-mark? A. We have not.

XQ. 18. Have you furnished The H. D. Lee Flour Mills Co. with a list of any of your old customers? A. We have not.

XQ. 19. Have you placed your corporate name upon the bags of The H. D. Lee Flour Mills Co.? A. Certainly not.

It seems to me clear from this statement that the assignment was in fact nothing more than an agreement on the part of the Liberty Mills not to continue the use of the "American Eagle" mark. No attempt was made to transfer any part of the business. It is well established that the naked transfer of a trade-mark without and aside from the business can not be accomplished. In *Independent Baking Powder Co.* v. *Boorman*, 175 Fed. 448, a somewhat similar condition was considered, and after citing cases and stating the general principle the court found the alleged assignment invalid. In that case, as in this, the assignor was employing several trade-marks, one of which they endeavored to transfer—

but kept their business and continued to manufacture identically the same powder and sell it under the same symbols under which it had previously been sold, save that they did not use the name "Solar,"

which was the subject of the transfer. The court held—

the assignor can not, after the assignment, continue the same identical business at the same places as before, under unassigned trade-marks, and at the same time authorize his assignee to conduct the same business elsewhere under an assigned trade-mark.

The case of *Mayer Fertilizer & Junk Company* v. *Virginia-Carolina Chemical Company*, 156 O. G. 539; 1910 C. D. 399, is a holding of the Court of Appeals of the District of Columbia to substantially the same effect. I must hold, therefore, that the 1923 assignment of the Liberty Mills was an abandonment of the mark by the Liberty Mills, and no benefit of their early use can accrue to the Lee Flour Mills Company. Of those now using the mark, the Johnson Milling Company is the first user, and its mark can not be canceled.

The Examiner of Interferences is reversed.

Ames Shovel & Tool Company v. Baldwin Tool Works.

Decided November 8, 1924.

1. Trade-Marks—Purpose Predominantly Utilitarian.

Where applicant's shovels have metal clips extending part way down the handle grips, and the evidence indicates that his purpose of applying paint in the manner illustrated in the trade-mark drawings was to prevent

the clips from rusting. *Held* that the purpose was predominantly utilitarian, and therefore the mark comes within that class condemned by the Supreme Court in *Columbia Mill Co.* v. *Alcorn*, 150 U. S. 460.

2. SAME—OPPOSITION—MARK WHICH WOULD PROHIBIT ORDINARY MANUFACTURING PRACTICE.

No one may adopt a mark which will exclude the rest of the trade from using the usual ordinary manufacturing practice established in the trade.

APPEAL from Examiner of Interferences.

Messrs. Roberts, Roberts & Cushman for Ames Shovel & Tool Company.

Messrs. Mida & Wallace for Baldwin Tool Works.

FENNING, *Assistant Commissioner:*

Baldwin Tool Works appeals from the action of the Examiner of Interferences sustaining an opposition brought against its application to register a trade-mark for shovels, spades, scoops, posthole diggers, and wooden handles, consisting "of the trade-mark name 'Red Head' used in connection with the color red on the handles of the goods."

The term "head" is generally applied to the top or grip end of the handle. It is clear, therefore, that the words "Red Head" describe a tool in which the head is painted red, as shown in applicant's device.

An effort is made in argument to limit the mark here to the paint carried only part way down the sides of the D handle, as shown in the drawing. It appears clearly from the evidence, however, that applicant has no intention to so limit the use of its mark. It is clear that it has put out goods with color extending to the end of the D handle and with color extending further down the handle, and the officers of applicant insist that such is their mark.

The evidence here clearly shows that it has been customary in the trade for a great many years to paint a part or all of the handles of such devices as are here involved various colors. It appears that opposer and other manufacturers have employed blue, black, brown, gold, red, green, yellow, gray, and possibly other colors. The color is frequently employed to distinguish the shovels of one owner from those of another. Colors frequently are applied at the factory to shovels in accordance with orders received. It has been the custom for years in the trade to paint at least the parts of handles which are made of metal to prevent them from rusting and of course the paint so used is of some color.

It seems clear that registration of the present mark to applicant will prohibit opposer from applying red paint to the grips or handles of shovels. Opposer has done this from time to time for many years past and hopes and proposes to do it in the future, at least in response to orders which it may receive in the ordinary course of business. This shows sufficient probability of damage to opposer to warrant it bringing the present proceeding.

It seems probable from the evidence here that applicant has never actually used the mark as shown in the drawing.

[1] The testimony here clearly indicates that applicant's shovels have metal clips extending part way down the D grip of its handles. The evidence seems to indicate that applicant's purpose of applying paint in the manner illustrated in the trade-mark drawing was to prevent the metal clips from rusting. The purpose of so applying paint was predominantly and primarily utilitarian. The mark therefore comes within that class condemned by the Supreme Court in *Columbia Mill Co.* v. *Alcorn*, 65 O. G. 1916; 1893 C. D. 672; 150 U. S. 460:

> It must be designed, as its primary object and purpose, to indicate the owner or producer of the commodity, and to distinguish it from like articles manufactured by others. * * * if the device, mark, or symbol was adopted or placed upon the article for the purpose of identifying its class, grade, style, or quality, or for any purpose other than a reference to or indication of its ownership, it cannot be sustained as a valid trade mark.

As was pointed out in *Diamond Match Co.* v. *Saginaw Match Co.*, 142 Fed. 727, the distinguishing colors are limited in number and it would be very easy for a small number of persons to adopt all colors and so shut the rest of the world out from manufacturing the goods at all.

The rope cases referred to by applicant stand on their own bottom, since of necessity the marking of ropes and cables is so difficult to accomplish that the practical trade has established a color practice which is favorably looked upon by the courts.

[2] No one may adopt a trade-mark which will exclude the rest of the trade from using the usual ordinary manufacturing practice established in the trade.

The Examiner of Interferences is affirmed.

ADJUDICATED PATENTS.

(D. C. N. Y.) The Wagner and Malocsay patent, No. 920,698, for cigar-banding machine, claims 22, 86, 87, 88, 96 and 97 *Held* not infringed. *International Banding Machine Co.* v. *American Bander Co.*, 4 F. (2d) 726.

ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,336,261, L. L. Scott, Combustion apparatus, decided May 8, 1925, claims 1, 3, 4, and 10.

Pat. 1,372,613, N. F. Egler, Furnace, decided May 4, 1925, claims 1 and 2.

Pat. 1,383,677, G. Thompson, Telephone-exchange system, decided May 8, 1925, claims 1 and 2.

Pat. 1,412,327, H. A. F. Abt, Bascule bridge, decided May 7, 1925, claim 2.

Pat. 1,501,560, Kean and Wilson, Umbrella, decided May 6, 1925, claims 1, 2, 3, 4, 5, 7, 9, 10, and 15.

Pat. 1,526,008, C. T. Olson, Ball bearing, decided May 6, 1925, claim 1.

TRADE-MARKS CANCELED.

34,864. Certain named food preparations. Merrell-Soule Company, Syracuse, N. Y. Registered July 10, 1900. Canceled May 14, 1925.

135,001. Paper or pulp towels. The Lily Cup Company Incorporated, New York, N. Y. Registered September 21, 1920. Canceled May 14, 1925.

150,333. Dyeing, coloring, and tinting compositions. Robert P. Dicks, New York, N. Y. Registered January 3, 1922. Canceled May 14, 1925.

156,764. Coffee. St. Louis Coffee & Spice Mills, St. Louis, Mo. Registered July 11, 1922. Canceled May 14, 1925.

166,486. Roof paint. Kling-Tite Products Co., Chicago, Ill. Registered April 3, 1923. Canceled May 14, 1925.

180,483. Threads. Manufacturers Supplies Company, St. Louis, Mo. Registered February 26, 1924. Canceled May 14, 1925.

185,951. (International.) Pianos and piano players. John L. Stowers, Calle de General Carrillo 29, Habana, Cuba. Registered June 24, 1924. Canceled April 8, 1925. (International registration No. 999, May 1, 1924.)

194,242. Rolled iron and steel. McCleane Brown, doing business as Pittsburgh Steel Supply Company, Pittsburgh, Pa. Registered January 20, 1925. Canceled May 14, 1925.

194,243. Rolled iron and steel. McCleane Brown, doing business as Pittsburgh Steel Supply Company, Pittsburgh, Pa. Registered January 20, 1925. Canceled May 14, 1925.

194,244. Rolled iron and steel. McCleane Brown, doing business as Pittsburgh Steel Supply Company, Pittsburgh, Pa. Registered January 20, 1925. Canceled May 14, 1925.

194,245. Rolled iron and steel. McCleane Brown, doing business as Pittsburgh Steel Supply Company, Pittsburgh, Pa. Registered January 20, 1925. Canceled May 14, 1925.

Disclaimer.

1,516,807.—*Clarence D. Tuska* and *Percival H. Spencer*, Hartford, Conn. PANTOGRAPH ENGRAVING TOOLS. Patent dated November 25, 1924. Disclaimer filed May 28, 1925, by the assignee, *The C. D. Tuska Company.*

Hereby enters this disclaimer to any interpretation of claims 5, 7, and 8 of said Letters Patent in which the phrase, in each of said claims, "a rotating tool carried in said guiding arm arranged for a floating vertical movement" does not mean that said rotating tool is capable of a floating vertical movement in said guiding arm and relative thereto.

Disposition of Patent Office Models.

The act of Congress, approved February 13, 1925, provides a commission "to select such of the Patent Office models and exhibition exhibits as may be deemed to be of value and of historical interest * * * and cause the remainder of the said models and exhibits to be disposed of by public auction, gift to Federal, State, or private museums or institutions, or returned without expense to the Government to the original depositors or their representatives, where demanded in writing by them." * * *

The commission hereby gives notice to all Federal, State, or private museums or institutions, and to all other parties entitled to receive any of the models or exhibits under said act of Congress, that claim thereto must be made in writing to the commission on or before July 15, 1925; otherwise the models may be sold or destroyed, as authorized by the act.

Claims should be addressed to the Patent Office, Washington, D. C.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

TRADE-MARKS

OFFICIAL GAZETTE, JUNE 23, 1925.

[VOL. 335. No. 4.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 160,135. (CLASS 50. MERCHANDISE NOT OTHERWISE CLASSIFIED.) IMPERVIOUS FABRICS COMPANY, INC., Mount Vernon, N. Y. Filed Mar. 3, 1922.

Waterwitch

Particular description of goods.—Waterproofed Woven, Knitted, and Felted Fabrics of Every Description.
Claims use since Aug. 1, 1919.

Ser. No. 161,574. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JAMES L. MCANLIS, Cleveland, Ohio. Filed Mar. 31, 1922.

BEAUTEX

Particular description of goods.—Liquid Shampoo, Hair Tonic, Vanishing Cream, Cold Cream, and Face Powder in Cream Form.
Claims use since on or about Jan. 5, 1921.

Ser. No. 164,513. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) GREAT STUFF PRODUCTS COMPANY, Minneapolis, Minn. Filed May 25, 1922.

Great Stuff

Particular description of goods.—Soap.
Claims use since Sept. 1, 1920.

Ser. No. 165,082. (CLASS 50. MERCHANDISE NOT OTHERWISE CLASSIFIED.) IMPERVIOUS FABRICS COMPANY, INC., Mount Vernon, N. Y. Filed June 6, 1922.

Waterseal

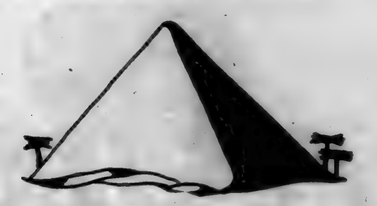
Particular description of goods.—Waterproofed Woven, Knitted, and Felted Fabrics of Every Description.
Claims use since Aug. 1, 1919.

Ser. No. 167,395. (CLASS 15. OILS AND GREASES.) HERCULES GASOLINE CO., Los Angeles, Calif. Filed July 26, 1922.

Particular description of goods.—Gasoline, Kerosene, Petroleum, Distillates, Fuel Oils, Lubricating Oils and Greases.
Claims use since Sept. 30, 1920.

Ser. No. 169,131. (CLASS 15. OILS AND GREASES.) HERCULES GASOLINE CO., Los Angeles, Calif. Filed Sept. 6, 1922.

HERCO



Particular description of goods.—Gasoline, Kerosene, Petroleum, Distillates, Fuel Oils, Lubricating Oils and Greases.
Claims use since Apr. 19, 1922.

Ser. No. 172,865. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MAUD REYNOLDS WALTERS, doing business as Reynolds Cosmetic & Hair Store, St. Paul, Minn. Filed Nov. 20, 1922.

Particular description of goods.—Face Lotion, Massage Cream, Bleaching Lotion, Antiseptic Oil, Astringent Lotion, Lavender Lotion, and Hair Scalp Lotion.
Claims use since May 15, 1922.

Ser. No. 176,610. (CLASS 12. CONSTRUCTION MATERIALS.) EQUITY CONSTRUCTION COMPANY, New York, N. Y. Filed Feb. 26, 1923.

EQUITY

Particular description of goods.—Sand and Gravel.
Claims use since May 1, 1922.

Ser. No. 176,683. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) MAGONY & BUSCHER, New York, N. Y. Filed Feb. 27, 1923.

BESTONE

Particular description of goods.—Banjo Resonator Attachments.
Claims use since Aug. 15, 1922.

Ser. No. 177,921. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE NATIONAL DAIRY CO., Toledo, Ohio. Filed Mar. 23, 1923.

GOLD RIBBON

Particular description of goods.—Skim Milk Concentrated with Cream Added.
Claims use since Mar. 19, 1923.

Ser. No. 180,720. (CLASS 12. CONSTRUCTION MATERIALS.) MARIO PALANTI, Buenos Aires, Argentina. Filed May 16, 1923.

The words "American Building, Universal Economical Construction" are disclaimed apart from the mark shown on the drawing.
Particular description of goods.—Blocks for the Construction of Houses, Bricks, Roof Tiles, Floor Tiles, and Mosaic Blocks.
Claims use since Apr. 9, 1923.

Ser. No. 185,506. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) HOWARD W. SLATER, doing business as Westchester Farm Products Company, Mamaroneck, N. Y. Filed Sept. 7, 1923.

No claim is herein made to the word "Perkins" apart from the mark shown.
Particular description of goods.—Butter.
Claims use since July 1, 1923.

Ser. No. 185,552. (CLASS 28. JEWELRY AND PRECIOUS-METAL WARE.) AULD'S INC., Columbus, Ohio. Filed Sept. 10, 1923.

No claim is made herein to the name "Auld's Inc." apart from the mark shown in the drawing. The lining indicates shading only.

ALL STEEL

Applicant disclaims any attempt to cover in this application the words "All Steel" except in the precise relation and association in which they are shown in the mark as a whole.

Particular description of goods.—Automobile Bodies.

Claims use since July, 1920.

Ser. No. 195,610. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) ANGELO BROS. LIMITED, Calcutta, British India. Filed Apr. 16, 1924.

ANGELOBRO
IG

Particular description of goods.—Prepared Shellacs.

Claims use since Dec. 31, 1899.

Ser. No. 195,807. (CLASS 39. CLOTHING.) NEWMAN DUBS & CO., New York, N. Y. Filed Apr. 19, 1924.

America's
School Boys
Suits

No claim is made to the words "America's School Boys Suits" apart from the mark shown on the drawing. The drawing is lined to represent a red upper zone and a blue lower zone.

Particular description of goods.—Boys' Suits.

Claims use since 1912.

Ser. No. 195,831. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE G. W. OPELL CO., Vincennes, Ind. Filed Apr. 19, 1924.

PAL'S

Particular description of goods.—Cakes.

Claims use since Apr. 15, 1924.

Ser. No. 195,909. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) RADIO GAMES COMPANY, Peoria, Ill. Filed Apr. 21, 1924.

Game
of
Radio

No claim is made to the use of the words "Game of" apart from the mark shown.

Particular description of goods.—Card Game.

Claims use since Mar. 20, 1924.

Ser. No. 196,509. (CLASS 45. BEVERAGES, NON-ALCOHOLIC.) DORIS BUSTANOBY, New York, N. Y. Filed May 3, 1924.

Forbidden
Punch

The word "Punch" is disclaimed apart from the mark shown on the drawing.

Particular description of goods.—Nonalcoholic, Maltless Beverage Sold as a Soft Drink.

Claims use since Apr. 24, 1924.

Ser. No. 196,510. (CLASS 45. BEVERAGES, NON-ALCOHOLIC.) DORIS BUSTAMORY, New York, N. Y. Filed May 3, 1924.

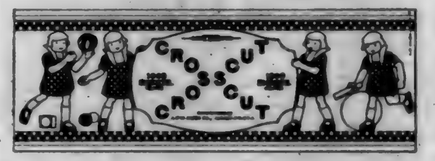
Particular description of goods.—Nonalcoholic, Maltless Beverage Sold as Soft Drink.
Claims use since Apr. 24, 1924.

Ser. No. 197,365. (CLASS 40. FANCY GOODS, FURNISHINGS, AND NOTIONS.) THE DE LONG HOOK AND EYE COMPANY, Philadelphia, Pa. Filed May 21, 1924.

The picture of the head, face, and upper portions of the shoulders shown in the accompanying drawing is fanciful.
Particular description of goods.—Hairpins.
Claims use since May 14, 1924.

Ser. No. 199,096. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS, NOT INCLUDING ELECTRICAL APPARATUS.) J. S. & J. F. STRING INCORPORATED, New Haven, Conn. Filed June 24, 1924.

VESTA



Particular description of goods.—Liquid-Fuel Systems, Liquid-Fuel Burners, Liquid-Fuel Furnaces, Liquid-Fuel Heaters, and Liquid-Fuel Torches.
Claims use since May, 1923.

Ser. No. 199,754. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) N. S. LOW & CO. INC., New York, N. Y. Filed July 8, 1924.

ENESLOW

Particular description of goods.—Instrument Trays; Electromedical, Physio-therapy, and X-Ray Apparatus; Abdominal Supporters, Elastic Stockings, Trusses, Abdominal Belts, Surgical Instruments, Deformity Apparatus, and Arch Supporters.
Claims use since about August, 1923.

Ser. No. 200,080. (CLASS 37. PAPER AND STATIONERY.) ALBANY PERFORATED WRAPPING PAPER COMPANY, Albany, N. Y. Filed July 16, 1924.

Applicant hereby disclaims any demand herein for protection upon the mere words "100 Sheets 4¾ x 5½" and "Albany, N. Y., U. S. A." and "Manufactured by A. P. W. Paper Co." apart from the mark shown.
Particular description of goods.—Toilet Paper.
Claims use since June 6, 1924.

Ser. No. 200,399. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) HENRY SPRAGUE LIPPINCOTT, Red Bank, N. J. Filed July 23, 1924.

LUMKSE

Particular description of goods.—Candy.
Claims use since June 30, 1924.

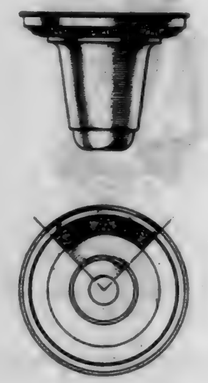
67,646. COMBINED PHONOGRAPH AND RADIO RECEIVER CABINET. BENJAMIN H. DIETZ and ALBERT E. HANSEN, Chicago, Ill. Filed Feb. 23, 1924. Serial No. 8,719. Term of patent 14 years.

The ornamental design for a combined phonograph and radio receiver cabinet, as shown.

67,647. BUILDING BLOCK. GEORGE W. DUNN, Newport, Ky. Filed July 10, 1924. Serial No. 10,111. Term of patent 14 years.

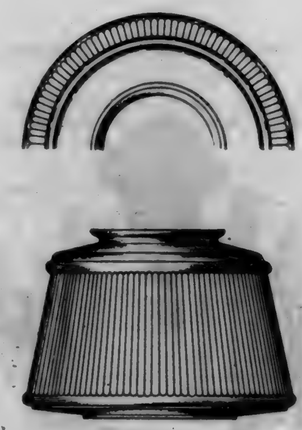
The ornamental design for a building block, as shown.

67,648. DISPLAY CARD. MERRITT L. EMRICH, Louisville, Ky., assignor to United States Foil Company, Louisville, Ky., a Corporation of Delaware. Filed Apr. 16, 1925. Serial No. 13,148. Term of patent 14 years.



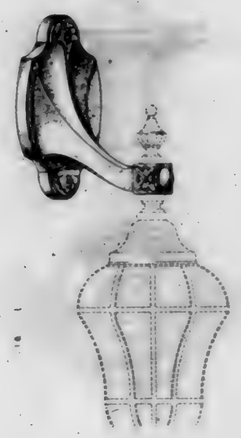
The ornamental design for a display card, as shown.

67,649. RING. JOSEPH ENGEL, New York, N. Y. Filed Feb. 26, 1925. Serial No. 12,493. Term of patent 7 years.



The ornamental design for a ring as shown.

67,650. CANOPY FOR LIGHTING FIXTURES. RUTH L. GERTH, Minneapolis, Minn., assignor to Alfred Vester Sons, Inc., Providence, R. I., a Corporation of Rhode Island. Filed Mar. 19, 1925. Serial No. 12,760. Term of patent 14 years.

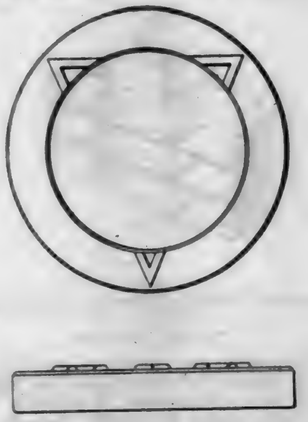


The ornamental design for a canopy for lighting fixtures, as shown.

67,651. GLASS ILLUMINATING BOWL. EDGAR A. GILLINDER, Philadelphia, Pa., assignor to Gillinder & Sons, Inc., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 29, 1925. Serial No. 13,254. Term of patent 7 years.

The ornamental design for a glass illuminating bowl, as shown.

67,652. WALL BRACKET. WILFRED B. GODDARD, San Francisco, Calif., assignor to Thomas Day Company, San Francisco, Calif., a Corporation of California. Filed Feb. 16, 1925. Serial No. 12,387. Term of patent 7 years.



The ornamental design for a wall bracket substantially as shown.

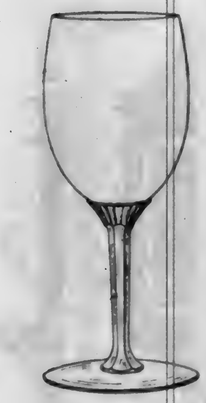
67,653. WALL BRACKET. WILFRED B. GODDARD, San Francisco, Calif., assignor to Thomas Day Company, San Francisco, Calif., a Corporation of California. Filed Feb. 16, 1925. Serial No. 12,388. Term of patent 7 years.

The ornamental design for a wall bracket substantially as shown.

67,654. LAMP DOOR. CHARLES E. GODLEY, Detroit, Mich. Filed Aug. 24, 1923. Serial No. 7,078. Term of patent 7 years.

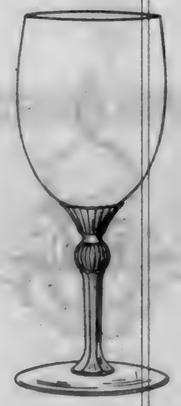
The ornamental design for a lamp door, as shown.

67,655. CANOPY FOR LIGHT GLOBES. JOSEPH W. GOSLING, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Dec. 22, 1923. Serial No. 8,137. Term of patent 14 years.



The ornamental design for a canopy for light globes as shown.

67,656. DRESS. MIRIAM GROSS, Chicago, Ill. Filed Mar. 12, 1925. Serial No. 12,690. Term of patent 14 years.

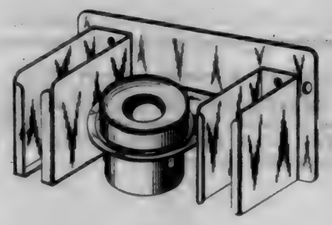


The ornamental design for a dress, substantially as shown and described.

67,657. GOBLET. THOMAS CLARENCE HEISEY, Newark, Ohio, assignor to A. H. Heisey & Company, Newark, Ohio, a Common Law Company. Filed Jan. 23, 1925. Serial No. 12,129. Term of patent 14 years.

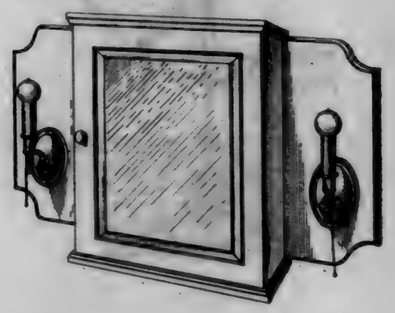
The ornamental design for a goblet as shown.

67,658. GOBLET. THOMAS CLARENCE HEISEY, Newark, Ohio, assignor to A. H. Heisey & Company, Newark, Ohio, a Common Law Company. Filed Jan. 23, 1925. Serial No. 12,130. Term of patent 14 years.



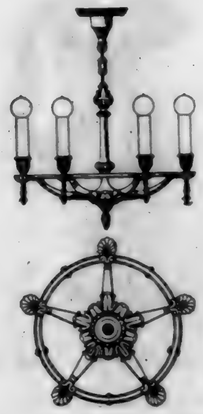
The ornamental design for a goblet, as shown.

67,659. ADVERTISING DEVICE. LLONEL MANUEL HENDLER, Baltimore, Md. Filed Dec. 22, 1923. Serial No. 8,128. Term of patent 14 years.



The design for an advertising device as shown and described.

67,660. SMOKE KIT. ADAM W. KAUFMAN, Milwaukee, Wis. Filed Mar. 26, 1925. Serial No. 12,886. Term of patent 7 years.

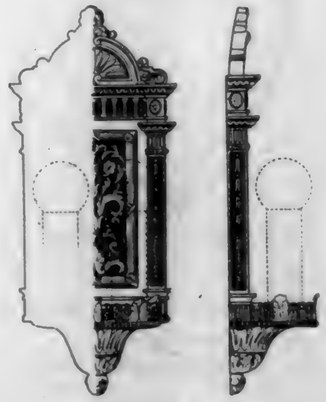


The ornamental design for a smoke kit.

67,661. WALL CABINET. ROBERT P. KING, Greensboro, N. C. Filed Apr. 14, 1925. Serial No. 13,131. Term of patent 14 years.

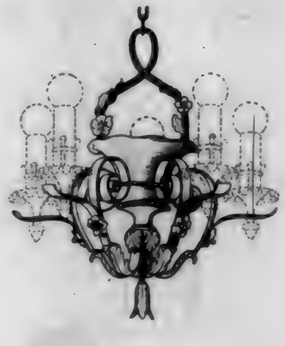
The new, original and ornamental design for a wall cabinet, substantially as shown.

67,662. CHANDELIER. MAX KLEIN, New York, N. Y., assignor to Shapiro & Aronson, Inc., a Corporation of New York. Filed Sept. 2, 1924. Serial No. 10,647. Term of patent 3½ years.



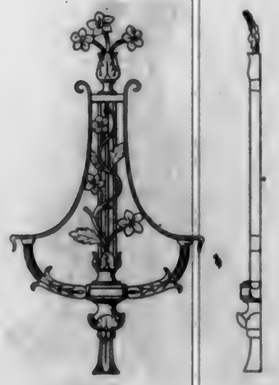
The ornamental design for a chandelier, as shown.

67,663. CHANDELIER. MAX KLEIN, New York, N. Y., assignor to Shapiro & Aronson, Inc., a Corporation of New York. Filed Sept. 2, 1924. Serial No. 10,650. Term of patent 3½ years.



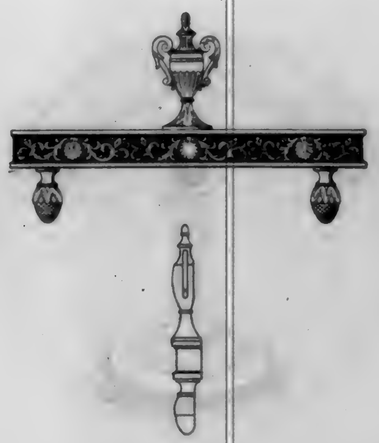
The ornamental design for a chandelier, as shown.

67,664. LIGHTING FIXTURE. ARTHUR R. KRAUSE, Woodhaven, N. Y., assignor to The Lion Electric Manufacturing Co. Inc., a Corporation of New York. Filed May 2, 1925. Serial No. 13,289. Term of patent 7 years.



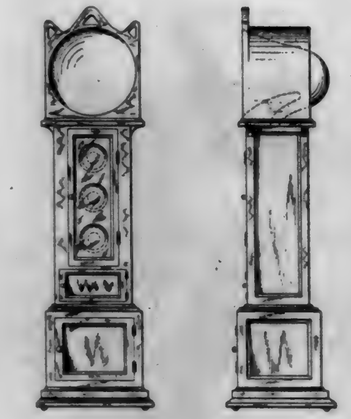
The ornamental design for a lighting fixture, substantially as shown and described.

67,665. CHANDELIER. ARTHUR R. KRAUSE, Woodhaven, N. Y., assignor to The Lion Electric Manufacturing Co. Inc., a Corporation of New York. Filed May 2, 1925. Serial No. 13,291. Term of patent 7 years.



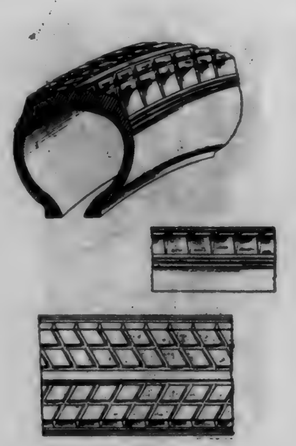
The ornamental design for a chandelier, substantially as shown.

67,666. LIGHTING-FIXTURE PART. ARTHUR R. KRAUSE, Woodhaven, N. Y., assignor to The Lion Electric Manufacturing Co. Inc., a Corporation of New York. Filed May 2, 1925. Serial No. 13,292. Term of patent 7 years.



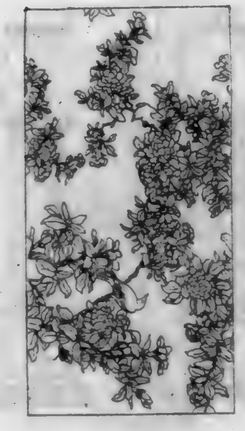
The ornamental design for a lighting fixture part, substantially as shown.

67,667. LIGHTING-FIXTURE ARM. ARTHUR R. KRAUSE, Woodhaven, N. Y., assignor to The Lion Electric Manufacturing Co. Inc., a Corporation of New York. Filed May 2, 1925. Serial No. 13,293. Term of patent 7 years.



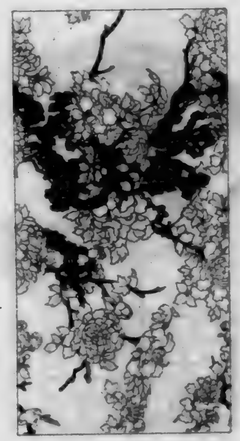
The ornamental design for a lighting fixture arm, substantially as shown.

67,668. RADIOCABINET. MAX MAYER, New York, N. Y. Filed Apr. 10, 1925. Serial No. 13,087. Term of patent 7 years.



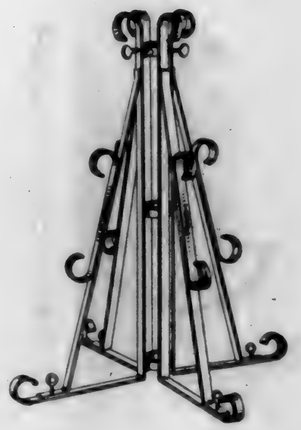
The ornamental design for a radiocabinet as shown.

67,669. TIRE TREAD. ROBERT M. MERRIMAN, Akron, Ohio. Filed Nov. 14, 1924. Serial No. 11,381. Term of patent 7 years.



The ornamental design for a tire tread, as shown.

67,670. WALL PAPER OR A SIMILAR ARTICLE. JOHN MCKANE, London, England. Filed Mar. 21, 1925. Serial No. 12,808. Term of patent 7 years.

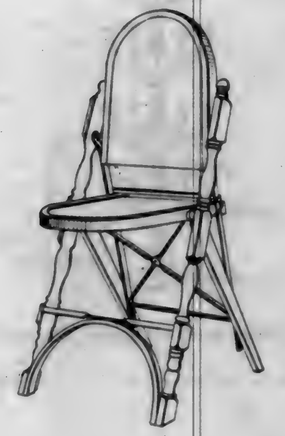


The ornamental design for wall paper or a similar article as shown.

67,671. WALL PAPER OR A SIMILAR ARTICLE. JOHN MCKANE, London, England. Filed Mar. 21, 1925. Serial No. 12,809. Term of patent 7 years.

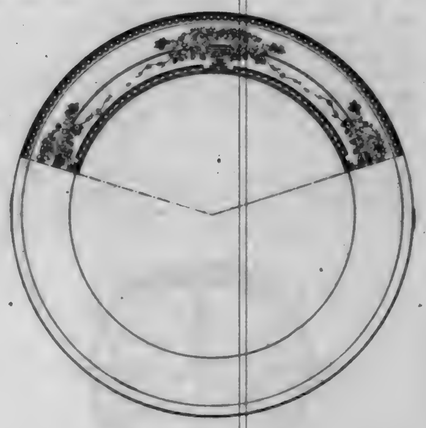
The ornamental design for wall paper or a similar article as shown.

67,672. FLAG STAND. WILLIAM H. MOHR, Reading, Pa. Filed Mar. 31, 1925. Serial No. 12,959. Term of patent 7 years.



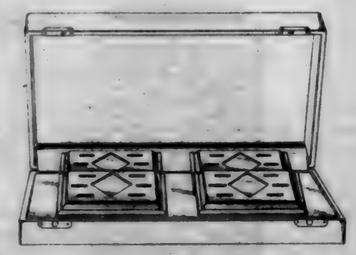
The ornamental design for a flag stand, as shown.

67,673. PEDESTAL FOR MERCHANDISE DISPLAY FIXTURES. EMIL THEODORE PALMENBERG, New York, N. Y. Filed Mar. 16, 1925. Serial No. 12,737. Term of patent 7 years.



The ornamental design for a pedestal for merchandise display fixtures.

67,674. FOLDING CHAIR. WILLIAM C. RASTETTER, Fort Wayne, Ind. Filed Jan. 28, 1925. Serial No. 12,174. Term of patent 14 years.



The ornamental design for a folding chair as shown.

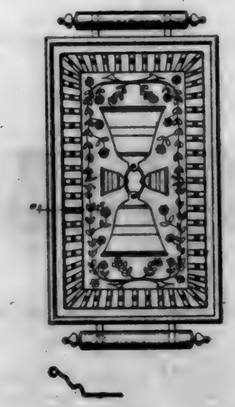
67,675. PLATE OR SIMILAR ARTICLE. EUGENE SAINSON, Great Kills, N. Y. Filed May 1, 1925. Serial No. 13,273. Term of patent 7 years.

The ornamental design for a plate or similar article, as shown.

67,676. DISPLAY CASE. MAURICE J. SCHLESS, New York, N. Y. Filed May 31, 1922. Serial No. 2,473. Term of patent 7 years.

The ornamental design for a display case, substantially as shown.

67,677. ANIMAL DOLL. HARRY E. SCHOENHUT, Philadelphia, Pa., assignor to Pat Sullivan, New York, N. Y. Filed Mar. 21, 1924. Serial No. 9,019. Term of patent 14 years.



The ornamental design for an animal doll substantially as shown.

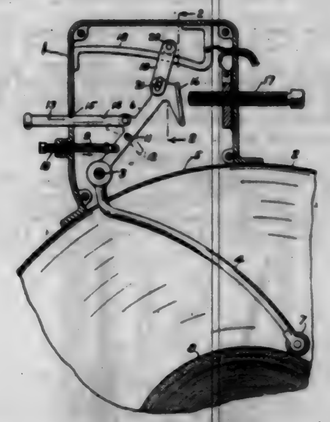
67,678. AMPLIFYING HORN. SAMUEL H. SERLIN, Chicago, Ill. Filed Sept. 19, 1924. Serial No. 10,829. Term of patent 14 years.

The ornamental design for an amplifying horn, as shown.

67,679. TRAY. BARBRA WEBB, Everett, Wash. Filed Apr. 25, 1925. Serial No. 13,220. Term of patent 7 years.

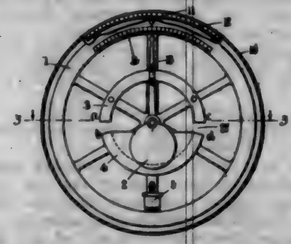
An ornamental design for a tray, as shown.

67,680. HATRACK. HARRY ZIEGLER, St. Louis, Mo., assignor to Levitt Millinery Company, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 20, 1925. Serial No. 13,177. Term of patent 7 years.



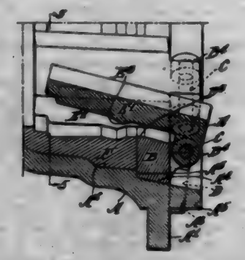
The ornamental design for a hatrack substantially as shown.

PATENTS



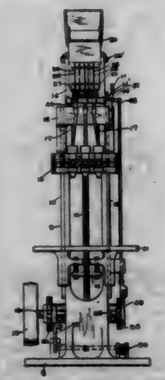
GRANTED JUNE 23, 1925.

1,542,808. INDICATOR FOR MOVING-PICTURE MACHINES. WILLIAM S. ADAMS, Philadelphia, Pa. Filed Aug. 22, 1921. Serial No. 494,058. 3 Claims. (Cl. 200—52.)



1. In an indicator for motion picture machines the combination of a housing for application to the magazine of the machine, a pivotal lever provided with a film actuated portion and with a radially arranged arm confined within the housing, a compression spring for said arm, means extending from the interior of the housing for adjusting said spring, an indicator index rigidly carried by said arm and extending through an arcuate slot provided in the housing and adapted to co-operate with a scale provided on the exterior of the housing, a hand piece movably connected with said arm and accessible from the exterior of the housing for positioning the arm, a contact adjustable from the exterior of the housing for co-operation with the arm, a contact rail fixture carried by the housing, and a current carrying link co-operating with the fixture and arm, substantially as described.

1,542,809. INCLINOMETER. FRANCIS HERBERT ALEXANDER, Newcastle-on-Tyne, and JOHN WILSON GILLIS, North Shields, England. Filed Dec. 1, 1922. Serial No. 604,199. 6 Claims. (Cl. 33—220.)



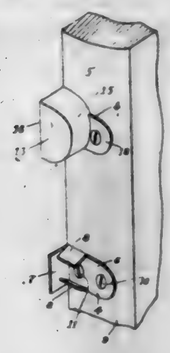
1. An instrument of the character described, comprising in combination a pendulum of relatively long period, a pendulum of short period, and means between the two pendulums for forming a magnetic coupling to oppose the deflection of the long period pendulum when subjected to acceleration.

1,542,810. CORE FOR CENTRIFUGAL PIPE MOLDS. THOMAS PEACOCK ANTHONY, Edgewater Park, N. J., assignor to United States Cast Iron Pipe & Foundry Company, Burlington, N. J., a Corporation of New Jersey. Filed Sept. 9, 1924. Serial No. 736,688. 3 Claims. (Cl. 22—170.)

1. A segmental removable core for a centrifugal pipe mold comprising in combination a ring adapted to be removably secured to the end of a mold and a series of core segments separately hinged to the ring adapted to fit together in the mold to form a core and to be turned inwardly in the mold to clear the casting.

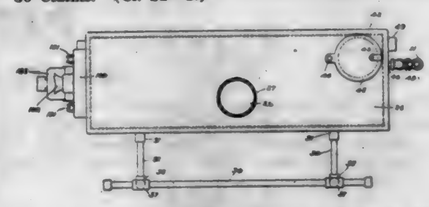
1,542,811. NAIL-FEEDING MECHANISM FOR BOX-MAKING MACHINES. JOHN ALBRECHT, Kewaunee, Wis. Filed Aug. 29, 1921. Serial No. 496,468. 4 Claims. (Cl. 1—16.)

1. A nail feeding mechanism for a nailing machine provided with a plurality of nail drivers, comprising a plurality of nail raceways having offset portions; a nail feeding member comprising an oscillating disc associated with each of said raceways provided with a recess in its edge adapted to register alternately with the offset portions of said raceway, whereby a nail may be received therein from one portion and be moved to



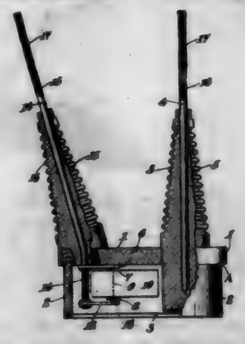
the other portion; resilient means for moving said feeding members in one direction; positive means for moving said members in the other direction; and hand set automatically operated means for preventing the functioning of said resilient means at predetermined intervals to stop the oscillations of certain of said feeding discs on alternate operations of said nail drivers.

1,542,812. ROLL FOR BEATING ENGINES. ALBERT J. ALLISON, Dayton, Ohio, assignor to The A. A. Simonds-Dayton Company, Dayton, Ohio, a Corporation of Ohio. Filed June 16, 1924. Serial No. 720,274. 6 Claims. (Cl. 92—22.)



1. In a beater roll, in combination: a head having slots on its periphery for the reception of fly bars, the walls of said slots diverging inward, making the slots broadest at the bottom, one wall of each slot being perpendicular to the face of the head while the other wall leans with reference to said face, making the slot broader at one side of the head than at the other; a fly bar, one side of which is adapted to lie against said perpendicular wall and having a longitudinal channel in the other side, and a wedge adapted to drive into the space between the bar and said leaning wall, having a spline on one side which lies in said channel in the bar, tying the wedge and bar together, the width of the wedge being equal to the depth of the slot.

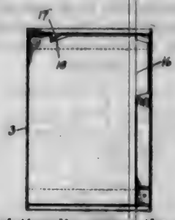
1,542,813. DOOR BUFFER. JAMES T. ATWOOD, Rockford, Ill. Filed Nov. 19, 1924. Serial No. 750,729. 7 Claims. (Cl. 16—86.)



5. A buffer adapted for automobile doors comprising a one-piece sheet metal retainer having a base portion and an end abutment in angular relation and side pieces turned inwardly to provide buffer retaining lugs, fastening means adapted to be passed through the base portion for securing the retainer to a door or door casing, and a buffer block of resilient material having spaced lug-receiving grooves along its base from one end, the grooves terminating within the block and being adapted for endwise reception of said retaining lugs, the buffer block being adapted to be pushed onto said lugs into abutting relation with said end abutment and being shaped to provide an arcuate door contacting face at its end opposite from said abutment.

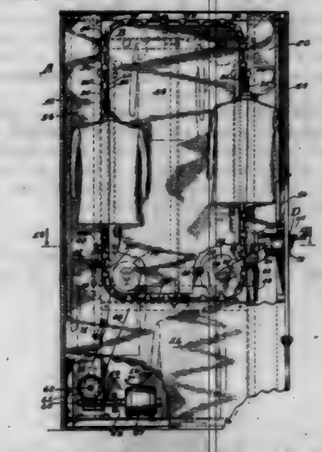
1,542,814. SHOE HEATER. WILLIAM H. BAYNARD, Boston, Mass., assignor to Harry H. Beckwith, Brookline, Mass. Filed Apr. 1, 1920. Serial No. 370,384. 30 Claims. (Cl. 12—1.)

1. A shoe heater comprising a housing having an aperture for the reception of a shoe, a vaporizing tank for containing a pool of water and delivering the vapor in the housing, means for admitting air to said housing, electrical heating means for heating said air, and an electrical heating element located and arranged to vaporize the water within said tank.



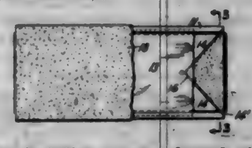
1,542,815. INSTRUMENT FOR LOCATING AND OBSERVING DEFECTIVE INSULATOR UNITS. CLAUDIUS E. BENNETT, Barcelona, Spain. Filed June 29, 1921. Serial No. 481,297. 7 Claims. (Cl. 175—183.)

7. A portable defective-insulator detector and observation instrument which operates equally well in all positions for detecting and observing defective insulator units in a series of such units, or otherwise, subjected to a high voltage, comprising in combination, spaced apart conductors highly insulated from one another and from ground for taking the voltage at the opposed surfaces of the insulator unit or units being tested; a rockable balanced indicator element which is rockable from a normal zero position to which it is constrained to return when free of electrostatic stresses to another observable position by the action of the electrostatic field resulting from the difference of voltage between the two conductors; a shield of conducting material for adjusting the strength and form of the electrostatic field in which the indicator element moves; a casing for maintaining the above elements in their correct relative position and for protecting the indicator element from undesirable outside influences.



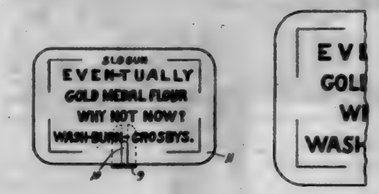
1,542,816. CARD-INDEX BOX. ROBERT J. BENTLEY, Monroe, Mich. Filed May 9, 1923. Serial No. 637,620. 2 Claims. (Cl. 291—15.)

1. In a card index box, a cardboard piece having parts forming the four sides of the box, two of the parts being hingedly connected with the other parts and with each other and extending over the top of the box and over substantially one-half of one side of the box, end cardboard pieces having flanged parts riveted to two of the side parts of the first named piece, two of the rivets located sufficiently remote from one end of the first named piece to permit the other end of the first named piece to be slid under the end having the



said rivets, to frictionally secure the box closed by the frictional engagement between the overlapping ends of the first named piece.

1,542,817. CLOTHING DISPLAY AND SALES CABINET. MATTHEW BERNHEIM, New York, N. Y. Filed June 8, 1922. Serial No. 566,714. 22 Claims. (Cl. 211—21.)

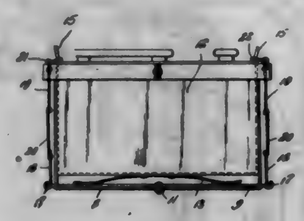


1. A display or sales apparatus comprising a housing, a conveyer arranged within the said housing, a plurality of supporting elements carried by the said conveyer and spacedly arranged thereon, the said elements being adapted for receiving supporting means for articles of merchandise, means for moving the said conveyer with the articles of merchandise moving past a display or sales window and provisions for automatically stopping the conveyer with a selected supporting element opposite said window, including movable members, one moved by the conveyor, and the other normally moving with the first, the stopping of the conveyor controlled by relative movement of the members, and selective stop mechanism for checking the movement of the second member with any selected supporting element at the window.

1,542,818. BLOTTER. RALPH H. BINNS, New York, N. Y. Filed Apr. 30, 1923. Serial No. 635,417. 11 Claims. (Cl. 120—24.)

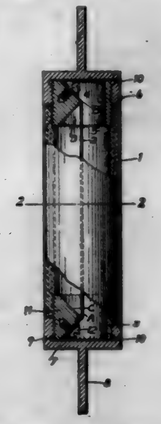
1. A blotter, including a cover, formed with a pair of grooves, and a blotter carrying plate having two of its edges extending into said grooves, said plate being formed with offset portions adjacent said edges.

1,542,819. SLOGAN CARD GAME. ARTHUR R. BLOOM, Minneapolis, Minn. Filed Oct. 25 1924. Serial No. 745,795. 4 Claims. (Cl. 273—152.)



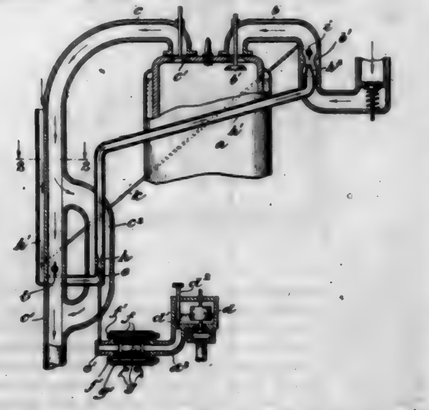
1. A card game apparatus comprising a key-card having thereon an inscription comprising a plurality of characters arranged in a plurality of lines, each line having a distinguishing characteristic, and a series of cards each having thereon one of the letters appearing in said inscription, the latters on the series of cards having the same characteristics as the letters in the respective lines of the inscription.

1,542,820. MARKING PIN. GEORGE BODEN, Waterbury, Conn., assignor, by mesne assignments, to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Sept. 30, 1922. Serial No. 591,467. 1 Claim. (Cl. 40—25.)



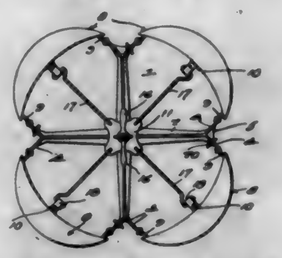
A marking pin comprising a bow, a pointed leg, and a cap-carrying bar, the pointed leg extending from the bow at an angle thereto, the bar extending from the bow substantially tangentially thereto and, for a portion of its length, substantially parallel to the pointed leg and being bent, adjacent the cap-carrying end, toward the pointed leg, and a marker plate secured to the bow, the edge of the marker plate between the pointed leg and the cap-carrying bar being rolled over to present a rounded surface.

1,542,821. SUPPORT FOR VEHICLE BATTERIES. LLOYD J. BOHANNON, Kansas City, Mo. Filed May 19, 1923. Serial No. 640,195. 1 Claim. (Cl. 180—68.5.)



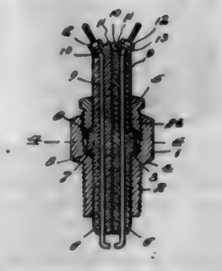
A device for supporting vehicle bodies including a U-shaped strap, a plate fixed to the intermediate portion of the U-shaped strap and provided with recesses at its ends for receiving the sides of the U-shaped strap, a battery box, a bowed leaf spring having its intermediate portion fixed to the bottom of the battery box, so that its ends engage the plate, said plate provided with slits one on each side of each recess, links engaged in said slits, resilient members engaged with said links, and other links engaged with said resilient members, and means for engaging the latter mentioned links with the handles of a battery in said battery box.

1,542,822. ELECTRIC-FUSE CASING. HOMER P. CHANDLER, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Feb. 1, 1923. Serial No. 616,270. 5 Claims. (Cl. 200—182.)



1. A fuse casing comprising a tubular casing of insulating material, a metallic bushing secured to the interior wall of the casing at each end and projecting from the casing, a metallic cap secured to the exterior projecting wall of each bushing, means on each cap to connect each cap to a terminal member, means on the bushing cooperating with means on the cap to provide a passage leading from the interior of the casing to the exterior to allow the escape of gases formed therein, and means on the interior of each bushing to receive the end of a fusible element, the last said means comprising a wedge shaped member projecting from a portion of the inner surface of the bushing, the base of the wedge united to the bushing and means on the outer face of the wedge members to secure the fusible element to each bushing.

1,542,823. METHOD OF AND APPARATUS FOR FORMING AN EXPLOSIVE MIXTURE. KEITH R. MANVILLE, Elmhurst, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed May 1, 1922. Serial No. 557,808. 9 Claims. (Cl. 123—122.)

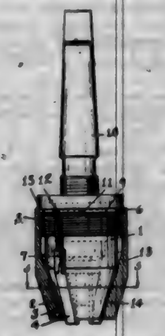


1. The combination with the exhaust and inlet passage of an internal combustion engine of apparatus for forming an explosive mixture which includes a metering device, an air intake pipe passing through the exhaust passage, a fuel conduit passing through the exhaust passage and terminating within the air intake pipe within the exhaust passage, said air intake pipe quitting said exhaust passage and being exposed to atmospheric temperature for an appreciable distance and terminating in a nozzle in the inlet passage.

1,542,824. WIRE REEL. WALTER J. MERRIMAN, Lake View, Ohio. Filed Dec. 19, 1924. Serial No. 756,930. 7 Claims. (Cl. 242—95.)

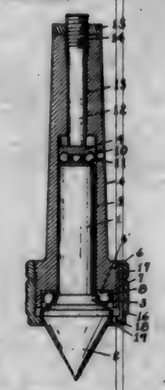
1. A wire reel of the class described comprising a spider embodying a plurality of radiating arms, and a collapsible rim structure supported on the outer ends of the arms, said rim being composed of a plurality of flanged sectors, and means for operating said sectors for collapsing the rim, said sectors being pivotally mounted on the outer ends of the arms to swing in a direction at right angles to the axis of rotation of said spider.

1,542,825. SPARK PLUG. JOHN C. NEWTON, Minneapolis, Minn. Filed July 21, 1922. Serial No. 576,613. 1 Claim. (Cl. 123—169.)



A spark plug structure comprising a bushing having an interiorly located annular shoulder disposed at an acute angle to the axis of the bushing, a pair of dielectric members mounted in the bushing and provided at their sides with projections having bevelled edges, each of said members being provided with a sparking electrode, said members having flat faces adapted to bear against each other and being located at the sides of the member opposite those sides at which the projections are provided, and a sectional gland nut screwed into the bushing and having a bevelled surface disposed opposite the projection, the parts being so assembled and arranged that when the nut is tightened in the bushing, the shoulder and the bevelled surface of the nut cooperate with the bevelled surfaces of the projections whereby the flat faces of the dielectric members are forced in close contact with each other.

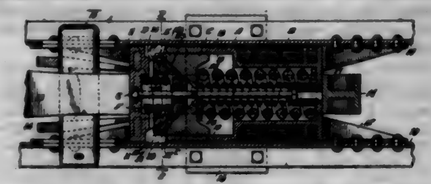
1,542,826. CHUCK. HOLGER NIELSEN, Lawton, Mich., assignor to Nielsen-Barton Chuck & Tool Company, Lawton, Mich. Filed Feb. 28, 1924. Serial No. 695,710. 1 Claim. (Cl. 279—69.)



A chuck comprising a body member tapered at its lower end and having longitudinal jaw ways in its tapered

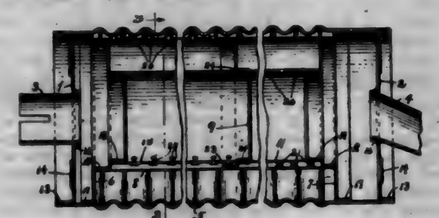
portion and slots extending therefrom and a peripheral groove opening to said slots, jaws arranged in said ways, springs disposed in said slots and connected to said jaws, a split ring with which said springs are connected dis-

posed in said groove, said ring having a lug at one end engaging a hole in said body, and a shell threaded upon said body to embrace and support said jaws and enclose said springs and ring.



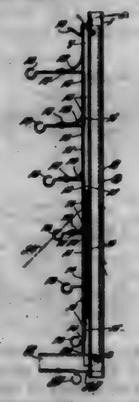
1,542,827. LATHE CENTER. HOLGER NIELSEN, Lawton, Mich. Filed Feb. 28, 1924. Serial No. 695,711. 4 Claims. (Cl. 82—33.)

1. A lathe center comprising a spindle of uniform diameter having a conical tip and shouldered at the base of the tip providing a ball race, a spindle holder having a longitudinal bearing for said spindle internally shouldered at its outer end providing a ball race, coacting bearing balls providing a combined radial and thrust bearing for said spindle, a thrust bearing member disposed at the inner end of said spindle bearing, balls coacting with the end of the spindle, a thrust bearing member support disposed longitudinally of and threaded into the inner end of said holder, a lock nut for said support, a retaining collar for said spindle threaded upon the outer end of the holder and having an inwardly projecting internally beveled flange embracing said conical tip, and a lock nut for said collar threaded upon said collar.



1,542,828. FRICTION SHOCK ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed June 30, 1921, Serial No. 481,555. Renewed Oct. 24, 1924. 11 Claims. (Cl. 213—34.)

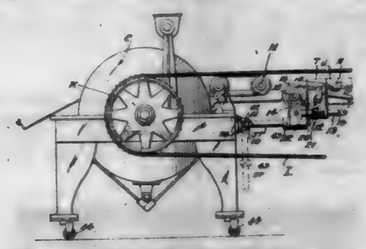
1. In a friction shock absorbing mechanism, the combination with a friction shell and a main spring resistance; of friction shoes cooperable with said shell and having wedge faces extending at different angles with respect to the line of movement of the shoes; and a multiple part self-releasing wedge system, the elements of which have wedge faces cooperable with said different angled wedge faces of the shoes, and means for normally



maintaining a spaced relation between the wedge faces on one of said elements and the co-acting wedge faces of said shoes.

1,542,829. MUFFLER. VIRGIL OLDBERG, Detroit, Mich., assignor to Oldberg Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed May 23, 1921, Serial No. 471,633. Renewed Mar. 10, 1924. 5 Claims. (Cl. 137—160.)

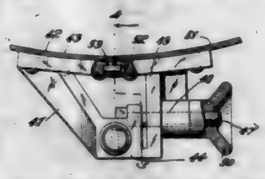
1. In a muffler, the combination of a series of cylindrical shells mounted within each other, heads closing the ends of the outer shell, thimbles within the ends of the outer shell and each having cylindrical extensions intermediate and inner shells mounted on said extensions, the inner shell being concentric with the outer shell and the intermediate shell being eccentric to the other two, said inner shell being in two sections, and a diaphragm mounted in the intermediate shell and having a cylindrical projection fitting the adjacent ends of the two sections of the inner shell, said inner and intermediate shells being formed with holes to permit the passage of exhaust gases, the holes in each of the inner shells being along longitudinal lines substantially diametrically opposite each other at opposite sides of the diaphragm.



1,542,830. CLOTHESRACK. HERBERT L. PARKER, Jr., St. Louis, Mo. Filed July 2, 1923. Serial No. 649,142. 3 Claims. (Cl. 45—13.)

1. In a metal clothes rack, a vertical member having pairs of parallel vertical slits at intervals, the metal strips between said slits being severed at one end from

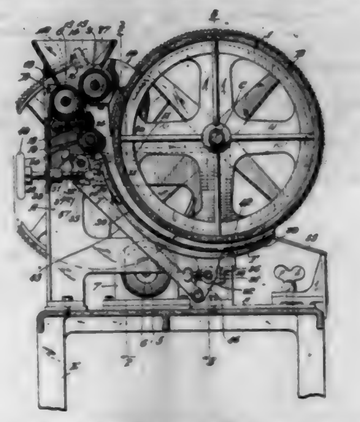
said member and bent outwardly, and clothes suspending elements secured to said member and extending through the openings provided by said strips, the severed and outwardly bent ends of said strips being secured to said elements at points spaced from said member.



1,542,831. APPARATUS FOR MOLDING DOUGH. EDWARD T. PARSONS, Newark, and ERNST J. STERNBERG, Lyons Farms, N. J., assignors to Thomson Machine Company, a Corporation of New Jersey. Filed June 14, 1923. Serial No. 645,462. 10 Claims. (Cl. 107—9.)

2. The combination with two dough molding machines one of which has a pair of links each pivotally connected at one end thereto, of a conveyor mechanism for conveying a loaf of dough formed by one of said machines from the discharge side thereof to the receiving side of the other of said machines, one end of said conveyor mechanism having a pair of openings each to slidably receive one of said links to mount said end of the conveyor mechanism on said machine, and means for mounting the other end of said conveyor mechanism on the other of said machines.

10. The combination with two dough molding machines, of a conveyor mechanism for conveying a loaf of dough formed by one of said machines from the discharge side thereof to the receiving side of the other of said machines, one end of said conveyor mechanism and one of said machines having slidably cooperating openings and links to mount said end of said conveyor mechanism on said machine, said links being each pivotally mounted at one end on one of said machines and said conveyor mechanism, the other end of said conveyor mechanism and the other end of said dough molding machines having cooperating arms and openings to mount said last-mentioned end of said conveyor mechanism on said second-mentioned machine, said arms being fixed, said second-mentioned machine having a gear thereon, and driving means for said conveyor mechanism on the second-mentioned end of said conveyor frame to directly connect with said gear simultaneously with the connection of the second-mentioned end of said conveyor mechanism to said second-mentioned machine.

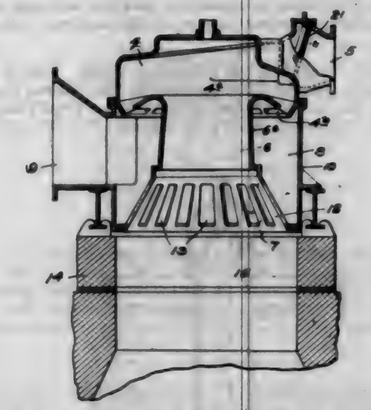


1,542,832. DOUGH-MOLDING MACHINE. EDWARD T. PARSONS, Newark, and ERNST J. STERNBERG, Lyons Farms, N. J., assignors to Thomson Machine Company, a Corporation of New Jersey. Filed July 19, 1923. Serial No. 652,477. 7 Claims. (Cl. 107—9.)

3. In a dough molding machine, the combination with a kneading drum and means for driving the same, of a compression plate surrounding a portion of the periphery of said drum in spaced relation thereto, said compression plate being formed in a plurality of arcuate sections, cooperating members on the meeting ends of adjacent ones of said sections for separably connecting the latter, and means for adjusting said plate toward and from the periphery of said drum.

6. In a dough molding machine, the combination with a kneading drum and means for driving the same, of a compression plate surrounding a portion of the periphery of said drum in spaced relation thereto, said compression plate being formed in a plurality of arcuate sections, cooperating members on the meeting ends of adjacent ones of said sections for separably connecting the latter, one of said members carrying a bolt and a nut and the other having a recess to separably receive the head of said bolt for connecting said members, and means for adjusting said plate toward and from the periphery of said drum.

1,542,833. ROLL-MOLDING MACHINE. EDWARD T. PARSONS, Newark, and ERNST J. STERNBERG, Lyons Farms, N. J., assignors to Thomson Machine Company, a Corporation of New Jersey. Filed Jan. 26, 1924. Serial No. 688,702. 18 Claims. (Cl. 107—9.)

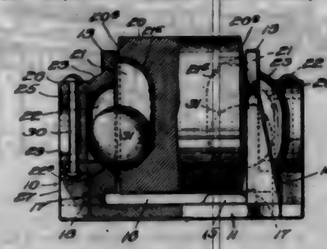


2. In a dough molding machine, the combination of a frame, a molding drum revolubly mounted thereon, an arcuate compression plate to surround a portion of said drum in spaced relation thereto to receive a roll of dough between itself and said drum, a pair of rocker bars extending transversely of said frame and separably engaging and supporting said compression plate at opposite ends thereof so that oscillation of said rocker bars moves said plate toward and from said drum, one of said bars and one end of said compression plate having a cooperationg hook and stud for separably connecting said compression plate to said one of said rocker bars.

18. In a dough molding machine, the combination with a main frame, a kneading drum revolubly mounted thereon, and an arcuate compression plate in spaced relation to the periphery of said drum, of a pair of spaced shafts arranged transversely of said frame parallel to said drum and having a plurality of recesses spaced longitudinally thereof, a pair of arcuate flange members concentric with said drum having their ends slidably mounted on said shafts for permitting adjustment of said flange members longitudinally of said drum, and set screws in said flange members to engage said recesses for holding said flange members in adjusted positions.

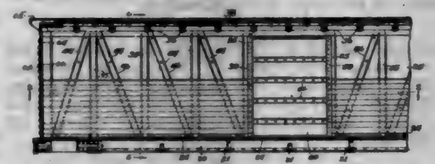
1,542,834. METHOD OF BURNING PULVERIZED FUEL, AND BURNER FOR PULVERIZED FUEL. THOMAS A. PEEBLES and BRYANT BANNISTER, Pittsburgh, Pa. Filed Feb. 2, 1922. Serial No. 533,563. 22 Claims. (Cl. 110—104.)

1. A process of burning pulverized fuel which consists in separating the heavier from the lighter particles of fuel, delivering the heavier particles to the combustion zone, with the main air supply and simultaneously delivering the lighter particles with an impelling current of air.



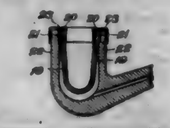
19. A process of burning pulverized fuel which consists in separating the heavier from the lighter particles of the pulverized fuel, and delivering the fuel so separated to the combustion zone with separate streams of air.

1,542,835. MACHINE FOR COATING, COLORING, OR OTHERWISE TREATING PAPER. EMIL POHL, Austin, Pa. Filed Apr. 26, 1924. Serial No. 709,070. 9 Claims. (Cl. 91—12.)



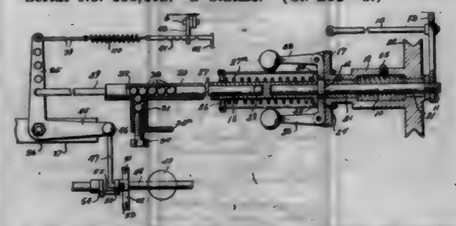
5. In a machine for striping paper or other materials, a color applying device consisting of a trough divided into compartments, a roller having a plurality of disks rotatably journalled in said trough, means connecting a plurality of spaced compartments containing the same color, and a source of supply connected to one of said spaced compartments.

1,542,836. SELF-CENTERING SIDE BEARING. EDWARD POSSON, Chicago, Ill. Filed Sept. 18, 1919. Serial No. 324,571. 5 Claims. (Cl. 64—64.)



1. In combination, a casing, a roller adapted to travel horizontally within said casing, said roller having apertures in the ends thereof, said casing having apertures adapted to register with said first-named apertures, and balls inserted in said apertures, said balls being adapted to travel therein divergently from the direction of travel of said roller and to return said roller to normal position within said casing.

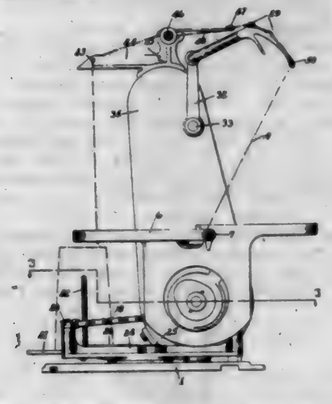
1,542,837. RAILWAY CAR. EDWARD POSSON, Chicago, Ill. Filed July 19, 1922. Serial No. 576,026. 9 Claims. (Cl. 105—407.)



1. A railway car comprising a steel corner post, said corner post being of channeled form with transverse flanges extending in opposite directions from the side walls thereof, a wooden corner post mounted in contact with one side wall and one transverse flange of said steel corner post, a wooden filler block mounted in contact with the other side wall and the other transverse flange of said corner post, and sheathing engaging the outer sides of said wooden corner post and said wooden filler block opposite said transverse flanges.

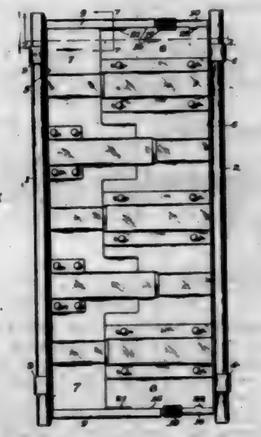
1,542,838. SMOKING PIPE. ROBERT M. PROPHET, Rutherford, N. J., assignor to Reiss-Premier Pipe Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 3, 1921. Serial No. 434,480. 3 Claims. (Cl. 131—12.)

1. In a smoking pipe, the combination of an outer bowl, an inner removable bowl, and means including a metal ring and having provisions to form a rotary separable screw connection between said outer bowl and said inner bowl, so that the removable bowl is supported entirely at its top portion, said metal ring being secured to the top of the inner bowl and extending down outside of said outer bowl, sealing and protecting the screw joint, and compelling rotation of the ring as a handle by which to unscrew the the inner bowl, whereby said inner bowl and the ring can only be removed together by rotation thereof.



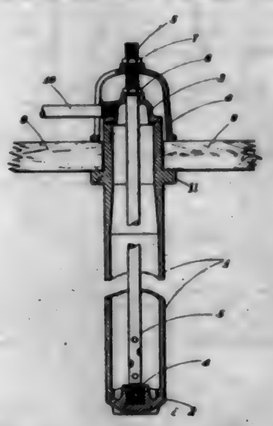
1,542,839. GOVERNOR FOR FORDSON TRACTORS. FRANCIS M. REEVES, Bogard, Mo. Filed Apr. 4, 1921. Serial No. 458,402. 2 Claims. (Cl. 264—3.)

1. The combination with a tractor having an engine and a throttle valve, of a supporting stem, a tubular member rotatably mounted upon the same and having means at one end whereby it may be rotated, a centrifugal governor carried by the other end of the tubular member, said stem projecting beyond the centrifugal governor, a sleeve into one end of which the stem projects, a rod section extending into the other end of said sleeve, a thrust bearing disposed between that end of the rod section adjacent the stem and said sleeve, a lever includ-



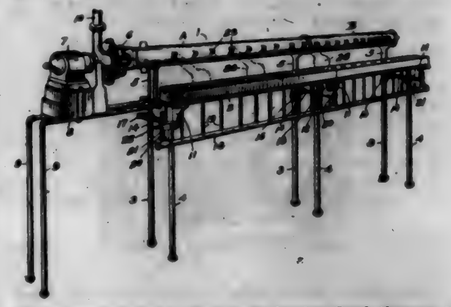
ing resilient means for tensioning the same, said lever being operatively connected to the throttle valve, a rod section connected at one end to said lever and having telescopic engagement with the first named rod section, manually adjustable means for shifting said last named sleeve upon the first named rod section to thereby control the adjustment of the throttle valve and the speed of the engine, and manually adjustable means for adjusting the tension of the spring tensioning means.

1,542,840. BUNDLE TIER. ALBERT H. SAXTON, JAMES B. SAXTON, and JOSEPH J. BACHMAYER, Blissfield, Mich., assignors to National Bundle Tyer Company, Blissfield, Mich., a Corporation of Michigan. Filed Nov. 8, 1923. Serial No. 673,467. 11 Claims. (Cl. 100—31.)



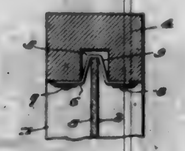
1. In a bundle tier, a movable package supporting member and a tying mechanism, operated by the said member.

1,542,841. LOCKING MEANS FOR TELESCOPING ELEMENTS. JOHN SCHADE, Holyoke, Mass., assignor to National Blank Book Company, Holyoke, Mass., a Voluntary Trust Association of Copartnership, having as trustees F. B. Towne, E. S. Towne, J. M. Towne, and F. W. Wilson. Filed Sept. 22, 1923. Serial No. 664,278. 1 Claim. (Cl. 129—13.)



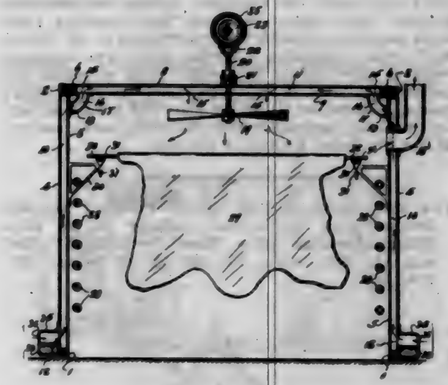
The hereindescribed locking means for flat telescoping elements, which comprises, in combination with these elements, a locking dog pivoted to one element, a spring which normally forces the nose of said dog into frictional locking contact with the other element, and a bar slidably supported by one of the elements in parallelism with said dog and operatively engaged with the dog whereby the sliding movements of said bar will rock the dog to effect the locking and unlocking positions thereof.

1,542,842. COOLING OR HEATING TUBE. PRINCE D. SCHENCK, Dayton, Ohio, assignor to The Duriron Company, Inc., a Corporation of New York. Filed June 5, 1923. Serial No. 643,547. 3 Claims. (Cl. 257—231.)



2. In combination in a temperature regulating tube, a cylindrical casing of corrosion resisting metal composition open at the ends and provided with a shoulder for engaging the inner surface of the wall of a container surrounding the opening in which the tube is mounted, a closure cap also of corrosion resisting material for the inner end of the casing, a closure cap for the outer end of the casing, a perforated tube of relatively strong tough metal secured to the inner cap at one end and extending through the outer cap at its other end, a nut threaded on said tube outside the outer cap and adapted to place such tube under tension, a clamping member through which said tube also extends opposing the outer surface of the wall of the container in opposition to said shoulder, a nut threaded on said tube for forcing said clamping member inward, and a connection for fluid leading to the interior of the casing.

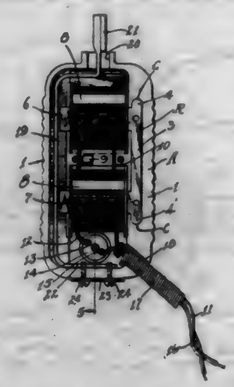
1,542,843. DIGESTION APPARATUS. WALTER H. SCOTT, Dayton, Ohio, assignor to The Duriron Company, Inc., a Corporation of New York. Filed Sept. 2, 1924. Serial No. 735,372. 2 Claims. (Cl. 23—259.)



2. In combination a fume tube having fixed thereon a series of tapering nipples extending laterally from the side thereof and inclined downwardly.

1,542,844. ANTIRATTLING DEVICE. CARL F. SEYBOLDT, Defiance, Ohio. Filed May 7, 1924. Serial No. 711,649. 2 Claims. (Cl. 16—86.)

1. In combination with the upper grooved member of the window frame of an automobile, an elastic strip extending transversely across the bottom of the groove in said member and means for fastening the ends of said elastic strip to the bottom wall of said upper member.

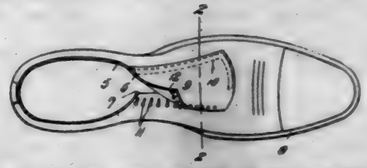


1,542,845. DRYING KILN. JAMES M. SEYMOUR, Newark, N. J. Filed Feb. 8, 1924. Serial No. 691,367. 16 Claims. (Cl. 34—12.)

1. A drying kiln comprising a double enclosing wall, the members of which are separated to provide an intermediate space, means subdividing said intermediate space into a plurality of substantially direct air passages, the outer member of said double wall having air intake ports communicating with the outer atmosphere at one end of each air passage, and the inner member of said double wall having air discharge ports communicating with the kiln interior at the opposite end of each air passage.

1,542,846. ELECTRIC VIBRATOR FOR RAZORS AND THE LIKE. GIORGI ADELMO, Spring Valley, Ill. Filed Mar. 17, 1924. Serial No. 699,914. 2 Claims. (Cl. 175—358.)

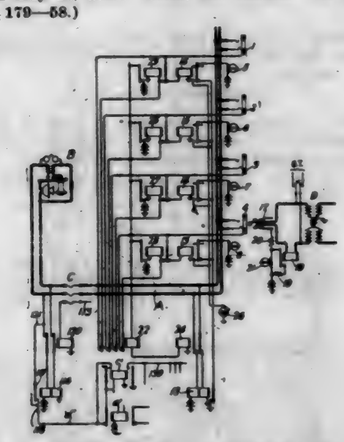
1. A device of the type described comprising a casing of insulating material consisting of two complementary parts, said parts having irregular recesses in one inner side wall thereof in registration with one another a magnetizable core arranged to be supported in said casing and partially received in said irregular recesses, whereby said core may be securely fixed against movement relative to said casing by means of said recesses, magnet coils disposed upon said core, an armature for said core arranged to partially extend exteriorly of said casing, and means for securing said armature to the inner wall of said casing at its lower end, said means also serving to securely bind the complementary parts of said casing to one another.



1,542,847. SIGNALING SYSTEM. RAND S. BAILEY, Montclair, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed May 10, 1922. Serial No. 559,868. 27 Claims. (Cl. 179—27.)

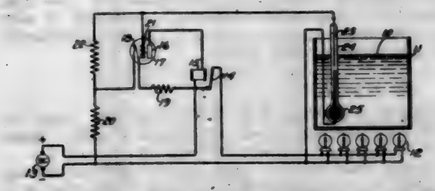
1. In a signaling system, a transmission line, an operator's position, a signaling device thereat for said line for indicating the arrival of a call, means for operating said signaling device upon seizure of said line, and means for changing the character of operation of said signaling device after the lapse of a predetermined period of time following said seizure.

1,542,848. CLOSURE FOR SHOE UPPERS. JOHN H. BARNES, Norwich, Conn. Filed July 6, 1923. Serial No. 649,794. 1 Claim. (Cl. 36—50.)



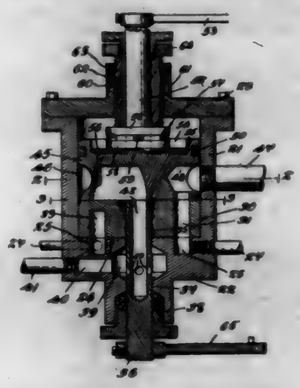
A shoe comprising an upper provided with an opening adapted to be disposed over the arch of the foot of a wearer, said opening being provided with spaced side edges and a transverse edge which is disposed over the ball of the foot of the wearer, a flap secured at one edge to one of the side edges of the said opening, and secured at the forward edge to the transverse edge of

the opening for a portion of the length thereof, by stitching which extends substantially to the median longitudinal dimension of the flap, the upper having a



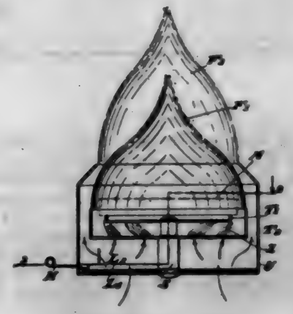
series of key hole slots provided at the opposite side edge of the opening, and the free longitudinal edge of the flap having headed studs adapted to enter the slots and engage under the edges thereof when the side edges of the opening in the upper are spread with relation to each other.

1,542,849. SIGNALING SYSTEM. HENRY M. BASCOM, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed May 10, 1922. Serial No. 559,855. 18 Claims. (Cl. 179—58.)



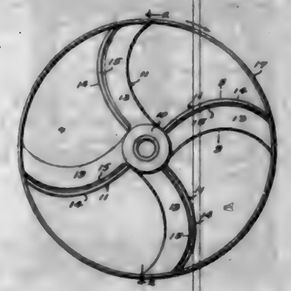
1. In a signaling system, a transmission line, a plurality of terminals therefor, signals associated with said terminals, means for operating said signals in response to a change in condition on said line, and means for operating one of said signals in a characteristic manner should connections be established to more than one of said terminals.

1,542,850. THERMOSTAT. ALFRED S. CURTIS and DAVID J. BEAVER, New York, N. Y.; said Curtis assignor of his interest to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 30, 1922. Serial No. 548,143. 25 Claims. (Cl. 219—20.)



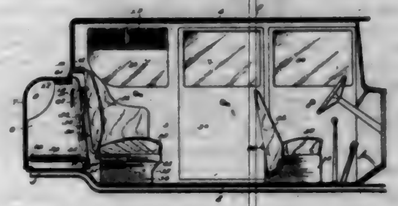
1. In a device of the character described, an amplifier, thermo-sensitive means in the input circuit thereof for opening and closing the same, and a heat supply controlling device in the output circuit operable upon change of current in said circuit.

1,542,851. VALVE. GEORGE TIBBL BOLLINGER, Lockport, La. Filed Mar. 3, 1924. Serial No. 696,642. 1 Claim. (Cl. 121—38.)



A valve for use with steam steering gear comprising a casing, a cross head operated valve arranged within the casing, a manually operated valve arranged within the casing and superposed on said cross head operated valve and means for resiliently holding the manually operated valve against the cross head operating valve while permitting relative rotary movement of the valves, said means comprising a spring plate, the manually operated valve having an annular ledge on which the peripheral portion of the spring plate rests, a thrust bearing mounted on the spring plate and a bushing having threaded engagement with the valve casing and engaging the thrust bearing at one end.

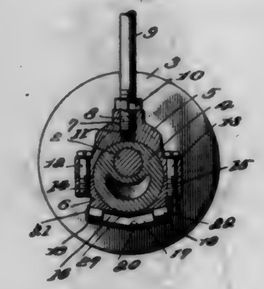
1,542,852. BURNER FOR SOLID FUELS. AUGUSTO BUSCH, Basel, Switzerland, assignor to the Firm Elektrizitätswerke Lonza, Basel, Switzerland. Filed Aug. 15, 1922. Serial No. 582,058. 2 Claims. (Cl. 126—43.)



1. A burner for solid fuel of metaldehyde, comprising a casing, air admission means thereon, a support plate for the solid fuel within said casing, a lower plate arranged to define a secondary combustion chamber with said fuel support plate, an annular air passage round said chamber for admission of air to the fuel on its support plate, large apertures in the latter for allowing fuel vapours to sink down into said chamber, large air admission apertures in the lower plate for the combustion of said fuel vapours within said chamber, to allow of formation of invert heating flames, substantially as and for the purpose described.

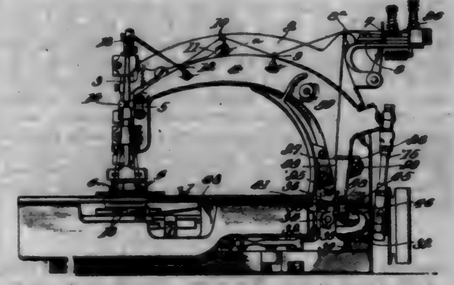
1,542,853. PROPELLER. JOSEPH J. CALLAHAN, Cornwells Heights, Pa. Filed June 24, 1924. Serial No. 722,148. 10 Claims. (Cl. 170—168.)

9. A propeller comprising a hub, a blade extending outwardly therefrom, said blade having walls forming a pocket having an intake side open in the direction of rotation of the blade and adapted to discharge fluid at substantially right angles to the plane of rotation, the deepest portion of said pocket being extended in the opposite direction from the intake side beyond the point of discharge of fluid.



1,542,854. AUTOMOBILE BODY. CHARLES J. CARLSON, Helena, Mont. Filed Mar. 3, 1924. Serial No. 696,590. 5 Claims. (Cl. 296—66.)

1. In a vehicle body, a rumble frame at the rear thereof, said rumble frame comprising a body open at the front, rear and top thereof, a cover section swingable to and from position to close said body of the rumble frame at its rear and top, said body of the rumble frame having a pair of opposed guideways extending in the direction of length of the vehicle body, a rumble seat having laterally extending pins at one end working in said guideways, and other supporting means carried by said rumble seat adapted to engage with the body of the rumble frame to co-operate with said pins and guideways to support said rumble seat in horizontal position.



1,542,855. ECCENTRIC CONNECTION. JOHN E. CHALMAN, Chicago, Ill., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 23, 1921. Serial No. 464,043. 1 Claim. (Cl. 74—1.)

In a device of the class described, the combination with a driving shaft provided with an eccentric; of a strap surrounding said eccentric, said strap being formed with an internal recess in its lowermost portion immediately beneath said eccentric and communicating with said eccentric, said recess extending from said central portion of the strap immediately beneath said eccentric upwardly and outwardly on each side thereof to

the opposite exterior faces of said strap, and oil retaining valves respectively, arranged in the opposite ends of said bore.

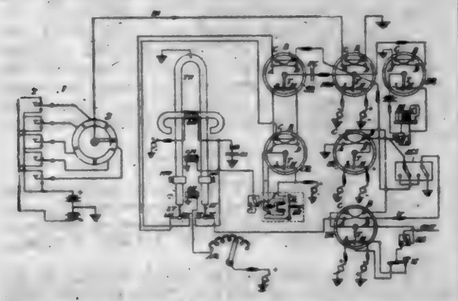
1,542,856. LOOPER THREAD CONTROLLER FOR SEWING MACHINES. JOHN E. CHALMAN, Chicago, Ill., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 7, 1923. Serial No. 617,557. 4 Claims. (Cl. 112—241.)

1. The combination with a feeding mechanism, a thread carrying looper moving in the general direction of the line of feed and opposed to the direction of feed as it enters the needle thread loop; of a thread controlling mechanism for the looper including a thread engaging arm, thread guides cooperating therewith, and means for moving said arm so as to engage the looper thread and take up a portion of the surplus slack therein just before the looper begins its retracting movement.

1,542,857. UNDERGARMENT. FRANKLIN CHATFIELD, Minneapolis, Minn., assignor to Munsingwear Corporation, Minneapolis, Minn., a Corporation of Minnesota. Filed Oct. 1, 1920. Serial No. 414,067. 3 Claims. (Cl. 2—78.)

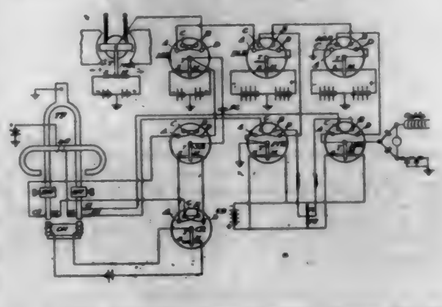
1. A woman's undergarment having a front section and two back and two side gores extending from both sides and with the two back gores lapped over but free to form a seat opening with their lower ends slanting downwardly from side to rear of the garment, the up-

per edges of the gores extending horizontally and the meeting edges of each side and back gore cut on continuous convex curves extending from bottom to top of the



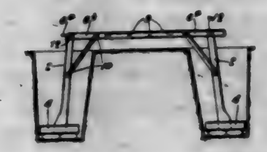
gores there being cut-out portions bounded by concave curves extending from the lower part of the meeting edges to the bottom of each of the back gores.

1,542,858. SHOCK ABSORBER. GEORGE L. CLOOK, Syracuse, N. Y. Filed Mar. 28, 1922. Serial No. 547,374. 3 Claims. (Cl. 267—17.)



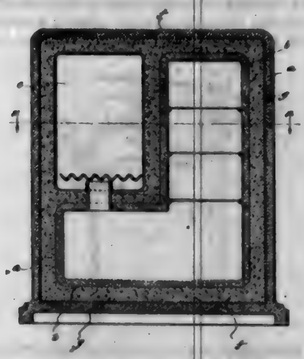
1. A shock absorbr for spring vehicles comprising a pair of U-shaped levers adapted to be mounted upon the axle of the vehicle, a leaf spring for supporting the body of the vehicle and having its ends operatively connected to corresponding arms of the levers, abutments rigidly connected to the brackets and interposed between the arms of the adjacent levers, said abutments being provided with bolt openings therethrough, bolts slidable endwise in said openings and connecting the arms of the corresponding levers, and coiled springs interposed between said abutments and arms of the adjacent levers and surrounding the corresponding bolts.

1,542,859. REGENERATIVE VIBRATORY REPEATER FOR TELEGRAPH CIRCUITS. ALDER F. CONNERY, Springfield, N. Y., assignor of one-half to Postal Telegraph-Cable Company, New York, N. Y., a Corporation of New York. Filed Oct. 6, 1923. Serial No. 667,055. 28 Claims. (Cl. 178—71.)



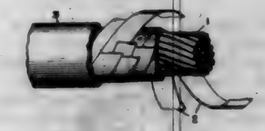
1. A regenerative vibratory repeater apparatus for telegraph circuits, comprising a signal receiving apparatus, a vibrating element, a signal transmitting apparatus, means whereby the time of operation of the transmitting apparatus will be controlled by the vibrating element, and means electrically connecting the transmitting apparatus to the signal receiving apparatus independently of the said vibrating element whereby the character of the signals sent out by the transmitting apparatus will be governed by the signal impulses received by the receiving apparatus.

1,542,860. CABLE TELEGRAPHY. ALDER F. CONNERY Jamaica, N. Y., assignor of one-half to The Commercial Cable Company, New York, N. Y., a Corporation of New York. Filed Apr. 17, 1924. Serial No. 707,154. 12 Claims. (Cl. 178—71.)



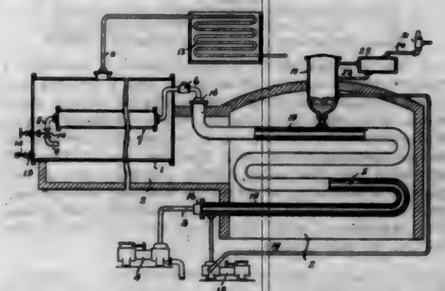
1. A cable telegraph repeater system wherein the signals received and transmitted are of positive, negative or zero current value, comprising a signal receiving apparatus adapted to be operated by the received signal impulses, a signal transmitting apparatus, means whereby the signal receiving apparatus will cause the transmitting apparatus to transmit signals of unit or multiple-unit length said means being interposed between and in circuit with the receiving apparatus and the transmitting apparatus, and means whereby the signal receiving apparatus will cause the transmitting apparatus to transmit signals of positive, negative or zero current value in response to received signals of corresponding current value said means being interposed between and in circuit with the receiving apparatus and the transmitting apparatus.

1,542,861. TOWER. JOHN WILLIAM CONRAD, Cedarville, W. Va., and MILTON PRESSLEY KERR, Sewickley, Pa. Filed Oct. 11, 1924. Serial No. 743,011. 5 Claims. (Cl. 189—21.)



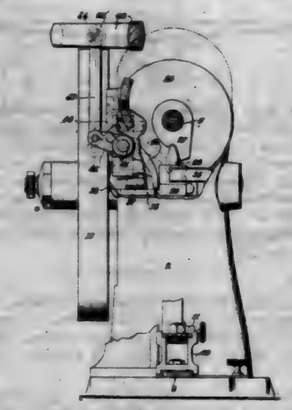
1. A tower for high tension lines and the like, comprising a plurality of anchor members adapted to be rigidly mounted in the ground, and a superstructure comprising a plurality of leg members adapted to be secured to said anchor members, and a plurality of brace members adapted to extend between and be secured to said leg members to complete said superstructure, a plurality of the members of said superstructure being so rality of the members of said superstructure being so cured together to form a templet for use in holding said anchor members in correct position until said superstructure is to be erected.

1,542,862. REFRIGERATOR CONSTRUCTION. LLOYD G. COPEMAN, Flint, Mich. Filed Feb. 2, 1924. Serial No. 690,143. 14 Claims. (Cl. 217—7.)



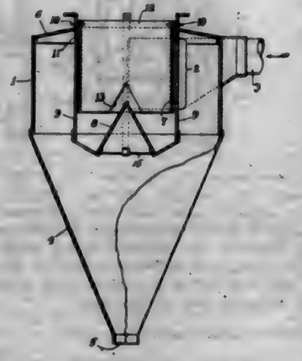
1. In a refrigerator construction, the combination of a moulded outer shell and a moulded inner shell secured together in spaced relation, and an insulating cement between said shells serving to bind them together and highly resistant to compression strains to form an entire moulded structure.

1,542,863. INSULATED ELECTRICAL CONDUCTOR. ELMER E. F. CREIGHTON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Jan. 10, 1918. Serial No. 211,111. 15 Claims. (Cl. 113—264.



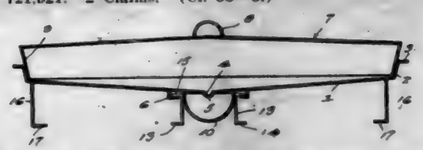
1. An electrical conductor covered with an insulating material, the dialectric strength of which increases with increase of temperature over a range of temperature from 20° C. to 100° C.

1,542,864. STILL. MAX F. DE BAILLIGETHY, Houston, Tex. Filed July 5, 1924. Serial No. 724,324. 5 Claims. (Cl. 196—110.)



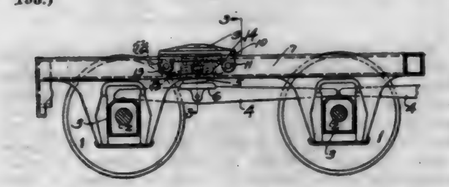
1. A still including a boiler, an inlet line entering the boiler and formed into an enlarged reaction drum within the boiler, and formed into a heating coil outside of the boiler, a housing enclosing the turns of said coil and spaced therefrom forming a fluid circulating chamber about the turns of the heater coil, means for circulating a fluid through said chamber, and an outlet line leading from said chamber, and formed with a trap.

1,542,865. SEWING MACHINE. ALBERT F. FITFIELD, Newark, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed July 20, 1921. Serial No. 486,215. 3 Claims. (Cl. 112—219.)



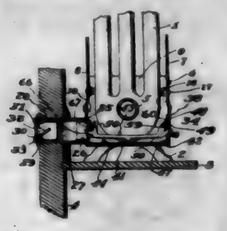
3. A sewing machine having a frame including a bed and overhanging bracket-arm, stitch-forming mechanism incorporated in said frame, a work-clamp, a manually operated lever fulcrumed on said bracket-arm and connected to open said work-clamp, a stop-motion device for the stitch-forming mechanism including a belt-shipper lever manually shiftable to starting position to effect connection of the machine to a source of power, a rock-shaft journaled on said bracket-arm and having its opposite ends disposed respectively, adjacent the clamp-opening and belt-shipper levers, means connected to the clamp-opening lever for rocking said shaft, and a stop-arm mounted on said shaft so as to move into the path of and block movement of the belt-shipper lever to running position when the work-clamp is open.

1,542,866. DUST COLLECTOR. FRANCIS E. FINCH, New York, N. Y., assignor to Ruggles-Coles Engineering Company, York, Pa., a Corporation of New Jersey. Filed May 9, 1921. Serial No. 468,092. 22 Claims. (Cl. 183—66.)



1. In a device of the character described, in combination, a receiving chamber, an outlet flue for said chamber, means co-operative with said flue to cause gradual and progressive expansion of gas in said flue, and a baffle in said flue in the path of transverse currents therein.

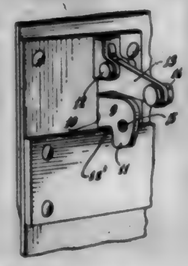
1,542,867. OVEN PAN. EDITH CAMPFIELD FISHER, Cleveland, Ohio. Filed June 21, 1924. Serial No. 721,521. 2 Claims. (Cl. 53—5.)



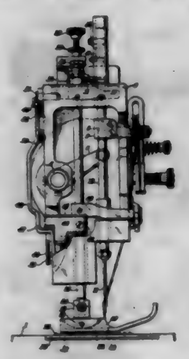
1. In an oven utensil of the class described, a juice collecting receptacle of elongated channel shaped cross section having one end thereof fashioned to form a discharge spout, provided at its opposite end with a handle, and U-shaped members fastened to the opposite walls of said receptacle, the upper laterally directed ends of said members constituting supporting lugs, and the lower laterally directed ends constituting supporting feet.

1,542,868. CAR TRUCK. GEORGE H. GIBSON, St. Louis, Mo., assignor to Commonwealth Steel Company, St. Louis, Mo., a Corporation of New Jersey. Filed Jan. 26, 1924. Serial No. 688,650. 8 Claims. (Cl. 105—195.)

1. In a car truck frame, a wheel piece of substantially constant cross sectional area and provided with a vertical spring receiving opening, and a spring seat detachably secured to said wheel piece over said opening.



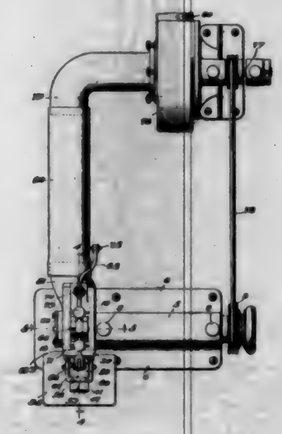
1,542,869. RADIATOR ATTACHMENT. JAMES F. GREENSTREET, deceased, late of Kewanee, Ill., by Ella Parke, administratrix, Kewanee, Ill. Filed Apr. 3, 1923. Serial No. 629,730. 16 Claims. (Cl. 257—135.)



15. An attachment for radiators for directing air to and through the radiator, having inwardly opening dampers on opposite sides, each with a depressed portion and a passage to which the depressed portion leads, and a connecting link for the dampers having latch ends for entering the passages as guided thereinto by the depressed portions, and each end of the link having a hook at the end and a shoulder back of the hook.

1,542,870. CANE-CAR ATTACHMENT. OTIS T. GREGG, Hackensack, N. J. Filed June 2, 1924. Serial No. 717,242. 24 Claims. (Cl. 105—308.)

1. The combination of a cane-car having upright standards and an outwardly swinging side-door, suitable means such as a journalled turn-bar having an offset for holding said door closed, a lever-arm for actuating said door-holding means, two complementary readily-engageable and readily-releasable latching-members for maintaining said lever-arm in its door-holding position, one of said latching-members being a hook-carrying latch pivoted and also laterally-movable upon a horizontal portion of said lever-arm, and the other member being supported by some other part of the structure such as one of the car-standards, and readily-releasable means for automatically locking said latching-members in engaged position, said means comprising a gravity-actuated cam-detent pivoted in position where it will automatically lock said complementary members when in their latched-engagement.



1,542,871. PRESSER MECHANISM FOR SEWING MACHINES. ALFRED GRIEB, Elizabeth, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Jan. 8, 1923. Serial No. 611,227. 8 Claims. (Cl. 112—235.)

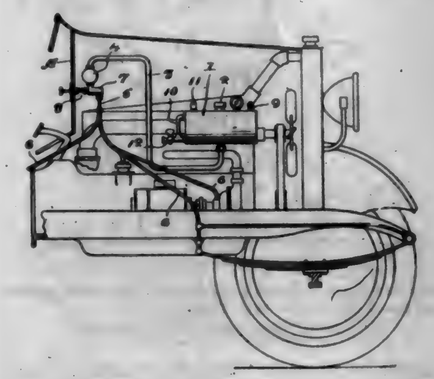
4. The combination in a sewing machine including a reciprocatory needle, a throat-plate, and a feed-dog projected through said throat-plate during its feeding movement, of a main cloth-presser, means yieldingly urging said cloth-presser in a direction toward said throat-plate, means independent of said feed-dog for limiting the movement of the cloth-presser toward the throat-plate in the absence of work, an auxiliary cloth-presser, and means yieldingly urging said auxiliary cloth-presser into engagement with the throat-plate in the lowered position of said feed-dog.

1,542,872. EDGE-TRIMMING MACHINE. HORACE F. GRUMAN, St. Louis, Mo., assignor to Lewis Invisible Stitch Machine Co., a Corporation of Maine. Filed Jan. 7, 1924. Serial No. 684,755. 19 Claims. (Cl. 164—61.)

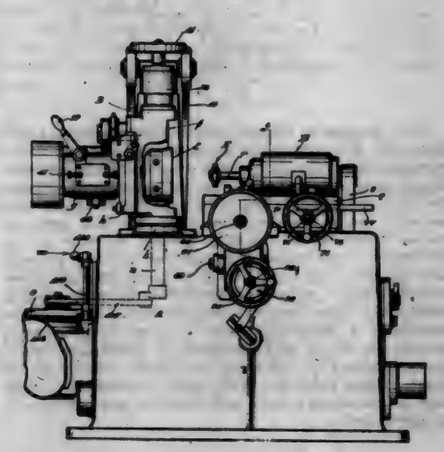
1. In a hand feeding embroidery edge trimming machine, the combination with a frame, of a rotary cutter journaled on a horizontal axis on said frame, a horizontally disposed work supporting device arranged in co-operative relation to said cutter and having an uninterrupted work supporting surface, a foot device disposed above the work-support, said devices being respectively located in spaced parallel planes to provide a horizontal guiding channel for the body fabric during the hand feeding thereof, and manually controlled means including a lever fulcrumed on the frame for elevating said foot device to vary the height of said guiding channel.

1,542,873. POROUS MASS FOR STORING EXPLOSIVE GASES. CARL HAGBERG, Stockholm, Sweden, assignor to American Gasaccumulator Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Mar. 9, 1921. Serial No. 450,960. 3 Claims. (Cl. 23—246.)

3. A porous mass for storing gas consisting of a mixture of granulated material and a powder of a fire proof substance.



1,542,874. GAME. KARL HAMPEL, Chicago, Ill. Filed July 1, 1922. Serial No. 572,280. 5 Claims. (Cl. 273—144.)

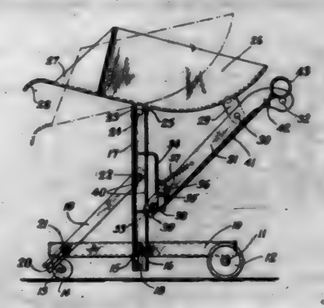


1. A device of the type described comprising a base, a pointer rotatably mounted on said base, a casing enclosing said pointer and said base, said pointer having one end thereof extending to the casing wall, and a ball for moving said pointer, said ball being disposed in said casing and being adapted to strike said pointer to move the latter.

1,542,875. LUBRICATING SYSTEM. EDWIN HORACE HANEY, Denver, Colo., assignor of one-eighth to J. B. Baney, Denver, Colo. Filed Aug. 11, 1922. Serial No. 581,217. 1 Claim. (Cl. 184—7.)

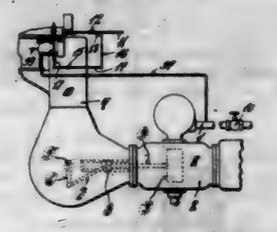
A lubricating system comprising a supply tank, a distributor tank connected therewith from which lubricant is distributed by fluid pressure, a plurality of valve casings connected with the distributor tank, a spring pressed valve in each casing and normally closing the same, a handle connected with each of the valves for permitting them to be moved to opening position, a flexible tube connecting each of the valve casings with a part to be lubricated and means on the supply tank for permitting an air pump to be attached thereto so that compressed air can be pumped into the tank to place the lubricant therein under pressure.

1,542,876. GRINDING MACHINE. BENGT M. W. HANSON, Hartford, Conn. Filed Aug. 20, 1921. Serial No. 493,780. 43 Claims. (Cl. 51—97.)



1. In a machine of the character described, an oscillating head, a foot bearing and an overhead bearing between which said head is supported, a carrier transversely adjustable on said head, and a spindle rotatably carried by said carrier and extending through said head, said spindle being longitudinally adjustable in said carrier in a plane to which the axis of said bearings is perpendicular.

1,542,877. MOBILE FURNACE STOKER. STEVENS PALMER HARMAN, Maplewood, N. J. Filed Feb. 23, 1923. Serial No. 620,580. 4 Claims. (Cl. 296—17.)



1. A portable stoker comprising a wheeled and castored truck, uprights on said truck, a hopper pivotally mounted

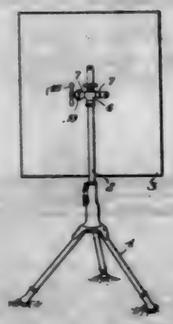
on said uprights, said hopper having a curved bottom at its rear, and a narrowed portion at the front adapted to

enter a furnace, a hooked end on said narrowed portion, and means for tilting said hopper.

1,542,878. AUTOMATIC STOPPING DEVICE. REINHARD HILDEBRAND, Webster Groves, Mo., assignor to Fulton Iron Works Company, St. Louis, Mo., a Corporation of Delaware. Filed Mar. 14, 1921. Serial No. 452,303. 18 Claims. (Cl. 103—22.)

1. In a pumping apparatus comprising a pump and a motor for actuating same, an automatic stopping device whereby said pump is stopped in response to predetermined high and low pressures, said automatic stopping device including operating means controlled by the fluid pressure transmitted from the pump, and said operating means including an operating member movable in one direction to stop the pump in response to a high pressure and movable in the opposite direction to stop the pump in response to a reduction in the pressure, yielding means tending to move said operating member in opposite directions, a weight tending to move said operating member in one of said directions, a pressure-responsive device adapted to move said operating member in the other of said directions, and means whereby fluid pressure is transmitted from said pump to said pressure-responsive device.

1,542,879. SCORING AND CUTTING RULE. JOHN EDGAR HIBBS, Langhorne, Pa., assignor to Automatic Machinery and Equipment Company, a Corporation of Delaware. Filed Dec. 15, 1923. Serial No. 680,794. 9 Claims. (Cl. 164—28.)

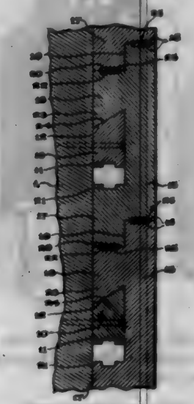


1. A scoring or cutting rule comprising a strip of metal having a continuous scoring edge and a plurality of indentations extending inwardly from the opposite edge.

1,542,880. ROTARY WELL-DRILLING TOOL. HIRAM B. HOBBS, Enid, Okla. Filed Mar. 21, 1923. Serial No. 626,591. 11 Claims. (Cl. 255—76.)

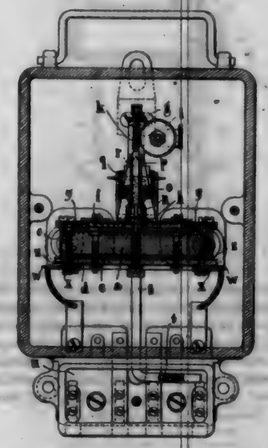
1. A rotary well drilling tool including a shell having one end thereof adapted to support a bit for cutting a bore, a reaming jaw pivoted upon the shell and adapted to swing outwardly thereon to active position for reaming out the bore behind the bit, a core bar slidable in the shell to coact with the jaw for swinging the jaw outwardly and normally sustaining the jaw in active position, means slidably connecting the core bar with the shell and adapted to limit the core bar in its upward movement upon the shell, and a sleeve connected to said core bar and slidably fitting over the shell.

1,542,881. ADJUSTABLE SUPPORTING MECHANISM FOR DRAWING BOARDS. ADOLPH HOFFMAN, Rochester, N. Y. Filed Nov. 10, 1924. Serial No. 748,924. 5 Claims. (Cl. 45—110.)



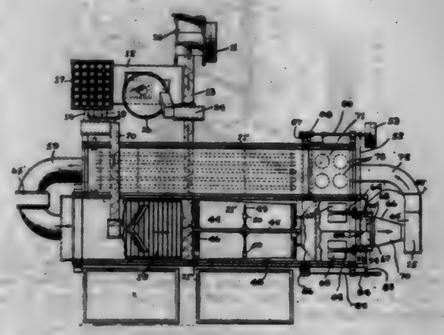
1. The combination with a post having a shoulder fixed thereon, of a yoke journalled on the post in engagement with said shoulder, a collar held against rotation on the post and slidable therealong to engage the outer face of the yoke, and a locking member having threaded engagement with the post and acting to force the collar and yoke toward said shoulder.

1,542,882. BUILDING BLOCK. WILLIAM F. HOFFMAN and HENRY FAHRENHOLTZ, Dayton, Ky. Filed Apr. 12, 1923. Serial No. 631,589. 2 Claims. (Cl. 72—19.)



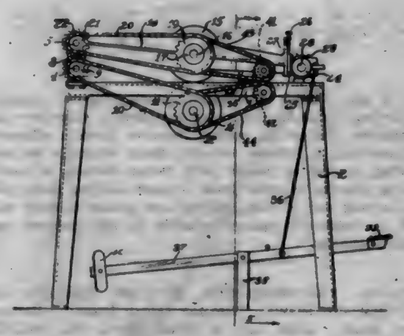
1. In a building construction, a plurality of strips adapted to be mounted in spaced parallel relation upon an unfinished wall, the strips having one edge inclined

toward the wall, and blocks adapted to be engaged upon the strips in rows, each block having its rear face formed with an opening of greater width than the strip to define a space between the other edge of the strip and the adjacent edge of the opening, said edge of the strip



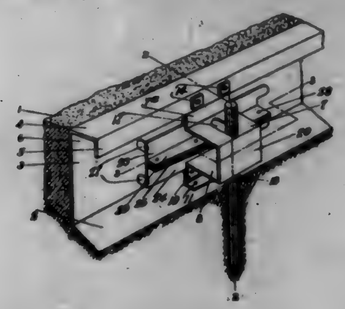
and said edge of the opening being formed with grooves, and a locking member adapted to be driven into said grooves.

1,542,883. METER. FRANK HOLDEN, Hampstead-London, England, assignor of one-third to Measurement, Limited, London, England, and one-third to La Compagnie pour la Fabrication des Compteurs et Matériel d'Usines a Gaz, Paris, France. Filed Feb. 27, 1922. Serial No. 539,587. 7 Claims. (Cl. 171—84.)



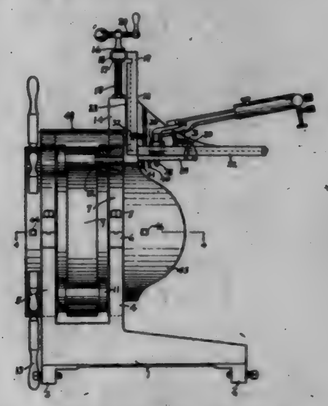
1. An electricity meter of the mercury motor type comprising in combination a mercury chamber formed from upper and lower plates clamped to a ring of magnetic material, a bell armature within said chamber, a permanent magnet within said bell, and conductors clamped upon one of said plates and adapted to make contact with the mercury through apertures in said plate.

1,542,884. COCOA POWDER PLANT. PAUL G. HOLZSTEIN, Carlstadt, N. J., assignor to J. M. Lehmann Company, Inc., New York, N. Y., a Corporation of New York. Filed June 14, 1922. Serial No. 568,858. 20 Claims. (Cl. 83—42.)



1. In a plant of the class described, the combination with a material treating chamber and a heat exchange room, of means for maintaining the circulation of a heat exchange medium through said chamber and room and in contact with the material, means for separating the entrained material from the medium before it is returned to said heat exchange room, means for preliminarily treating and delivering material to said treating chamber, means for separating the different grades of material after treatment and means for returning one separated part of the material to the preliminary treating means.

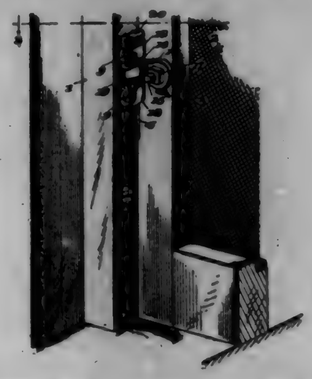
1,542,885. LEATHER-ROUGHENING MACHINE. WILLIAM F. HORSTING, Chicago, Ill., assignor to Standard Leather Machinery Co., Chicago, Ill., a Corporation of Delaware. Filed Jan. 5, 1924. Serial No. 684,494. 10 Claims. (Cl. 69—1.)



1. A leather roughening machine comprising a table, a frame pivoted on said table, means on said pivoted frame for feeding a sheet of leather over the table, and a roughening mechanism on said pivoted frame adapted to act on the surface of the sheet of leather to roughen the same.

1,542,886. ROAD RAIL OR FORM. MARK S. HOTCHKISS, Johnson City, N. Y. Filed Mar. 2, 1925. Serial No. 12,604. 9 Claims. (Cl. 25—118.)

1. A road form comprising a rail, a stake receiving member secured thereto, and a stake securing device including a wedge shaped member having separated stake engaging surfaces.



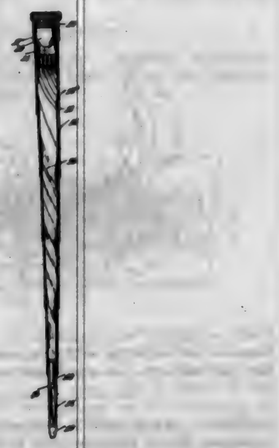
1,542,887. OXYACETYLENE PIPE-CUTTER ATTACHMENT. JOHN L. IRVIN and LEO A. BRAUER, Beaumont, Tex. Filed May 19, 1923. Serial No. 640,063. 9 Claims. (Cl. 266—23.)

1. A pipe cutter attachment comprising an upright supporting frame having a circular opening therethrough, nonfriction supporting rollers mounted therein adjacent said opening, a tubular master chuck rotatable in said opening, means to rotate said chuck therein, a torch-guiding bushing in said chuck, a torch-holding plate over the forward end of said bushing and means to hold said plate in uniformly spaced relation to the forward end of said bushing.

1,542,888. FASTENER FOR WINDOW SCREENS OR STORM WINDOWS. THOMAS OSCAR IVERSON, Rochester, Minn. Filed Apr. 9, 1924. Serial No. 705,277. 3 Claims. (Cl. 292—342.)

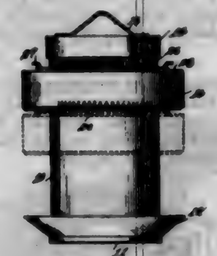
1. A fastener for securing a window screen or storm window to a window frame comprising a bracket attachable to an outer vertical guide strip of the window frame, said bracket comprising a pair of spaced apart hook portions having the web portions thereof proximate to the adjacent face of a side member of the frame for said window screen or storm window, a second bracket attachable to said side member of the frame of the window screen or storm window and having a hook portion bent reversely to the hook portion of said first named bracket and disposed between said first named

hook portions, and a tapering locking key insertable between the first named hook portions and the hook portion of the second named bracket.



1,542,889. MOTOR-STARTING DEVICE. CARROLL R. JOHNSON, Essex, Iowa. Filed June 12, 1924. Serial No. 719,688. 4 Claims. (Cl. 74—106.)

1. An engine starter comprising a member adapted to be secured to a drive wheel, an additional member adapted to be secured to the crank of an engine to be started, a connection between said members as to cause one to be rotated by the other, and means in the connection for causing a longitudinal movement of one member away from the other member upon rotation of one member by the other through the connection.



1,542,890. UMBRELLA CASE. JESSE C. KITTERMAN, Corydon, Ind., assignor of one-half to Russell R. Rowe, Corydon, Ind. Filed Apr. 17, 1924. Serial No. 707,174. 2 Claims. (Cl. 135—17.)

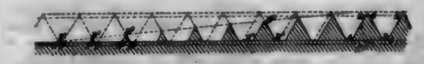
1. A combined cane and umbrella case comprising a casing including telescopic sections the larger end one of which is externally threaded at both ends, said sections, when extended receiving the umbrella, an internally threaded cup fixed on the handle end of the stick of the umbrella and arranged to receive one end of said larger end section when the sections are telescoped, and

a cap arranged to be engaged on the other end of said larger end section when the sections are collapsed, at times, and when the sections are extended, at times.

1,542,891. POULTRY FEEDER. JOHN H. KLAASSEN, George, Iowa. Filed July 6, 1923. Serial No. 649,911. 4 Claims. (Cl. 119—52.)

4. The combination with the upright container of a poultry feeding device having a tray on its lower end, of a disinfectant discharging means including a hollow ring encircling the container and arranged to be moved toward and away from said tray, means carried by the ring for discharging disinfectant onto poultry eating from said tray, and spring means secured to the ring and frictionally encircling the receptacle whereby to hold the ring in different positions with relation to said tray.

1,542,892. METHOD OF FORMING A SERRATED EDGE. CONRAD A. KOENIG, Auburn, N. Y. Filed June 1, 1922. Serial No. 565,230. 2 Claims. (Cl. 76—104.)

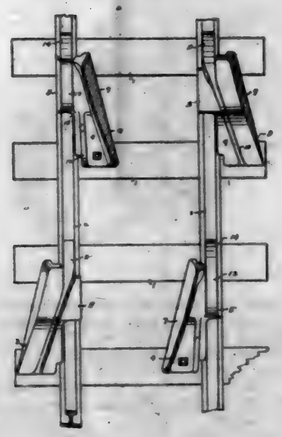


1. The method of producing a serrated edge, comprising shaping a flat metal knife blank, heating the blank, pressing in one surface of the blank while the blank is in heated condition a multiplicity of simultaneously formed grooves deepening toward one edge of the blank and extending only partially through the blank at their

edge and without changing the flat character of the opposite surface of the blank, and then grinding the blank

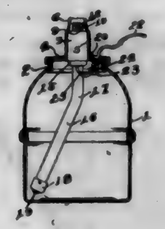
so formed upon the said flat surface opposite that in which the grooves are formed until a serrated cutting edge is produced.

1,542,893. TAPS, DIES, AND THE LIKE. PAUL KREUTZBERGER, Bellevue, France. Filed Aug. 23, 1921. Serial No. 494,563. 2 Claims. (Cl. 10—141.)



1. An improved screw cutting tool of the type of taps, dies and the like comprising a series of teeth, in which similar sides, one on each tooth, are formed as cutting (front) edges and all lie on a first common screw surface, while the opposite set of similar sides, one on each tooth, is formed with non-cutting (back) edges, and all lie on a second common screw surface, the non-cutting edges being such that each surface formed by the back of a tooth and passing through one of the said edges coincides with the said second common screw surface; while the cutting edges are such that the surfaces formed by the backs of the teeth and passing through the said edges are screw surfaces having a common pitch which is greater than that of either of the said common screw surface, the screw surfaces for consecutive teeth being axially displaced with regard to one another.

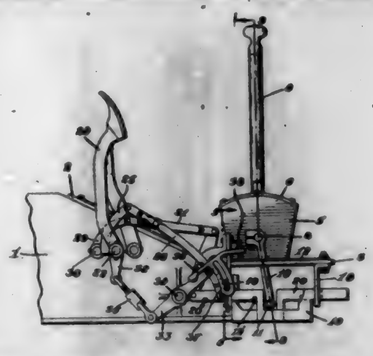
1,542,894. COMBINATION CANE OR THE LIKE AND SIGNAL. PAUL P. LANGNER, Minneapolis, Minn. Filed Oct. 2, 1924. Serial No. 741,121. 2 Claims. (Cl. 135—45.)



1. A cane, having a handle at its upper end, a sign plate secured near the lower end of the cane, said sign plate and handle projecting from the cane in a common plane.

1,542,895. RERAILING FROG. CHARLES R. LAW, Mansfield, La. Filed Mar. 22, 1924. Serial No. 701,031. 2 Claims. (Cl. 104—268.)

1. Car replacers including two members having upper inclined faces and formed at corresponding sides to engage over the treads of the rails of a railway track, a single diagonal upstanding rib formed on the upper face of one member, whose upper end is turned into alignment with the underlying rail and extended forming a declining forward projection, said rib and projection forming a continuous tread for the car wheels, an upstanding rib formed on the upper face of the other member parallel with the adjacent rail, and a supplemental tread formed on the last mentioned member and offset with respect to said last mentioned rib and aligned with the underlying rail and extended forming a declining forward projection.

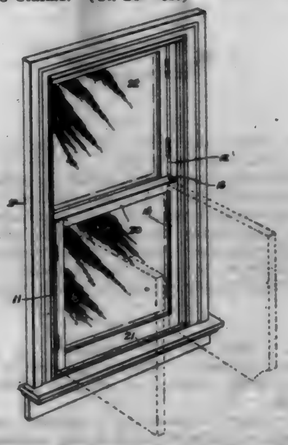


1,542,896. PUMP-FEED OIL CAN. GUSTAVE LIDSEEN, Chicago, Ill. Filed Dec. 1, 1924. Serial No. 753,284. 15 Claims. (Cl. 221—51.)

12. An oil feed device comprising a container, a spout removably engaged thereon, a control valve therein, an oil feed mechanism in said container having a reciprocal engagement with said spout, and a lever mechanism on said spout for reciprocating said oil feed mechanism to cause oil from said container to actuate the valve and be pumped out of said spout.

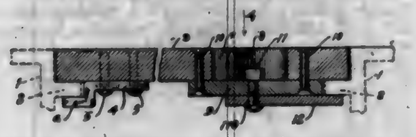
1,542,897. DRIVING ATTACHMENT FOR AUTOMOBILES. WILLIAM H. LONSDALE, Brownsburg, Quebec, Canada. Filed May 3, 1924. Serial No. 710,945. 7 Claims. (Cl. 74—89.)

1. A driving attachment for an automobile having a transmission casing containing variable gearing and a clutch pedal shaft adapted to set said gearing for low speed, comprising a yoke slidably supported by said casing, an operative connection between the yoke and the



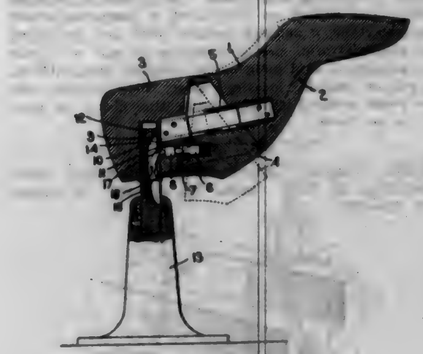
shaft, a slidable bar supported by the casing, an operating lever for shifting said bar, and a rod secured to the bar and adapted to engage said yoke.

1,542,898. RAIL BOND. MATTHEW H. LOUGHRIDGE, Bogota, N. J. Filed Oct. 25, 1920. Serial No. 419,201. 10 Claims. (Cl. 173—280.)



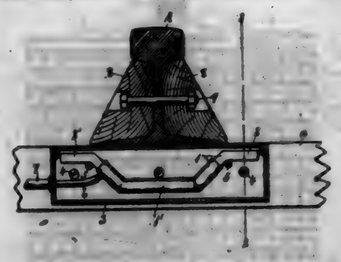
5. In a rail bond, a plurality of wires each of substantially the same sectional area throughout, said wires shaped near each end to have a cross-section forming a portion of a circle, said wires when placed adjacent one another forming substantially a frustrum of a cone with its base at the end of each of said wires.

1,542,899. SLIDING AND SWINGING WINDOW. JOHN MCASKILL, Brooklyn, N. Y., assignor to Columbia Safety Sash Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Aug. 15, 1922. Serial No. 582,067. 5 Claims. (Cl. 20—48.)



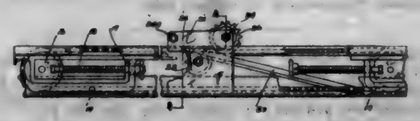
1. In a window, the combination of a frame having on each side strips defining a guideway a slide in each guideway, and adapted to normally be located in the upper part and the lower part of the frame respectively, a tongue in each guideway and opposite the normal position of each slide, a sash hinged to each slide and having a groove in its free edge to engage and receive the tongue, and weather closures at the hinged edge of the sashes.

1,542,900. MANHOLE COVER. ARTHUR MADDOCKS, Denver, Colo. Filed Feb. 4, 1924. Serial No. 690,485. 1 Claim. (Cl. 94—35.)



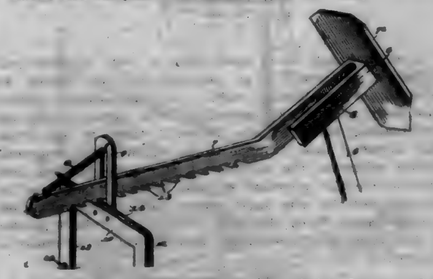
A manhole cover comprising a plate, a lug secured to one side of the plate near the outer edge thereof, said lug having a portion spaced from the surface of the plate so as to provide an opening for the reception of a flange, said cover having an opening near the side opposite from the lug, a plate secured to the underside of the cover and adapted to cover the opening, a turn button rotatably secured to said plate, means comprising a noncircular head secured to the turn button and accessible from the top of the plate for rotating the turn button, and means comprising a plug having an opening adapted to receive the head for holding said button-turning means against accidental movement when the button is in locking position.

1,542,901. DEVICE FOR UNLOCKING LASTS. JOHN W. MAY, Boston, Mass., assignor of one-eighth to J. Dudley Clark, Boston, Mass. Filed Aug. 6, 1921, Serial No. 490,202. Renewed Oct. 28, 1924. 4 Claims. (Cl. 12—135.)



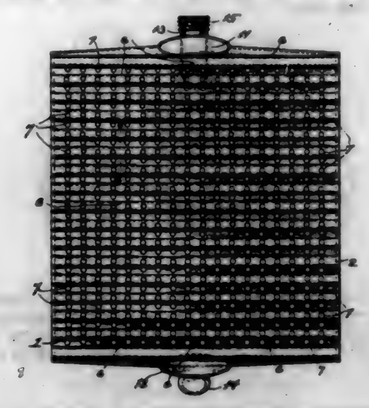
1. In a device for unlocking lasts wherein the lock is releasable by a lock-releasing member situated exterior to the thimble in the heel part, but operable from within said thimble, the combination with a last pin to enter said thimble, of means carried by the last pin and actuated by the movement involved in placing the last over the last pin to actuate the lock-releasing member, thereby to unlock the last.

1,542,902. ELECTROMAGNETIC APPLIANCE FOR RAILWAYS. RAYMOND S. MERRIETT, Syracuse, N. Y. Filed Aug. 11, 1922. Serial No. 556,847. 4 Claims. (Cl. 246—63.)



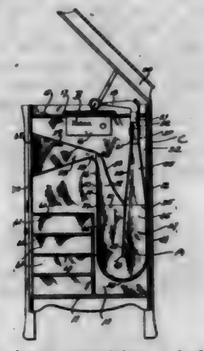
1. An electromagnetic appliance for railways comprising in combination with one of the rails, an electromagnet directly below and in proximity to the base of the rail, and a housing of non-magnetic matter inclosing said magnet.

1,542,903. PAN CONVEYER. JOEL MOORE, Cincinnati, Ohio, assignor to The J. H. Day Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Dec. 11, 1922. Serial No. 606,069. 12 Claims. (Cl. 198—168.)



1. In a device of the class described the combination of a pair of rails disposed in vertical relation one to another, the upper rail terminating intermediate the ends of the lower rail, endless chains extending adjacent the rails, detached trays for movement over the rails and adapted to fall from the upper rail to the lower rail upon reaching the end of the upper rail disposed intermediate the ends of the lower rail and spaced cross bars carried by the chains adapted to move trays in opposite directions on the rails.

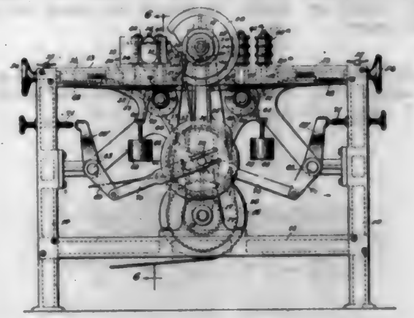
1,542,904. CLUTCH-PEDAL CONTROL. REINHART L. NORDNESS, Lily, S. Dak., assignor of one-half to Henry A. Roseth, Lily, S. Dak. Filed May 7, 1923. Serial No. 637,334. 2 Claims. (Cl. 74—81.)



1. A clutch pedal comprising a rockable lever, a bar pivotally mounted at one end on said lever, a guide for the bar, said bar being provided with a plurality of teeth and having an end projecting through and beyond said guide, a keeper engageable with the teeth, means for resiliently connecting the projecting end of the bar to the guide whereby said ends will normally tend to move upwardly when the lever is rocked, and a tread on the end of the bar adjacent its pivotal point on the lever.

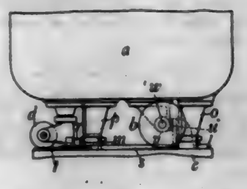
1,542,905. AUTOMOBILE RADIATOR. CHARLES H. NOBLIN, Philadelphia, Pa. Filed July 24, 1923. Serial No. 653,546. 6 Claims. (Cl. 257—131.)

1. A radiator consisting essentially of two mating sheets of counterpart corrugated form secured together along their side edges to define a wide shallow tortuous passage for fluid, the bights of the corrugation being disposed transversely to the air flow.



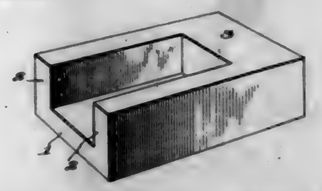
1,542,906. SOUND MODULATOR. ETHEL M. PACE, Vicksburg, Miss., assignor of one-half to Edward R. O'Neill, jr., New Orleans, La. Filed July 19, 1922. Serial No. 576,064. 1 Claim. (Cl. 181—27.)

A phonograph horn comprising a body portion providing a relatively large chamber therein having an open top, and a bottom wall, a partition secured within said body portion and extending from the open top and terminating short of the closed bottom to sub-divide the chamber into two portions which have communication adjacent the bottom of the body portion, and inlet and outlet portions secured upon the body portion at substantially the same plane, said inlet and outlet portions each being disposed over a sub-divided portion of the body portion chamber and having communication therewith.



1,542,907. RUBBER-CUTTING-OFF MACHINE. LOUIS J. PIANAROSA, Trenton, N. J., and WILLIAM NICHOLAS, Bridgeport, Conn., assignors to The Black Rock Mfg. Co., Bridgeport, Conn., a Corporation of Connecticut. Filed Mar. 10, 1922. Serial No. 542,546. 16 Claims. (Cl. 164—61.)

1. The combination with two feeding devices, each for feeding a bar of rubber or the like lengthwise, clamping devices for holding the said bars of rubber in position after being fed, a rotary knife, a swinging carrier pivotally mounted at one end and supporting the rotary knife at the other end and operatively



mounted as between the two said bars of stock, and means for swinging the carrier backward and forward about said pivot to bring the knife into engagement with the said stock.

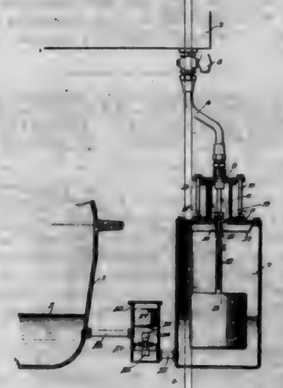
1,542,908. MACHINE FOR THE MIXING AND KNEADING OF BREAD DOUGH. JOHN EDWARD POINTON, Peterborough, England, assignor to Baker-Perkins Company, Incorporated, White Plains, N. Y. Filed Nov. 12, 1923. Serial No. 674,413. 3 Claims. (Cl. 259—81.)

3. In a dough mixing and kneading machine, the combination comprising a portable bowl, runners, locating members and buffers on said bowl, a platform housed in said machine, a gudgeon integral with and projecting below said platform, means consisting in part of a gear wheel secured to said gudgeon for rotating the platform, and runner guards, locating shoes, shoe latches, and buffer stops integral with and projecting above the platform, as set forth.

1,542,909. BRICK. JOSEPH REGAN, Rockville, Conn. Filed Dec. 19, 1923. Serial No. 681,493. 3 Claims. (Cl. 72—37.)

2. A building brick comprising an integral rectangular brick having a recess located centrally between the longitudinal sides of the brick, one end of the recess opening through one end of the brick and the other end of the recess terminating short of the opposite end of the brick, the cubical area of the recess being substantially one-third of the cubical area of the entire brick.

1,542,910. FUEL-BURNING GRATE. CORA H. REID, Niagara Falls, N. Y. Filed Nov. 25, 1921. Serial No. 517,432. 7 Claims. (Cl. 126—152.)

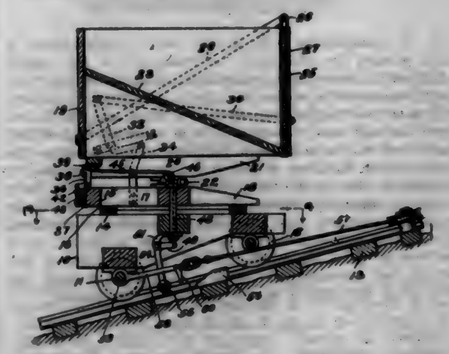


1. A fuel burning grate comprising a supporting member having openings, a flange surrounding each opening, a cap having a depending skirt surrounding each flange and providing an uninterrupted passage for air through the openings and between the flanges and skirts around the entire periphery of the openings.

1,542,911. MULTIPLE-CONNECTION DRY-CELL BATTERY. CARL SEAVERNS RIDER, Lansing, Mich., assignor to National Carbon Co. Inc., a Corporation of New York. Filed May 23, 1921. Serial No. 471,660. 8 Claims. (Cl. 136—107.)

5. In a battery of dry cells, a plurality of cathode elements arranged to present a serrated surface upon one side and a flat surface upon another, an anode operatively adjacent to both said surfaces, and a group of cathode and anode elements adapted to interfit with those first described, whereby an assembly having only flat exterior faces is formed.

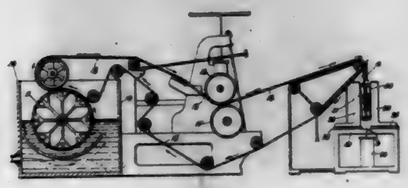
1,542,912. MOTOR-VEHICLE-ENGINE LUBRICATING SYSTEM. CHARLES ROCKWELL, Newcastle, Wyo. Filed Jan. 18, 1924. Serial No. 687,039. 6 Claims. Cl. 184—108.)



1. The combination with the crank case of an automobile engine, of an elevated supply tank, connections between the tank and crank case including a reservoir adjacent the crank case, a partition extending across the reservoir and having an oil passage formed therethrough, a valve stem extending through said passage, valves on said stem above and below the partition and adapted to, respectively, close the upper and lower ends of said passage, a float in the reservoir above the partition, and a yielding connection between the upper valve and said float.

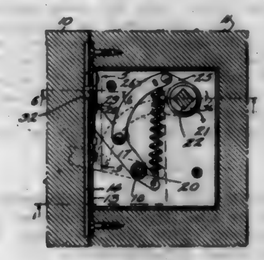
1,542,913. VACUUM METER. OSKAR SEITZ, Baden, Switzerland, assignor to Gleichrichter-Aktiengesellschaft, Glarus, Switzerland. Filed Aug. 29, 1921. Serial No. 496,261. 4 Claims. (Cl. 73—31.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A vacuum meter of the McLeod type including a graduated capillary tube, a barometric tube communicating with the capillary tube and having an enlarged bore at its upper end, a storage vessel surrounding the lower end of the barometric tube, the cross section of said enlarged bore being very great in proportion to the cross-section of the space between the lower part of the barometric tube and the walls of the mercury storage vessel for the purpose of rendering the adjustment of the mercury storage vessel which is necessary for the proper adjustment of the comparing mercury meniscus practically independent of variations of atmospheric pressure.



1,542,914. DUMP CAR. CARL V. SHAMBERGER, Indiana, Pa., assignor to Mine Appliances Company, a Corporation of Delaware. Filed Mar. 14, 1925. Serial No. 15,488. 10 Claims. (Cl. 214—58.)

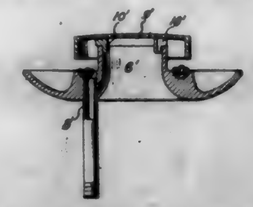
1. The combination, with a dump car having an underframe, a tilting body carried on said underframe and capable of being rotated about a vertical axis so as to dump in any desired direction and means for normally



locking the body against dumping, of a track upon which said car is adapted to be hauled, and means for releasing said body to permit the same to dump automatically when a predetermined point in the path of travel of the car is reached.

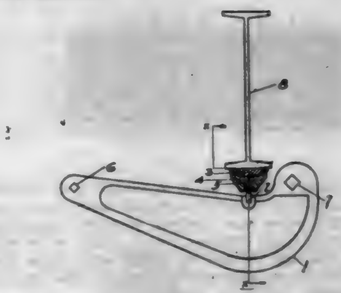
1,542,915. PAPER YARN AND PROCESS OF PRODUCING THE SAME. JOHN C. SHERMAN, Portland, Me., assignor to Brown Company, Berlin, N. H., a Corporation of Maine. Filed Nov. 16, 1921. Serial No. 515,484. 15 Claims. (Cl. 117—3.)

1. A roving formed of cellulose fibers, consisting of a fibrous strip initially coiled transversely about one of its longitudinal edges, and having the fibers of its coils united together.



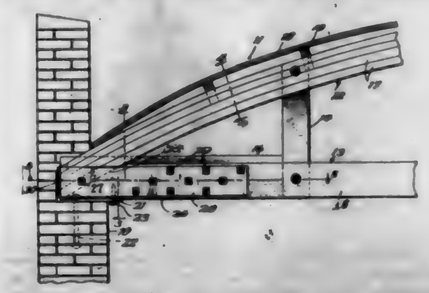
1,542,916. LATCH. JOHN A. SKOGERSON, Sioux City, Iowa. Filed July 1, 1924. Serial No. 723,470. 7 Claims. (Cl. 292—223.)

1. In combination with a door and a door casing, a bolt pivoted in the door intermediate of its length adapted to move from inoperative position where it is contained entirely within the door, to operative position where it extends into the casing, a latch adapted to engage the bolt and to maintain it in inoperative position, said latch having a portion disposed so as to engage the casing when the door is moved to closed position and to withdraw the latch from engagement with the bolt, manually operable means for returning the bolt to inoperative position, said last means including a swinging arm, and a link attached to the arm and to the bolt at a position between the outer end and the pivot thereof and means for returning the latch to engagement with the bolt when the door is moved away from the casing.



1,542,917. BURNER. RALPH H. STAPLES, Mount Vernon, Ind. Filed Feb. 24, 1923. Serial No. 620,982. 1 Claim. (Cl. 158—91.)

A burner of the class described comprising a base having a vertically arranged air passage therein, a flange formed on the upper portion of the base and forming a continuation of the air passage, a groove formed in the base adjacent the flange, a wick, in said groove, a trough formed in the base, between the groove and the periphery



of the base, said trough being deeper than the groove, a flanged cover, projections thereon engaging the top of the flange to support the cover in spaced relation to the flange and means for delivering oil to the wick groove.

1,542,918. WEIGHING SCALE. DAVID W. STUBBS, Chicago, Ill., assignor to E. and T. Fairbanks and Company, St. Johnsbury, Vt., a Corporation of Vermont. Filed Mar. 15, 1923. Serial No. 625,364. 4 Claims. (Cl. 265—71.)

1. In a scale, in combination, a main lever, a load supporting member carried by said lever, a bridge girder operatively connected to the load supporting member, and a key interposed between the bridge girder and the load supporting member for the purpose of compensating for any inequalities therebetween, said key having a curved face contacting with said load supporting member and said key being shiftable without displacing the relative positions of the said supporting member and said bridge girder.

1,542,919. ROOFING-TRUSS STRUCTURE. WILLIAM J. SUMMERBELL, Alhambra, Calif. Filed May 29, 1922. Serial No. 564,402. 7 Claims. (Cl. 108—23.)

4. In a truss, the combination with top and bottom chords, the top chord comprising a plurality of superposed laminated members, being bowed and longitudinally

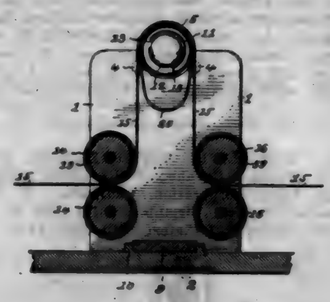
slotted, and the end of the bottom chord obliquely abutting the top chord inside the supporting point of the latter, and a metal stirrup embracing and fastened to the truss end, with the extreme end of the top chord fitted throughout its depth in end grain abutting contact with said stirrup, the bottom chord being provided with an intermediate extension which projects into the slot of the top chord at the end of the truss.

1,542,920. BEDPAN SUPPORT. HELMERT A. SWENSON, Philadelphia, Pa., assignor to H. D. Dougherty & Company, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 17, 1922. Serial No. 544,392. 6 Claims. (Cl. 5—308.)

1. In a device of the character described, the combination of a receptacle for receiving and holding a container, said receptacle having relatively stationary means at one end for suspending the said end from a suitable support and also having a tubular member secured to its upper side and extending longitudinally thereof, and a rod extending into the said tubular member and having slidable engagement therewith, the said rod projecting from the said tubular member at the opposite end of said receptacle and being adapted to suspend the said opposite end from a suitable support.

1,542,921. STOVE. JESSE R. THOMAS, Kansas City, Kans., assignor to Lewis H. Borserine, Kansas City, Mo. Filed Mar. 27, 1924. Serial No. 702,264. 4 Claims. (Cl. 158—88.)

3. A hydrocarbon burner comprising a hollow vaporizing chamber, the hollow vaporizing chamber being horizontally disposed and having depending triangular offset portions with apexes of the angular portions directed toward the front of the chamber, the forward portion of the chamber extending beyond the apexes and having spaced flat walls, nozzles for directing flame against the apexes of the angular portions, the angular portions being spaced apart, the inner walls of the angular portions converging toward the rear of the chamber so that the narrowest space between the walls of the angular portions will be at the rear of the chamber and means for communicating the nozzles with the chamber.

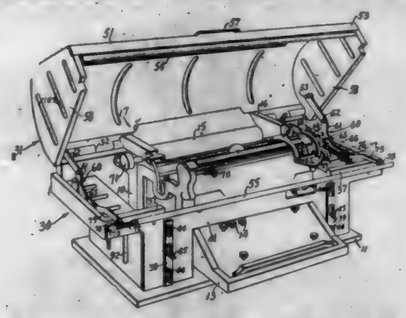


1,542,922. TELEPHONE RECEIVER. GEORGE K. THOMPSON, Maplewood, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Apr. 21, 1920. Serial No. 633,754. 7 Claims. (Cl. 179—114.)

1. A telephone receiver comprising a permanent magnet, two electromagnets presenting upper ends of opposite polarity to a diaphragm, the lower ends of said electromagnets lying above said permanent magnet, and two pole pieces movably mounted on said permanent mag-

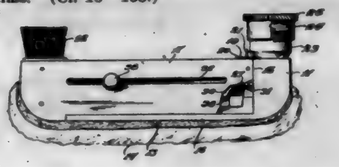
net, said pole pieces extending between the lower ends of the electromagnets, each pole piece being free to respond to attraction toward either electromagnet.

1,542,923. PHOTOGRAPHIC-PRINTING APPARATUS. DAVID G. URQUHART, Chicago, Ill., assignor to Photo Sales Service Corporation, Chicago, Ill., a Corporation of Illinois. Filed Nov. 15, 1920. Serial No. 424,229. 27 Claims. (Cl. 95—75.)



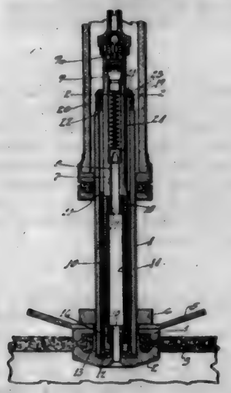
1. In a photographic printing apparatus the combination of a frame, a transparent cylinder rotatably supported on said frame and disengageable therefrom, an endless film strip of flexible material movably engaging said cylinder and movable off of and onto the same when it is disengaged from the frame, a luminant within the cylinder, and means for transmitting a web of flexible sensitized material across the cylinder in register with the film strip of flexible material.

1,542,924. TYPEWRITING MACHINE. JOHN WALDHEIM, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed July 18, 1921. Serial No. 485,521. 20 Claims. (Cl. 197—186.)



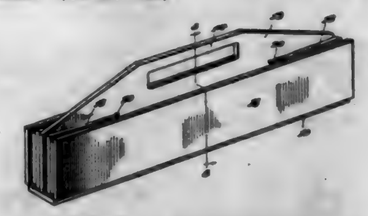
1. A sound-deadening casing for a typewriting machine having a carriage and a finger-piece projecting therefrom, said casing comprising a body-part having a front wall, a cover forming with the top of said front wall a slot through which the finger-piece projects to

travel therealong with the carriage, the upper part of said front wall being shiftable downwardly, and cover-controlled means for shifting said portion of the front



wall downwardly during the lifting of the cover to open the slot in both directions, and upwardly to effective position during the closing of the cover.

1,542,925. SHOE POLISHER. HAROLD M. WAMBOLD, Jermyn, Pa. Filed Mar. 8, 1924. Serial No. 697,758. 5 Claims. (Cl. 15—135.)

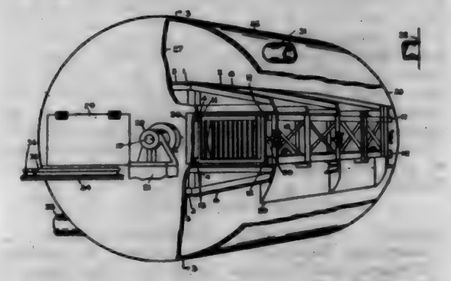


1. In a shoe polisher, the combination of a casing to receive a container of polish, a dauber mounted upon the casing, spaced top lugs forming abutments to receive the forward thrust of the container, means for conveying polish from said container to the dauber, and means to coact with said container for feeding polish to the dauber.

1,542,926. PNEUMATIC TIRE-PRESSURE GAUGE. PARK E. WELTON, Cuyahoga Falls, Ohio, assignor to Tiregage Valve Corporation, Charleston, W. Va., a Corporation of West Virginia. Filed Jan. 17, 1923. Serial No. 613,253. 7 Claims. (Cl. 152—11.5.)

1. In a pneumatic tire pressure gauge, the combination of a tire stem; a valve carrying plunger in the stem subjected to the tire pressure and responsive in movement to said pressure; and a thimble secured to the outer end of the valve stem and forming a stop limiting the outward movement of the plunger, said stop being located at the limit of the outward movement of the plunger.

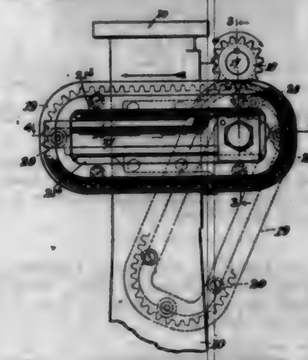
1,542,927. TOOL BOX. HOBART B. WHITAKER, Norton, Va. Filed Apr. 30, 1924. Serial No. 710,078. 2 Claims. (Cl. 217—46.)



2. In a tool box, the combination of a bottom wall including a center section and side sections hinged to the center section, side walls hinged to the side sections of the bottom wall and foldable downwardly theresgainst, a partition fixed to the center section of the bottom wall, end wall sections hinged to the partition at opposite sides thereof closing the box at its ends, studs carried by the side walls, and springs catches carried by the end wall sections and apertured to engage over said studs connecting the side walls with said end wall sections whereby the end wall sections provide separate rigid braces for the side walls, the end wall sections being foldable inwardly to lie along the sides of said partitions and the side sections of the bottom wall with the folded side walls being foldable upwardly to overlie said end wall sections.

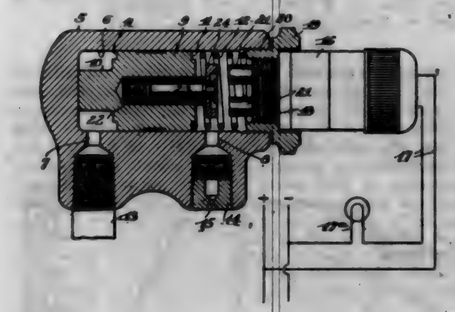
1,542,928. PROCESS FOR THE PRODUCTION OF DISINFECTING SOLUTIONS WHICH ARE CAPABLE OF BEING REGENERATED. ALBERT WOLFF, Berlin, Germany. Filed July 7, 1924. Serial No. 724,714. 2 Claims. (Cl. 23—86.)

2. A process for producing hypochlorite solutions, consisting in treating neutral or only slightly alkaline diluto aqueous solutions of chlorides of metals capable of forming hypochlorites with ozone in the presence of a metallic oxide until they are saturated with ozone, the said treatment being repeated several times and spread over a considerable period, as set forth.



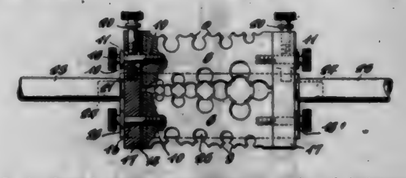
1,542,929. CENTRIFUGAL DRIER. EDWARD WOOLRICH, Sault Ste. Marie, Ontario, and GOTTLIEB RUDOLPH HOLLIGER, Montreal, Quebec, Canada. Filed Jan. 7, 1924. Serial No. 684,889. 9 Claims. (Cl. 34—28.)

6. In a centrifugal drier, an open frame rotatably mounted and having compartments at opposite sides, carriages forming containers having main frames and screw adjusted spring tighteners in said frames and



pivoted clamping screws and nuts adapted to engage brackets secured to the main frame and a casing housing said frame and having an inlet connected to a compressed air supply and a discharge opening for the laden air.

1,542,930. BASKET-MAKING MACHINE. JOHN G. EKLUND, St. Joseph, Mich., assignor to St. Joseph Iron Works, St. Joseph, Mich., a Corporation of Michigan. Filed July 13, 1922. Serial No. 574,753. 9 Claims. (Cl. 147—47.)

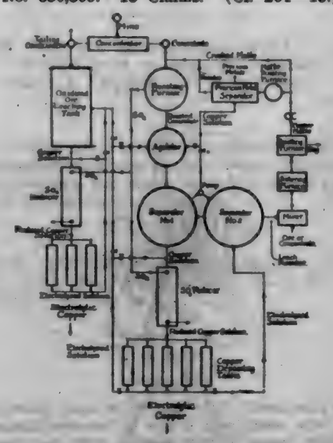


1. In a basket stapling machine of the type employing a traveling basket form and having a frame and means for intermittently driving the form, the combination therewith of a form guide bracket affixed to the frame, said bracket having a pair of parallel guide strips one of which is shorter than the other, the longer guide strip joined with an arcuate guide strip, and rollers on the form adapted to move between and in contact with said guide strips to control the motion of the form.

1,542,931. AUTOMATIC ELECTRIC SWITCH. EDWARD B. FOOTE, Rochester, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed Apr. 21, 1923. Serial No. 633,767. 6 Claims. (Cl. 200—82.)

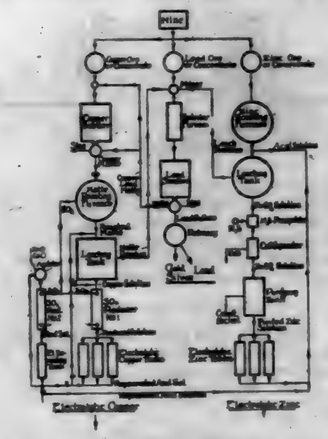
1. In a fluid pressure operated switch for controlling an electric circuit, the combination of a cylinder, a piston therein, contacts adjacent one end of the cylinder, circuit control means adapted to be moved by the piston for opening and closing a circuit through said contacts, means for admitting fluid pressure to either end of the piston, and yieldable means adapted to be assembled at either end of the cylinder so as to maintain the switch either in open or closed position when the pressure of the fluid upon the piston is relieved.

1,542,932. THREAD CUTTER. WILLIAM H. FULLINGTON, Cleveland, Ohio, assignor to Katharine J. Riddell, Cleveland, Ohio. Filed Mar. 6, 1924. Serial No. 697,249. 7 Claims. (Cl. 10—114.)



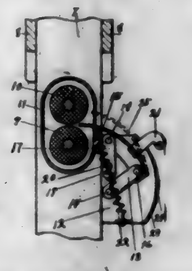
3. A thread cutter comprising a pair of bolsters, a pair of die plates arranged between and removably connected to the bolsters, said plates being revolvable upon their longitudinal axes upon separation of the bolsters, a removable guide plate arranged upon the under side of the die plates, and operating handles for the cutter.

1,542,933. MIXING DEVICE. WILLIAM OWEN GEPFERT, Arch Creek, and CHARLIE STROMQUIST, Miami, Fla.; said Stromquist assignor to said Gepfert. Filed Nov. 6, 1922. Serial No. 599,366. 2 Claims. (Cl. 48—180.)



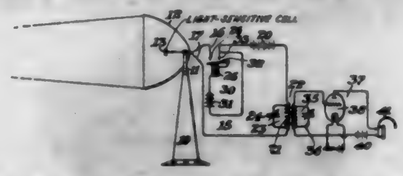
1. In a device of the character specified comprising a body having a central recess for containing a plurality of filtering screen units, each unit comprising a disk of wire net-work and a disk of metal formed with a plurality of perforations, washers holding said units in spaced relation, means in connection with one of the units for limiting the volume of gas penetrating the said units, and means for retaining said units in position in said recess in the body.

1,542,934. METALLURGICAL PROCESS. WILLIAM E. GREENAWALT, Denver, Colo. Filed Apr. 6, 1923. Serial No. 630,309. 15 Claims. (Cl. 204—15.)



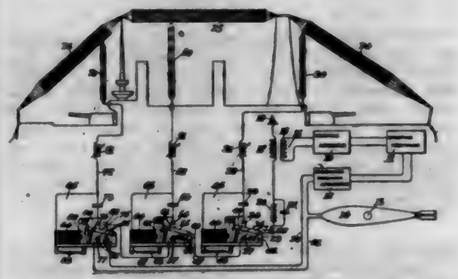
1. A process of treating copper ores comprising, concentrating the ore into a sulphide concentrate, roasting the concentrate, leaching the concentrate to extract a portion of the copper, then smelting the leached concentrate residue to get the remainder of the copper into a matte, crushing the matte, adding the crushed matte to a new sulphide concentrate charge and repeating the cycle.

1,542,935. METALLURGICAL PROCESS. WILLIAM E. GREENAWALT, Denver, Colo. Filed Jan. 31, 1924. Serial No. 689,613. 11 Claims. (Cl. 204—15.)



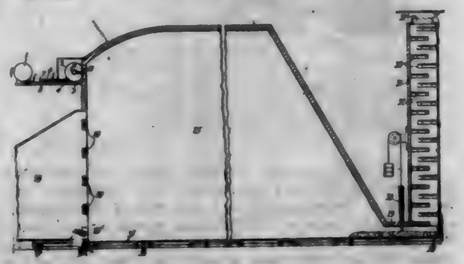
1. A process of treating copper and lead ores containing precious metals comprising, smelting the copper ore to matte, crushing the matte, roasting the matte, leaching the roasted matte with a dilute acid solution to extract a portion of the copper, electrolyzing the resulting copper solution to deposit the copper and regenerate acid, returning the regenerated acid solution to the roasted matte and repeating the cycle until the copper in the roasted matte is sufficiently extracted, then mixing the roasted matte leach residue containing the precious metals and a small amount of copper with the lead ore, smelting the mixture whereby the major portion of the precious metal values are concentrated into a lead bullion and the minor portion into a lead-copper matté, and adding the lead-copper matte so obtained to a new copper ore charge for copper matte smelting, and repeating the cycle.

1,542,936. SAFETY DEVICE FOR CLOTHES WRINGERS. LESTER S. GUNDERMAN, Pittsburgh, Pa. Filed Mar. 7, 1923. Serial No. 623,379. 3 Claims. (Cl. 68—32.)



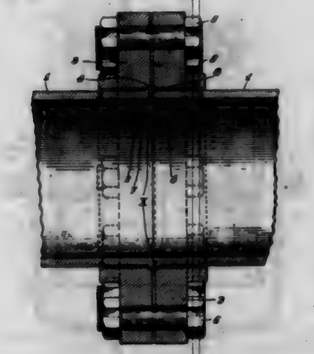
1. An attachment for a clothes wringer frame having presser rolls, comprising a pair of brackets mounted on the wringer frame, a link member with the lower end pivoted to each of said brackets, a feed bar with the lower end hinged to the outward extended end of the link members, said members guiding the movement of said feed bar, link members having slotted bearings, having one end of each slidably connected to each of said brackets and the opposite ends extending upward and pivotally mounted to side flanges on said feed bar for guiding the upper edge of said feed bar, when feeding different thicknesses of clothes to the presser rolls, a pair of handles secured to said feed bar to move said feed bar to the bite of the presser rolls, and a cover plate mounted on said brackets for protecting said feed bar when in an inoperative position.

1,542,937. OPTICAL INSTRUMENT. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Filed May 8, 1920. Serial No. 379,840. 7 Claims. (Cl. 250—1.)



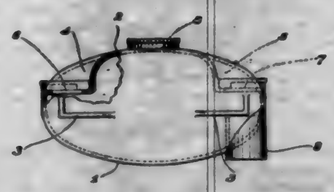
1. In an optical instrument, a receiver thallium oxosulphide cell sensitive to light waves, and means actuated by said receiver for detecting variations in the intensity of said light waves.

1,542,938. AUTOMATIC ANTENNA SYSTEM. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Filed July 9, 1920, Serial No. 395,018. Renewed Aug. 29, 1924. 23 Claims. (Cl. 250—2.)



1. In a wireless receiving system, a plurality of antennæ, a receiving apparatus responsive to all of said antennæ one at a time, and means for automatically connecting one antenna to said receiving apparatus in place of another antenna.

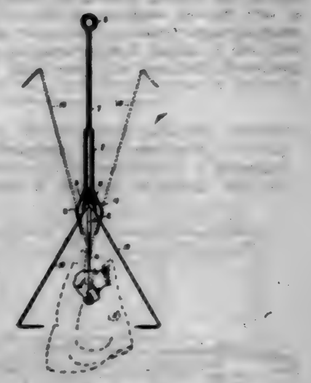
1,542,939. PROCESS AND APPARATUS FOR TREATING LIQUID MATERIAL. ERNEST HOPKINSON, New York, N. Y., assignor to General Rubber Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 27, 1923. Serial No. 671,127. 42 Claims. (Cl. 18—50.)



1. A process of drying latex or similar materials which consists in, filming the latex with opposite free surfaces, dispersing the film into liquid particles, and substantially drying the particles while dispersed.

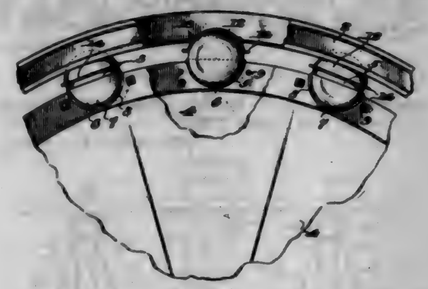
1,542,940. FLANGE JOINT. EDWARD J. HUGHES, Bloomfield, N. J. Filed May 5, 1923. Serial No. 622,722. 1 Claim. (Cl. 285—140.)

A flange joint comprising: two members, each member consisting of a ductile iron pipe the end of which is rolled over into a narrow tapering lap, the end of each member having a square corner at its inner circumference and the lap having a thickness at its outer circumference less than that of the wall of the pipe, said laps being in engagement with each other; two collars, out of contact with each other, mounted loosely one on one and the other on the other pipe, each having a taper face engaging the taper on the lap; and bolts connecting the collars.



1,542,941. CONCENTRATING PAN. OYSTEIN JACOBSEN, Dayton, Ohio, assignor to The Duriron Company, Inc., a Corporation of New York. Filed Nov. 17, 1923. Serial No. 675,420. 3 Claims. (Cl. 23—274.)

1. A concentrating pan for use as one of a series comprising a hollow integral casting, substantially ellipsoidal in shape, with its major axis in horisontal position and with its top depressed at one end and provided with an inlet opening, and with its other end provided with an overflow tube leading downward from such other end with an opening through the top wall of the pan opposite the overflow tube, said overflow tube being adapted to fit in the depression in the next pan of the series.



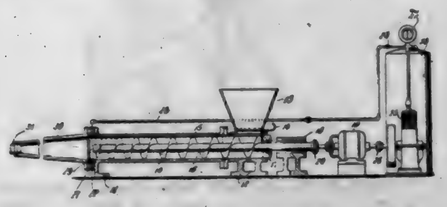
1,542,942. FISHHOOK. AXEL JACOBSON, Two Harbors, Minn. Filed Dec. 15, 1924. Serial No. 755,869. 2 Claims. (Cl. 43—89.)

2. A fish hook of the class described comprising a cylindrical body portion having spaced guiding wings extending downwardly from the lower end thereof, spaced hook engaging wings intermediate of the guide wings, a bait hook permanently attached to the lower end of the body portion extending downwardly intermediate of the guide wings and below same, a reciprocable line engaging shank carried axially within the body portion of the lower end being operable intermediate

of the guide wings, and gaff hooks pivotally attached to the lower extremity of the shank and operable within the guide wings.

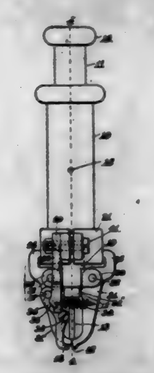
1,542,943. VEHICLE WHEEL. WALTER S. JOSEPHSON, New York, N. Y., assignor to George Whitaker Morley and Robert Roy Armstrong, trustees, Toronto, Ontario, Canada. Filed Aug. 11, 1923. Serial No. 656,789. 9 Claims. (Cl. 152—36.)

1. A vehicle wheel including center and rim structures, complementary half-cups secured to the periphery of the center structure, and shock insulating means interposed between the half-cups and the rim.



1,542,944. BOTTLE. UTAKICHI KAWASAKI, San Francisco, Calif. Filed Aug. 17, 1921. Serial No. 492,994. 1 Claim. (Cl. 229—5.5.)

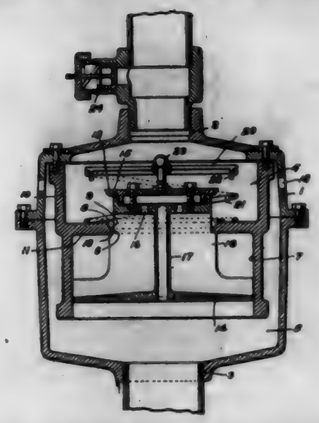
A bottle comprising a body portion formed of pulp, paper or fibrous material, which body portion is open at one end and formed with an integral closing wall at



the other end, there being a line of weakness at the juncture of the closing wall and the body portion extending part way of the circumference of the body to provide for tearing, cutting or disrupting of the bottle at said line of weakness to form an opening, an upstanding finger piece on the outer side of the closing wall, and a sealing member adapted to be permanently mounted in the open end after filling of the bottle.

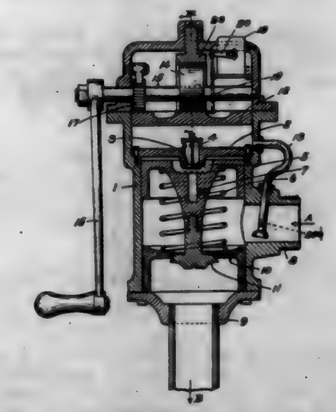
1,542,945. FLUENT PULVERIZED FUEL. ALONZO G. KINYON, Allentown, Pa., assignor to Fuller-Lehigh Company, a Corporation of Pennsylvania. Filed Nov. 28, 1920. Serial No. 426,016. 6 Claims. (Cl. 44—11.)

2. A fuel in a sluggishly fluent state consisting of an intimate mixture of finely divided coal and air at a pressure in excess of atmospheric, the air filling the interstices between the particles of coal and giving the fuel its fluent state.



1,542,946. TACK-DRIVING DEVICE. OSCAR L. LAWSON, Lynn, Mass. Filed Sept. 14, 1923. Serial No. 662,771. 12 Claims. (Cl. 1—46.)

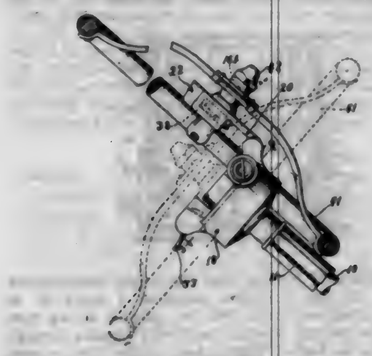
1. In a device of the class described, a casing; a reciprocating member therein; a driving member secured thereto; a collar through which said driving member is adapted to move; jaws pivotally mounted on said collar; means for feeding a tack between said jaws; means permitting said jaws to separate when the driving member is actuated; and means operable during the driving operation for curving the pointed end of the tack being driven.



1,542,947. LIQUID-DISPENSING APPARATUS. GEORGE W. MACKENZIE, Beaver, Pa. Filed Nov. 16, 1923. Serial No. 675,127. 10 Claims. (Cl. 73—167.)

1. In liquid-dispensing apparatus the combination of a liquid container provided with an orifice, a valve arranged within the container opposite said orifice and reciprocable to and from a position of closure upon

said orifice, and yielding means constantly exerted upon said valve and tending constantly to sustain it at an interval above said orifice.



1,542,948. LIQUID-DISPENSING APPARATUS. GEORGE W. MACKENZIE, Beaver, Pa., assignor to Guarantee Liquid Measure Company, Rochester, Pa., a Corporation of Delaware. Filed Oct. 28, 1924. Serial No. 745,851. 6 Claims. (Cl. 221—108.)

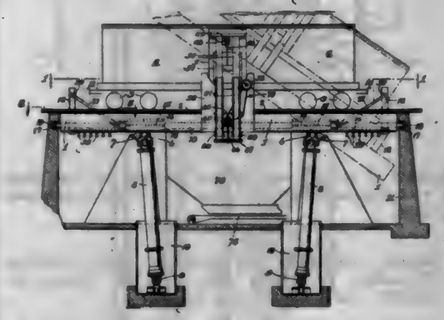
1. In a liquid-dispensing apparatus the combination of a container provided with a discharge orifice, a valve controlling said orifice, a chamber provided with a delivery orifice, means for segregating from a larger volume and within said chamber a unit volume of liquid, means for expelling liquid from said chamber and through said delivery orifice, the means last named being operatively connected with the valve first named.

1,542,949. TILTING STEERING WHEEL. ELMER MICHAUD, Chicago, Ill. Filed Jan. 26, 1922. Serial No. 531,870. 13 Claims. (Cl. 74—33.)

1. In combination a housing, a cap hingedly connected to said housing, a two-part steering shaft, one part of said shaft being associated with said housing and the other part being journaled in said cap, a steering wheel mounted on said last-mentioned shaft part, and clutch

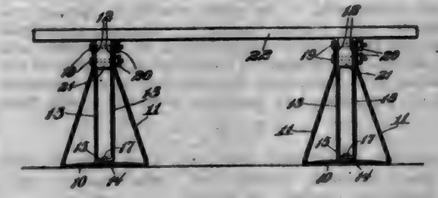
members mounted on the respective shaft parts which are adapted to be brought into operative interlocking engagement when the wheel is in normal position.

1,542,950. FUSE. ELMER L. OGLE, Chicago, Ill., assignor to Federal Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 2, 1921. Serial No. 497,888. 2 Claims. (Cl. 200—128.)



1. In an electric fuse, a cartridge containing a fusible element, said cartridge comprising a tubular body of insulating material, a closure for one end of said body through which said fusible element extends, a closure and fusible element support for the other end of said body comprising an inwardly tapered, internally threaded, metal plug, provided with an extension for the attachment of the fusible element, and a tubular cap with an apertured head adapted to be clamped upon said plug with the end of said tubular body gripped between, said plug having a boss adapted to extend through the aperture in the head of said cap, said plug having a longitudinal notch and said head being cut away in line with said notch, and the body of the cap extending into said notch so that the metal of the head is closely engaged with the boss on said plug.

1,542,951. CAR-DUMPING APPARATUS. AUGUSTUS T. PERKINS, Oak Park, Ill., assignor to Webster Mfg. Company, Chicago, Ill., a Corporation of Ohio. Filed Jan. 18, 1924. Serial No. 686,966. 47 Claims. (Cl. 214—47.)

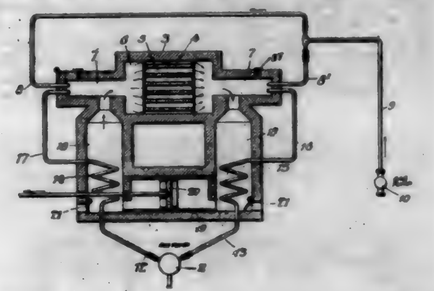


1. The method of dumping the load of materials from a car having side doors, comprising the pushing in of the doors at the opposite sides of the car, thereby releasing and discharging the middle portion of the load from the sides of the car, then tilting the car endwise about one axis to discharge one end portion of the load from the side, and thereafter tilting the car endwise in the opposite direction about another axis to laterally discharge the other end portion of the load, whereby the entire load is discharged in three separate stages or operations.

5. Apparatus for dumping cars, comprising a platform to support the car, means supported by said platform and operative for opening the side of the car, instrumentalities for tilting said platform first in one direction and then in the other, thereby to first raise one end of the car and then the other, deflecting means on said opening means for effecting the lateral discharge of the load, first from one end of the car and then from the other, at the middle of the car, by said tilting motion, whereby

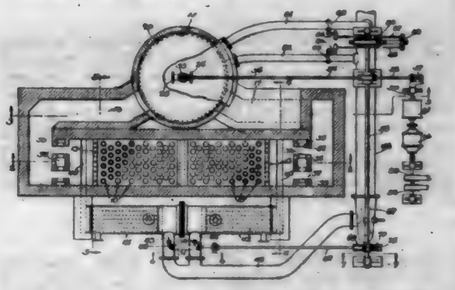
a portion of the load is discharged by said opening of the car, while another portion of the load is discharged by the tilting of the car in one direction, and the final portion is discharged by the tilting of the car in the opposite direction, said means for opening the side of the car comprising a power operated ram, and said deflecting means being carried on one side of said ram, together with means for turning said ram over to bring said deflecting means into position to effect the discharge of the final portion of the load.

1,542,952. SUPPORT. ERNEST L. PLASS, Elmhurst, Ill. Filed June 17, 1924. Serial No. 720,628. 2 Claims. (Cl. 248—41.)



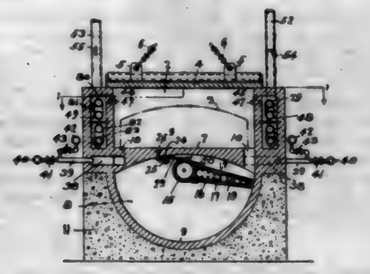
2. A support of the character described comprising a single strip of metal having its central portion bowed upwardly, the ends of the bowed portion being bent upwardly and inwardly above the bowed portion to form side members, the upper ends of the side members being vertically extended, the strip at the ends of said vertical portions being inverted and extended downwardly vertically for engagement with the base, the terminal portions of the inverted portions being provided with angular feet engaging the base and one another, and a securing element directed through the base and such angular feet.

1,542,953. METHOD OF HEATING. FRANZ PUENING, Chicago, Ill. Filed July 16, 1920. Serial No. 396,693. 20 Claims. (Cl. 263—1.)



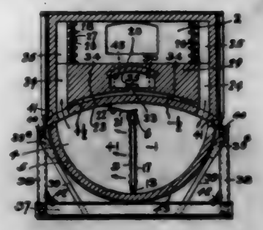
4. In a device of the class described, a heating chamber, a pair of combustion chambers communicating therewith, means for supplying air and fuel to each said com-

bustion chamber, a storage chamber communicating with each said combustion chamber, a cylinder, a piston therein, the capacity of the cylinder being less than the



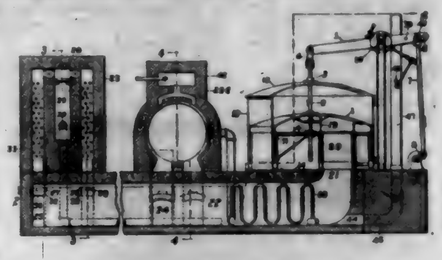
capacity of the storage chamber whereby the hot products of combustion are prevented from contact with said cylinder.

1,542,954. HEATING APPARATUS. FRANZ PUENING, Pittsburgh, Pa. Filed Dec. 11, 1922. Serial No. 606,037. 32 Claims. (Cl. 263—1.)



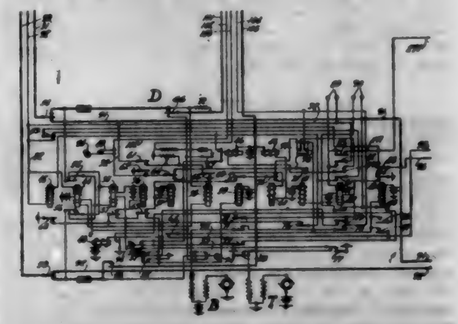
10. In a device of the class described a heating chamber, means for supplying heating gas to said chamber and withdrawing it therefrom alternately through the opposite ends thereof, means for supplying additional hot gas to the heating gas, flues at the respective ends of the heating chamber for withdrawing a portion of the heating gas substantially corresponding to the increment of hot gas, and a heat exchanger connected to said flues.

1,542,955. HEATING METHOD AND APPARATUS. FRANZ PUENING, Aspinwall, Pa. Filed Jan. 18, 1923. Serial No. 613,396. 27 Claims. (Cl. 263—1.)



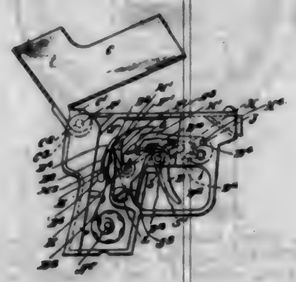
9. In a furnace, an enclosure to be heated, a gas-reciprocating piston mounted for oscillation below said enclosure, and a horizontal arch disposed above said piston and below said enclosure, said arch having ports to permit reciprocation of the heating gases.

1,542,956. HEATING METHOD AND APPARATUS. FRANZ PUENING, Aspinwall, Pa. Filed Jan. 31, 1923. Serial No. 616,133. 41 Claims. (Cl. 263—1.)



2. A method of heating that comprises reciprocating hot gases through a system including a space to be heated, dividing said gases into two streams during each reciprocation thereof, passing one of said streams through the space to be heated, adding heat to the other stream and mixing both streams together prior to the next reciprocation.

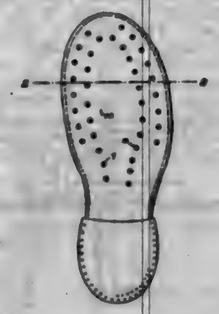
1,542,957. HEATING APPARATUS. FRANZ PUENING, Pittsburgh, Pa. Filed Jan. 23, 1924. Serial No. 688,017. 28 Claims. (Cl. 263—1.)



4. A device for transferring heat from a heat-source to a receiver of heat, comprising a piston sealed in liquid for pulsating heat-carrying gases back and forth between said heat source and said receiver.

1,542,958. AUTOMATIC TELEPHONE SYSTEM. ARTHUR J. RAY, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 21, 1921. Serial No. 438,985. 19 Claims. (Cl. 179—27.)

1. In a telephone system, main and branch exchanges, means including a switching selector repeater for connecting a calling branch subscriber with a called subscriber in either exchange, a rotary line switch permanently associated with said selector repeater, trunk lines to the main exchange accessible to said line switch, means for operating said line switch to select an idle trunk line whenever the said selector repeater is taken for use, means for giving the calling subscriber a busy signal in case all of said trunk lines are busy, and means for rendering said last mentioned means inoperative until the calling subscriber has called such digits as determine definitely that the call in order to be successful must be completed by way of one of said trunk lines.

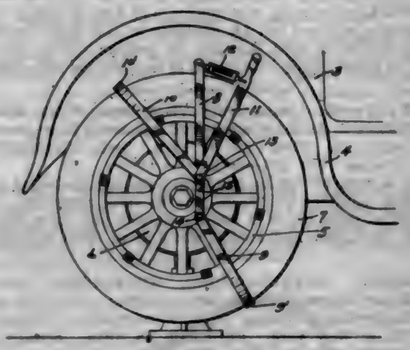


1,542,959. TOY PISTOL. ROBERT EDWIN REARDON, Columbia, Pa., assignor to Victory Sparkler & Specialty Company, Elkton, Md., a Corporation of Delaware. Filed July 2, 1923. Serial No. 648,926. 10 Claims. (Cl. 42—57.)

1. In a toy firearm, an anvil, a hammer, a trigger, and single spring means for holding the hammer normally retracted from the anvil, returning the trigger to normal position, and applying striking force to the hammer.

8. In a toy pistol having a casing comprised of three parts, means for assembling same consisting of one interiorly located, normally hidden assembly screw.

1,542,960. CALK. ALFRED C. REDDEN, Seattle, Wash. Filed Jan. 19, 1920. Serial No. 352,436. 1 Claim. (Cl. 36—67.)

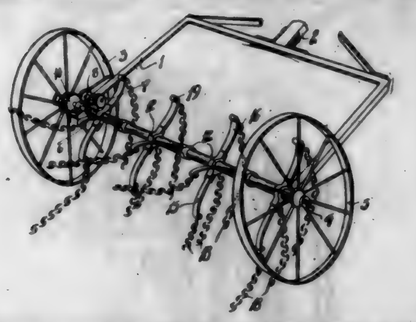


A shoe embodying an oil soaked middle sole, an outer sole having holes punched therein, and a one piece calk disposed in said holes, said calk having a shank with parallel sides, said holes being of a size as compared to the size of said shank as to not distort and put the surrounding leather under compression, and a head relatively much wider than the diameter of its shank, said head being disposed between said outer sole and said middle sole.

1,542,961. HAMMER MECHANISM USED IN DRIVING SHEATHING. RAY J. REIGHLOTH, New Haven, and WILLIAM POWELL, Hamden, Connecticut. Filed Nov. 8, 1924. Serial No. 748,757. 6 Claims. (Cl. 61—73.)

1. A hammer for driving sheathing, and means thereon for guiding its movement by engagement solely with adjacent sheathing.

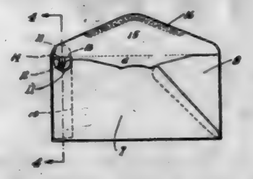
1,542,962. AUTO BRAKE-TESTING DEVICE. JOHN J. RODEN and PAUL W. QUINN, Minneapolis, and DAVID C. RODEN, St. Paul, Minn. Filed Mar. 5, 1924. Serial No. 697,067. 5 Claims. (Cl. 265—1.)



1. A brake-testing device comprising a plurality of pivotally connected members, certain of which have grapple-acting ends engageable with the exterior of a wheel tire and arranged to be drawn onto the tire by movement of one of the other of said members, and a scale applied to the latter noted member and to another of said other members and arranged to indicate the force exerted to rotate the wheel to which the device is applied

---

1,542,963. CULTIVATOR. WILLIAM K. RUSSELL, Sharon, Wash. Filed Jan. 27, 1925. Serial No. 5,001. 3 Claims. (Cl. 97—40.)

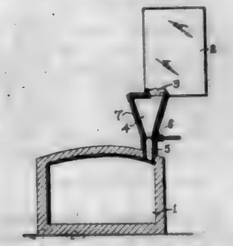


1. The combination in an implement as described with a frame, axle and a traction wheel rotatable with the

axle, of a tubular shaft on said axle and power transmission connections between said axle and shaft, a series

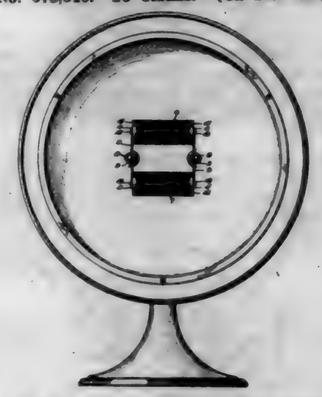
of arms carried by said shaft, and flexible beaters carried at the ends of said arms.

1,542,964. ENVELOPE. FRANK A. RYDER, Chicago, Ill. Filed Nov. 13, 1922. Serial No. 600,560. 4 Claims. (Cl. 229—76.



1. An envelope provided with a front and having a back portion and an end portion extending from said front, a notch cut in the edge of one of said portions to provide a holding tongue, and a lip on the other of said portions overlapping said tongue and having means for fastening it down and for engaging in said notch behind said tongue to hold said end in position during filling but to permit ready withdrawal of said end for inspection.

1,542,965. INDELIBLE TRANSFER COMPOUND. HELENA S. SADTLER, Springfield Township, Montgomery County, Pa. Filed July 14, 1923. Serial No. 651,622. 4 Claims. (Cl. 134—36.)

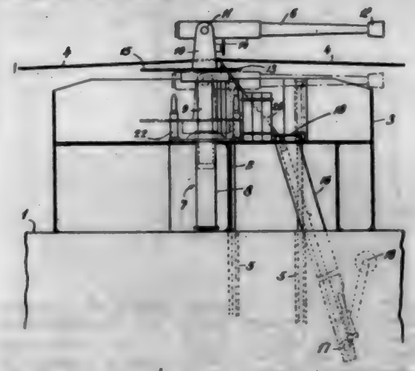


4. A transfer ink in powdered form for producing indelible markings on fabrics or the like, comprising an artificial resin which is non-saponifiable and fuses about 100° centigrade and an ink which is in itself indelible.

1,542,966. METALLURGICAL APPARATUS. JOHN MOORE SAMUEL, Douglas, Ariz., assignor of fifty-five one hundredths to Phelps Dodge Corporation, a Corporation of New York. Filed Jan. 28, 1919. Serial No. 273,559. 1 Claim. (Cl. 266—10.)

An apparatus of the kind described, comprising an ore-roasting furnace provided with an outlet, a smelting furnace provided with an inlet, a heat-insulated transfer conduit operative betwen the outlet of the roasting furnace and the inlet of the smelting furnace and having air-tight connection therewith, respectively, and means for closing communication between the two furnaces through the conduit.

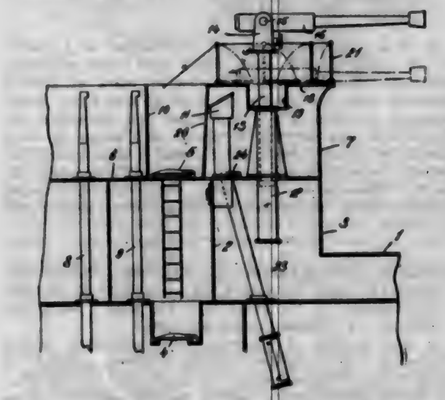
1,542,967. ELECTRIC HEATER. MILTON H. SHORNBERG, San Francisco, Calif. Filed Nov. 19, 1923. Serial No. 675,540. 16 Claims. (Cl. 219—34.)



1. In an electric heater, a pair of bifurcated supports, and a pair of heating coils supported by said supports, each coil being carried by the two supports.

1,542,968. MANUFACTURE OF IRON OXIDE. RICHARD O. SNELLENBERGER, Chicago, Ill., assignor to Iron Oxide Products, Inc., Cicero, Ill., a Corporation of Illinois. Filed June 28, 1922. Serial No. 571,566. 3 Claims. (Cl. 23—200.)

1. That improvement in the manufacture of iron oxide which consists in exposing to air comminuted iron treated with an oxidation-accelerating chemical reagent, agitating the material to expose it to the air, and periodically reducing its temperature, until oxidation has been substantially completed.



1,542,969. GUN MOUNTING FOR SUBMARINES. LAWRENCE Y. SPEAR, New London, Conn., assignor to Electric Boat Company, New York, N. Y., a Corporation of New Jersey. Filed June 4, 1923. Serial No. 643,161. 15 Claims. (Cl. 89—38.)

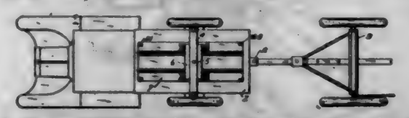
1. The gun mounting for submarines, comprising the combination with the conning tower of a submarine, of an exposed gun supported by the conning tower above the deck of the submarine, said gun having means associated therewith for neutralizing substantially all of the recoil action due to firing a projectile from the gun, whereby the conning tower is not subjected to the greater part of the force of reaction of the gun.

11. The gun mounting for submarines, comprising the combination with the conning tower of a submarine, of a gun associated with and arranged above the conning tower, means for raising and lowering said gun, a platform associated with said gun, and a spray shield extending well above the conning tower to form a fair-water for the gun when it is in its lowered position, and to form a shelter for said platform.

1,542,970. GUN MOUNTING FOR SUBMARINES. LAWRENCE YORK SPEAR, Groton, Conn., assignor to Electric Boat Company, Groton, Conn., a Corporation of New Jersey. Filed July 28, 1924. Serial No. 728,644. 16 Claims. (Cl. 89—37.)

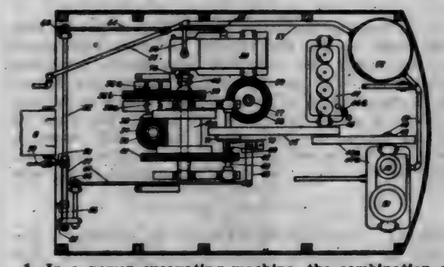
1. The gun mounting for submarines, comprising the combination with the bridge of a submarine, of a gun supported by the bridge, a platform above said bridge, and means for hoisting the gun above the platform.

1,542,971. PROCESS OF PRODUCING ALKALI-METAL CARBONATES. FREDERICK W. SPEAR, Jr., and DAVID L. JACOBSON, Pittsburgh, Pa., assignors to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 18, 1921, Serial No. 462,309. Renewed Aug. 22, 1924. 6 Claims. (Cl. 23—63.)



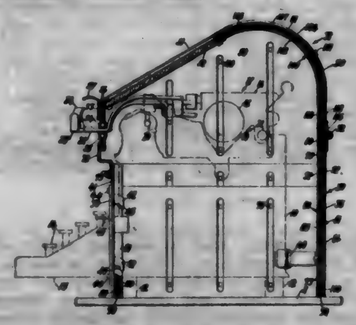
4. The process of producing alkali-metal carbonates which consists in mixing an alkali thiosulphate with carbonaceous material and limestone, subjecting the admixture to heating to convert the thiosulphate to carbonate, and separating the alkali-metal carbonate from the residual carbonaceous material; substantially as specified.

1,542,972. BASCULE BRIDGE. JOSEPH B. STRAUSS, Chicago, Ill. Filed Dec. 20, 1920. Serial No. 431,850. 10 Claims. (Cl. 14—41.)



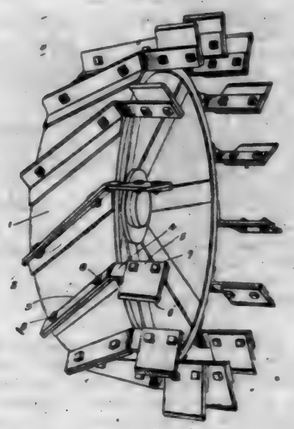
1. In a bascule bridge, comprising two sections or leaves, a lock adapted to lock the leaves together where they meet at the center, said lock comprising a pivoted locking projecting part on one leaf a pivot fixed against lateral movement which connects said locking projection to one leaf and a recessed part on the other leaf, mechanism independent of the leaf for moving them into engagement, the parts when engaged holding the leaf against both horizontal and lateral movement.

1,542,973. TRAVELING ROTATIVE BOLSTER. LEE EVERETT UTTER, Nashotah, Wis., assignor to The Trailer Truck Company, Nashotah, Wis., a Copartnership Firm. Filed Feb. 7, 1920. Serial No. 356,955. 12 Claims. (Cl. 280—33.4.)



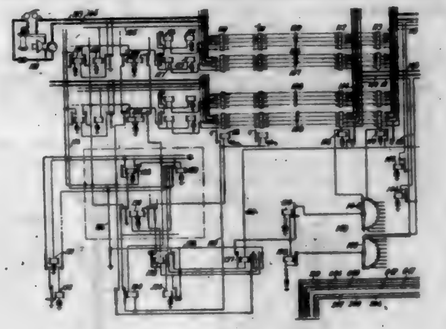
1. The combination with a truck and trailer, of a bed plate mounted upon the truck, a carriage normally freely movable thereon longitudinally of the truck, means for retaining the carriage upon the bed plate, and a pivotally mounted bolster supported by said carriage.

1,542,974. POWER EXCAVATING MACHINE AND METHOD OF ACTUATING THE SAME. ARTHUR C. VICARY, Erie, Pa., assignor, by direct and mesne assignments, to Erie Steam Shovel Company, Erie, Pa., a Corporation of Pennsylvania. Filed Feb. 23, 1923. Serial No. 620,727. 34 Claims. (Cl. 214—135.)



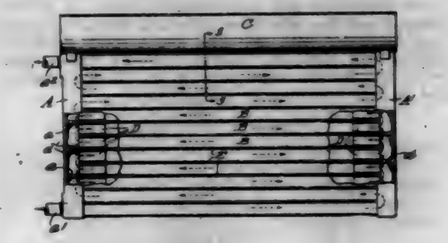
1. In a power excavating machine, the combination of a rotating platform, a direct driven rotative hoisting mechanism comprising a non-fluid pressure actuated motor, and an indirectly driven turning mechanism comprising a compressor and a fluid pressure actuated rotatively acting turning engine receiving its fluid from the compressor.

1,542,975. TYPEWRITING MACHINE. JOHN WALDHEIM, Elisabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 1, 1923. Serial No. 616,275. 18 Claims. (Cl. 197—186.)



1. A sound-deadening casing for a typewriting machine comprising hollow walls, each being formed with a series of discrete cells closed at their ends, each cell constituting a sound-deadening air chamber.

1,542,976. MUD HOOK. RAY A. WELLS, Lucerne, Mo. Filed Feb. 24, 1925. Serial No. 11,016. 2 Claims. (Cl. 301—44.)

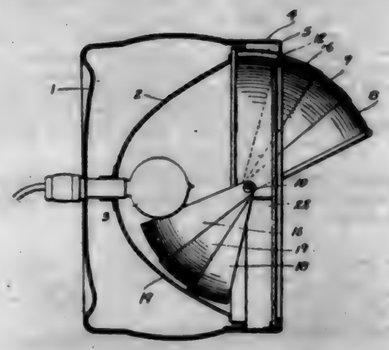


2. In combination with a tractor wheel having diagonal cleats on the rim thereof, mud-hook attachments for said cleats, the mud-hook attachments comprising bars having body portions adapted to lie flat against the cleats, provided with extensions at angles to the body portions in planes parallel to the axis of the wheel extending beyond the side of the wheel, and removable teeth on the extensions of greater lengths than the width of the cleats and the body portions of the bars.

1,542,977. TELEPHONE-EXCHANGE SYSTEM. SAMUEL B. WILLIAMS, Brooklyn, and EDWARD E. HINRICHSEN, New York, N. Y., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 30, 1923. Serial No. 635,421. 11 Claims. (Cl. 179—18.)

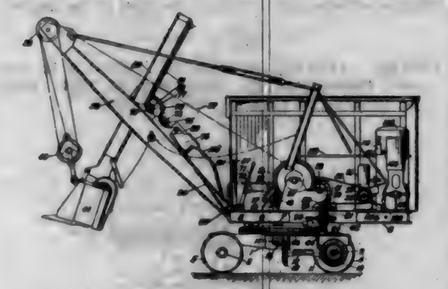
1. The combination with a selective switch of a group of lines appearing in said switch, means for extending a connection to said switch, means for operating said switch to select said group of lines, means responsive to the operation of said switch for releasing the same without releasing the extended connection, means for testing said lines to determine an idle one, and means for thereupon reoperating said switch to extend the connection to the determined idle line.

1,542,978. HEAT EXCHANGER. KIRK K. WRIGHT, Buffalo, N. Y., assignor to R. G. Wright & Co., Buffalo, N. Y. Filed Nov. 17, 1922. Serial No. 601,601. 3 Claims. (Cl. 257—183.)



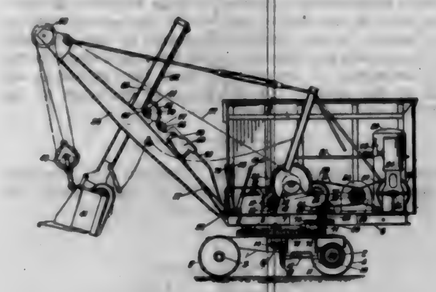
2. In a heat exchanger, the combination of a plurality of tubes, headers with which said tubes communicate and provided with a series of holes of smaller diameter than the outside diameter of said tubes, insert members arranged within said tubes and extending into said holes and serving to space said tubes in close proximity to each other and forming a rigid connection between said headers and said tubes, and a bonding connection between adjacent tubes which fills the spaces between tubes and forms a connection between tubes.

1,542,979. ESTIMATION OF CARBON MONOXIDE. WILLIAM YANT, Pittsburgh, Pa., and ROYD R. SAYERS, Washington, D. C. Filed Nov. 19, 1923. Serial No. 675,771. 11 Claims. (Cl. 23—230.)



1. The method of quantitatively estimating carbon monoxide, that comprises treating a known quantity of blood with a reagent capable of destroying the red color of oxyhemoglobin, while leaving the red color of carbon monoxide-hemoglobin, and comparing the resulting color with a standard colorimetric scale prepared in colors corresponding to definite quantities of carbon monoxide-hemoglobin in the said quantity of blood.

1,542,980. HEADLIGHT LAMP. JOHN E. YINGLING, Topeka, Kans. Filed Mar. 10, 1924. Serial No. 698,082. 5 Claims. (Cl. 240—45.2.)



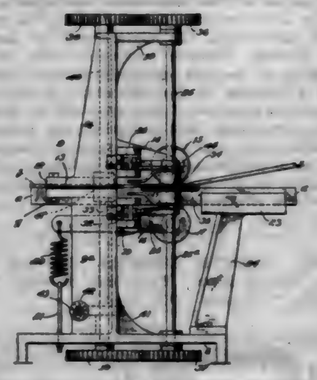
1. A head light lamp comprising a casing, a reflector and a light source, in combination with a movable hood consisting of a plurality of hinged segments at the upper portion of the lamp and a movable reflector covering means consisting of a plurality of hinged segments at the lower part of the reflector.

1,542,981. POWER EXCAVATING MACHINE AND METHOD OF ACTUATING THE SAME. EDWIN J. ARMSTRONG, Erie, Pa., assignor, by direct and mesne assignments, to Erie Steam Shovel Company, Erie, Pa., a Corporation of Pennsylvania. Filed Feb. 26, 1923. Serial No. 621,836. 42 Claims. (Cl. 214—135.)

1. In a machine, the combination of a plurality of instrumentalities having intermittent and successive operation; a primary motor operating directly on one of said instrumentalities; a secondary motor operating on the second of said instrumentalities; an energy storing means supplied from the primary motor and supplying energy to the secondary motor; and devices for relieving the primary motor from the effort of delivering energy to the energy storing means during a peak load on the instrumentality actuated directly from the primary motor.

1,542,982. POWER EXCAVATING MACHINE AND METHOD OF ACTUATING THE SAME. EDWIN J. ARMSTRONG, Erie, Pa., assignor, by direct and mesne assignments, to Erie Steam Shovel Company, Erie, Pa., a Corporation of Pennsylvania. Filed Feb. 26, 1923. Serial No. 621,837. 30 Claims. (Cl. 214—135.)

1. In a machine, the combination of a plurality of instrumentalities having intermittent and successive operation; a primary electric motor operating directly on one of said instrumentalities; a secondary motor operating on the second of said instrumentalities; and an energy storing means supplied from the primary motor and supplying energy to the secondary motor.

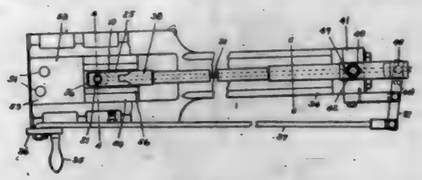


1,542,983. DRAWN ARTICLE AND METHOD FOR MAKING THE SAME. CARL BERGMANN, Jr., West Hoboken, N. J., assignor of one-half to Gustave R. Thompson, New York, N. Y. Filed May 18, 1920. Serial No. 382,872. 9 Claims. (Cl. 153—32.)

3. A cold drawn, bent, seamless, tubular article of metal of the character described, tapered from one side of said bend to the other, said article having a ball-like tubular boss or enlargement thereon.

5. A method of forming seamless, tapered, bent, drawn articles of metal of the character described, comprising bending a tube of substantially uniform diameter, and successively expanding said bent tube against tapered dies of increasing size.

1,542,984. WELDING MACHINE. GEORGE J. BLUM, Chicago, Ill., assignor to Armstrong-Blum Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 30, 1921. Serial No. 525,926. 16 Claims. (Cl. 219—4.)

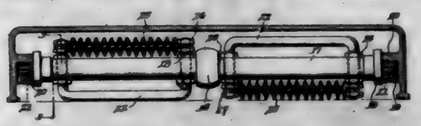


1. An electric welding machine having two pairs of parallel shafts each carrying an electrically energized disk, the axes of the corresponding disks of each pair being in alinement and the disks of each pair being spaced a short distance apart, means for guiding two members to be joined between said disks in edge to edge relation with the joint between the members disposed in a plane lying in the space between the pairs of disks, and means for exerting pressure upon said members to force their abutting edges into intimate contact as they pass between said disks, the disks of the respective pairs being of opposite polarity so as to effect the passage of current from opposite sides of one of said members through their abutting edges and then out from the opposite sides of the other member.

1,542,985. EYELET-INSERTING TOOL. JOHN H. BRADNACK, New Haven, Conn., assignor to The Tubular Products Company, Southington, Conn., a Corporation. Filed Oct. 10, 1923. Serial No. 667,655. 4 Claims. (Cl. 218—1.)

4. In combination in mechanism for inserting eyelet rivets as a lining for the border wall of openings in the peripheral wall of tubing, a spreader having a neck for being entered into the opening from within the tubing, a holder incorporated in the structure of said spread-

er, a positioning bar operatively connected to one end of said spreader and holder and extending longitudinally outward from said end, the other end of said spreader

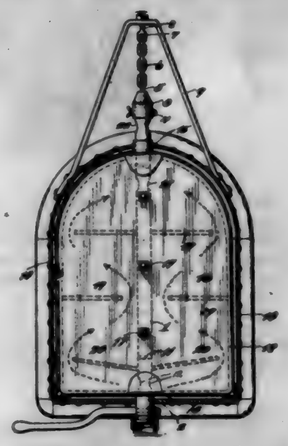


and holder being free for limited transverse movement, a wedge for cooperating with said free end, and an operating-rod connected to said wedge and extended in parallelism with said bar.

1,542,986. PROCESS FOR THE MANUFACTURE OF NITROGENIC AND PHOSPHATIC COMBINATIONS. JOSEPH BRESLAUER and GEORGES DARIER, Geneva, Switzerland, assignors to Société d'Etudes Chimiques pour l'Industrie, Geneva, Switzerland. Filed Sept. 18, 1920. Serial No. 411,074. 9 Claims. (Cl. 71—9.)

1. A process for converting raw cyanamid into fertilizers consisting in introducing raw cyanamid in small quantities at a time into water, maintaining the temperature of the mixture between 30 and 40 degrees centigrade, maintaining the mixture acid by gaseous acids which produce insoluble compounds with the metallic impurities in the raw cyanamid whereby there is obtained a solution of free cyanamid, producing a very concentrated solution of free cyanamid by repetition of the preceding steps, then converting the solution of free cyanamid into a urea product by an acid agent, then introducing insoluble phosphates and thereby utilizing the acid agents for the conversion of the insoluble phosphates into soluble phosphates.

1,542,987. VACUUM CLEANER. BENNETT L. CALLAHAN, Abilene, Kans. Filed Mar. 3, 1923. Serial No. 622,542. 7 Claims. (Cl. 15—8.)



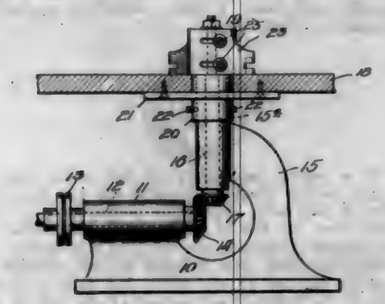
1. A cleaner of the class described comprising a nozzle, a shaft journalled in said nozzle, a beater having a portion extending substantially parallel to said shaft and a portion projecting beyond the opposite side of the shaft, and a sweeper secured to the projected portion of the beater.

1,542,988. HEADLIGHT REFLECTOR. WILLIAM P. CARSTARPHEN, Denver, Colo., assignor, by direct and mesne assignments, to Nite-Eye Light Corporation, Denver, Colo., a Corporation of Colorado. Filed Oct. 9, 1923. Serial No. 667,497. 1 Claim. (Cl. 240—41.)

An illuminating device for automobiles comprising, in combination, two lamps adapted to be applied in spaced relation to the forward end of an automobile, said lamps each comprising an integral reflector divided vertically into two substantially parabolic surfaces placed side by side, each of which has an axis which crosses the axis of the other surface at the focal point, the axes of the adjacent reflector surfaces of each lamp being substantially parallel, while the axes of the outside reflector surfaces are outwardly inclined to the right and left respectively, whereby the roadway lying in front of the lamps will receive light from the reflector surfaces having the parallel axes and the light reflected from the outer reflector surfaces will illuminate the sides of the roadway.

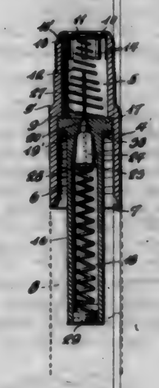
1,542,989. AIR-COOLED DAMPER. WILLIAM M. CONNERY, Philadelphia, Pa. Filed May 22, 1924. Serial No. 715,139. 17 Claims. (Cl. 126—285.)

1. An air cooled damper comprising a hollow damper construction with a hollow spindle extending through and fastened to the damper, whereby the damper may be moved to closed and various open positions, the spindle having diametrically opposite openings adjacent the opposite ends of the damper but within the interior thereof, the damper having circuitous passages on opposite sides of the spindle and communicating with said openings for the conduction of a cooling air from the exterior at one end of the spindle and permitted to discharge at the opposite end of the spindle.



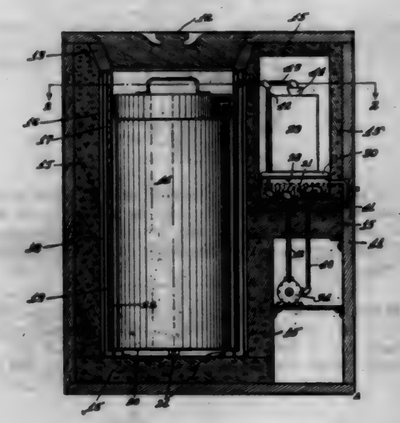
1,542,990. TAPE HOLDER. ATTILIO DI TOMASSO, East Boston, Mass. Filed Nov. 22, 1923. Serial No. 676,277. 3 Claims. (Cl. 33—137.)

1. A device of the class described comprising a body portion, a retaining lug depending from the lower side thereof, and a pair of oppositely disposed converging elements projecting above the plane of the upper surface of the body portion and constructed and arranged removably to grip the end ring of a measuring tape between them.



1,542,991. PORTABLE WOODWORKING MACHINE. FRED DOSENBUSCH, Ottawa, Ill. Filed Aug. 20, 1923. Serial No. 658,224. 1 Claim. (Cl. 144—134.)

In a light portable wood-working machine, the combination of a base having an upwardly extending arm provided with a horizontal bearing, and a vertical arm provided with a vertical bearing, all formed integrally with the base, a driving shaft mounted in the horizontal bearing, a driven shaft mounted in the vertical bearing, an adjustable collar mounted on the vertical bearing and



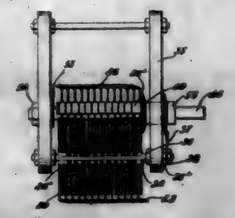
provided with a horizontal plate adapted to be secured to a bench or support, a blade-head non-rotatably mounted on the upper end of the driven shaft, cutting blades mounted on said head and means for adjusting said blades substantially as and for the purpose set forth.

1,542,992. VALVE. LINCOLN S. DOWNS, East Cleveland, Ohio. Filed Sept. 7, 1923. Serial No. 661,496. 2 Claims. (Cl. 152—12.)

1. A valve carrying cap for a standard valve stem, comprising a body portion having a central bore, an annular shoulder formed in said bore at a point substantially midway the length of said body, a closure at one end of said bore, said bore being threaded from its open end to said shoulder, a stem, an enlarged disc-shaped threaded head carried by said stem and arranged in the threaded bore in abutment with said shoulder, said head and stem having a central bore, a pair of spaced seats arranged in the bore of the head and stem, a yieldable plug arranged in the bore of the head and stem and having a pair of spaced portions adapted for contact with said seats, a coil expansion spring arranged in the bore to normally seat the plug, and means whereby the spring tension may be varied.

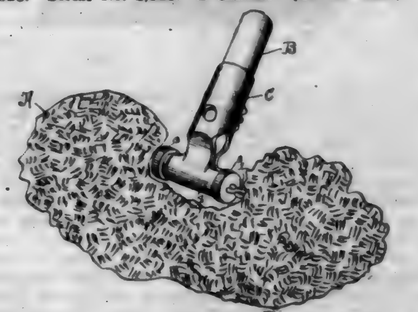
1,542,993. REFRIGERATING DEVICE AND CONTAINER. JOHN E. DUNCAN, Moundsville, W. Va., assignor, by mesne assignments, to A-B-C Transit Refrigeration Company, Helena, Mont., a Corporation of Delaware. Filed Nov. 13, 1922. Serial No. 600,758. 1 Claim. (Cl. 62—101.)

A refrigerating apparatus comprising a casing having a partition extending from the top to the bottom thereof, a storage receptacle on one side of said partition, a passage for brine around said storage receptacle, a second partition on the opposite side of the partition from the storage receptacle, said partition extending from the intermediate portion of said first mentioned partition to the side wall of the casing and forming upper and lower compartments, said upper compartment having a reservoir therein with means for producing a brine and maintaining the same at a predetermined liquid level, said lower compartment having a pump therein, said storage receptacle, brine reservoir and pump being connected to form a circulatory system whereby the lower stratum of briny solution will gravitate from the brine chamber into the pump and be forced through the circulatory system and returned to the brine chamber, substantially as set forth.



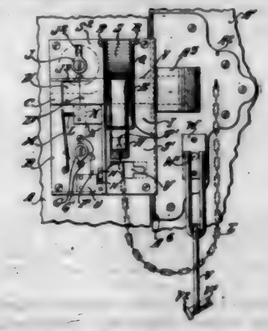
1,542,994. METHOD AND APPARATUS FOR TESTING TELEPHONE RECEIVERS. VERNON DURBIN, Newton, Mass., assignor to The Holtzer-Cabot Electric Company, Roxbury, Mass., a Corporation of Massachusetts. Filed Jan. 10, 1923. Serial No. 611,893. 13 Claims. (Cl. 179—175.)

2. The method of testing a telephone receiver which consists in impressing musical notes of different frequencies and the same amount of sound energy upon the receiver diaphragm and measuring the electrical output of the receiver at each frequency.



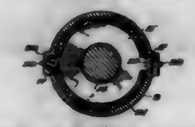
4. The method of testing the magnetic characteristics of a telephone receiver without a diaphragm or cap which consists in causing a regular and periodical variation in magnetic flux through the windings of the receiver, and measuring the voltage generated in the windings.

1,542,995. CONDENSER. MELVILLE EASTHAM, Cambridge, Mass., assignor to General Radio Company, Cambridge, Mass., a Corporation of Massachusetts. Filed Oct. 11, 1923. Serial No. 667,867. 17 Claims. (Cl. 250—41.)



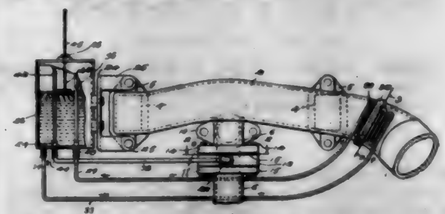
1. A stator plate for an electrical air condenser having peripheral lugs angularly related to the plane of said plate and arranged to partially overlap correspondingly-positioned lugs on one of the stator plates next adjacent thereto.

1,542,996. DUST MOP. HERBERT H. ERICKSON, Chicago, Ill., assignor to Weil-Ransom Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 9, 1925. Serial No. 1,340. 2 Claims. (Cl. 15—229.)



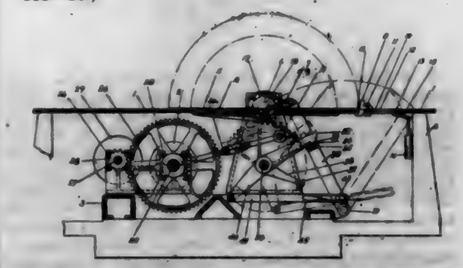
1. A dust mop comprising a head consisting of a rectangular frame, a cylindric bearing member mounted on said frame and having its ends beveled, and a handle connecting member comprising a sleeve surrounding said bearing member and having tapered ends engaging the beveled ends of said bearing member.

1,542,997. LOCK. MORRIS S. FINKELSTEIN, New York, N. Y. Filed Feb. 28, 1922. Serial No. 539,868. 3 Claims. (Cl. 70—14.)



3. A lock comprising a frame having a main bolt adapted to be operated by a key, a brace bar adapted to be carried into locked position by said main bolt, said brace bar cooperating with a groove having an inclined portion leading therefrom, a chain attached to said brace bar and to the frame of the door whereby when the door is opened, the brace bar rides out of said groove on the inclined portion thereof and is pulled aside by said chain.

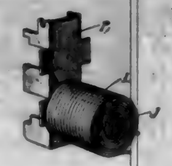
1,542,998. JOURNAL BOX. JAMES R. FLEMING, Scranton, Pa. Filed Nov. 6, 1922. Serial No. 599,242. 2 Claims. (Cl. 308—180.)



1. In a journal box having an open ended body an enlarged annular pocket formed on one end thereof, a bearing in said body, a centrally perforated wear plate disposed over the end of said body in said pocket, opposed recesses formed in the walls of said pocket, and extensions on said plate engaged in said recesses for preventing rotation of said plate, and plate anchoring means in the walls of said pocket at one side of said plate.

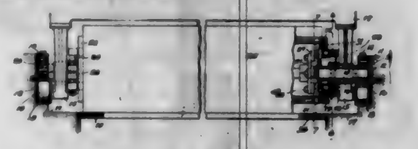
1,542,999. HUMIDIFIER FOR INTERNAL-COMBUSTION ENGINES. ORVILLE Z. FRASIER, Grand Rapids, Mich. Filed July 7, 1922. Serial No. 573,450. 1 Claim. (Cl. 123—25.)

The combination with an internal combustion engine and a water tank supported adjacent the exhaust manifold thereof, a conduit including two substantially parallel legs communicating with the water tank and an intermediate portion formed with a series of communicating U-shaped parts, all of which and the adjacent ends of the parallel legs being curved longitudinally to embrace the exhaust manifold, a clamp encircling the exhaust manifold and engaging the intermediate portion, and a steam conducting pipe leading from the water tank to the intake manifold of the engine.



1,543,000. FOLDING APPARATUS FOR METALLIC SHEETS. THOR GANNESTAD, Pittsburgh, Pa. Filed Aug. 12, 1922. Serial No. 581,474. 6 Claims. (Cl. 153—16.)

1. In folding apparatus for metallic sheets the combination of a rotatable platen with means for swinging the same through an arcuate path, stop means mounted to yield in a vertical direction against which a sheet

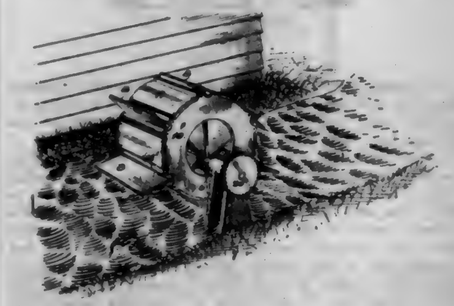


abuts when in position for folding, a member arranged to clamp a sheet along the line on which it is to be folded, and means arranged to swing said clamping member out of the path of movement of the platen during folding movement thereof.

1,543,001. MAGNETIC CORE. EDWIN G. GAYNOR, Stratford, Conn. Filed Sept. 5, 1923. Serial No. 661,020. 8 Claims. (Cl. 175—21.)

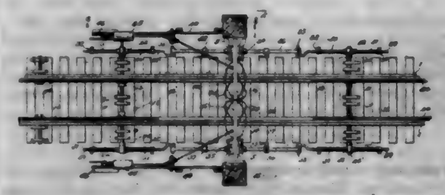
4. A core of the type described which comprises, a strip of magnetically permeable metal folded back and forth lengthwise of the core to form a series of superposed lengthwise folds and pressed together to form a compact core, said core having a substantially cylindrical shape and having channels extending lengthwise of the core within and at the outer surface of the bent portions of said folds.

1,543,002. CLEANING APPARATUS. EUGEN GRIGEM, Karlsruhe, Germany, assignor to William D'Olier, New York, N. Y. Filed Aug. 18, 1921, Serial No. 493,435. Renewed Jan. 29, 1924. 8 Claims. (Cl. 15—21.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



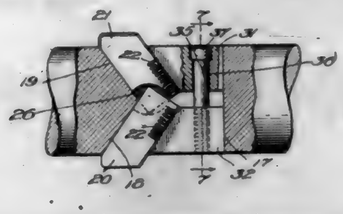
1. A cleaning apparatus including a driving shaft, a cylindrical brush surrounding said shaft and a plurality of non-flexible links each pivotally connected at one end to said shaft and at the other end to said brush, each of said links being movable about its pivots in a plane at right-angles to the axis of said shaft.

1,543,003. NONSKID FABRIC SHOE. JULES C. GINDRAUX, Spokane, Wash. Filed Oct. 17, 1923. Serial No. 669,051. 3 Claims. (Cl. 152—17.)



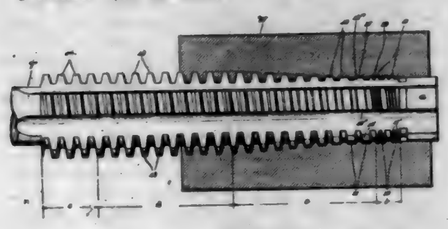
1. A non-skid fabric shoe for automobile tires, comprising a canvas strip manufactured to fit the outer contour of an automobile tire, one end of each strip having a flap adapted for engaging the inner surface of the other end of the strip, means comprising cables connected with such flap and joined to the opposite end of the strip for fastening such flap on the inner side of said opposite end, a cable stitched to position along each of the longitudinal edges of said strip, means for securing the ends of the cables together and a fabric tread stitched to the outer surface of said strip.

1,543,004. WATER WHEEL. ELMER JOB GOODDING, Camanche, Calif. Filed Mar. 1, 1924. Serial No. 696,230. 1 Claim. (Cl. 170—98.)



A water wheel assembly comprising a pair of spaced apart standards of unequal height adapted to be rigidly anchored in a flowing stream, horizontal bearings at the upper ends of said standards, a cylindrical drum mounted between said standards, said drum having one end wall closed, a stub shaft rigidly associated with said wall and rotatably mounted in the bearing of the longer standard, the opposite end wall of said drum having a relatively large central opening, a second shaft rotatably mounted in the shorter of said standards, and extending through said open end wall into said drum, the peripheral wall of said drum provided with transverse slots, a plurality of blades connected to said last named shaft extending radially therefrom and adapted for passage through said slots, the axes of the two shafts being offset in parallel relation, whereby the blades are reciprocated through the periphery of the drum by the rotation thereof.

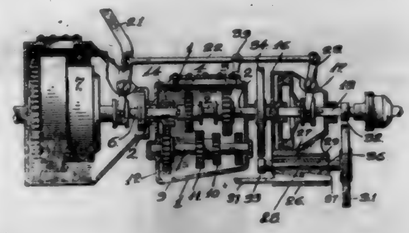
1,543,005. MINE DOOR. FREDERICK A. GUTH, Columbus, Ohio. Filed Mar. 17, 1922. Serial No. 544,600. 4 Claims. (Cl. 246—292.)



1. In an automatic mine door, a hingedly supported door section, tripping mechanism located on opposite sides of the door and including a pair of movable bars arranged to be actuated by the passage of rolling stock thereover, resilient connections between the bars and said door section operable to swing the door section in a direction governed by the line of travel of the rolling stock, and a resilient hinged mounting for the door section constructed to admit of swinging movement of the door section without necessarily moving the tripping bars.

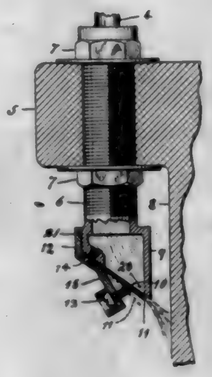
1,543,006. BORING BAR AND THE LIKE. ARTHUR V. HANNIPIN, Chicago, Ill. Filed Apr. 28, 1923. Serial No. 633,911. 1 Claim. (Cl. 77—56.)

A boring bar having a transversely extending through slot, one end face of said slot extending in a radial direction with respect to the axis of rotation of the boring bar, the other end face of the slot being of V-shape with the two arms of the V lying at equal angles with respect to the axis of rotation of the boring bar, a pair of companion clamping blocks adapted to seat into said slot for the purpose of clamping tools therein, each of said clamping blocks having a width less than one-half the diameter of the boring bar and having two of its opposite faces lying at an angle to each other equal to the angle between the two end walls of the slot of the boring bar, suitable tools in the slot between one end wall and the clamping blocks aforesaid, said tools having parallel edges, and means for drawing the clamping blocks towards each other to clamp the tools in place within the boring bar comprising a single tension screw reaching between the clamping blocks, substantially as described.



1,543,007. TAP. BENGT M. W. HANSON, Hartford, Conn. Filed Nov. 27, 1922. Serial No. 603,441. 8 Claims. (Cl. 10—141.)

5. A tap having a portion provided with teeth increasing in height and having their cutting edges interrupted by a spiral groove, and a second portion provided with uninterrupted teeth gradually increasing in height beginning with a tooth of less height than the last interrupted tooth, and arranged to successively remove the rib formed by said interrupted teeth.

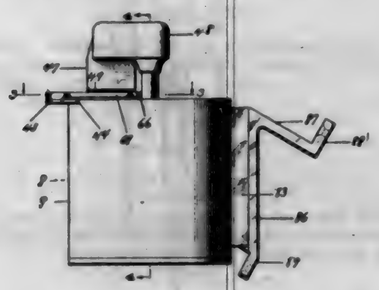


1,543,008. MOTOR-VEHICLE DRIVING MECHANISM. HARRY A. HANSON and VICTOR F. ZOHODIAKIN, Oakland, Calif. Filed July 3, 1924. Serial No. 724,114. 4 Claims. (Cl. 74—58.)

4. The combination with a motor vehicle and the transmission and clutch thereof, of a second clutch interposed between the said transmission and the propeller shaft of said vehicle whereby rotation of the variable speed gears of said transmission may be prevented when either vehicle or motor thereof is in operation; frictional speed reducing means arranged to connect the variable speed gears with the propeller shaft of the vehicle whereby said variable speed gears may be rotated slowly when the vehicle is in motion; and means for first simultaneously actuating both clutches to disconnect the variable speed gears from the motor and vehicle to prevent rapid rotation of said gears, and then

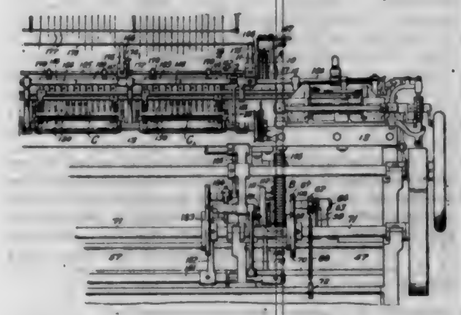
actuating the frictional speed reducing means whereby said variable speed gears may be rotated slowly to facilitate shifting of said gears.

1,543,009. SPREADER FOR URINAL STALLS. EDWARD G. HEDGES, Newark, N. J. Filed Jan. 17, 1923. Serial No. 613,097. 3 Claims. (Cl. 299—129.)



3. A spreader for urinal stalls comprising a tubular shank, a tubular head secured to one end of said shank, said head being of larger internal diameter than said shank, the lower end of said head sloping downwardly and forming a valve seat, the upper portion of said seat being enlarged to form a support, a valve having one edge secured to said support, a clamp, adjusting means carried by said clamp and engaging said valve to regulate the size of the discharge opening, and a single screw for securing said clamp and said valve to said support, said clamp having means engaging said head to prevent the clamp from turning.

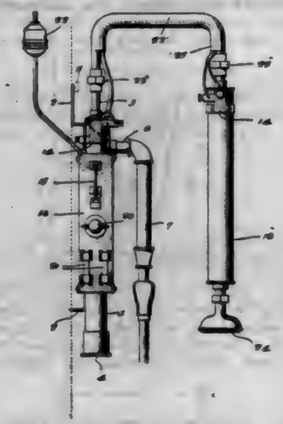
1,543,010. PUNCH. FREDERICK H. JOHNSON, Northboro, Mass. Filed Jan. 11, 1924. Serial No. 685,524. 5 Claims. (Cl. 164—94.)



2. In a device of the character set forth, a hollow body provided with grooves, a top provided with a cutter opening, an operating head yieldingly supported by the body exterior of the top, a die in the head registerable in the opening, a detachable bottom in the body, a post in the bottom provided with a bore extending into said bottom, a pin slidably mounted in the post,

a tapering head on the post extending within the bottom, a spring in the post pressing against the head, radially disposed rods slidably mounted in the bottom

with their inner ends in contact with the tapering head and having outer ends engageable in the grooves and springs on the rods engaging the bottom.

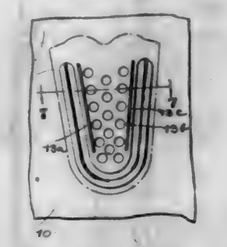


1,543,011. KNITTING-MACHINE ATTACHMENT. LEON KLEIN, Brooklyn, N. Y. Filed Dec. 16, 1924. Serial No. 756,289. 23 Claims. (Cl. 66—12.)

1. In a knitting machine, mechanism for producing striping designs or patterns in hosiery, including a reciprocating carrier-rod equipped with thread-carriers, a pattern wheel for limiting the movement of the carrier-rod in one direction, a similar wheel for limiting the movement of the carrier-rod in the other direction, each wheel being adapted to carry an annular series of removable pins of differing lengths, and means for independently rotating said wheels to bring said pins successively into the path of movement of the carrier-rod, said wheel-rotating means comprising two slidable members carrying pawls engaging said wheels, and means for moving said members alternately to cause said pawls to rotate said wheels alternately.

1,543,012. INSTANTANEOUS HEATER. APOSTOLOS KONIAS KLIMIS, Baltimore, Md. Filed Dec. 11, 1922. Serial No. 606,094. 2 Claims. (Cl. 219—38.)

1. A device of the class described comprising a casing, a supply pipe connected with the same adjacent its upper end, an outlet tube passing through one end of the casing and having its other end located a short distance from the other end of the casing, an electric heating coil surrounding said tube, a tubular member inclosing the coil for preventing water in the casing from reaching the same, a partition in the upper end of the casing between said casing and a tubular member for preventing water from reaching the upper end of the casing, a baffle plate in the casing spaced from the lower end of the outlet tube, a block of insulating material extending into the casing above the partition and conductor wires passing through the block and connected with the coil.



1,543,013. FAUCET. ANDREW A. KRAMER, Kansas City, Mo. Filed June 9, 1922. Serial No. 567,152. 1 Claim. (Cl. 137—21.)

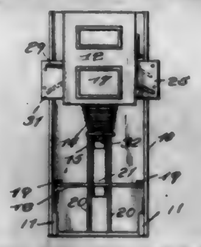
The combination with a dispensing pipe line, of a valve casing in the pipe line, a rotatable valve plug in the casing having a through port, the plug having a stem extending through the casing, a faucet at the delivery end of the pipe line, the faucet having a valve seat, a spring pressed reciprocatory valve in the faucet, normally urged upon the seat, the valve having a depending stem, a rock shaft in the faucet having an arm connected to the stem whereby when the rock shaft is operated in one direction, the valve will be lifted off its seat, a crank on the end of the first named valve stem, a crank on the rock shaft, a link connecting the two cranks and a lever on the rock shaft whereby when the lever is operated, the valve and plug will be moved in unison.

1,543,014. PERCOLATOR SPOUT. FRANK E. KRONENBITTER, Maywood, Ill. Filed Aug. 25, 1923. Serial No. 659,292. 1 Claim. (Cl. 52—3.)

An improved vessel of the class described including a body having a U-shaped slit provided with out turned ends and formed adjacent the top of the side wall of

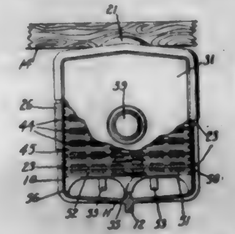
said vessel, the material on the outer side of the slit being rolled outwardly throughout the length of the slit to form a flange on the exterior of the body for engagement by a spout flange, the material within said

slit forming a downwardly extending tongue integral with the body at its upper end, said tongue being provided with a multiplicity of perforations therein, said tongue further having stiffening ribs adjacent its sides.



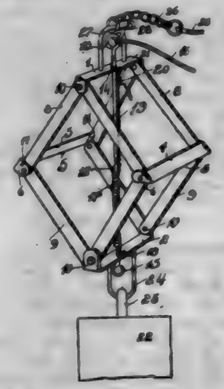
1,543,015. COMBINED PHOTOGRAPHIC PRINTER AND ENLARGER. CHARLES A. LARR, Baltimore, Md. Filed Mar. 5, 1923. Serial No. 622,945. 4 Claims. (Cl. 88—24.)

1. A photographic printing apparatus including a source of light, a lens, means for supporting the element to be printed intermediate the lens and light, an easel, shiftable supports for said lens and easel, a pair of cams, contact members carried by said easel and lens supports each engaging one of said cams, means for maintaining the contact elements in engagement with the cams, and means for simultaneously rotating said cams to thereby shift the easel and object support, the working face of the cam shifting said lens support being constructed in the form of a spiral, the working face of the cam operating the easel being formed in two joined sections, each of said sections being in the form of an increasing spiral from the junction of the sections.



1,543,016. COMBINED PHOTOGRAPHIC PRINTER AND ENLARGER. CHARLES A. LARR, Baltimore, Md. Filed June 27, 1923. Serial No. 648,072. 9 Claims. (Cl. 88—24.)

1. In a mechanism of the character described, a supporting structure, a source of light, a lens carrier, a sensitized paper supporting member, a negative supporting member, means for coincidently shifting the lens and one of said members relative to each other comprising an actuating member having two cam tracks in different



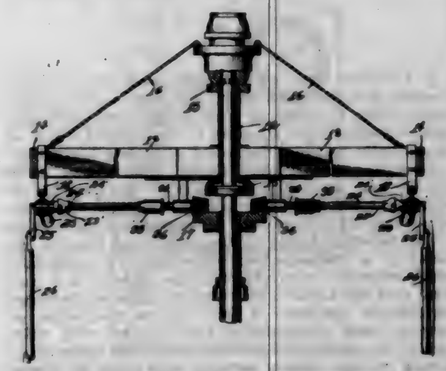
planes and crossing each other, and means operatively connecting one of said members with one of said tracks and the lens carrier with the other track.

1,543,017. STORAGE BATTERY. JOHN M. LEA, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Sept. 7, 1920. Serial No. 408,749. 13 Claims. (Cl. 136—166.)

8. In a battery cell the combination of a jar formed of conducting material, a set of plates secured thereto, a cover of conducting material, a second set of plates carried thereby and separators of insulating material between successive plates of opposite polarity, the plates of one set having means engaging over the upper edges of the separators to retain them in position while permitting withdrawal of the plates of the other set.

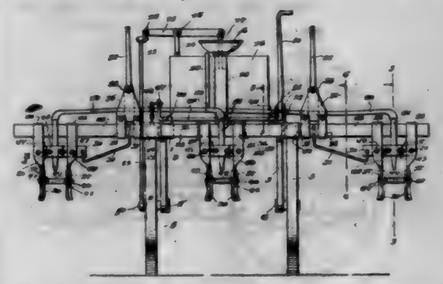
1,543,018. FLUE CLEANER. RICHARD LE FEUVRE, Spokane, Wash. Filed Apr. 8, 1924. Serial No. 704,977. 3 Claims. (Cl. 15—243.)

1. The combination in a chimney cleaner with a pair of spaced cross heads and a lift rope attached to one of them, of a pair of intermediate scraper bars, pairs of toggle links pivotally connected to said heads and



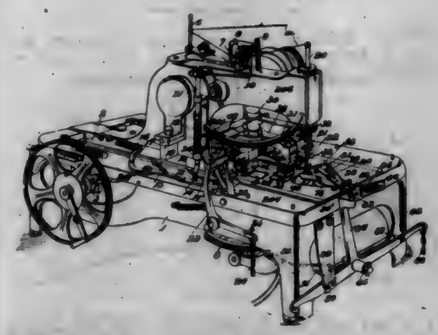
having a pivotal connection with said scraper bars, a weight suspended from the lower cross head, and means for transferring the load of the weight from said device to said lift rope.

1,543,019. WINDOW LOCK. ELMER LEHMHAUS, Hamilton, Ohio. Filed Apr. 17, 1922. Serial No. 553,526. 1 Claim. (Cl. 292—175.)



A window lock comprising a keeper carried by one sash, a housing mounted on the other sash and having an attaching plate portion, the wall of the housing toward the first named sash being formed with a rectangular opening and the opposite wall being formed with a circular hole, and a bolt including a cylindrical stem slidable through said hole and further including a head slidable through said opening and adapted to engage within the keeper, a coil spring within the housing bearing against the head and against the opposite wall of the housing for normally urging the bolt into extended position, a handle knob on the free end of the stem outwardly of the housing, the stem of the bolt being provided with spaced notches and a plate pivoted to the second named wall of the housing and having a lower edge adapted to engage in said notches, the pivot of the plate being spaced from said edge of the plate a considerable distance whereby the plate at its point of engagement in the notch shifts longitudinally through the notch when the plate is elevated.

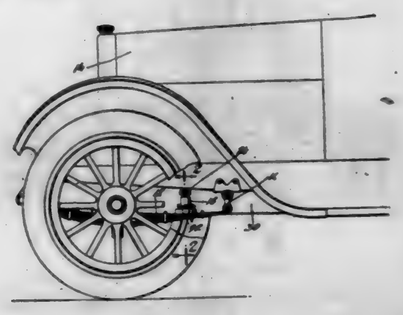
1,543,020. MERRY-GO-ROUND. HUEL B. LOMBARD, Brookings, S. Dak. Filed Jan. 11, 1923. Serial No. 612,052. 2 Claims. (Cl. 272—40.)



1. A merry-go-round including a center post, a rotary carriage on the post, a series of cars suspended on the carriage, a series of outwardly swinging frames suspended on the carriage and extending in tangential relation thereto, cars suspended on the swinging frames, manually operable driving means on each of the last-named cars including a rocker, a crank shaft on each of the swinging frames, a gear on the post, a radial shaft having a driving gear engaged with the post-carrier gear, a rod connecting the said crank and rocker, and a universal joint and sliding joint connections between the second frame crank shaft and the radial shaft.

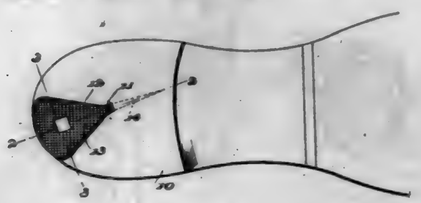
1,543,021. SPRAYING MACHINE. NEILL PAT MCARTHUR, Wakulla, N. C. Filed Aug. 18, 1923. Serial No. 658,064. 3 Claims. (Cl. 299—41.)

1. A plant treating machine comprising a frame, a cross bar having arms pivoted to the frame, means associated with said arms for adjusting the cross bar vertically, inner and outer plant contact hoods having loops freely mounted on said cross bar and consisting of spaced side plates and front and rear connectors joining the plates, flexible pipes having spray nozzles discharging between said front and rear connectors and the side plates of the hood, and means connecting the nozzles to the hoods whereby the nozzles and the hoods move together.



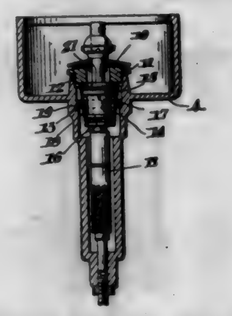
1,543,022. THREAD-TRIMMING MECHANISM FOR BUTTONHOLE MACHINES. HENRY C. MILLER, Waterford, N. Y. Filed June 26, 1914, Serial No. 847,534. Renewed Apr. 1, 1920. Serial No. 370,536. 72 Claims. (Cl. 112—252.)

52. In a buttonhole machine, clamping means, upper thread mechanism, lower thread mechanism, the lower thread mechanism having a hook and including a throat plate, said upper thread mechanism and lower thread mechanism being mounted for relative movement to the clamping mechanism for stitching the buttonhole, said throat plate receiving a stay cord, said hook compelling a loop formation of the upper thread below the cloth, thread slackening means for both the upper and lower threads operable following the buttonhole stitching operation, and means for simultaneously trimming the loop of the upper thread, the lower thread, and stay cord, and means for temporarily holding the free end



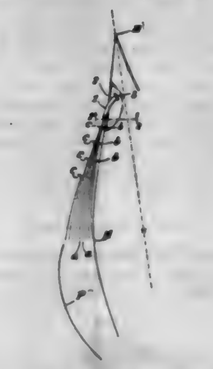
of the lower thread during the initial stitches of the next succeeding buttonhole, and means for subsequently advancing the free end of the lower thread to be sewn in by succeeding stitches of said next succeeding buttonhole.

1,543,023. DEVICE FOR USE IN REBUSHING SPRING SHACKLES. PAUL MINNARD, Detroit, Mich. Filed Mar. 27, 1924. Serial No. 702,345. 5 Claims. (Cl. 29—84.)



1. A device for use in rebushing spring shackles which comprises, in combination, a base having a plane bottom to engage the top surface of a spring adjacent the shackle, a support having an axial projection in position to engage the chassis frame above the spring, the support and base being threaded together for adjustment by turning the support about an axis passing through the axial projection until the device takes the load off the shackle, and four setscrews spaced 90° apart about the base and threaded through the base into engagement with the spring, one or more of the setscrews being adjusted to tilt the spring while still carrying the load so that the shackle bolt and bushing may be removed and replaced without binding.

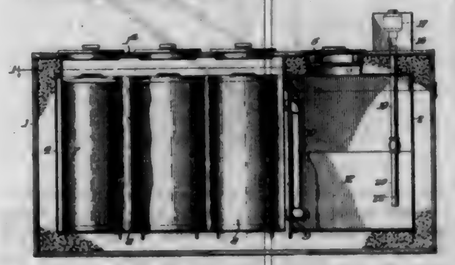
1,543,024. HEEL PLATE. WILLIAM ALEXANDER MORRIS, El Reno, Okla. Filed Sept. 22, 1922. Serial No. 589,829. 3 Claims. (Cl. 36—74.)



1. A heel plate for use with elastic heels and comprising a transversely curved body portion adapted to be fitted to the heel in such manner that the side edges of the body portion are embedded in the material of the heel, a prong extending longitudinally from one end of the body portion and inclined slightly with respect to the plane of the body portion, the prong being adapted to be inserted into the body of the heel and being adapted to lie at a slight distance above the tread surface of the heel, the juncture between the prong and the body portion being curved, a lug integrally formed with the body portion and adapted to be driven into the heel, said lug being apertured, and a fastening device adapted to be driven through the material of the heel and through the aperture of said lug.

1,543,025. FLEXIBLE NECK BEARING. NELSON HOWARD NORRIS, Renfrew, Ontario, Canada. Filed Mar. 9, 1923. Serial No. 623,907. 2 Claims. (Cl. 64—48.)

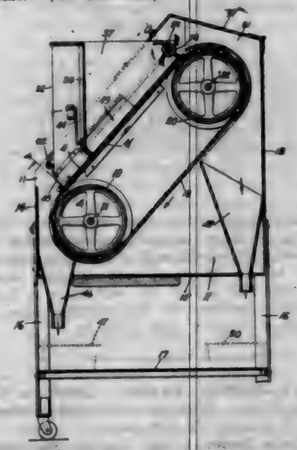
1. A flexible neck bearing comprising, in combination with a spindle, a taper-shaped bearing recessed at the centre and operatively mounted thereon, a coiled spring wound thereon and adapted to take its bearings from the extremities of said spring, a threaded collar for said spring adapted to fit therearound against the coils, and tension-creating washer means for said bearing.



1,543,026. PROPELLING SYSTEM AND METHOD. CLIFFORD M. PAXTON, Brooklyn, N. Y. Filed Apr. 7, 1923. Serial No. 630,463. 14 Claims. (Cl. 115—14.)

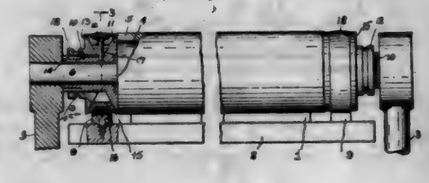
1. A marine vessel of the displacement type, in combination with propulsion means, including means for supplying water at relatively high pressure and submerged nozzles designed and arranged to project said water as substantially rearwardly directed water-jets having correspondingly high initial velocity, said nozzles being located near the hull surfaces aft of the stem but in advance of the regions of normal maximum high pressure which are adjacent the forwardly directed surfaces of the entrance section of the vessel, and being so directed as to discharge said water-jets at a substantial angle outwardly with respect to the adjacent hull surfaces near the nozzles; the outward angles of discharge, the contours and areas of nozzle orifices, and initial jet velocity, being predetermined and correlated with reference to the size and the desired speed of the vessel, so as to keep the high velocity initial portion of the jet stream from immediate bending to the hull surfaces, and so as to restrict the useful water-excavating, pressure-reducing portions of the resultant streams substantially to the regions adjacent the entrance section of the vessel; to restrict the transition portions of said streams substantially to the regions adjacent the surfaces of the vessel

amidship; and to restrict the water-depositing, pressure-increasing portions of said streams substantially to the regions adjacent the surfaces of the vessel aft of the after end of the entrance section or adjacent the run section, substantially as and for the purposes described.



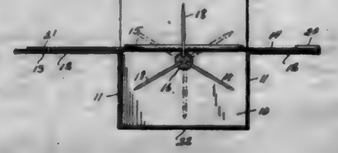
1,543,027. SYSTEM OF REFRIGERATION. LEWIS PENWELL, Chicago, Ill., assignor to A-B-C Transit Refrigeration Co., Helena, Mont., a Corporation of Delaware. Filed July 23, 1921. Serial No. 487,089. 8 Claims. (Cl. 62—101.)

1. A refrigerating apparatus comprising the combination of an insulating receptacle, an enclosed casing located therein providing a columnar passageway, a refrigerant supply vessel located in the insulating receptacle and communicating with said passage-way, and means for causing a flow of the refrigerant through said passage-way and the refrigerant supply vessel.



7. In a refrigerating apparatus, the combination with a container, of a circulating conduit for conveying a cooling liquid in association with the container, a supply brine compartment having communication with the supply end of said conduit, a discharge brine compartment having communication with the discharge end of said conduit, said compartments and conduit being arranged for retention of liquid in the latter at a higher level than in the former, and means for maintaining liquid in the supply compartment at a higher level than that in the discharge compartment.

1,543,028. DOCKAGE TESTER AND PROCESS FOR OPERATING THE SAME. JOHN A. PERKINS, Minneapolis, Minn. Filed May 28, 1924. Serial No. 716,420. 9 Claims. (Cl. 130—18.)

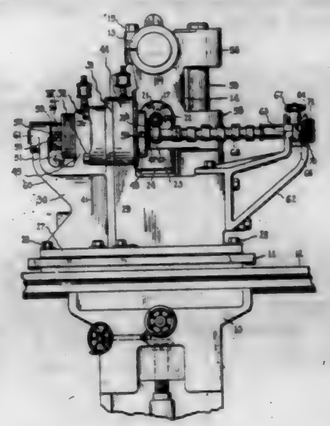


1. A machine of the class described comprising a frame, a separator movable relatively thereto for separating the finer from the coarser material, means constituting the discharge for coarser material for holding the body of material over a certain predetermined area of the separator until the separation is complete and controllable for releasing the coarser material after the separation is effected.

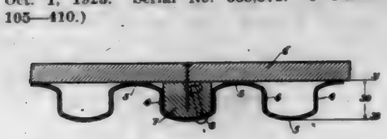
1,543,029. INKING ROLL FOR PRINTING PRESSES. WILLIAM M. REICHART, Cleveland, Ohio, assignor to The Chandler & Price Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 19, 1921. Serial No. 501,564. 2 Claims. (Cl. 101—348.)

1. An inking roll for a printing press, the combination with the roll spindle, of a roller for said spindle, said roller including a rim of fixed diameter surrounding said spindle, means for supporting said rim on said spindle, said means being adjustable thus variously to support said rim from concentric relation to said spindle to variable degrees of eccentricity therewith, and means restraining rotative movement of said rim about said spindle.

1,543,030. SPEAR-PROJECTING TRAP. ALONZO B. RHUDE, Plummer, Idaho. Filed July 15, 1924. Serial No. 726,157. 6 Claims. (Cl. 43—58.)



5. A trap of the character described comprising a body adapted to be disposed in a runway having a transversely extending shaft formed with a plurality of substantially radially projecting, pointed members, the pointed members being so mounted upon the shaft that one of the pointed members is always supported in a vertical position by gravity, and a plate supported upon the body over said shaft and having a slot through which the pointed members in the shaft may project and through which they may turn.

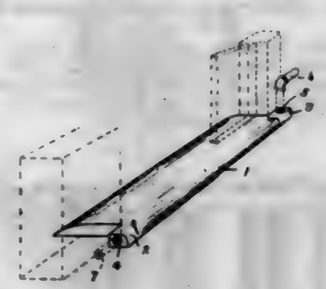


1,543,031. GEAR-CUTTING MACHINE. CHARLES R. SHORT, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Dec. 10, 1917. Serial No. 206,441. 9 Claims. (Cl. 90—4.)

1. A gear cutting machine comprising a standard, a horizontal spindle supported on said standard, a face mill

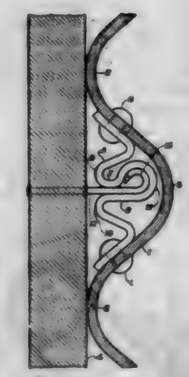
cutter carried at one end of said spindle, a table vertically adjustable on said standard, a barrel chuck horizontally mounted on said table and having the axis thereof in the plane of said cutter face, and means for rotating said spindle and said chuck.

1,543,032. END STRUCTURE FOR RAILWAY CARS. VINTON E. SISSON, Chicago, Ill., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Original application Filed Sept. 1, 1920, Serial No. 407,316. Divided and this application filed Oct. 1, 1923. Serial No. 665,871. 6 Claims. (Cl. 105—410.)



1. A metallic panel for car ends having a plurality of corrugations formed therein with main walls, and curved arched portions connecting said main walls, the width of each corrugation being greater than the distance between parallel planes drawn through the outermost parts of the corrugated panel.

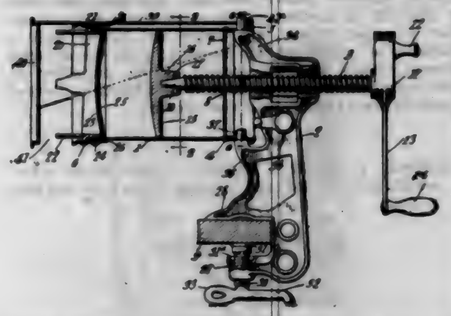
1,543,033. ELECTRODE. WALTER O. SNELLING, Allentown, Pa. Filed May 20, 1922. Serial No. 562,526. 6 Claims. (Cl. 250—27.)



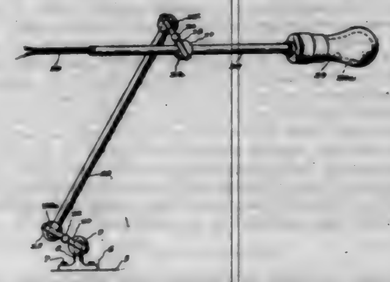
1. An electrode comprising a film of light-transparent metal superimposed upon an electrically conducting wire gauze.

1,543,034. THRESHOLD. SYLVESTER GEO. STEVENS, Duluth, Minn. Filed Oct. 27, 1923. Serial No. 671,248. 4 Claims. (Cl. 20—64.)

1. The combination with a house door opening, of a hollow threshold therefor extending wholly across the opening on top of the floor and forming a part of the frame for the opening, and pipe connecting means, for communication with the interior of the threshold, spaced from either side of the door opening.



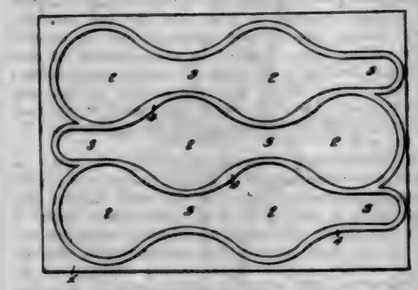
1,543,035. MEANS OF SECURING A WOODEN LINING TO A CORRUGATED WALL. SVEN J. STRID, Chicago, Ill. Filed Aug. 21, 1924. Serial No. 733,344. 4 Claims. (Cl. 105—407.)



1. In combination with a wall element for a railway car having a plurality of corrugations formed therein, a fastener secured to said wall, a lining, a nail securing said lining to the fastener, said fastener comprising means to guide and deflect the nail as it is driven between adjacent portions of the fastener whereby said nail is retained between said portions.

1,543,036. DOMESTIC PRESS. LAWRENCE H. TAYLOR, Iola, Kans. Filed Oct. 10, 1924. Serial No. 742,861. 1 Claim. (Cl. 100—44.)

In a culinary device, a food holding receptacle open at one end, said end having an outward pressed shoulder to form an internal abutment a strainer carrying ring carried within said receptacle end and adapted to abut said shoulder a clamping ring working loose in the flange of the screen or strainer, said clamping ring having a plurality of lugs extending outward to perform the double function of supporting feet for the cylinder and means for connection with a wrench, a follower mounted in said cylinder and means for actuating the follower.

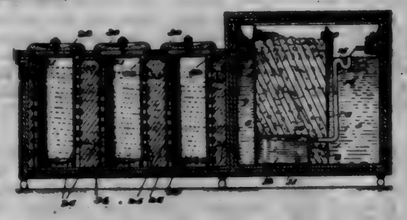


1,543,037. ADJUSTABLE LIGHT FIXTURE. JAMES F. TETTER, Forest Park, Ill. Filed July 12, 1923. Serial No. 651,113. 1 Claim. (Cl. 248—3.)

A lamp support comprising pairs of clamping elements, the clamping elements of each pair being flat and arranged in edge to edge relation and formed intermediate the ends thereof with alined openings, the edge portions of said clamping elements being provided in their opposed sides with pairs of recesses, the walls of which are curved longitudinally and transversely, a supporting rod having spherical heads received in certain of said recesses, and spherical attaching heads received in the other recesses of said clamping elements and having radial incisions, the side walls of which are normally spaced whereby the second-named heads may be compressed into gripping engagement with objects extended through the second-named spherical heads, and screw bolts extended through said alined openings for drawing the clamping elements together in clamping engagement with the first and second-named heads, said spherical heads being substantially greater in diameter than the thickness of said clamping elements.

1,543,038. FRUIT CONTAINER. HARRY J. THOMPSON, San Francisco, Calif., assignor to National Fibreform Company, San Francisco, Calif. Filed Feb. 11, 1922. Serial No. 535,833. 1 Claim. (Cl. 217—26.5.)

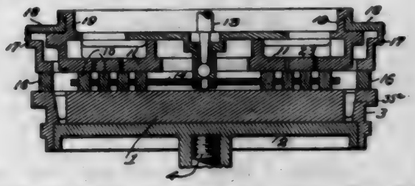
A structure of the class described comprising separate pairs of molded trays, each tray formed of absorbent cushioning material, the trays of each pair being oppositely disposed, each of said trays having recesses in one face matching corresponding recesses in the opposed tray, there being depressions between the recesses in each tray forming necks, the trays being provided with dome-like projections corresponding with the recesses therein, the dome-like projections on the trays of one pair being adapted to nest between the corresponding projections on the trays of the next adjoining pairs and to bear substantially at single points of contact upon the neck portions of the trays, thereby providing transverse and longitudinal air spaces between the trays.



1,543,039. BEARING. LAMBERT H. VERVOORT, Washington, D. C. Filed May 23, 1922. Serial No. 563,085. 8 Claims. (Cl. 64—62.)

2. In a bearing, a roller cage comprising two end plates stayed apart, each of the said end plates being provided with radially elongated bearing depressions spaced apart on its inner face.

1,543,040. REFRIGERATING APPARATUS. GEORGE B. WALKER, Washington, D. C., assignor, by mesne assignments, to A-B-C Transit Refrigeration Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 14, 1921. Serial No. 437,333. 6 Claims. (Cl. 62—101.)



1. A refrigerating apparatus comprising a refrigerating compartment, having a brine lifting chamber at one side, a receiving chamber at one end, a delivery chamber at the opposite end, and an ice chamber between the receiving and delivery chambers, the receiving chamber communicating with the ice chamber at the lower portion of the latter and the delivery chamber communicating with the ice chamber at the upper portion of the latter, a brine lifting element pivoted in the brine chamber, means for moving the brine lifting element up and down in the brine chamber to pick up the brine therefrom, and means for delivering the brine from the brine lifting element to the receiving chamber.

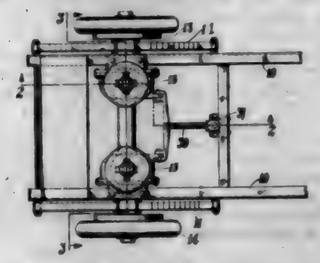
5. A refrigerating apparatus for ice cream cans comprising a storage compartment including a series of coils defining can receiving spaces, means arranged beyond said coils to force the circulation of a refrigerating medium thru the coils, the top of the storage compartment having openings in line with the can receiving spaces, closures sealing said openings, and an annular flexible sealing gasket secured to the underside of each closure and having an opening of slightly less diameter than that of the can to seal the interior of the compartment about the can when the latter is inserted, and a cork filling for the interior of the compartment beyond the coils.

6. A refrigerating cabinet, comprising an outer receptacle, a circulating conduit housed therein and located an appreciable distance from the side walls thereof, said conduit being in the nature of a hollow jacket shaped to receive and closely encompass a container, insulating material in the space between the receptacle and said circulating conduit, a tank in the casing adapted for the retention of ice, said conduit communicating at its terminals with the tank, and means for inducing a flow of the refrigerant through said cooling tank and the conduit.

1,543,041. PROCESS FOR LAPPING GAUGE BLOCKS. FLOYD C. WEAVER, Washington, D. C. Original application filed Jan. 17, 1922, Serial No. 530,007. Patent No. 1,476,863, dated Dec. 11, 1923. Divided and this application filed Sept. 6, 1922. Serial No. 586,521. 1 Claim. (Cl. 51—278.)

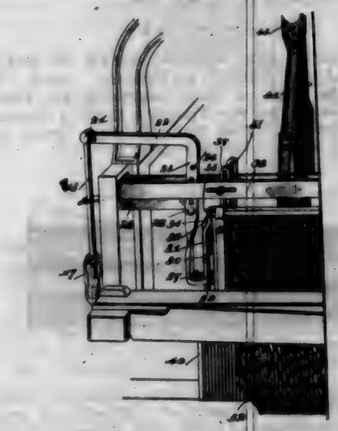
A process of the character described comprising placing articles to be ground upon a support having a flat upper article receiving face with the articles held in spaced relation to each other and grinding the upper ends of the articles a predetermined amount to provide end faces parallel to the article engaging face of the support, then inverting the articles and placing a waterproofed plastic about and between the articles to hold the articles in place, then grinding the previously unground ends of the articles to remove a predetermined amount of material and provide end faces parallel to the previously ground end faces, removing the articles and plastic from the support and thoroughly cleansing the articles and subjecting the end faces thereof to a final grinding to reduce the articles to a desired size with their end faces exactly flat and parallel to each other.

1,543,042. MUFFLER FOR INTERNAL-COMBUSTION ENGINES. FRANK A. WHITTEN, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Mar. 5, 1923. Serial No. 622,939. 1 Claim. (Cl. 137—60.)



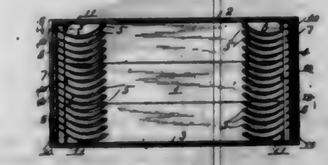
A muffler comprising a hollow cylindrical casing; a spiral rib extending inward from the inner surface of said casing and terminating short of the axis thereof, to thereby provide a spiral passage and a straight and unobstructed passage both extending from end to end of the muffler; heads secured to the ends of said casing and having passages leading into and out therefrom; and a plurality of circumferentially spaced supporting members arranged within said casing and having each a plurality of supporting lugs struck up from the material thereof, which lugs are secured to the periphery of said spiral rib to thereby hold the convolutions thereof properly spaced apart from one another.

1,543,043. CIGARETTE HOLDER. EDGAR ALLEN, Cambridge, Ohio. Filed Mar. 7, 1923. Serial No. 623,502. 1 Claim. (Cl. 131—10.)



A holder for cigar or cigarettes, comprising a section of uniform diameter throughout and formed at one end to receive the article and with a central duct leading toward and communicating with an enlarged valve passage at the opposite end, a spring pressed valve in said passage, a hollow section of uniform diameter with the first mentioned section and removably secured to the latter, said hollow section being in open communication with the valved passage and being adapted to contain a free body of mineral oil, a valve section connected to the hollow section and containing a passage controlled by a valve and open to the hollow section, and an enlargement of such passage adapted to contain an absorbent, and a mouth piece removably secured to the valve section and having a central duct communicating with the absorbent chamber, the end of the mouth piece serving to retain the absorbent in the chamber.

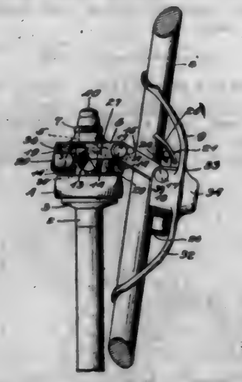
1,543,044. MOTOR MOUNTING AND POWER-TRANSMISSION MECHANISM FOR MOTOR VEHICLES. JOSEPH A. ANGLADA, Jenkintown, Pa., assignor to Electrocar Corporation, New York, N. Y., a Corporation of Delaware. Filed Mar. 10, 1922. Serial No. 544,351. 1 Claim. (Cl. 180—65.)



In a motor vehicle, a frame, a transverse axle housing, a pair of drive wheels supported thereby, springs between the frame and the axle housing, a pair of motors on the frame above the axle housing, independent transmission mechanism between each motor and one of the wheels each comprising a telescopic connection and a universal joint, a radius rod, a universal joint between one end of said rod and the vehicle frame, and a cross bar pivotally connected near its ends with the axle housing, and near its center with the radius rod.

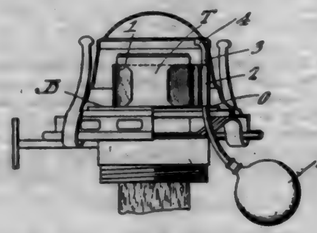
1,543,045. LENO LOOM. JOHN SHELDROW BACHMAN, SIDNEY ARTHUR MOAK, and STARLING CHRISTOPER LEWIS, Rome, Ga. Filed Jan. 14, 1924. Serial No. 686,068. 1 Claim. (Cl. 139—50.)

In a leno loom, the combination with vertical reciprocating healds and stationary healds, means for causing shifting of the reciprocating healds, said means comprising a rod having an enlargement at its lower end, said enlargement being provided with a horizontal slot, a drive gear, a pin on the gear received by the slot, a lever having an adjustable pivotal mounting intermediate its ends, one end of the lever being connected with the rod, a yoke at the opposite end of the lever having arms projecting laterally and then inwardly and with an arm connected with a heald for causing simultaneous lateral shifting of the reciprocating healds and means for maintaining the stationary healds in position while the reciprocating healds are shifted laterally between said stationary healds.



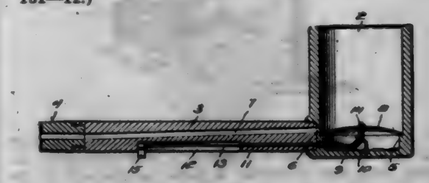
1,543,046. PACKING CASE FOR GARMENTS. JOHN THOMAS BATTS, Los Angeles, Calif. Filed Jan. 24, 1924. Serial No. 688,129. 3 Claims. (Cl. 206—7.)

1. In a garment packing case; a plurality of garment hangers having sustaining members adapted to be removably held on the supporting rod hereinafter named; a supporting rod inside the case; adjustable means for clamping the rod sidewise to the case with said members clamped therebetween.



1,543,047. TILTING STEERING WHEEL FOR MOTOR VEHICLES. DAVID BEHRSING and CLARENCE A. GODSHALK, Philadelphia, Pa., assignors to Fox Automotive Products Corporation, Philadelphia, Pa., a Corporation of Delaware. Filed Nov. 6, 1922. Serial No. 599,292. 10 Claims. (Cl. 74—33.)

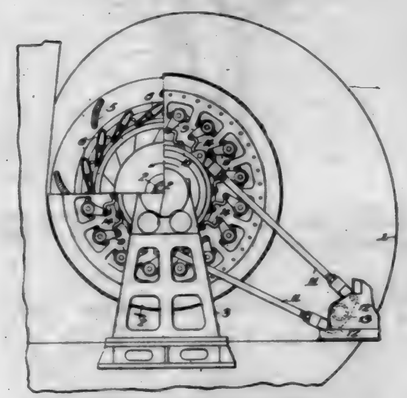
1. The combination with a steering shaft and a steering wheel for turning it, of double pivotal connections between these two, the pivots being parallel with each other and arranged to permit the wheel to tilt, without



bodily movement of translation, about one pivotal axis, and to swing bodily and away from the line of the shaft about the other pivotal axis.

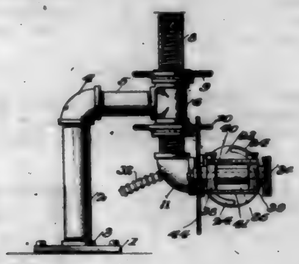
1,543,048. LAMP-BURNER ATTACHMENT. GLOVER BEE BELLAH, Port Lavaca, Tex. Filed Sept. 8, 1924. Serial No. 736,605. 1 Claim. (Cl. 67—75.)

An attachment for lamp burners including a clip for engagement with a wick tube, a sleeve upon the clip, an air tube secured within the sleeve and having a terminal nozzle for directing a jet of air along the exposed edge of a lamp wick, and air forcing means connected to the air tube.



1,543,049. SMOKING-PIPE-CLEANING ATTACHMENT. JOSEPH ADAM BENNETT, Rexford, N. Y. Filed Jan. 17, 1925. Serial No. 3,129. 3 Claims. (Cl. 131—12.)

1. In combination with a smoking pipe wherein the latter comprises a bowl, a stem, and a mouth piece, of a cleaning attachment for the bowl, the same comprising a disc normally disposed in the bowl for the passage of the smoke, said disc adapted for reciprocatory movement in said bowl, means for actuating the same, said means comprising a flexible wire extending into said bowl and secured to said disc, an upwardly curved tubu-

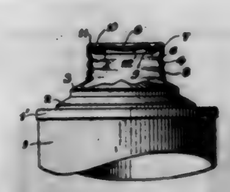


lar member arranged in the bottom of the bowl below said ejector and through which the forward portion of the flexible wire is adapted to extend, and means associated with the opposite end of the flexible wire for actuating the same.

1,543,050. BREAKAGE LINK. FRANK R. BENSON, Kecoughtan, Va., assignor to Newport News Shipbuilding & Dry Dock Company, Newport News, Va., a Corporation of Virginia. Filed Feb. 21, 1924. Serial No. 694,269. 4 Claims. (Cl. 253—122.)

1. In an hydraulic turbine, in combination with the gate and the gate operating mechanism, a protecting member intermediate said parts, comprising a connecting link having a middle portion comprising offset portions in angular relation to each other and adapted to bend relatively when said link is subject to opposing forces acting thereon which exceed a predetermined value.

1,543,051. COMBINATION SAW. JAMES H. BLOODGOOD, Tampa, Fla. Filed Nov. 20, 1923. Serial No. 675,903. 3 Claims. (Cl. 143—6.)

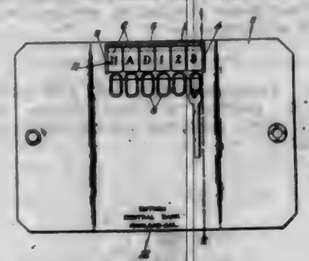


1. A portable saw comprising a vertical standard adapted to be secured in position, a horizontal arm projecting from said standard, a guide on the end of the arm, a slidable screw mounted for rotary and vertical adjustment in the guide, means supporting the screw and controlling the adjustment of the screw in the guide, a saw head support carried in a horizontal position by the screw, said support being composed of a tubular member, disks mounted for limited rotation on the opposite ends of the body, and rods slidably carried by said disk, passing through the tubular body and projecting from opposite ends of the body, a saw head rigidly connected to the adjacent ends of the rods, a shaft carrying a saw mounted for rotation in the saw head, a rotatable means on the opposite ends of the rods, and means operably connecting the rotatable means with the shaft in the saw head.

1,543,052. STAY FOR HOLLOW ROLLS OF FLEXIBLE PLIANT SHEET MATERIAL. ABNER W. BROWN, San Francisco, Calif., assignor to The Paraffine Companies, Inc., San Francisco, Calif., a Corporation of Delaware. Filed Mar. 24, 1921. Serial No. 455,313. 1 Claim. (Cl. 206—59.)

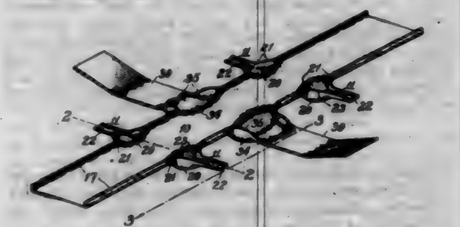
The combination with a normally collapsible hollow center roll of flexible material, of a plurality of separate tubes having spaced rigid discs disposed therein perpendicularly to the axis of the tube, one of said discs being secured to the tubes at each end thereof, one of said tubes being inserted snugly into the hollow center of the roll at each end thereof and abutting each other at substantially the center of the roll, whereby to position several of the rigid discs of substantially the center of the roll and one of the rigid discs at each end of the roll to prevent collapse of the roll at its center and ends, substantially as described.

1,543,053. CONTAINER. SOL L. BUSCHMAN, New York, N. Y., assignor to Metal Package Corporation of New York, New York, N. Y., a Corporation of New York. Filed Mar. 11, 1924. Serial No. 698,423. 5 Claims. (Cl. 220—46.)



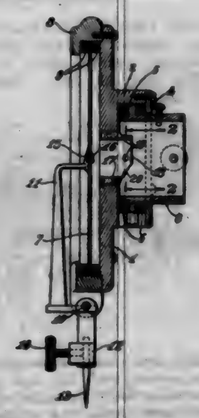
1. A container provided with a neck having a sealing surface comprising an inwardly extending annular flange, said flange including an upwardly extending peripheral bead above and substantially in alinement with said neck, an annular depression adjacent thereto, and a relatively plane surface projecting inwardly of said depression, and a cap adapted to pass over said neck and be secured thereto, said cap including a portion having a configuration corresponding to the sealing surface of said neck and interfitting therewith.

1,543,054. KEY PURSE. JOHN B. BUSHNELL, Berkeley, Calif., assignor to Crocker Manufacturing Co., San Francisco, Calif., a Corporation of California. Filed Apr. 26, 1924. Serial No. 709,211. 4 Claims. (Cl. 150—40.)



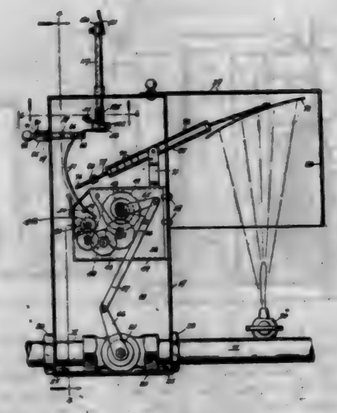
1. A key-container comprising a folio and frame secured in the said folio, a shaft mounted in said frame, sheet metal holders journaled upon said shaft and having

apertures adjacent the lower end of each holder and key-rings each comprising a loop of spring wire having



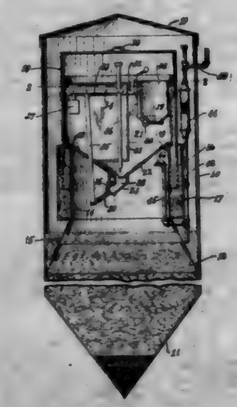
upwardly extending tips on the end of said loops and the said tips extending upwardly through the said apertures in the holders.

1,543,055. SPRING PLANK. GEORGE S. CHILES, Lima, Ohio, assignor to The Ohio Steel Foundry Company, Lima, Ohio, a Corporation of Ohio. Filed Dec. 5, 1923. Serial No. 678,671. 8 Claims. (Cl. 105—208.)



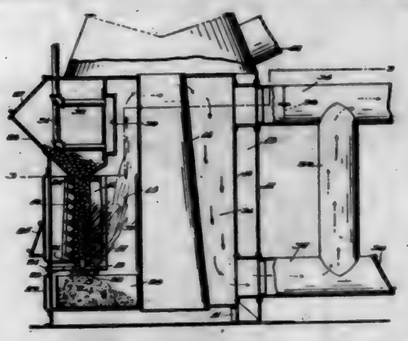
1. A spring plank for car trucks comprising a relatively flat body portion and laterally extending projections integral therewith, having continuous marginal flanges along contiguous sides of said body portion and projections, and depressed areas at the intersections of said body portion and projections.

1,543,056. SOUND REPRODUCING OR RECORDING MECHANISM FOR PHONOGRAPHS. JOHN C. CLÄSEN, St. Louis, Mo., assignor, by mesne assignments, to Clasen Naturephone Company, Wilmington, Del., a Corporation of Delaware. Continuation of application Serial No. 445,927, filed Feb. 18, 1921. This application filed Aug. 1, 1921. Serial No. 488,894. 14 Claims. (Cl. 181—32.)



1. In an amplifying reproducer of music a diaphragm of tempered horn.

1,543,057. AUTOMATIC THERMOSTATIC GAS CUT-OFF. FRANK COLONNA, Brooklyn, N. Y. Filed Dec. 5, 1923. Serial No. 678,564. 13 Claims. (Cl. 67—114.)



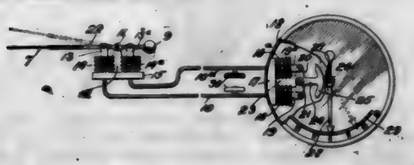
1. An automatic fuel cut-off comprising a fluid pressure actuated means, adjustable means on said fluid pressure actuated means for adjusting the latter for operation at a predetermined fluid pressure, fuel cut-off means associated with said fluid pressure actuated means for closing the supply of said fuel when the fluid pressure has dropped to or below said predetermined fluid pressure and a chamber associated with the automatic fuel cut-off through which said moving fluid is made to move in a vertical column out to the atmosphere and in which said fluid pressure actuated means is arranged.

1,543,058. ACETYLENE-GAS GENERATOR. MARION H. COMPTON, Muscatine, Iowa. Filed Aug. 3, 1921. Serial No. 489,586. 1 Claim. (Cl. 48—57.)

A gas generator including an outer metallic casing constituting a closed container and adapted to be embedded in the ground, the lower end of the outer casing being downwardly tapered to form a relatively deep, inverted, acutely pointed cone whereby to facilitate the embedding and installing of the casing and the removal of sludge, the casing terminating at the extreme apex of the cone, and gas generating mechanism disposed within the casing.

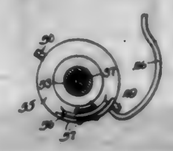
1,543,059. HOT-AIR FURNACE. ROBERT PATRICK COSTELLO, East Calgary, Alberta, Canada. Filed June 19, 1922. Serial No. 569,373. 10 Claims. (Cl. 126—99.)

1. A hot air furnace having a fire place and a combustion chamber at one side thereof, and a smoke chamber at the opposite side thereof, a vertical baffle wall separating the combustion and smoke chambers and extending from the bottom to the top of said chambers, and having an opening at its upper end only leading from the combustion to the smoke chambers, an air conduit extending vertically through the smoke chamber having one side formed of the baffle wall, draught inlets to the fire place, smoke outlets from the smoke chamber, and air inlets and outlets for the air to be heated.



1,543,060. MARKED GUMMED TAPE. CHARLES H. CROWELL, Brooklyn, N. Y. Filed July 21, 1922. Serial No. 576,572. 8 Claims. (Cl. 91—67.95.)

1. The gummed tape comprising an absorbent kraft paper backing and an adhesive gum coating applied thereto and a series of spaced superficial designating markings on said tape between said backing and gum coating and penetrating the adjacent portions of said coating and backing, said markings comprising starchy body material and incorporated water soluble aniline dye stuff adapted to further penetrate the backing if it is moistened.

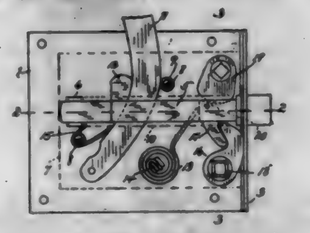


6. The gummed tape comprising absorbent backing and an adhesive gum coating applied thereto and designating markings on said backing coloring adjacent portions of said backing and coating and said markings comprising water soluble dye stuff.

1,543,061. BALANCED TRANSMISSION FOR DISTANT INDICATORS. OSCAR A. DANIELSON, Brooklyn, N. Y. Filed May 18, 1920. Serial No. 382,285. 6 Claims. (Cl. 265—23.)

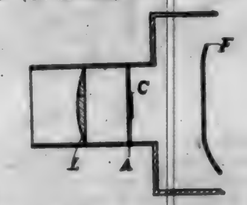
1. In a transmitting mechanism, separate systems each comprising a passage and terminal cells filled with a confined body of fluid, a pivoted lever arm at each end of the systems for balancing same, to which arm the cells of the respective systems are pivotally connected at opposite sides of the lever pivot, a prime mover which acts on the lever arm at one end of the systems and means actuated by the lever arm at the other end of the systems.

1,543,062. SPEED CONTROLLING AND INDICATING DEVICE. BETHUEL M. DAVIS, Chicago, Ill. Filed Sept. 7, 1920. Serial No. 408,453. 22 Claims. (Cl. 175—355.)



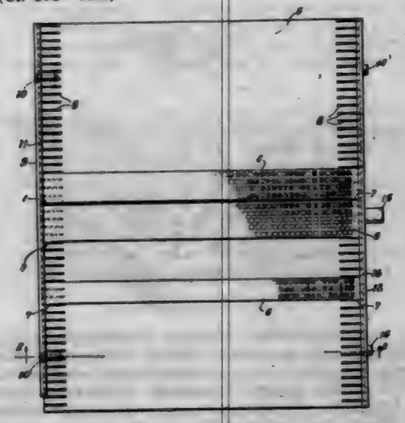
1. In a device of the class described, a shaft adapted to be rotated, a control circuit, a pair of contacts in said circuit, a spring-controlled escapement mechanism normally held against movement for controlling said contact springs, means controlled by the speed of said shaft for releasing said escapement, said escapement mechanism consisting of a hollow drum loosely mounted upon a shaft driven from said first-mentioned shaft, and a spiral spring within said drum, the inner end of said springs rotating with said second shaft, and the outer end of said spring frictionally engaging with the inner periphery of said drum.

1,543,063. DRIVING ROPE. JAMES DAWSON, Lincoln, England, assignor to James Dawson and Son, Limited, Lincoln, England. Filed Nov. 21, 1924. Serial No. 751,325. 4 Claims. (Cl. 74—63.)



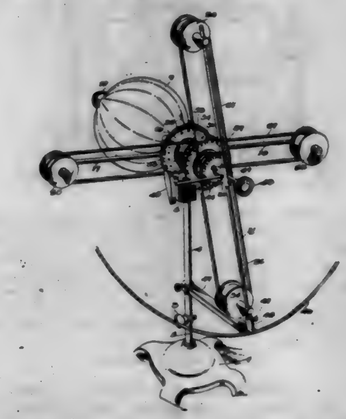
1. In a driving rope, the combination of a plurality of flat belts of decreasing width, nails securing the central layers only, nails securing at least one adjacent belt to the central layers, and rivets securing the total number of assembled belts which form the rope.

1,543,064. DOOR LATCH. WILLIAM C. DEVERBAUX, Detroit, Mich., assignor to Ferro Stamping & Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 28, 1922. Serial No. 583,922. 1 Claim. (Cl. 292—173.)



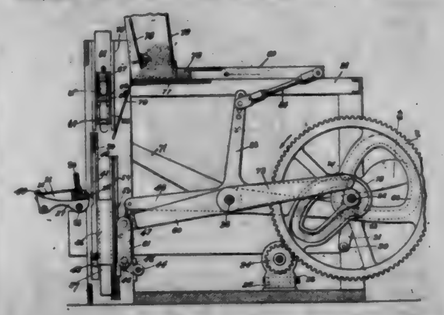
In a door latch, the combination with a case plate, of a cover plate spaced from the case plate, a locking bolt movable between the case plate and cover plate, a lever between said plates for actuating said bolt, lugs on one of said plates for guiding said bolt, interiorly threaded tubular spacers for said cover plate extending through the case plate and riveted thereto, screws extending through said cover plate and threadedly engaging said spacers, one of said spacers constituting a stop lever, and a coil spring surrounding the other of said spacers having one arm abutting one of said lugs and having another arm abutting said lever and normally holding the latter against the stop.

1,543,065. METHOD OF MASKING PHOTOGRAPHIC FILM WHILE EXPOSURE IS BEING MADE. LEON F. DOUGLASS, Menlo Park, Calif. Original application filed July 15, 1922, Serial No. 575,310. Divided and this application filed Jan. 12, 1923. Serial No. 612,242. 3 Claims. (Cl. 95—36.)



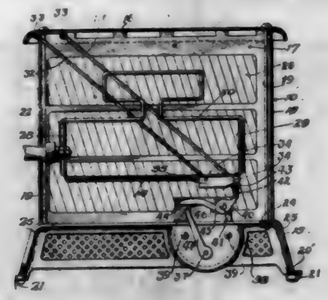
1. The method of producing two separate images on a negative film which comprises, attaching an opaque member of particular shape to a transparent support adapted to cover one frame of a negative film, placing the opaque member and transparent support in the path of the light rays proceeding through a camera lens from an object to be photographed to a negative film located inside the said camera, making an exposure of said negative film to the light rays passing through the transparent support, removing the opaque member from the transparent support, and attaching thereto another opaque member adapted to mask the portion of the transparent support not masked by the first mentioned opaque member, interposing the last mentioned opaque member and transparent support in the path of the light rays proceeding from another object through said camera lens to said film, and making another exposure of said film to the light rays passing through the transparent support.

1,543,066. SECTIONAL PRINTING-FORM BED. JOSEPH S. DUNCAN, Chicago, Ill., assignor to Addressograph Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 8, 1924. Serial No. 730,817. 2 Claims. (Cl. 101—384.)



1. The combination of a printing form section having type characters thereon and down-turned lugs on one side edge adjacent its ends, a bed therefor having a series of grooves adjacent each side margin to receive said lugs and spaced apart according to the line spacing of the type characters on the section, and means for holding the sections in place on the bed.

1,543,067. EDUCATIONAL APPLIANCE. CHARLES H. DUNLOP, Brooklyn, N. Y. Filed Dec. 10, 1923. Serial No. 679,714. 10 Claims. (Cl. 35—3.)

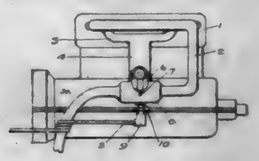


1. In an apparatus of the class described, the combination of a support, a shaft mounted for rotation on the support, a terrestrial globe rigidly connected with the shaft and having its polar axis in longitudinal alinement with the shaft, a disk mounted against rotation with the shaft passing through the axis of the disk, said disk having a dial plate provided with a series of numerals representing the hours of the day, a bracket arm projecting laterally from the support and provided with axles at its opposite ends, flanged drums rigidly mounted for rotation on the axles, a flanged drum rigidly connected with the shaft and mounted for rotation therewith located adjacent the dial plate, an endless band supported by the first mentioned drum and having a portion coiled about the drum on the shaft, said tape having its outer face divided into sections representing the days of the week, with each section equal in length to the circumference of the drum on the shaft whereby a complete rotation of the drum will cause to be advanced one section of the band.

1,543,068. BLOCK MACHINE. CHARLES M. EBERLING, Cleveland, Ohio. Filed Apr. 5, 1923. Serial No. 630,029. 12 Claims. (Cl. 25—45.)

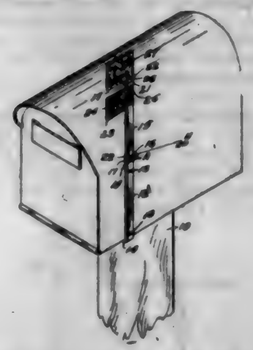
1. A block machine comprising a mold comprising a compacting end, a core, and means independent of said end for withdrawing said core as said end advances.

1,543,069. AUTOMATIC TOASTER. CHARLES S. ELLIS, Chicago, Ill. Filed Apr. 5, 1924. Serial No. 704,342. 10 Claims. (Cl. 53—5.)



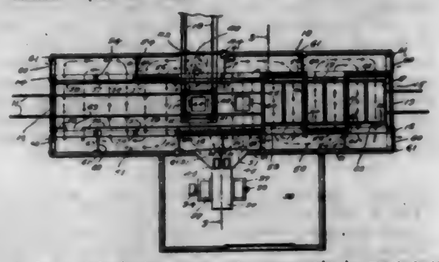
10. A toaster comprising a frame having opposed toaster units and having an opening for the passage of a carrier to toasting position between the units and away from said position, a carrier to support a toast slice edgewise in both toasting and nontoasting position, and hanger rods pivoted to said frame and to said carrier on which the carrier is carried into and out of toasting position.

1,543,070. ROLLER SKATE. GEORGE J. ERTL, Chicago, Ill., assignor to Richardson Ball Bearing Skate Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 17, 1924. Serial No. 707,072. 12 Claims. (Cl. 208—179.)



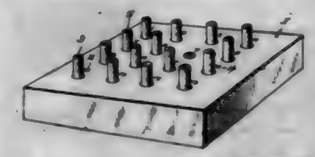
1. A roller skate comprising, in combination, separately formed forward and rear sections, provided respectively with rollers, an intermediate connecting section for connecting said forward and rear sections without capacity for relative movement, and means for rigidly but removably uniting the forward and rear sections with the connecting section whereby, through substitution of a longer or shorter connecting section, the skate may be fitted to feet of different lengths.

1,543,071. METHOD AND MEANS FOR VAPORIZING FUEL IN INTERNAL-COMBUSTION ENGINES. GEORGE LAWRENCE ERTS, Los Angeles, Calif. Filed Nov. 14, 1921, Serial No. 514,994. Renewed Jan. 12, 1925. 9 Claims. (Cl. 123—133.)



1. The method of forming a vaporous mixture for an internal combustion engine which consists in mixing liquid fuel with air, segregating unvaporized portions of the fuel, vaporizing said portions by passing therethrough a heated gas and carbureted air and then mixing the vaporized portions again with said first mentioned air.

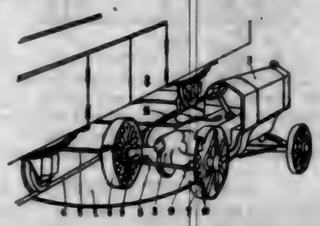
1,543,072. MAIL-BOX FLAG. HARRIET E. FENNER, Des Moines, Iowa. Filed Aug. 7, 1924. Serial No. 730,750. 1 Claim. (Cl. 232—34.)



The combination of a mail box with a flag staff hingedly supported thereon to stand in upright position or to swing down to position alongside the mail box, a flag at the outer end of said staff, a second flag staff hingedly connected beyond the first flag to the staff thereof, a flag on the second staff, the hinges being arranged to fold in opposite directions and to permit the flags to be arranged one above the other or to be folded to positions side by side.

1,543,073. DEHYDRATOR. CARL W. FIELD, Healdsburg, Calif. Filed Sept. 27, 1923. Serial No. 665,208. 18 Claims. (Cl. 34—46.)

1. In a dehydrator, means to cause air to pass over the material and substantially in a horizontal direction, means to carry the material, and means to form a return passage for the air to the first mentioned means under the entire length of said means to carry the material.



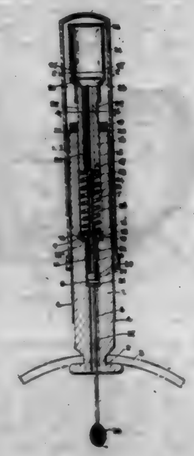
1,543,074. GAME APPARATUS. DONALD FOREMAN, Portland, Oreg. Filed Mar. 25, 1924. Serial No. 701,727. 2 Claims. (Cl. 273—136.)

2. A game apparatus comprising a polygonal-shaped base provided on its upper face with four transversely extending spaced rows of spaced shallow sockets, each row consisting of four sockets, the sockets of one row arranged in alignment with respect to the sockets of an adjacent row, means on the upper face of said base in proximity to each of the sockets of each row to consecutively designate the sockets of the row, the designations for the sockets of one row being different from the designations

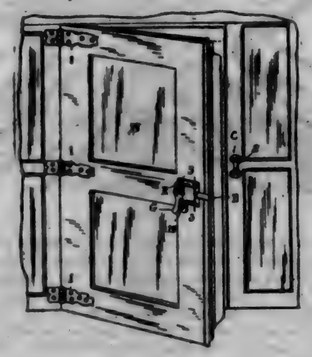
for the sockets of an adjacent row, a set of removable socket entering pins, said set of a number less one than the combined number of sockets of the four rows, each of said pins of a height greater than the depth of any one of the sockets and having a flat top, and means on the top of each of said pins to provide a numerical designation therefor, the designation on each of said pins being different and corresponding to a designation of a socket, each of said sockets being circular, and each of said pins being cylindrical and of the same diameter throughout and of a diameter with respect to each socket to provide for the loose seating of a pin in a socket, thereby providing for the convenient entry and removal of the pins.

1,543,075. SYSTEM OF OPERATING TURNTABLES BY MEANS OF TRACTORS. GUIDO FORNACA, Turin, Italy. Filed July 18, 1924. Serial No. 726,850. 2 Claims. (Cl. 104—36.)

1. A system of operating turntables for shunting railway wagons, by means of a tractor, in which the tractor (after it has hauled a wagon on to the turntable) is stopped with the wheels at one side on the table and the wheels at the other side off the table, the driving wheel on the table being thereafter locked, so that when the tractor is again started only the outside driving wheel rotates compelling the table to turn while the tractor remains always in position at the side of the wagon ready to move the latter from the table in the required direction.



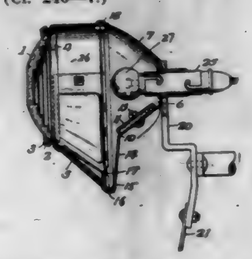
1,543,076. FASTENER DEVICE. LESTER E. FULFORD, Edgewood, R. I., assignor to Fulford Mfg. Co., Providence, R. I., a Corporation of Rhode Island. Filed Sept. 11, 1924. Serial No. 737,089. 1 Claim. (Cl. 24—216.)



A socket member of a fastening device comprising an anvil member having a central opening through both its inner and outer walls, the opening through the inner wall being greater than that through the outer wall, a socket element closely fitted to and guided by the edge of the opening through the inner wall and engaging the inner surface of the wall of the opening through the outer wall and spread thereby in being forced to operating position to lock said element in engagement with said anvil.

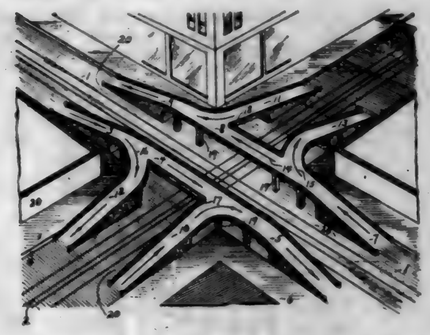
1,543,077. COMBINED SAFETY VALVE AND SIGNAL FOR PNEUMATIC TIRES. JOHN HAMILTON GALL and GUS SWANSON, Marshfield, Oreg. Filed Oct. 3, 1922. Serial No. 592,124. 2 Claims. (Cl. 116—34.)

1. A device of the character described comprising a tubular body adapted at one end for attachment to a pneumatic tube or tire, outwardly opening normally closed spring pressed valve means therein for controlling the bore of the tubular body, signal means adapted to be operated by pressure fluid escaping from the tube or tire through the tubular body, and means extending from the tubular body into the pneumatic tube or tire and adapted to be actuated upon a partial collapse of the walls of the latter to move the valve means from closing position, said last named means comprising a stem movable longitudinally in the bore of the tubular body, a plunger head at the end of the stem adjacent to the valve means but separate therefrom and a bumper head at the end of the rod disposed within tube or tire, said bumper head being made of a soft compressible material and being adapted to be drawn through the bore of the tubular body when compressed.



1,543,078. LATCH FOR REFRIGERATOR DOORS AND THE LIKE. JOHN EDWARD GLOSKLER, Pittsburgh, Pa. Filed Oct. 12, 1922. Serial No. 668,100. 7 Claims. (Cl. 292—92.)

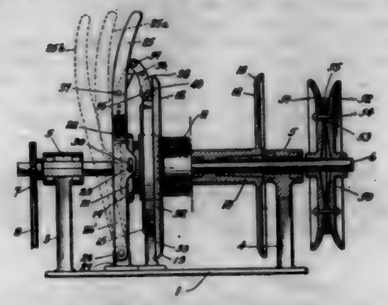
1. In a latch for refrigerator doors and the like, the combination with a keeper mounted on the door jamb, of a latch mechanism mounted on the door and comprising an inclosing casing, a latch-bar mounted in said casing to swing on a horizontal axis and its front and protruding end when depressed engaging said keeper, a vertically disposed helical spring in said casing with its lower end bearing on the front end of said latch bar,



the top of said casing being provided with a threaded hole, and a bearing nut screwed in said hole and having its lower end bearing on the upper end of said spring, whereby the power of said spring may be regulated by adjusting said nut.

1,543,079. COMBINATION TAIL LAMP. CHARLES E. GODLEY, Detroit, Mich., assignor to Edmunds & Jones Corporation, Detroit, Mich., a Corporation of New York. Filed Mar. 14, 1924. Serial No. 699,104. 7 Claims. (Cl. 240—7.)

1. A tail lamp for vehicles, comprising a casing including a rearwardly flaring front portion having a frontal opening and a bottom aperture, and including a forwardly flaring back portion adjoined to the front portion and provided on its interior with reflecting surfaces and having a bottom opening; a lens closing said frontal opening, transparent closures for the bottom aperture and the said bottom opening; and a light bulb mounted in the casing and having its filament disposed within the forwardly flaring back portion and above the said bottom opening.

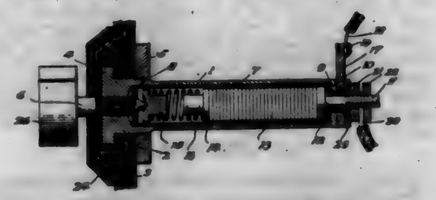


1,543,080. STREET-TRAFFIC SYSTEM. HENRY W. GRAVES, Chicago, Ill., assignor of one-half to John F. Goode, Chicago, Ill. Filed Aug. 25, 1924. Serial No. 733,904. 9 Claims. (Cl. 104—124.)

3. In a street crossing, right-hand turnouts respectively disposed adjacent to the four corners of the street intersection, each turnout comprising an elevated medial portion and a pair of inclined driveways connecting the said medial portion respectively with the two intersecting streets, the parts of each medial portion outside the building lines adjacent thereto being sufficiently elevated to permit the free passage of pedestrians under the same.

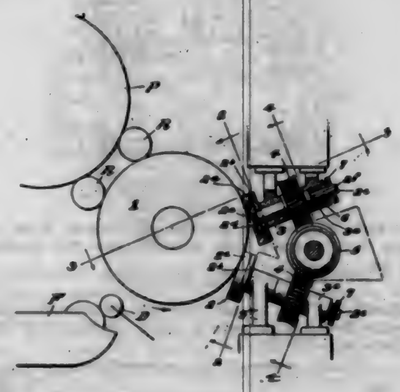
1,543,081. FISHING DEVICE. HANS P. HANSEN, Ketchikan, Territory of Alaska. Filed Feb. 23, 1924. Serial No. 694,604. 1 Claim. (Cl. 192—17.)

A device of the class described comprising a mounting base, standards on said base, a shaft rotatable in the standards, a reel rotatable on the shaft, a clutch plate on the end of the reel, a brake drum on the reel, a pair of brake bands supported from the base and extended about the brake drum and having cam shoes at their ends, a clutch head slidably keyed to the shaft, a lever pivotally fixed to the base and operably connected to said



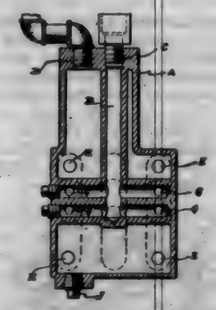
clutch head to shift it into and from driving connection with the clutch plate on the reel, and a toggle mechanism connected with the lever and said cam shoes whereby the brake may be set when the lever is shifted to move the clutch head to its outer released position.

1,543,082. BOAT-CONTROL DEVICE. BERTRON G. HARLEY, North Tonawanda, N. Y., assignor to Albert L. Ellsworth, Toronto, Canada. Filed Mar. 31, 1923. Serial No. 629,084. 3 Claims. (Cl. 115—41.)



1. A boat control device, comprising, the combination with a hull having an arched recess in its bottom, a plate curved to correspond to the curvature of said recess and having forwardly extending side members pivotally supported in the sides of the recess, and means for swinging said members on their pivots to move said plate downwardy to project into the water below the hull and to lift it clear.

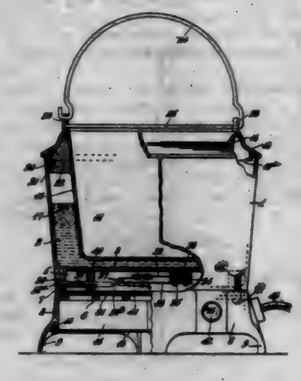
1,543,083. CARBON-PILE RHEOSTAT. HARRY B. MARSHALL, St. Louis, Mo. Filed Feb. 4, 1924. Serial No. 690,428. 12 Claims. (Cl. 201—51.)



1. A rheostat comprising a pile of resistance elements, a screw in axial alinement with the pile, a compression spring operatively interposed between the screw and the pile, and means operating through the bore of the spring for limiting the compressing of the spring by the screw.

1,543,084. INKING MECHANISM FOR PRINTING PRESSES. ISAAC C. SQUIER, North Plainfield, N. J. Filed Feb. 14, 1922. Serial No. 536,410. 24 Claims. (Cl. 101—347.)

1. In inking mechanism; the combination of a cylindrical distributing surface rotating on a fixed axis, and a plurality of series of rotatable distributing members cooperating with such surface; each series extending longitudinally thereof.

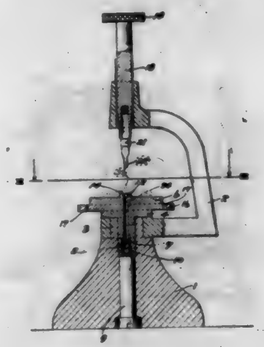


1,543,085. MOLD CLEANING, HEATING, AND LAMP-BLACKING DEVICE. ALEXANDER ANDERSON, Detroit, Mich., assignor to Earl Holley, Detroit, Mich. Filed Mar. 28, 1924. Serial No. 703,981. 3 Claims. (Cl. 22—88.)

1. In a combined lampblack burner, cleaner and heater, a passage for the admission of lampblacking depositing gas, a separate chamber for the admission of heating and cleaning gases, burners for the heating and cleaning gases, separate burners for the lampblacking gas.

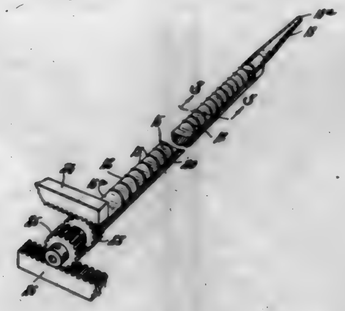
1,543,086. GLUE POT. CHRISTIAN F. BARBER, Cleveland, Ohio, assignor to The Van Dorn Electric Tool Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 23, 1923. Serial No. 620,741. 10 Claims. (Cl. 126—345.)

1. A glue pot structure, comprising a container, a heating element, and a detachable base for supporting said container and said heating element, said base being provided with means for yieldingly pressing said heating element into heat conducting engagement with the bottom of said container.



6. A glue pot structure, comprising a container, a base removably secured therto, a heating element, a thermostatic control located between said container and said base, and regulating means for said thermostatic control accessible from a point outside the side wall of said structure and adjacent the line of separation of said container and said base.

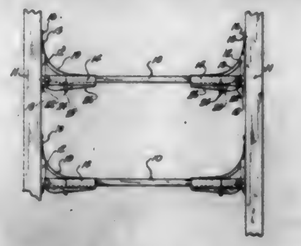
1,543,087. WELL PUMP. JOHN A. BAKER, Los Angeles, Calif. Filed Mar. 24, 1923. Serial No. 627,298. 16 Claims. (Cl. 103—225.)



1. In a pump plunger adapted to be reciprocated through a barrel, an internal plunger body having a pump rod connection at its upper end, a non-expansible surrounding liner for the plunger having frictional engagement with the barrel and being supported on the the plunger body at its lower end, said liner being of relatively easy fit and movable longitudinally on the body, and means at the upper end of the plunger body to limit upward movement of the liner on the body.

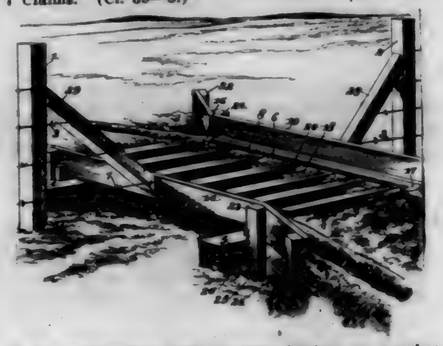
1,543,088. BALANCE-WHEEL SUPPORT. BLAND H. BALLARD, Berkeley, Calif., assignor of one-half to George W. Schofield, San Francisco, Calif. Filed May 13, 1924. Serial No. 713,063. 8 Claims. (Cl. 29—89.)

1. Means for mounting a balance wheel having a rim split into sections comprising a support for the balance wheel having flanges extending into the splits for preventing relative movement of the sections.



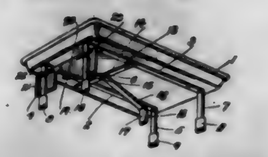
1,543,089. PICKER STEM. JOSEPH BARDWELL and HARRIS G. PROUTY, Whitman, Mass. Filed June 17, 1924. Serial No. 720,550. 3 Claims. (Cl. 56—50.)

1. A picker stem comprising an elongated rod having a tapered nose portion, a substantially semi-cylindrical side, and a substantially flat side extending inward from the inner end of the nose portion; and a plurality of separately formed arcuate pointed hooks overhanging the flat side, and provided with arcuate shanks, the semi-cylindrical side of the rod including spaced apart arcuate ridges alternating with arcuate grooves in which the arcuate shanks are secured, said ridges and shanks forming a substantially semi-cylindrical runner portion of the stem.



1,543,090. CONCRETE FORM. ALFRED E. BAUMANN, Milwaukee, Wis. Filed Aug. 1, 1924. Serial No. 729,521. 6 Claims. (Cl. 25—118.)

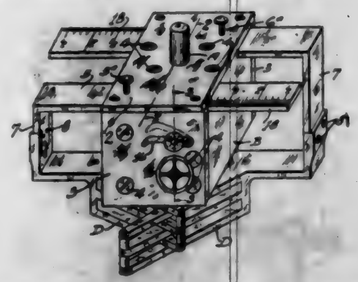
1. A corner form for concrete stairways comprising a concrete retaining angle bracket having a portion for receiving the end of a riser form member in laterally removable clamping engagement and another portion for attachment to the inner face of an inclined



side form member and adapted for removal from and along said inclined side member after the concrete has set.

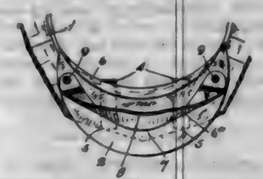
1,543,091. STILE. JOSEPH THOMAS BERTHELOTE, Goldbutte, Mont. Filed Apr. 16, 1924. Serial No. 707,006. 7 Claims. (Cl. 39—5.)

1. In combination with a fence having an opening, a stile situated in said opening having grooved side timbers providing fixed tracks for the wheels of a vehicle, and means fixed in position upon and between tracks preventing an animal from walking through.



1,543,092. PORTABLE SERVITOR. HARRY A. BEYNON, Kansas City, Mo. Filed June 20, 1924. Serial No. 721,224. 6 Claims. (Cl. 45—51.)

1. A servitor comprising a top, a frame supporting the top having legs, a centrally located pivoted brace carried by the frame, the brace being provided with an arm, and a transverse slide having offset shoulders movable into and out of line with the arm to change the angle position of the brace.



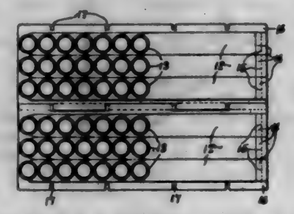
1,543,093. CENTER AND ECCENTRIC MARKING DEVICE. JOHN ADAM BICKL, St. Louis, Mo. Filed Apr. 21, 1924. Serial No. 707,958. 5 Claims. (Cl. 33—191.)

1. A device for the purpose described, comprising a body portion, a reciprocating marking element carried by said body portion, a pair of slides arranged in said body portion in parallel relation, opposed locating elements on said slides that are adapted to engage the object to be marked, a manually-operable rack and pinion mechanism for simultaneously moving said slides in opposite directions to separate said locating elements and

for thereafter moving said slides simultaneously in opposite directions to close said locating elements, and means whereby one of said slides can be disengaged from said rack and pinion mechanism and moved manually to change the position of the locating element thereon relatively to the other locating element.

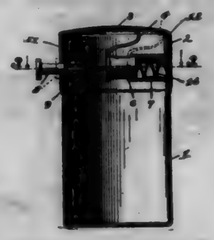
1,543,094. CAP WITH EYESHADE. HARRY BLECKER and SAMUEL K. KRAFF, Reading, Pa. Filed July 21, 1924. Serial No. 727,199. 2 Claims. (Cl. 2—10.)

1. In combination with a cap having a vizor provided with spaced fastening elements arranged on the underside thereof near the ends of said vizor, a detachable eyeshield formed of approximately flat substantially stiff sheet material having fastening elements arranged near the inner edge and ends of the shield and spaced a greater distance apart than the fastening elements of the vizor and connected to the fastening elements of the vizor, so as to cause determined outward bowing of the applied shield.



1,543,095. SPRING BOTTOM. CHARLES D. BROUYETTE, Topeka, Kans. Filed Oct. 3, 1923. Serial No. 666,335. 6 Claims. (Cl. 5—270.)

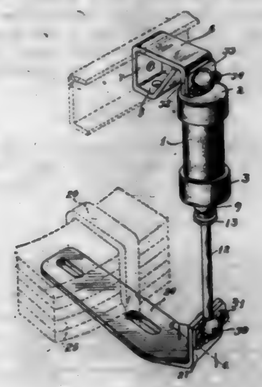
1. In a spring bottom, a plurality of coiled springs, means for securing the bottom portions of the springs in spaced relation to maintain the springs in rows, and tying-in members, each tying-in member comprising a strand bent to provide a spring seat, a loop and a hook at one end, the other end of each strand being coiled to engage the top convolute of a spring, the coil terminating in a right angular arm having a loop receiving seat and a transverse hooked end, the transverse hooked end of each member passing through the loop of a complementary member and interlocking with the top convolute of a spring, the loop of each member being receivable in the seat of the complementary member, the spring seat and first named hook of each member engaging one of the coil springs.



6. A locking member for spring bottoms comprising a strand having bent portions to provide a spring engaging seat, one end being hook shaped, the strand having an open transverse loop between the hook and the spring seat, the opposite end of the strand being coiled, the coil terminating in a right angular projection having a bend to form a notch, the extremity of the bend terminating in a hook.

1,543,096. ARTICLE FOR MAKING CIGARETTES. CHARLES H. CAMPBELL, Springfield, Ohio. Filed June 26, 1924. Serial No. 722,617. 4 Claims. (Cl. 131—59.)

1. An article of manufacture comprising a wrapper for cigarettes having an expansible body and a relatively short inexpansible mouth piece.

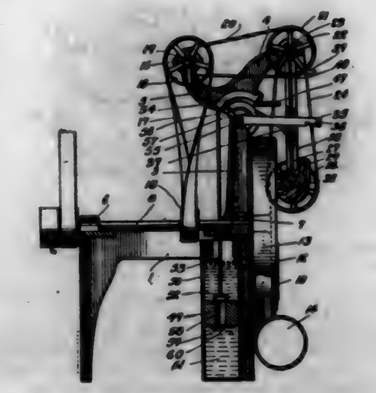


1,543,097. DISPENSING CONTAINER. FREDERICK F. CANTON, San Rafael, Calif. Filed Feb. 4, 1924. Serial No. 690,541. 1 Claim. (Cl. 221—62.)

A dispensing container comprising a body; a cap detachably connected to the body, said cap having a centrally disposed dispensing aperture; a transversely disposed cylindrical guide secured within the cap; a plunger mounted within the guide; a closing element connected to the plunger and arranged to engage the inner surface of the can to close the dispensing aperture; an actuating member extending outwardly through the side of the cap; and a link connecting the actuating member and the plunger, said link being formed from two strands of wire having their adjacent ends twisted together to form threads adapted for screwing into the plunger at one end and into the actuating member at the opposite

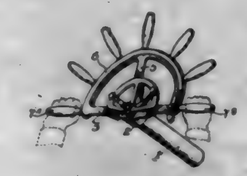
end, the intermediate portions of said strands being spread apart out of alignment with the dispensing aperture to avoiding causing an obstruction to the passage of substance therethrough when the plunger and closing element are moved to the open position.

1,543,098. SHOCK ABSORBER FOR AUTOMOBILES. NICHOLAS CARTER and MILAN KRIVOKUCHA, Chicago, Ill. Filed July 16, 1924. Serial No. 726,253. 4 Claims. (Cl. 188—88.)



1. A shock absorber comprising a cylinder partly filled with a liquid, a piston having a head slidable in the cylinder and a stem extending slidably through one head of the cylinder, the piston head having a continuously open port extending through it and also a relatively larger port extending through it, and a check valve disposed for opening and closing the said larger port according as the piston is moving in one direction or the other, the check valve comprising a flexible flap having one face adapted to bear against one face of the piston head, the flap being adapted to be flexed away from the said face by the flow of liquid through the said larger port, and a stiffening member engaging a part of the flap to limit the flexing of the flap.

1,543,099. METHOD OF MANUFACTURING STITCH-DOWN SHOES. WILLIAM H. COWELL, Winthrop, Mass. Filed Apr. 10, 1924. Serial No. 705,490. 3 Claims. (Cl. 12—142.)

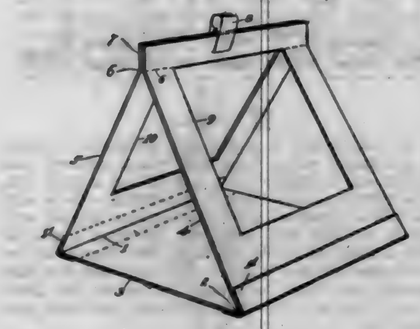


1. The improvement in the method of manufacturing stitch-down shoes which consists in first preparing a unit comprising a sole having a box toe or stiffener attached to the forepart thereof, then applying the unit thus prepared to a last by inserting the toe of the last within the said box toe, then making fast the heel part of the sole to the last, and then applying the upper and performing the lasting and remaining operations.

1,543,100. WOOD-FEATHERING MACHINE. WILLIAM D. CRAIG, Kansas City, Mo. Filed Dec. 5, 1923. Serial No. 678,658. 2 Claims. (Cl. 144—185.)

1. In a machine of the class described, a frame, a rotatable disk carried by the frame having knives radially disposed therein, standards on the frame, a shaft carried by the standards, segments on the shaft, a swinging work holding carriage movable toward and away from the disk, a dash pot, a piston in the dash pot, a flexible connection between the piston and on one of the segments and a flexible connection between the carriage and the other segment and means for causing rotative movement of the work.

1,543,101. STEERING WHEEL. FRED T. CRICHTON, Chicago, Ill., assignor of forty-nine one-hundredths to Grace T. Crichton. Filed June 25, 1924. Serial No. 722,254. 5 Claims. (Cl. 74—33.)



1. The combination with the steering post of a self-propelling vehicle, of a steering wheel fast upon the post; the said wheel comprising a substantially semi-circular rim having its diametric side parallel to the driver's seat, and its arcuate portion forwardly directed when the steering post is disposed for directing the vehicle straight ahead, and a plurality of uniformly spaced handles projecting radially outward from the said arcuate rim portion in a plane transverse of the axis of the steering post, the diametric side of the rim being formed by two spokes of the wheel.

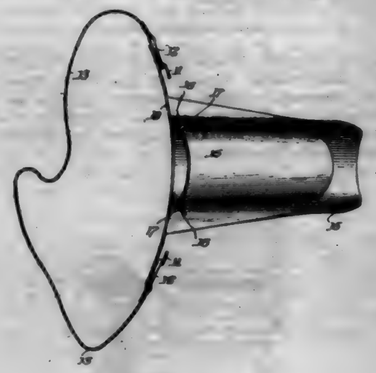
1,543,102. DISPLAY RACK. NATHAN I. FLEISCHER, Cincinnati, Ohio. Filed Sept. 2, 1922. Serial No. 585,892. 3 Claims. (Cl. 211—24.)

1. A display rack comprising base and side sections arranged to form a triangle, said side sections being

provided with registering openings through which the sides of a roll of merchandise resting on said base may

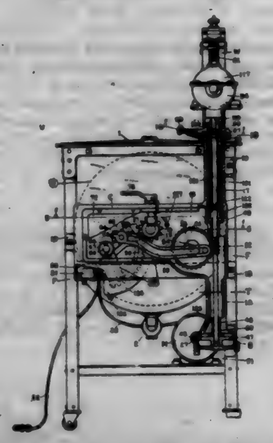
extend so as to permit said roll to rotate in said rack for the removal of said merchandise.

1,543,103. BED COUCH. JOSEPH M. HEALE, Toronto, Ontario, Canada. Filed Jan. 8, 1923. Serial No. 610,487. 5 Claims. (Cl. 5—13.)



1. In a bed couch, the combination with the couch frame, of a section secured to a fixed pivot and suspended at the rear of the frame, a section pivotally connected to the lower end of thee rear section, leg supports pivotally connected to said second section and secured to a fixed pivot at the forward side of the frame, a third section pivotally connected to the second section, an outer section pivotally connected to the third section and adapted to form a support for the couch seat, and link connections joining the outer and third sections with the pivotal leg supports below their point of connection to the second section to rigidly support the intermediate sections when in their extended position and to operate in the folding action of the bed.

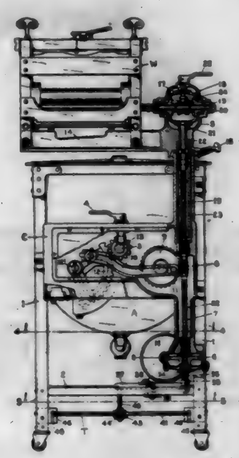
5. In a bed couch, the combination with a plurality of hinged sections and a leg support rigid with the outer section, of a back pivotally connected to said leg support, a member slidably supported on said back and adapted to move either side of the pivot, and a coil spring connected to said slidable member to hold the back in tilted positions.



1,543,104. COLOSTOMY APPLIANCE. CHARLES A. HOAG, De Kalb, Ill. Filed July 18, 1924. Serial No. 726,712. 1 Claim. (Cl. 128—283.)

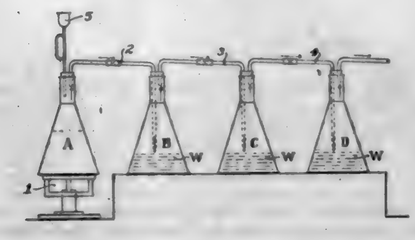
In a device of the class described, the combination of a rigid plate curved to correspond substantially to the curvature of the abdomen of the wearer and provided with a notch in its upper edge, a rigid, open top spout fixed to the plate beneath said notch, and projecting at substantially a right angle from the plate, a cover

for said spout having a removable hinge connection therewith, and means on the plate by which said plate may be secured against the body of the wearer.



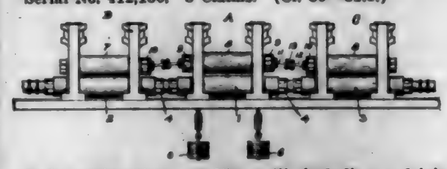
1,543,105. OPERATING GEARING FOR WASHING MACHINES. WINTHROP E. HOWE, Rochester, N. Y., assignor, by mesne assignments, to The G. R. S. Products, Inc., Colonie, N. Y., a Corporation of New York. Filed Nov. 12, 1919. Serial No. 337,525. 24 Claims. (Cl. 74—50.)

1. In a combined power operated washing machine and wringer, a rectangular supporting frame comprising legs and cross braces, a box-like oil-tight casing with a removable cover extending across one side of said frame and fastened thereto at three points, a stuffing-box in the back wall of said casing, a load shaft extending through said stuffing-box and adapted to be connected to the washing element, manually operable means for sliding the load shaft back and forth, said casing having a hollow extension integral therewith which extends down from the casing near one corner of the supporting frame, a vertical drive shaft in said extension, a second stuffing-box at the lower end of said extension, a horizontal power shaft extending through said last named stuffing-box into the lower end of said extension, worm



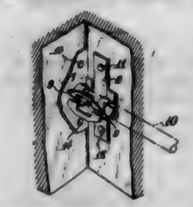
gearing between the power shaft and the drive shaft, operating mechanism in said casing for alternately rotating said load shaft, and a worm on said drive shaft for driving said mechanism.

1,543,106. SAFETY WRINGER CONTROL FOR WASHING MACHINES. WINTHROP K. HOWE, Rochester, N. Y., assignor, by mesne assignments, to The G. R. S. Products, Inc., Colonie, N. Y., a Corporation of New York. Filed Nov. 12, 1919. Serial No. 337,526. 2 Claims. (Cl. 74—101.)



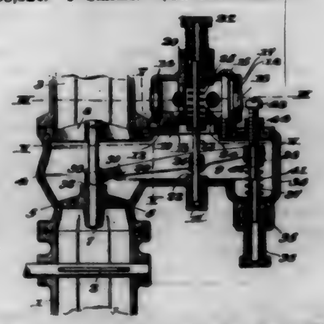
1. In a combined power operated washing machine and wringer, the combination with a wringer and normally inactive driving means therefor, of a foot controlled member extending on all sides of the machine and supported on a single pivot for controlling said driving means, said foot controlled member as it is operated and released automatically rendering said driving means active and inactive respectively.

1,543,107. WEED-DESTROYING COMPOSITION AND PROCESS OF PRODUCING THE SAME. HUGH EDWARD HUGHES, Berkeley, Calif., assignor, by direct and mesne assignments, to The Weed Control Company of California, Berkeley, Calif., a Corporation of California. Filed Aug. 26, 1924. Serial No. 734,200. 3 Claims. (Cl. 252—1.)



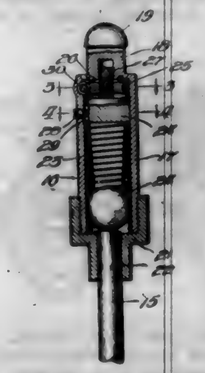
1. A composition for the described purpose comprising sulfuric acid, hydrochloric acid, arsenic, saltpeter, solution water, and water charged with the condensed distilled vapors of the mixture of said acids, arsenic and saltpeter.

1,543,108. ROLLING MILL. LORENZ IVERSEN, Pittsburgh, Pa., assignor to Mesta Machine Company, a Corporation of Pennsylvania. Filed Sept. 23, 1920. Serial No. 412,150. 3 Claims. (Cl. 80—31.1.)



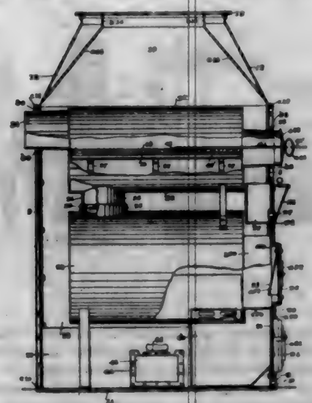
3. In combination, a rolling mill, including a driving roll, a balanced roll, a jump mill located adjacent said first mill and including a driving roll and a jump roll, an operative connection between the driving rolls of said mills, and a universal driving connection between said balanced roll and said jump roll, including a friction clutch, adapted to render the jump roll effective as the driving agent of said balanced roll when said first mill is empty, but which is adapted to render the jump roll ineffective as a driving agent when said first mill is working.

1,543,109. CLIP BRACKET FOR CURTAIN RODS. SAMUEL M. KASS, Philadelphia, Pa. Filed Sept. 1, 1921. Serial No. 497,632. 2 Claims. (Cl. 156—22.)



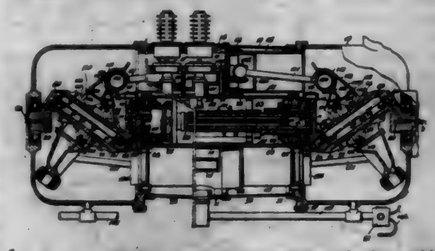
1. A bracket having two sides at right angles to each other, one supporting the curtain rod and the other forming an abutment, for the end of the rod, in combination with spring clips integral with the curtain rod holding side, the clips having spaced spring portions, connecting members and a hollow center, and holding means for securing the member to a wall, balanced with respect to the spaced spring portions, corresponding in width with the opening between the spring portions and cut therefrom.

1,543,110. AUXILIARY AIR VALVE. WILLIAM HENRY KITTO, Jr., Detroit, Mich. Filed Nov. 5, 1919. Serial No. 335,824. 9 Claims. (Cl. 123—124.)



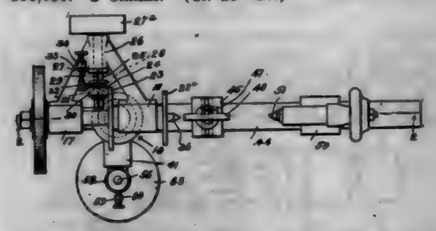
1. An auxiliary air inlet device for the intake manifold of an internal combustion engine, comprising a valve body having a side extension, a valve adapted to admit air to the side extension of said valve body, a lever adapted to open said valve, means in said valve body actuated by fluid passing therethrough adapted to effect said lever to open said valve, and means carried by the side extension of said valve body adapted to be adjusted to change the leverage of said valve lever.

1,543,111. VALVE TAPPET AND THE LIKE FOR INTERNAL-COMBUSTION ENGINES. RALEIGH I. KLIPSTEIN, Des Plaines, Ill. Filed July 25, 1924. Serial No. 728,125. 2 Claims. (Cl. 123—90.)



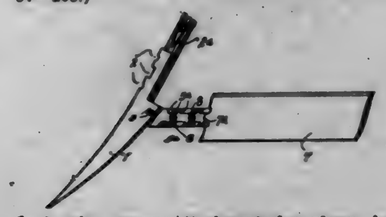
1. As a new article of manufacture, a device for the purpose specified including a cylindrical member having a downwardly extending guide sleeve at its lower end for the accommodation of the upper end of a tappet rod, a ball within said member adapted to receive the thrusts of the upper end of said rod, an adjustment block within said cylindrical member above the ball, a spring between the adjustment block and ball, a threaded stem on the upper end of the adjustment block, a worm gear threaded on said stem, a ball bearing between said worm gear and the upper end of the cylindrical member, a worm extending across the cylindrical member and engaging the worm gear, whereby the position of the adjustment block may be varied by the adjustment of the worm, means for locking the adjustment block in adjusted position, and a hemispherical head on the upper end of the member, substantially as described.

1,543,112. HEATING FURNACE. JOSEPH M. LAUBE, Bellingham, Wash. Filed Oct. 30, 1922. Serial No. 597,929. 2 Claims. (Cl. 126—99.)



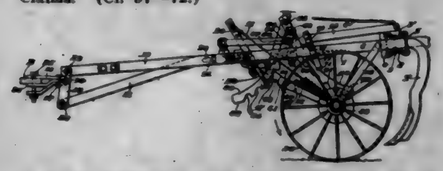
1. In a heating furnace in combination, a combustion chamber, a radiator chamber above said combustion chamber the lower rear part of which has flue connection with said combustion chamber and the rear upper part of which has flue connection with a smoke pipe and having a clean-out opening in its front wall, a removable cap having a small hole therethrough over said clean-out opening, two damper slideways removably mounted on the interior walls of said radiator to extend in slideway relation from the front to the rear thereof and located midway between the bottom and top thereof and adapted for installation and removal through said clean-out opening, a damper shorter than said radiator mounted therein for reciprocation on said damper slideways and adapted to pass through said clean-out opening for installation and removal, and a damper rod connected to said damper and mounted for reciprocation in said hole in said clean-out-opening cap.

1,543,113. ENGINE-LUBRICATION SYSTEM. ALBERTO LLEO and CLAUDIO BARADAT, Barcelona, Spain; said Baradat assignor to said Lleo. Original application filed Jan. 5, 1920, Serial N. 349,652. Patent No. 1,479,918, dated Jan. 8, 1924. Divided and this application filed Jan. 15, 1921. Serial No. 437,484. 14 Claims. (Cl. 184—6.)



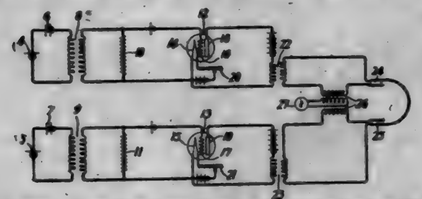
1. In an internal combustion engine of the wabble plate type, a driven shaft including a central straight portion, angularly disposed portions at opposite ends thereof and straight end portions aligned with the central portion, said central and inclined portions being hollow separate means for closing the ends of the same to form oil compartments therein, intercommunicating means providing for fluid communication between the compartments so that the lubricant will flow from one into another and means for feeding the lubricant through one of the end portions to supply the oil compartment in the adjacent inclined portion of the shaft, wabble plate mountings on said inclined portions of the shaft, said portions provided with vents for supplying the mountings thereon with lubricant from the interior thereof.

1,543,114. MACHINE TOOL. CHARLES E. H. LLOYD, Los Angeles, Calif. Filed Sept. 23, 1922. Serial No. 590,050. 2 Claims. (Cl. 29—27.)



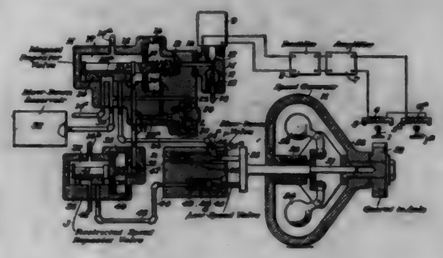
1. A machine tool, comprising a standard, a shaft mounted on said standard, means for frictionally driving said shaft, a friction disk adapted to be detachably secured to said shaft, and a plurality of radially disposed arms pivotally mounted on said standard adapted to support tool units, whereby any one of said tool units may be swung into or out of operative engagement with said friction disk.

1,543,115. LONG-SWEEP ATTACHMENT FOR CULTIVATORS. JOSEPH B. LONG, Cleburne, Tex. Filed Sept. 2, 1924. Serial No. 735,297. 3 Claims. (Cl. 97—205.)



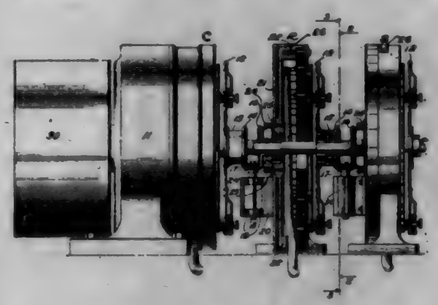
1. A wing sweep attachment for plows, having in combination with a plow share, a pair of inwardly curved members in limited pivotal attachment to each rear upper side of the plow share, a plurality of spaced apertures cut through each of said members, said apertures adapted to receive wing sweep shafts, and projections arranged on the members to hold the wing sweeps at the desired angular adjustment, and set screws adapted to be tightened upon the wing sweep snafts to hold them within the apertures of the members.

1,543,116. POWER-LIFT AGRICULTURAL IMPLEMENT. JOSEPH MADER, Philadelphia, Pa., assignor to S. L. Allen & Co., Inc., a Corporation of Pennsylvania. Filed Sept. 14, 1922. Serial No. 588,119. 13 Claims. (Cl. 97—72.)



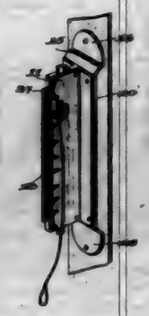
1. In an implement of the class described, the combination of a normally substantially horizontally disposed tool carrying frame, an axle disposed beneath the frame and having arms extending to and movably connected with the frame, a pair of ground wheels freely rotatable on the axle, a lantern wheel secured to each wheel, a lifting arm horizontally pivoted above the frame in alignment with each lantern wheel and having a plurality of notches adapted to cooperate therewith, means for moving said arms from a position out of engagement with said wheels to a position in engagement therewith, and toggle members extending between the axle and the frame operative to maintain said frame in raised position after it has been lifted from normal position by coaction of said lifting arms and said lantern wheels.

1,543,117. ACOUSTICAL AID FOR DEAF PERSONS. JOSEPH P. MAXFIELD, Millburn, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 28, 1921. Serial No. 503,771. 4 Claims. (Cl. 179—107.)



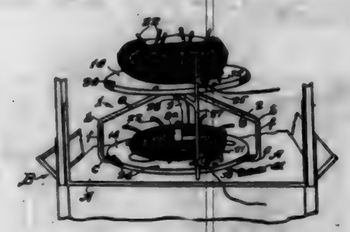
1. The method of improving the hearing of a deaf person, which consists in generating continuous vibrations, applying said vibrations to the patient simultaneously with the sound vibrations to be heard, and adjusting the frequency of the continuously generated vibrations to suit the individual case.

1,543,118. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. FRANK H. NICHOLSON, Philadelphia, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Aug. 28, 1924. Serial No. 734,714. 2 Claims. (Cl. 246—63.)



1. Railway traffic controlling apparatus comprising apparatus on a train arranged when released to change from an initial condition to an ultimate condition in a time interval which decreases as the speed of the train increases, means partially on the train and partially in the trackway for continually keeping said apparatus in its initial condition under safe traffic conditions but for releasing said apparatus under dangerous traffic conditions, brake applying mechanism set into operation when said apparatus reaches its ultimate condition, a portion of track containing a permanent hazard and not equipped with trackway apparatus for keeping said apparatus continually in its initial condition, and devices in such portion of track for restoring said apparatus to its initial condition at intervals but so arranged that if the speed of the train exceeds a safe maximum the apparatus will reach its ultimate condition.

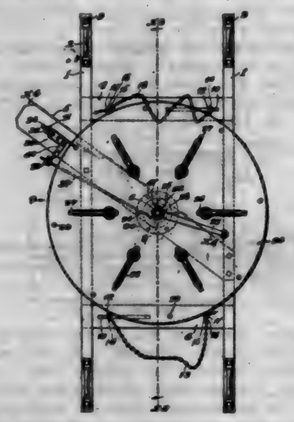
1,543,119. DISTRIBUTING APPARATUS. HARRY PFANNENSTIEHL, Maplewood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 1, 1920. Serial No. 420,908. 10 Claims. (Cl. 178—58.)



1. A distributing apparatus comprising a distributor face, conducting rings and segments carried by said face, a rotatable brush arm, brushes supported by said arm and adapted to sweep over said conducting rings and segments, means for rotating said brush arm at a definite predetermined speed, and manual means for orientating the brush arm in either direction while rotating.

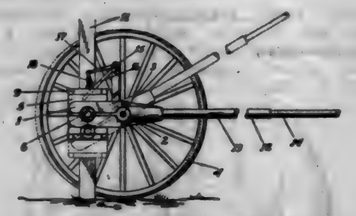
1,543,120. FISHHOOK HOLDER. MATHIAS RABER and JOHN H. CUMMINGS, Bend, Oreg. Filed Jan. 14, 1925. Serial No. 2,843. 10 Claims. (Cl. 43—32.)

1. A fish hook holder comprising a movable member having a plurality of hook receiving openings, and means whereby with a limited movement of said member said hooks will be bound against removal from said openings.



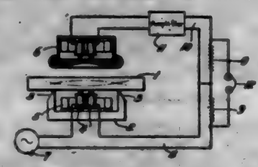
1,543,121. DOUBLE-DECK COMBINED TAKE-UP AND PAY-OUT WIRE REEL. ALVA E. RAVENSCROFT, Los Angeles, Calif., assignor to C. R. Kieruiff & Co., Los Angeles, Calif., a Copartnership consisting of C. R. Kieruiff and Alva E. Ravenscroft. Filed June 28, 1923. Serial No. 648,294. 4 Claims. (Cl. 242—85.)

1. A wire reel comprising a frame composed of two pieces of channel iron; one of said pieces being a loop formed with a horizontal top limb and two bottom limbs, and side limbs connecting said top and bottom limbs, and means to hold said loop upright.



1,543,122. SINGLE-DISK PAY-OUT AND TAKE-UP WIRE REEL. ALVA E. RAVENSCROFT, Los Angeles, Calif., assignor to C. R. Kieruiff & Co., Los Angeles, Calif., a Copartnership consisting of C. R. Kieruiff and Alva E. Ravenscroft. Filed June 28, 1923. Serial No. 648,295. 1 Claim. (Cl. 242—85.)

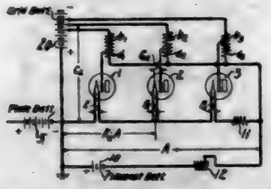
The lineman's reel substantially set forth comprising a frame having rails; cross bars connecting said rails together; a diagonal bar connecting said rails and having one end extending beyond one of said rails; and axle secured to said diagonal bar; a thimble rotatably mounted on said axle and having a flange and a squared portion; a disc secured to said flange; radially adjustable prongs secured to said disc; a post secured to the extending end of said diagonal bar; a wire guide and lock arm carried by said post; a bracket secured to said



frame; a rod having one end engaging said spindle and its other end extending through said bracket; and means abutting against said bracket to adjust the rod against said spindle.

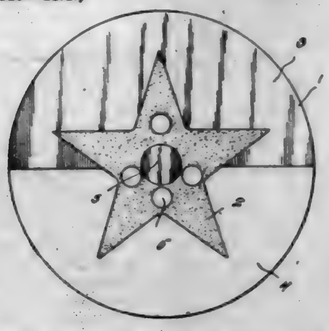
1,543,123. POST PULLER. LOUIS RENARI, Santa Rosa, Calif. Filed May 21, 1924. Serial No. 714,804. 5 Claims. (Cl. 254—81.)

5. A post puller comprising a lever structure pivoted and supported from the ground intermediate its ends, opposed blocks adapted to engage the opposite sides of a post, and guide means for said blocks pivoted as a unit in the lever structure, the blocks being arranged for upward diverging movement in the guide means, and hand means mounted on the lever structure and connected to the blocks to move them upwardly simultaneously, whereby to enable the blocks to be adjusted to take posts of different sizes and to be held in a predetermined position while a post is being engaged thereby.



1,543,124. FREQUENCY STANDARD. NORMAN H. RICKER, Houston, Tex., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 9, 1924. Serial No. 724,965. 26 Claims. (Cl. 175—368.)

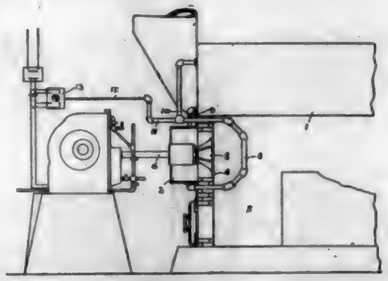
1. A frequency selective transmission system comprising two mutually independent electric circuits, a vibratory mechanical element and means for separately and re-



ciprocally coupling said element to said circuits, comprising electromagnetic coupling means for one circuit and electrostatic coupling means for the other circuit.

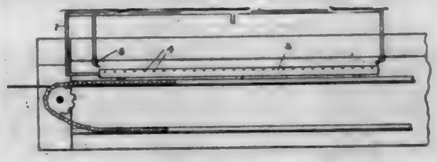
1,543,125. CONTROL OF RELAYS. HUGH R. ROBINSON, Brooklyn, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 21, 1924. Serial No. 707,862. 15 Claims. (Cl. 179—171.)

1. An energy translating system comprising an electric discharge device having an anode, a cathode, and means for controlling current flow between said anode and cathode, voltage supply means for energizing said cathode, a generator of electromotive force for supplying voltage across said anode and cathode, a generator of electromotive force for supplying voltage to said control means, two direct current paths connecting said last generator to points of different potential on said cathode energizing means, and means connecting said control means to a point of one of said paths at a potential different from the potentials of the ends of said one path.



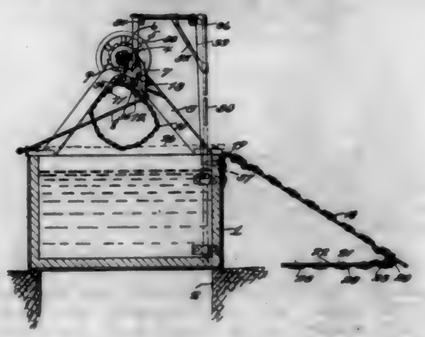
1,543,126. LENS. FREDERICK SCHMITZ, Alexandria, Ind. Filed Mar. 20, 1924. Serial No. 700,649. 1 Claim. (Cl. 240—48.4.)

A lens of the class described comprising a plane glass disk, the upper half thereof being opaque to intercept the passage of light rays therethrough, the lower half being clear and transparent so as to permit unrestricted passage of light rays therethrough, there being a semi-transparent ground area at the center of the plate and said ground area being shaped to provide a star, the points of which extend over and upon the opaque and transparent portions of said plate, there also being an opaque circular portion at the center of said star shaped area, and said circular portion being surrounded by circumferentially spaced clear glass openings confined within said ground area.



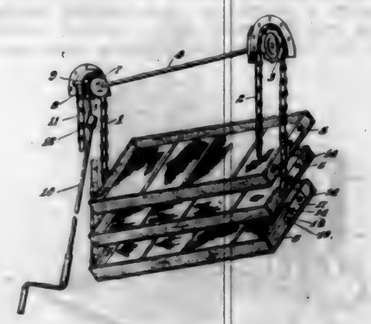
1,543,127. THERMOSTATIC CONTROL FOR OIL BURNERS. WILLIAM E. SHOMB, New York, N. Y. Filed July 31, 1922. Serial No. 578,648. 3 Claims. (Cl. 158—42.4.)

1. A thermostatic control for oil burners, comprising, a burner, a main reservoir, a conduit independent of the circulating system of said reservoir and leading from a low point of said reservoir and returning to a high point and passing contiguous to the flame of the burner,



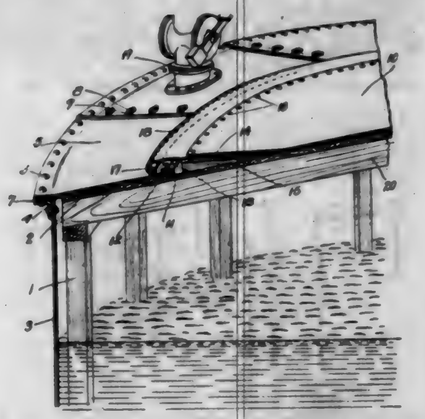
and a thermostatic device controlled by the temperature of the fluid flowing in said conduit adapted to cut off the fuel supply to the burner in the event of the flame being extinguished.

1,543,128. BAKER'S OVEN. JAMES A. SIMPSON, Toronto, Ontario, Canada. Filed Jan. 31, 1924. Serial No. 689,672. 4 Claims. (Cl. 107—57.1.)



1. A bakers' oven having means for distributing steam therein, and means arranged transversely of the oven to project sheets of steam to form effective barriers to retain the steam in a limited area.

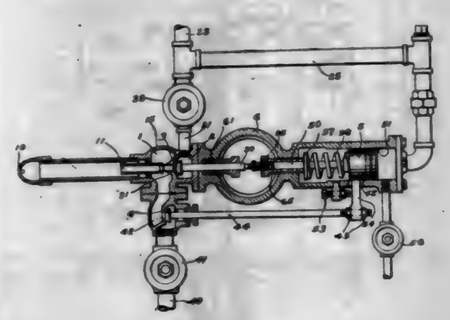
1,543,129. HOG-SCALDING APPARATUS. FRANK J. SMITH, Dodge City, Kans. Filed Aug. 21, 1923. Serial No. 658,607. 2 Claims. (Cl. 17—13.)



2. A hog scalding apparatus including a tank for the reception of scalding water, a windlass mechanism including a shaft supported on the tank, a hoisting sling operatively connected with the shaft and adapted for the reception of the hog, whereby it may be lowered in the scalding water, a table to one side of the tank, and a second hoisting and crane mechanism for cooperating with the sling to swing it to one side over the center of the table.

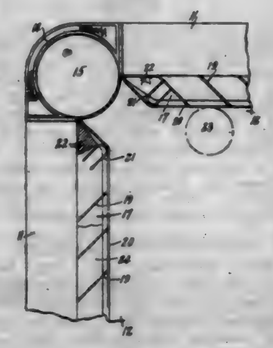
1,543,130. INCUBATOR. SAMUEL B. SMITH, Cleveland, Ohio, assignor to The Buckeye Incubator Company, Springfield, Ohio, a Corporation of Ohio. Filed Oct. 23, 1922. Serial No. 596,253. 4 Claims. (Cl. 119—44.)

1. In a device of the character described, a series of trays arranged in a vertical row, a pair of endless chains arranged respectively at the ends of said trays, a hanger on the end of each tray, each hanger being spaced from the tray sufficiently to permit the chain to straddle the hanger and having a notch arranged midway the width of the trays, said notches being adapted to engage the links of the chains to pivotally suspend the said trays, and means to move the chains to lower the trays.



1,543,131. TANK-ROOF COVERING. JAY ALBERT STOUGH, Tulsa, Okla. Filed July 5, 1924. Serial No. 724,384. 4 Claims. (Cl. 220—5.)

1. A tank comprising a wall, a plurality of segments connected to the wall at the edge thereof and arranged in circular series, roofing material inside the space surrounded by the ring and a flexible connection between the roofing material and the inner edge of the ring.

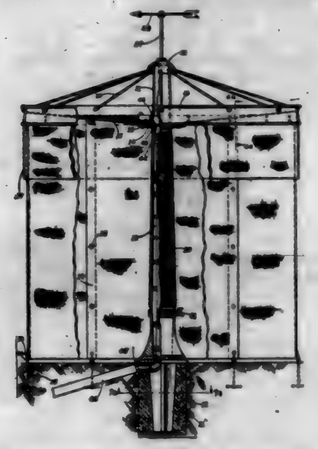


1,543,132. OIL BURNER. ARTHUR EARL SWEET, Tacoma, Wash., assignor to W. D. Tripple, Tacoma, Wash. Filed Mar. 6, 1924. Serial No. 697,218. 1 Claim. (Cl. 158—45.5.)

In an oil burner, a casing having a partition therein forming steam and oil receiving chambers, said partition having a valve port therein and the opposite walls of the casing having one a nozzle receiving opening and the other a valve stem opening, a valve controlling said port in the casing and having a stem passing through its opening in the casing, a nozzle secured in its opening in the casing, an axially positioned pipe section secured in said nozzle opening and extending into the

nozzle, said pipe section being of much smaller diameter than the nozzle pipe and placed with one end slightly spaced from and alined with the discharge end of the steam valve, a steam cylinder having a piston therein and a spring acting in opposition to the steam pressure, and means adjustably connecting the piston rod with the stem of the steam valve.

1,543,133. BILLIARD AND POOL TABLE CUSHION. FREDERICK W. TILLEY, Hamilton, Ontario, Canada. Filed Jan. 23, 1925. Serial No. 4,208. 3 Claims. (Cl. 273—9.)



1. In a billiard and pool table including a supporting frame, side walls facing the playing area of the table, a plurality of leaf springs fixed in diagonal grooves in the side walls and, having free ends extending therefrom, and an elastic band stretched taut along said springs and fastened at its ends.

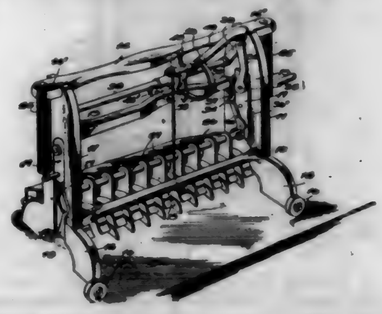
1,543,134. SHELTER. LEBANUS M. TODD, Rochester, N. Y. Filed Feb. 12, 1923. Serial No. 618,475. 10 Claims. (Cl. 20—1.)

1. A shelter comprising a central supporting column, a rigid top carried thereby and projecting laterally there-

from, curtain sections depending from the periphery of the top and adapted to either extend adjacent the

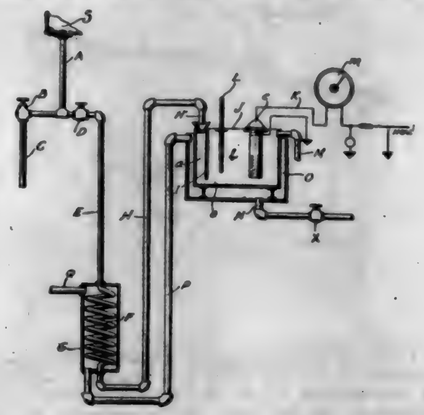
ground or be rolled upwardly out of use, and supporting means on the under side of said top for supporting the rolled up portions of the curtain sections.

1,543,135. BALL BEARING. GUSTAVO VINCON, Villar Perosa, near Pinerolo, Italy. Filed May 31, 1922. Serial No. 564,899. 4 Claims. (Cl. 308—196.)



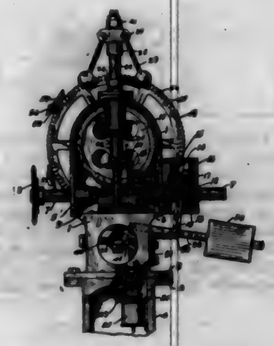
1. A race-way for ball bearings comprising two annular members adapted to contain a series of balls, each member having one edge reduced in thickness to form a telescoping connection between the members, annular grooves formed in the opposing faces of said reduced edges and adapted when the edges are assembled to form an annular chamber substantially cylindrical in cross section, and a polygonal split member adapted to be inserted between the grooves to lock the edges together.

1,543,136. DOUGH-CUTTING MACHINE. JAMES BENJAMIN WARD, Nashville, Tenn. Filed July 16, 1923. Serial No. 651,886. 4 Claims. (Cl. 107—21.)



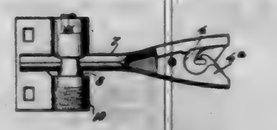
1. In a device of the character described, a bar disposed horizontally, a plurality of blades carried by said bar, means whereby said bar may have vertical movement, means for yieldably retaining the bar in an elevated position with respect to its vertical movement, a shaft rotatably supported, a hand lever for rotating said shaft, connecting means between said hand lever and the bar carrying said blade whereby said bar may be moved downwardly with the rotation of said shaft in a predetermined direction, means whereby the bar carrying said blade will be moved laterally previous to the moment said bar assumes its lowermost position with respect to its vertical movement, and means whereby the bar carrying said blades will be automatically released upon the completion of its lateral movement and permitted to assume its elevated position with respect to its vertical movement.

4. A dough cutting machine comprising a vertically reciprocable blade carrying frame, means for normally and yieldably holding the frame in an elevated position, a shaft, link connections between the shaft and blade carrying frame whereby the frame can be forced downward with the rotation of shaft, a handle extending from the shaft for manually rotating the same, a second rotatable shaft, a plurality of dough retaining fingers extending from the second shaft, connecting means between the handle and dough-retaining fingers for ele-



vating the free ends of the fingers when said handle is swung upward, means whereby with the downward movement of the handle the same will be automatically released from the shaft upon the blade carrying frame terminating its downward stroke, and the connecting means between the handle and retaining fingers serving to hold said retaining fingers depressed while the blade carrying frame moves upward and assumes its normal position.

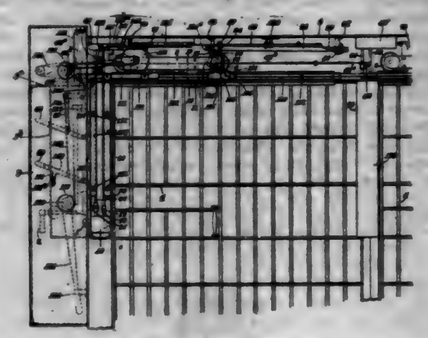
1,543,137. APPARATUS FOR CONTINUOUSLY INDICATING AND CONTROLLING THE DEGREE OF CONCENTRATION OF LIQUIDS IN EVAPORATING VESSELS. GEORGE FREDERIC WEATON, Riverminea, Mo. Original application filed Feb. 13, 1922, Serial No. 536,284. Divided and this application filed Mar. 26, 1923. Serial No. 627,809. 1 Claim. (Cl. 73—51.)



In an apparatus of the class described, in combination with an evaporating vessel provided with a valve controlled discharge conduit, means for conducting from the evaporator a sample of the fluid therein, a cooler, means for conducting said sample to the cooler, a receiving tank, means for conducting the cooled liquid to the receiving tank, means for circulating a cooling medium through the receiving tank and cooler, and means for measuring the temperature and the density of the liquid within the tank.

1,543,138. HOISTING-ENGINE CONTROLLER. CLARENCE R. WELCH, Denver, Colo. Filed Jan. 2, 1924. Serial No. 683,940. 5 Claims. (Cl. 192—140.)

1. A controller for hoisting engines having a drum, comprising, in combination, a centrifugal governor, means for rotating the governor at a speed proportional to the speed of the drum, means for stopping the drum, said last named means comprising a mechanism for cutting off the power and for applying a brake to the drum, means comprising an electromagnet for holding the stopping means inoperative, means for deenergizing said electromagnet whenever the speed of the drum exceeds a predetermined amount, said de-energizing means comprising a switch connected to the energizing circuit of the electromagnet, and means cooperating with the governor for operating said switch and de-energizing said electromagnet when the speed exceeds a predetermined value, said governor having resistance means which is applied in steps whereby the governor acts intermittently when subjected to a constant rotary acceleration.

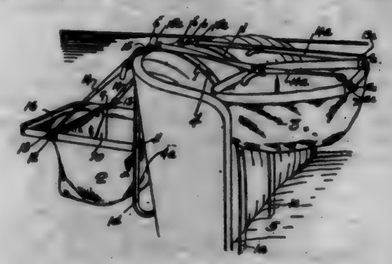


1,543,139. THREAD GUIDE. AMOS E. WHIPPLE, Whitinsville, Mass., assignor to Whitin Machine Works, Whitinsville, Mass., a Corporation of Massachusetts. Filed Mar. 19, 1923. Serial No. 626,010. 17 Claims. (Cl. 242—157.)

1. Thread guide construction for wet twisters, etc., comprising a ceramic guide eye, a supporting box therefor formed of sheet metal protecting said eye on its top, sides and bottom, said box being externally smooth and having an integral sheet metal extension forming a shank and a finger head provided with means for adjustably receiving and supporting said shank.

1,543,140. JAIL-DOOR-LOCKING MECHANISM. JOHN T. WHITEHOUSE, Cleveland, Ohio, assignor to The Van Dorn Iron Works Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 23, 1923. Serial No. 633,963. 33 Claims. (Cl. 189—7.)

1. A jail door locking mechanism comprising a lock bolt adapted for movement into and out of locking position, means for holding said lock bolt in unlocked position, and means carried by the door for releasing



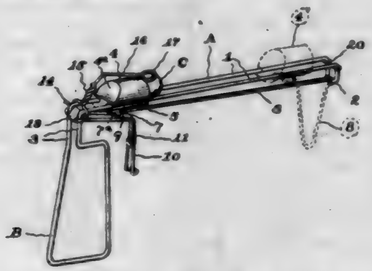
said holding means and adapted to be engaged by said lock bolt for locking the door.

1,543,141. LAMP. WILLIAM H. WOOD, Cleveland, Ohio. Filed Dec. 13, 1920, Serial No. 430,168. Renewed Oct. 20, 1924. 4 Claims. (Cl. 240—41.)

1. The combination with a reflector having an axis and a focal point, of an incandescent electric light bulb comprising two independently usable filaments of unequal candle power, one of the same being substantially V-shaped with its plane coinciding with the reflector axis and its apex substantially at the focal point, the other filament being located cross-wise of the first filament in the angle made by the legs thereof, the planes of said filaments being substantially perpendicular to each other, the second filament intersecting the axis of the reflector and spaced from the apex of the first filament sufficiently so as not to touch the same and the second filament being shaped to lie substantially within the surface which would be produced by revolving the first filament about the reflector axis.

1,543,142. BABY CARRIER FOR AUTOMOBILES. FRANK G. WOODS, Memphis, Tenn. Filed Oct. 22, 1923. Serial No. 669,974. 3 Claims. (Cl. 5—94.)

1. A baby carrier for automobiles comprising supporting members spaceable apart to conform to the spacing of rivets in a seat frame, each member comprising a single piece extending upward from behind the automobile seat, conforming to the curvature of the front of the seat back, thence curving over the

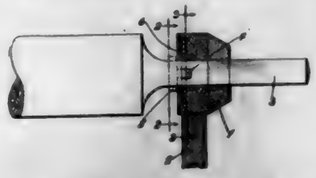


top thereof and extending vertically downward, thence looping inward against the rear of the seat back and extending upward along the same and secured to said vertical section, each of these supporting members having a plurality of corresponding keyhole slots in the front and back legs thereof, and each having an attaching member at the top thereof, of a basket, comprising a frame having a seat carried thereby, the said frame having button head rivets spaced apart projecting from the rear thereof and adapted to be engaged with one pair of said keyhole slots in the supporting member, and adjustable supporting straps extending from the front of said frame to the corresponding attaching members.

1,543,143. TOY. MICHAIL WOZNUCK, Philadelphia, Pa. Filed June 30, 1924. Serial No. 723,378. 5 Claims. (Cl. 272—85.)

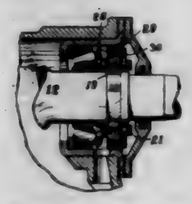
1. A toy comprising a pole having an axle fixed to one end thereof, a pair of wheels mounted on said axle, one of said wheels having its periphery toothed, a frame mounted for rotation on said pole and consisting of a pair of spaced disks united by posts, the ends of the posts being projected beyond one of said disks to engage the teeth on the said wheel to cause rotary movement to be imparted from the wheel to the said frame.

1,543,144. MARBLE SHOOTER. HENRY WURM, Cleveland, Ohio. Filed Apr. 9, 1925. Serial No. 21,847. 18 Claims. (Cl. 273—129.)



1. A marble shooter comprising a barrel formed of spaced strands of wire adapted to support and guide a marble, a plunger slidably mounted upon the wire strands, yielding means for moving the plunger forwardly, and trigger controlled means for holding the plunger at the rear end of the barrel.

1,543,145. CONTROLLER HANDLE. FRANK P. YEOMANS, Oakland, Calif., assignor, by direct and mesne assignments, of one-half to Selma Yeomans, Oakland, Calif., and one-half to Max Horn, San Francisco, Calif. Filed May 4, 1922. Serial No. 558,384. 4 Claims. (Cl. 74—33.)



1. A controller handle comprising a handle portion, a fixed jaw formed integrally therewith, a detachable yoke member carried by said handle portion, a slidable jaw carried by and embracing said yoke, and means for moving said slidable jaw towards said fixed jaw.

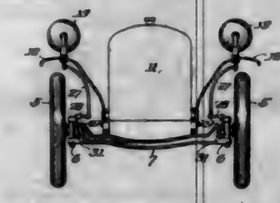
1,543,146. TRUCK FOR SUPPORTING FORM ROLLERS ON PRINTING PRESSES. FERDINAND H. ZIMMERER, St. Louis, Mo. Filed Feb. 9, 1925. Serial No. 7,755. 3 Claims. (Cl. 101—348.)

1. A truck roller for form rollers comprising a roller composed of indurated fiber having a pair of diametrically opposite radial grooves extending inwardly from one end, in combination with a metallic plate embedded in said end of said roller and having a pair of diametrically opposite radial notches in continuation of said grooves.

1,543,147. AXLE. THOMAS ZIMMERMAN, Cleveland, Ohio, assignor, by mesne assignments, to The Eaton Axle & Spring Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 25, 1919. Serial No. 306,633. 12 Claims. (Cl. 64—22.)

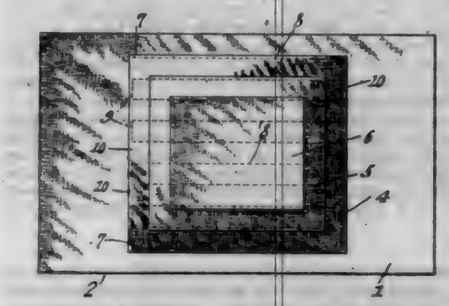
1. In mechanism of the class described, the combination of a shaft having a shoulder thereon, and a collar on said shaft co-operating with said shoulder to transmit axial thrust, comprising a ring formed of a plurality of sections, and means slidable axially over said ring for holding the parts of said ring in assembled relation.

1,543,148. SEPARABLE CUFF BUTTON. BENJAMIN FRANKLIN BAKER, St. John, New Brunswick, Canada. Filed Aug. 26, 1924. Serial No. 734,291. 9 Claims. (Cl. 24—110.)



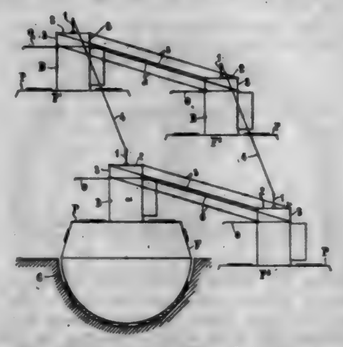
1. A separable button consisting of two parts, one comprising a head and a shank extending from one side thereof and provided with a shoulder, the other part comprising a head having a tubular shank extending from one side thereof and provided at its outer end with an opening to receive the shank of the first mentioned part, mutually opposed locking elements arranged within the hollow shank for relatively free floating movement, means yieldably urging said elements toward each other to a locking position, oppositely located shoulders upon said elements for engagement by the shoulder upon the shank of the first mentioned part, and means operable to relatively separate said elements to disengage said shoulders from the shoulder of the shank of the first mentioned part.

1,543,149. AUXILIARY MOTOR CUT-OFF FOR PRESSURE SYSTEMS. SHERIDAN S. BIGLER, New Philadelphia, Ohio. Filed Jan. 28, 1924. Serial No. 688,887. 2 Claims. (Cl. 103—25.)



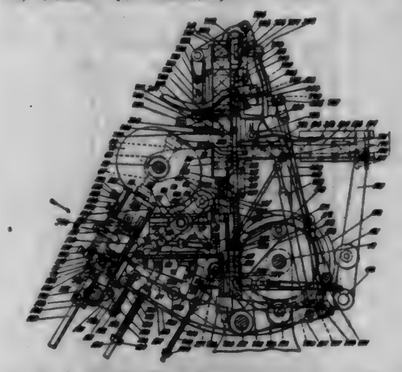
1. The combination with a cylinder adapted to receive pressure; of a bracket having a portion contacting with the outer side of said cylinder and a portion projecting laterally from one end of the latter, means securing the first named portion of the bracket to the cylinder, a hand-closed switch including a base mounted on said bracket and a handle extending across said one end of the cylinder, and a piston in said cylinder having a stem positioned to thrust outwardly upon said handle and open the switch.

1,543,150. DIRIGIBLE HEADLIGHT. CHARLES W. CARLSON and WALTER P. DAVIS, Chicago Heights, Ill. Filed Sept. 21, 1923. Serial No. 664,009. 1 Claim. (Cl. 240—62.)



A headlight mounting for vehicles comprising a hollow standard having a downwardly facing shoulder on its exterior and a threaded portion adjacent thereto adapted to be projected through a portion of the vehicle, an upwardly facing shoulder and a groove formed on the interior of said standard, a lamp supporting post adapted to fit within said standard having a shoulder and a groove adapted to cooperate with the groove and shoulder formed within said standard, and a spring ring adapted to engage both of said grooves.

1,543,151. BLOW-OUT SHOE. ALVA HEYWOOD COOPER, Atlanta, Ga. Filed Feb. 14, 1925. Serial No. 9,253. 1 Claim. (Cl. 152—24.)

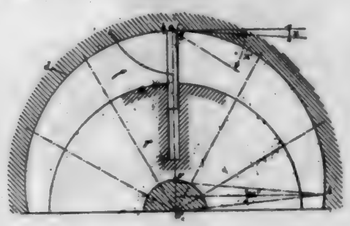


A blow-out shoe for vehicle tires, the shoe being made of textile material and comprising a body, the length of which is greater than its width, a plurality of layers superposed on the body, the area of each layer being less than the area of the layer next therebeneath, the area of the innermost layer being less than the area of the body, and a zig-zag stitching comprising parallel long parts and parallel short parts connecting the long parts at the ends thereof, the short parts being located at right angles to the long parts, the short parts joining the innermost layer to the body, all of the long parts joining at least one of the layers to the body, some of the long parts joining all of the layers to the body; the short parts of the stitching extending parallel to the ends of the body and being spaced apart transversely of the body and the long parts of the stitching extending parallel to the edges of the body thereby permitting the body and the layers to be united by the stitching whilst they are flat and preventing them from buckling when the shoe is disposed in trough shape.

1,543,152. STABILIZING FLOAT FOR SHIPS. LOUIS THEOPHILE COUTY, Tulle, France. Filed Nov. 13, 1923. Serial No. 674,582. 3 Claims. (Cl. 114—191.)

3. A ship having a plurality of basins to contain water, floats in said basins buoyed by the water in said basins, structures extending upwardly from said floats and connections between said structures, said structures and said connections coacting to secure simultaneous movement of all of the floats in any direction when any one of them departs from a horizontal position.

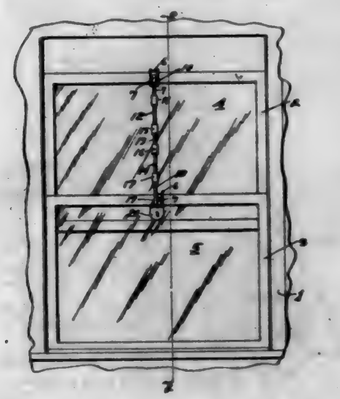
1,543,153. MACHINE FOR LABELING PACKETS, BOXES, AND THE LIKE. ALBERT DAY, London, England. Filed Mar. 6, 1923. Serial No. 623,276. 10 Claims. (Cl. 216—54.)



1. In a machine for the purposes set forth, a box open at the top and bottom, a cage under said box, a conveyor to deliver packets positively into said cage, a pivoted flap adapted to rise to enclose the packet in said cage, means for positioning an adhesive label

between said box and packet, and a ram vertically reciprocating in said cage to lift and push packets therefrom successively into and through said box together with the label.

1,543,154. PROCESS OF DISPOSING OF GARBAGE. CLARENCE R. FOX and WILLIAM S. DAVIS, Lebanon, Pa. Filed July 28, 1923. Serial No. 654,500. 1 Claim. (Cl. 71—6.)

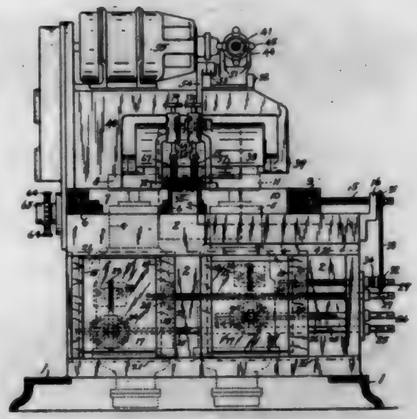


The process of disposing of garbage which comprises reducing it to fine particles by mechanical means, and then passing the finely divided garbage through a sewerage putrefaction system to putrefy it.

1,543,155. LUBRICATION OF PARTS ROTATING AT HIGH SPEED. CHARLES FRADET, Asnieres, France, assignor to Walter Schindler, Asnieres, France. Filed Apr. 20, 1922. Serial No. 555,689. 2 Claims. (Cl. 184—1.)

1. Means for effecting lubrication of the contacting surfaces of rotary pumps and the like of the radially moving van type, which comprises vanes each having the forward edge of its surface engaging the stator wall beveled to an angle greater than the maximum angle formed by the normal to the vane and the tangent to the surface with which the vane contacts, whereby the lubricant is forced under pressure between the surfaces in contact.

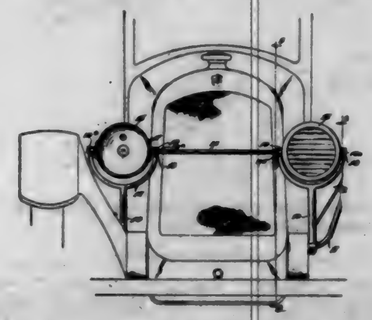
1,543,156. WINDOW LOCK. ALEXANDER T. GIBSON, Oakland, Calif. Filed Mar. 15, 1923. Serial No. 625,393. 4 Claims. (Cl. 292—262.)



1. A window lock of the class described, comprising a screw eye secured to the top member of the upper window sash, a screw eye secured to the top member of the lower window sash, a jointed rod with a hook to engage said upper screw eye, and an eye to parallel said lower screw eye, means to lock said lower eyes together, and means to change the length of said jointed rod.

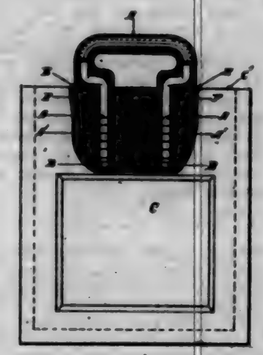
1,543,157. PROCESS OF OBTAINING SULPHONATED PRODUCTS OF WOOL FAT. OLIVER HERZOG, Berlin-Dahlem, Germany. Filed Jan. 29, 1925. Serial No. 5,666. 2 Claims. (Cl. 87—26.)

1. The process of obtaining sulphonated products of wool fat, consisting in dissolving wool fat in a volatile solvent, separating from one another the waxy and the liquid fractions of the fat by cooling, and sulphonating these fractions separately.



1,543,158. STICKER FOR DOOR STOCK. WILLIAM C. HOBART and FREDERICK A. NICHOLSON, Tacoma, Wash. Filed Jan. 5, 1925. Serial No. 569. 4 Claims. (Cl. 144—90.)

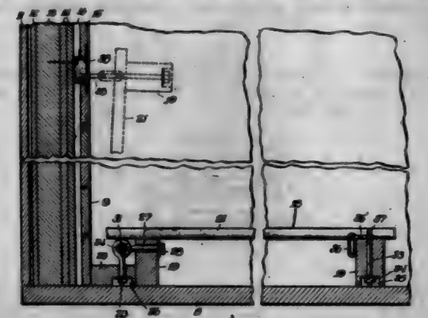
1. A sticker for door stiles or rails comprising a pair of fixed pedestals; a fixed rear horizontal table mounted on both said pedestals; a movable front horizontal table mounted on both said pedestals and in the same horizontal plane as the fixed table, said front and rear tables being adapted to support the stock to be worked in flat position near its edges in a continuous structure from end to end of the machine; pressure shoes resiliently mounted on the tables and engaging the upper face of the stop adjacent the cutter heads; a pair of independently rotated and adjusted cutter heads, rotating on vertical axes in transverse alignment relatively to the longitudinal axis of the machine; feed means independently rotated on horizontal axes and engaging the upper and lower flat horizontal faces of the stock to pass it through the machine; fixed guide means mounted on the fixed rear table; and resilient guide means mounted on the movable front table whereby the stock is guided between the cutter heads as it is driven thereagainst by the feed means.



1,543,159. HEADLIGHT MECHANISM. FREDERICK H. HOPKINS and WINDELL W. MOODY, Kansas, Ill. Filed Apr. 23, 1924. Serial No. 708,415. 2 Claims. (Cl. 240—61.)

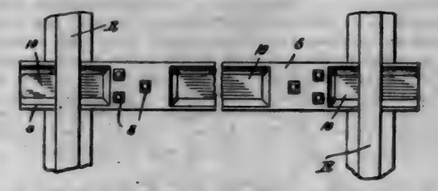
1. In a headlight mechanism, the combination of a bracket formed at its lower end for attachment to a support and provided at its upper end with a fork having fork arms terminating in companion bearings, one of said fork arms being provided with a recess opening through the bearing of said arm, a headlight having trunnions journaled in said bearings, means for

rocking the headlight, one of said trunnions being provided with spaced sockets, and a spring pressed ball detent accommodated in said recess to selectively seat in said sockets for locking the headlight when rocked.



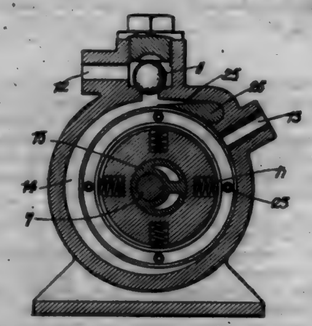
1,543,160. BATTERY-BOX HANDLE. LOUIS W. HOTTEL, Erie, Pa., assignor to M. Liebel, jr., Erie, Pa. Filed Feb. 9, 1925. Serial No 7,577. 2 Claims. (Cl. 16—119.)

1. In a battery box having vertical holes in the wall thereof, a metallic reinforcing loop, parallel arms on said loop, insulating material covering said handle, and terminating in shoulders, and sleeves of insulating material integral with said shoulders and covering a portion of said arms, said arms and sleeves adapted to be inserted into said vertical holes.



1,543,161. FASTENER FOR THE FLOOR RACKS OF RAILROAD CARS. GEORGE A. HULL, Chicago, Ill., assignor to Equipment Specialties Co., Chicago, Ill., a Corporation of Illinois. Filed Dec. 11, 1924. Serial No. 755,201. 17 Claims. (Cl. 105—375.)

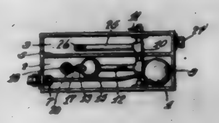
1. In a railroad car, the combination of a side wall, a floor rack adapted for swinging up into proximity to said side wall, a fastening member hingedly connected to said floor rack, and a socket member comprising an annular metal wall set into a recess in said side wall of the car and closing the sides of said recess, said socket



member having a locking shoulder therein with which said pivoted fastening member is adapted to have locking co-operation.

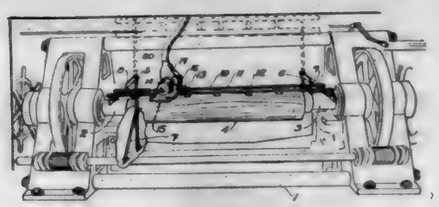
1,543,162. RAIL TIE AND FASTENER. LLOYD R. JENKINS, Bruin, Pa. Filed June 24, 1924. Serial No. 722,110. 1 Claim. (Cl. 238—84.)

A rail tie and fastener including a bar having its ends shaped for snug engagement with the inner base flanges and webs of rails to be connected, transverse ribs on the bottom of the bar, chairs including bases extending under the bar and jaws overhanging the outer base flange of the rails, transverse ribs upon the bases, and means extending through the bases and the bar for holding them adjustably connected, the inner ends of the bases forming abutments for gripping a roadbed therebetween.



1,543,163. COMPRESSOR. SVEN A. JOHNSON and HERMAN F. HOLMQUEST, Brooklyn, N. Y. Filed May 9, 1923. Serial No. 637,781. 1 Claim. (Cl. 230—30.)

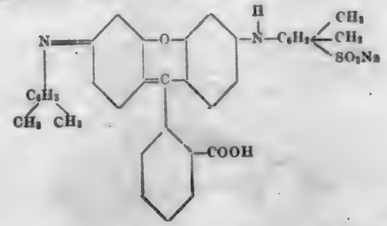
A pump of the class described comprising a casing, having an inlet and an outlet, a shaft mounted therein, an eccentric keyed to the shaft, a loose hub on the eccentric, a loose ring and resilient elements spacing said



ring from the hub, packing rings and resilient elements within the sides of said rings, said rings, frictionally engaging the inner sides of the casing, an outlet valve and a resiliently held valve within the casing adjacent the said inlet.

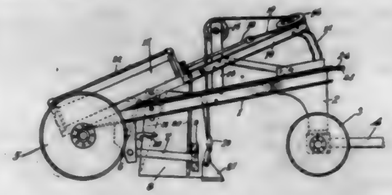
1,543,164. AUTOMATIC LIQUID CONTROL. EDWIN E. JOSLIN, Portland, Oreg. Filed Mar. 6, 1923. Serial No. 623,207. 8 Claims. (Cl. 4—42.)

1. Automatic liquid control apparatus, consisting in a tank including a receiving and a discharge compartment, said receiving compartment having communication with a source of water supply under pressure, a float-controlled valve admitting water from said source when the water-level is lowered, a tubular yoke journaled to oscillate in said tank, said yoke having an exteriorly disposed tripping lever, tubular legs communicatively connected with said yoke and extending into said compartments, respectively, said legs and yoke forming an inverted siphon to convey water from said receiving compartment to the discharge compartment, said legs having an upturned goose-neck at their outer ends, a float connected to the outer end of the intake leg positioned in the receiving compartment, a cup rigidly secured to the outer extremity of said intake leg provided with a perforated bottom, and a similarly perforated plate pivotally secured to said bottom whereby the leakage through said perforated bottom may be regulated.



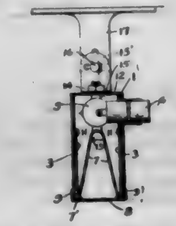
1,543,165. SAWING MACHINE. CLARENCE A. KESSLER, Kansas City, Mo., assignor to Penrod Walnut & Veneer Company, Kansas City, Mo., a Corporation of Missouri. Filed Oct. 6, 1924. Serial No. 741,928. 4 Claims. (Cl. 144—136.)

1. A machine for cutting kerfs in logs, comprising a longitudinal track of guideway, a support to which one side of the guideway is pivoted so that the weight of the guideway will cause its free side to swing downwardly until it contacts with a part of the log-carrying machine to maintain the guideway in a horizontal plane, and a saw movable along the guideway.



1,543,166. WOOL DYE OF THE PYRONE SERIES. GEORG KÖHRER, Leverkusen, near Cologne, Germany, assignor to Farbenfabriken vorm. Friedr. Bayer and Co., Leverkusen, near Cologne-on-the-Rhine, Germany. Filed Oct. 10, 1924. Serial No. 742,933. 3 Claims. (Cl. 260—63.)

3. The new dye of the pyrone series obtainable from fluorescein chloride and vic. meta-xylidine, which is, after being dried and pulverized in the shape of the sodium salt of its sulfonic acid, a red powder soluble in concentrated sulfuric acid with a scarlet-red coloration having most probably the formula:

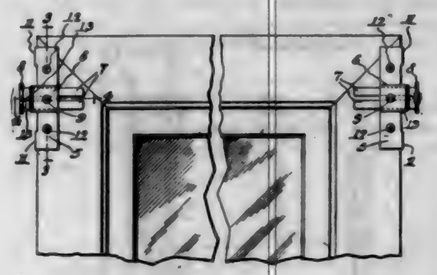


and dyeing wool pure yellowish-red shades fast to light, substantially as described.

1,543,167. SCRAPER. GEORGE KORTGARDNER, Jr., Cincinnati, Ohio, assignor to The Kortgardner Trucking Company, a Corporation of Ohio. Filed Aug. 1, 1924. Serial No. 729,629. 2 Claims. (Cl. 37—133.)

1. A scraper comprising a frame having two side members, a scoop movably mounted between said side members, a hoist frame having two side members, said side members diverging upwardly from said first mentioned frame from the rear to the front, oblique pulleys mounted in the front portion of the side members of said hoist frame, vertical pulleys mounted in said frames to the rear of said oblique pulleys, air cylinders mounted on said hoist frame, and cables secured to the piston rods of said air cylinders and arranged to operate over said pulleys, the free ends of said cables being secured to said scoop, whereby the operation of said cylinders is caused to hoist said scoop.

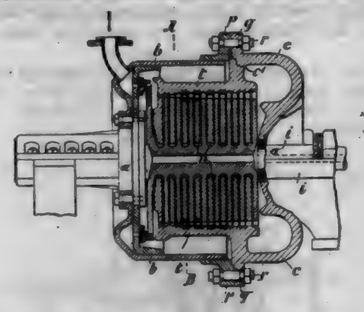
1,543,168. SIGNAL LAMP FOR VEHICLES. LEO M. LAROSE, Detroit, Mich., assignor to Isreal Weinstein, Chicago, Ill. Filed Oct. 5, 1923. Serial No. 666,714. 3 Claims. (Cl. 40—132.)



1. In a signal device, a casing, a source of light in the upper portion of said casing, and a V-shaped double reflector within said casing below said source of light, the walls of said reflector converging upwardly toward said light source and being rigidly secured to the casing bottom at their diverged edges, and a headed member securing said reflector to the top of the casing, the head of said member being engaged within the angle formed by the convergent walls of the reflector.

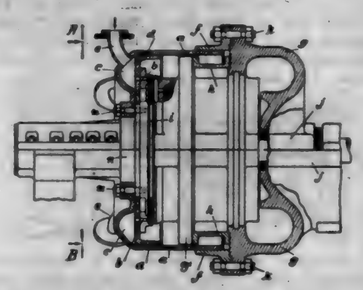
1,543,169. PROCESS AND APPARATUS FOR SEPARATING PALPABLE POWDER BY SUSTENTATION. EPHRAIM ANDRÉ LÉVY and JOSÉ SAPONT, Mexico, Mexico. Filed Feb. 26, 1923. Serial No. 621,362. 1 Claim. (Cl. 83—11.)

A grinding plant comprising a grinding mill; a curved grate beneath said mill; a pair of transverse funnels having deflectors therein; a pair of settling chambers each in communication with one of said funnels; means for blowing a current of air into the mill and through said funnels; and an elevator for feeding material to said mill and to reconvey the material which falls through said grate back into the mill for regrinding.



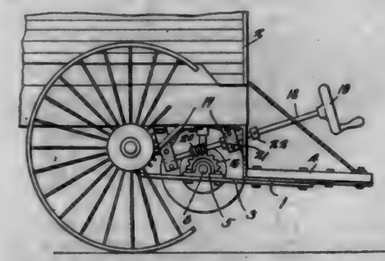
1,543,170. WINDOW-SHADE BRACKET. BARNETT LONG, Martinsburg, W. Va. Filed June 23, 1924. Serial No. 721,763. 1 Claim. (Cl. 156—24.)

A curtain shade bracket comprising a body portion having a central outstanding portion, the forward edge of the outstanding portion extending outwardly and upwardly to provide a guide, a screw extending through the outstanding portion, a supporting bracket adapted to be positioned within the body portion, said supporting bracket including spaced arms, said screw adapted to extend between the spaced arms, a nut positioned under the arms and having a threaded opening to receive the screw, and said screw adapted to be operated to move the nut into close engagement with the arms of the supporting bracket to clamp the arms into engagement with the inner surface of the outstanding portion of the body portion.



1,543,171. ELASTIC-FLUID TURBINE. FRANZ LÖSEL, Brunn, Czechoslovakia. Filed Aug. 4, 1923. Serial No. 655,722. 24 Claims. (Cl. 253—69.)

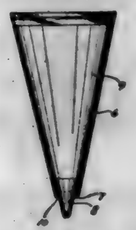
1. In an elastic fluid turbine, an axially divided casing for the exhaust end thereof having a rotor enclosing casing portion, another casing separate therefrom for the high pressure or admission end surrounding the axially divided higher pressure parts of said rotor enclosing casing portion to form an elastic fluid chamber there-



around, and an intake admitting high pressure elastic fluid to said chamber for opposing the internal pressure on the rotor enclosing casing portion.

1,543,172. ELASTIC-FLUID TURBINE. FRANZ LÖSEL, Brunn, Czechoslovakia. Filed Aug. 4, 1923. Serial No. 655,720. 7 Claims. (Cl. 253—57.)

1. An elastic fluid turbine having a high pressure part and a low pressure part, a casing for the high pressure part and a casing for the low pressure part, blading for guiding the elastic fluid and a supporting part for the said blading, the high pressure part of the casing being made of wrought metal, such as boiler plate, and the low pressure part of the casing and the supporting part for the guide blading being made of cast metal, for the purpose set forth.

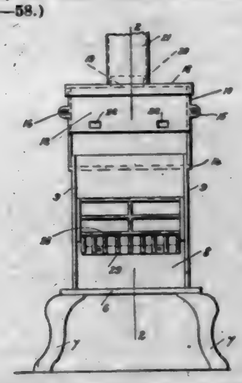


1,543,173. SCREW GEARING. DANIEL L. LOTT, Tiffin, Ohio, assignor to The Loomis Machine Company, Tiffin, Ohio. Filed June 2, 1923. Serial No. 643,068. 1 Claim. (Cl. 74—36.)

A take-up of the class described including a gear, a slidable and rotatable shaft, a worm upon the shaft, said shaft being slidable in one direction to disengage the worm from the gear and slidable in the opposite

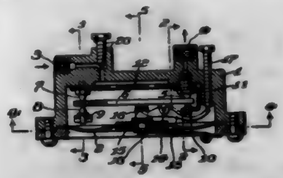
direction to bring the worm into mesh with the gear, means for limiting the movement of the shaft in each direction, one of said means constituting a thrust bearing for the shaft while the worm and gear are in mesh.

1,543,174. PAPER LINER FOR CAKE DECORATORS. JOSEPH BROKAW MATTSON, Minneapolis, Minn. Filed Mar. 7, 1925. Serial No. 13,723. 5 Claims. (Cl. 107—52.)



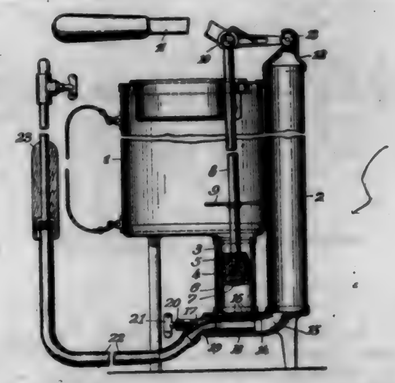
1. A cake decorator comprising a bag, a removable liner for the bag, said bag and liner having co-incident nozzle openings, and a nozzle mounted in said openings.

1,543,175. MAGAZINE SPANNER. WILFRID JUSTIN MCCARTHY, Kenilworth, England. Original application filed Aug. 15, 1923, Serial No. 657,548, Patent No. 1,508,692, dated Aug. 5, 1924. Divided and this application filed May 21, 1924. Serial No. 714,926. 3 Claims. (Cl. 81—125.)



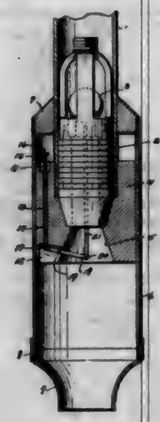
1. A magazine spanner comprising in combination a tube having one end thereof formed as the acting end of a spanner, ball plungers disposed within the walls of said tube and adapted to project within the bore thereof, an annular spring surrounding said plungers and abutting the outer ends thereof, said spring normally maintaining the acting surface of said plungers within the bore of the tube and means for positioning said spring relative to said plungers.

1,543,176. HEATER. WILLIAM E. MCCARTY, Athens, Ga. Filed July 15, 1924. Serial No. 726,119. 3 Claims. (Cl. 126—58.)



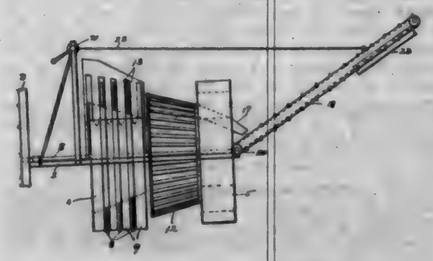
1. A heater, comprising a horizontal base, a removable frame supported on the base and open at its top and front, a grate secured inside the said frame, a removable chamber supported by the said frame and provided with means for connecting it with a stove pipe, and a removable plate for partially closing the front of the frame.

1,543,177. FLASH-LIGHT APPARATUS. ELOF H. MEDÉN, Short Hills, and CARL LUNDAHL, Hillside, N. J., assignors to American Gasaccumulator Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Oct. 17, 1923. Serial No. 669,185. 15 Claims. (Cl. 67—111.)



1. In a flashlight apparatus, the combination of a valve lever pivoted at one end, a valve body having an opening adapted to be closed by the said lever, means for limiting the opening movement of said lever, means whereby magnetic forces tend to hold the said valve lever in its closed or in its open position according as it is in the one or the other position, and means for controlling the periods of the closed and open positions of said valve lever which means comprises a pivoted lever and an adjustable stop member which cooperate therewith.

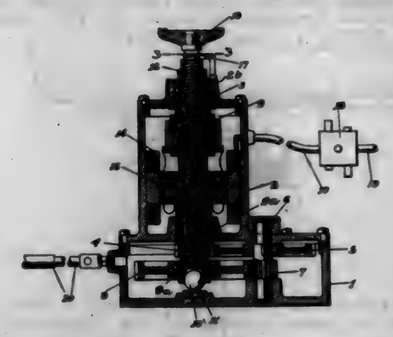
1,543,178. FLUID-SPRINKLING DEVICE. JEAN MEILI, Veltheim, near Winterthur, Switzerland, assignor to Adolf Kauf, Zurich, Switzerland. Filed Oct. 23, 1922. Serial No. 670,345. 3 Claims. (Cl. 299—97.)



1. A portable fluid sprinkling device comprising in combination a receptacle adapted to hold the fluid, an air vessel connected to said receptacle, a piston pump arranged below said receptacle, the cylinder of said pump being in open connection with the said receptacle and the piston having a flexible cup, a hand lever operatively connected to said piston, a member enclosing a pressure space, the wall of said member being provided with apertures adapted to connect said pressure space to said cylinder, a nipple projecting into the pressure space of said member, a flexible hose fixed to the outer end of said nipple, and an elastic part fixed to the inner end of said nipple and adapted to lie snugly against the walls of said pressure space and forming the organ controlling said apertures between the cylinder and the pressure space, a stirrup hinged to said member, and means carried by said stirrup and cooperating with said nipple to press the latter against said member to thus produce a fluid tight joint between the nipple and said member.

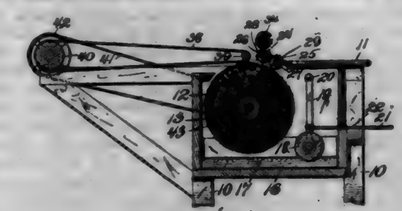
1,543,179. VALVE TRIP MECHANISM. ANDREW MILLER and FRED D. MILLS, Caney, Kans. Filed May 15, 1924. Serial No. 713,022. 2 Claims. (Cl. 103—221.)

1. In combination with a working barrel and a valve structure therein, a sleeve slidably engaged with the working barrel, a valve seat collar carried by the working barrel and contained within the sleeve, and means carried by said collar and operable by contact with the sleeve upon pull on the barrel to open the valve within the barrel.



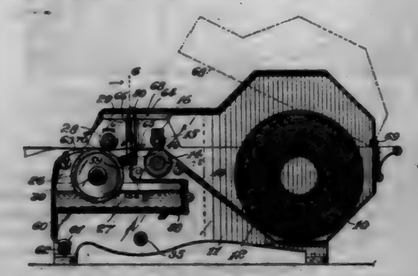
1,543,180. ELEVATING MECHANISM FOR ROOT HARVESTERS. ORO H. MOORE, Payson, Utah. Filed Oct. 9, 1923. Serial No. 667,520. 4 Claims. (Cl. 55—50.)

1. In an elevating mechanism for a harvesting machine, an elevating wheel, a screen, and a second elevating wheel, the screen being between the two said wheels.



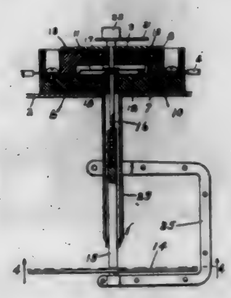
1,543,181. ELECTRIC JACK. HARVEY W. MOORE, San Francisco, Calif. Filed Apr. 19, 1924. Serial No. 707,613. 4 Claims. (Cl. 254—103.)

1. A jack including a casing structure having longitudinally spaced bearings therein, an outer sleeve turnably mounted in the bearings, an inner sleeve turnably mounted in the outer sleeve, reduction gearing between the sleeves, driving means applied to the outer sleeve intermediate the bearings, and a jack stem threaded



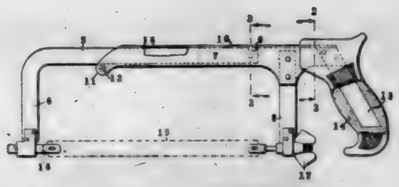
directly into the inner sleeve, whereby the lifting strain of the stem is taken directly by said sleeve with the rotation thereof.

1,543,182. CARROTING MACHINE. JOSEPH A. MORIN, Newark, N. J. Filed May 22, 1923. Serial No. 640,693. 3 Claims. (Cl. 8—21.)



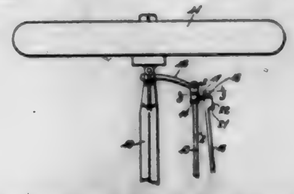
1. A carroting machine comprising a brush moving in one direction, a means for feeding a skin so that the fur is curved and spread when presented to the brush and at a slower speed than the speed of the brush, a tank for holding liquid, a supply roller in the liquid, and means for moving the roller to contact with the brush.

1,543,183. TAPE-FEEDING MACHINE. CHARLES G. MORTIMER, Glen Ridge, N. J. Filed Mar. 27, 1924. Serial No. 702,421. 6 Claims. (Cl. 91—14.5.)



1. A tape feeding machine comprising a frame to hold a roll of tape, an arc-shaped rack pivoted to the frame, a pair of gears each gear being in direct and constant mesh with the rack, sets of rollers to be driven by the gears, and a clutch connection between each gear and its set of rollers whereby each set of rollers can be rotated forwardly independent of its gear.

1,543,184. HEAT CONTROL. LUCIAN R. OAKES, Tipton, Ind., assignor to The Oakes Manufacturing Company, Tipton, Ind., a Corporation of Indiana. Original application filed Nov. 3, 1920, Serial No. 421,538. Divided and this application filed Nov. 14, 1922. Serial No. 600,921. 5 Claims. (Cl. 200—140.)

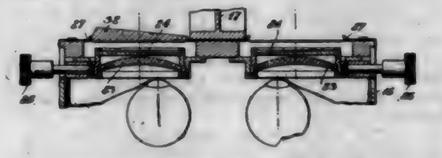


1. In a heat controlling mechanism comprising a pair of contact plates having their meeting ends overlapped with each other, a longitudinally movable rod passing through one of said contact plates, means on the rod for causing the contact through which it passes to move away from the other contact incident to the longitudinal movement of the rod, a non-rotatable longitudinally movable plunger adjustably connected to said rod, an indicator connected to the outer end of said rod, a thermostat for moving said plunger lengthwise for disengaging the contact plates, and means for determining the position of the indicator for maintaining a prescribed degree of heat.

1,543,185. HACK-SAW FRAME. WILLIAM J. PARSONS, Millers Falls, Mass., assignor to Millers Falls Company, Millers Falls, Mass., a Corporation of Massachusetts. Filed June 30, 1923. Serial No. 648,757. 2 Claims. (Cl. 145—34.)

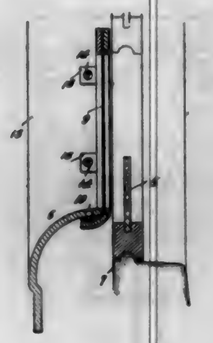
1. A hack-saw frame, including, in combination, a sheath U-shaped in cross section, an arm disposed substantially at right angles thereto and at a point short of the end thereof, said arm having its inner end projecting between the side walls thereof and rigidly secured thereto, a stem slidable within said sheath, an arm carried by said stem, blade-securing means associated with said last- and first-named arms, a handle member independent of said first-named arm, said member having a beveled end-portion and being arranged adjacent the end of said sheath with its beveled end resting against the base thereof whereby the body of said member extends obliquely thereof, and means for securing the handle member in such position.

1,543,186. STEERING-GEAR CONNECTING ROD. JAMES AUSTIN PERKINS, Opelousas, La. Filed Apr. 30, 1924. Serial No. 710,036. 3 Claims. (Cl. 280—95.)



1. In a jointed connection of the character described, a member provided with a ball and a second member provided with a socket for receiving said ball, spaced fingers formed on said socket member and embracing the member carrying said ball, for the purpose described.

1,543,187. SHOE. EDWIN A. PETERSON, Stockton, and GEORGE PETERSON, Elsinore, Calif. Filed Aug. 18, 1923. Serial No. 658,002. 1 Claim. (Cl. 36—51.)



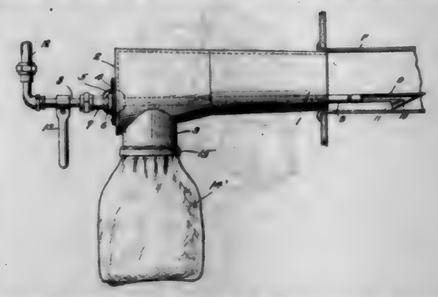
A shoe having a primary vamp below and independent of the fastening flaps of the upper of the shoe, the primary vamp having an independent longitudinal slit therein closed at each end, a secondary vamp disposed on the under side of the primary vamp and being secured all around to the free edges of the slit, the secondary vamp being of a width to allow it to be expansible accordingly as the free edges of the slit are spread apart or toward each other, and means for lacing the edges of the slit together independently of other fastening or lacing means of the shoe.

1,543,188. STEREOCAMPIMETER. MAX POSER, Rochester, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed Jan. 3, 1921. Serial No. 434,402. 16 Claims. (Cl. 88—29.)

1. A stereoscope having for each eye a meniscus lens corrected to practically eliminate astigmatism of oblique pencils over an area of thirty degrees from the center of the field, the centers of said lenses being laterally separated more than the interpupillary distance of the observer's eyes.

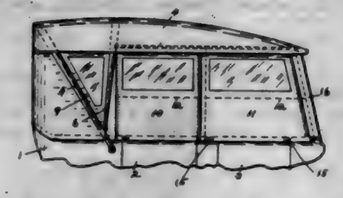
1,543,189. SCREEN FOR WINDSHIELDS. SOL WAITE RAWLS, Franklin, Va. Filed Aug. 29, 1924. Serial No. 734,989. 1 Claim. (Cl. 296—95.)

In combination with a curved section of a cowl ventilator of a motor vehicle, a screening device including a frame having a lower curved section adapted to be fitted under the curved section of the cowl ventilator, ears formed at the ends of the frame and adapted to engage the side members of a windshield frame, and a screening member supported within the frame.



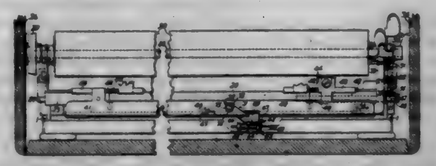
1,543,190. MARKING TAG. EDWARD A. SAGUI, Newark, N. J. Filed Oct. 2, 1923. Serial No. 666,245. 3 Claims. (Cl. 40—21.)

1. A tag comprising a tab with a strip extending from one end, the tab having a slit to receive the strip, the slit being crescent-shaped with its convex edge toward the strip, the end of the strip having shoulders to engage the said edge to hold the strip in looped position the tongue formed by the slit acting as a guide when the strip is inserted in the slit and by its resiliency holding the strip against the concave edge of the slit.



1,543,191. FLUE CLEANER. EDWARD EARL SAURBMAN and GEORGE WASHINGTON CUYLER, Herington, Kans., assignors of one-sixth to Bupford Johnson and one-sixth to Steve Carr, both of Herington, Kans. Filed July 1, 1921. Serial No. 481,088. 1 Claim. (Cl. 122—391.)

A tool for separately cleaning the flues of a boiler, including a tapered sleeve open at its small end and closed at its large end, said sleeve being insertible into one end of a flue, an outlet extension adjacent the closed end of the sleeve for engagement by a container, a pipe extending longitudinally of and beyond both ends of the sleeve and mounted to swing and slid relative to the sleeve, a nossle at that end of the pipe projecting beyond the open end of the sleeve, said nozzle having a passage provided with a return portion for delivering a jet against the wall of the tube into which the sleeve is

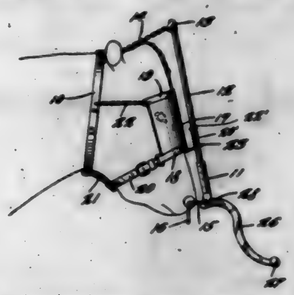


inserted to blow the contents of the tube into the sleeve, and a handle upon the pipe for sliding and rotating the same relative to the sleeve.

1,543,192. CURTAIN FOR AUTOMOBILES. FRANK B. SIMPSON, Poughkeepsie, N. Y. Filed Oct. 2, 1923. Serial No. 666,123. 1 Claim. (Cl. 296—141.)

In a curtain for automobiles having a top and bows, of stiff fabric curtain sections hinged together and adapted to fold upon each other, of means secured to said top for supporting said curtains comprising a rod, and means whereby said curtains can be slid past each other.

1,543,193. TYPEWRITING MACHINE. CHARLES E. SMITH, Brooklyn, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Nov. 8, 1924. Serial No. 748,515. 22 Claims. (Cl. 197—110.)



1. In a typewriting or like machine, the combination of a carriage, printing keys, a lock for preventing a printing actuation of said keys, a finger piece for actuating said lock to render it effective, and means which render said finger piece effective to thus actuate said lock only when the carriage is at a given point in its travel.

1,543,194. BULL POKE. CORTE J. SPENCER, Dundee, N. Y. Filed Feb. 27, 1924. Serial No. 695,528. Renewed Jan. 17, 1925. 3 Claims. (Cl. 119—142.)

1. A safety device for animals comprising in combination, a blinder, means for supporting the blinder across the eyes of the animal, a vertically disposed rod arranged directly in advance of the head of the animal, a nose

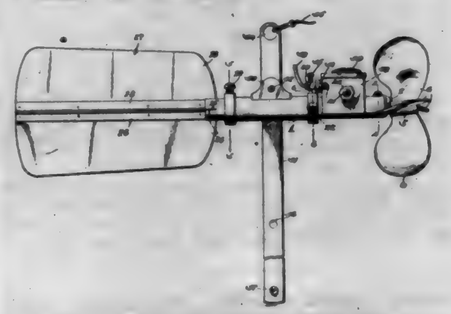
ring supporting the lower end of the rod, a collar, means connecting the upper end of the rod with the collar, cooperating means carried by the blinder and rod to

assist in supporting the weight of the latter, and a curved arm projecting forwardly and downwardly from the lower end of said rod and capable of upward pivotal movement for the purpose specified.

1,543,195. DEVICE FOR CUTTING UP FETAL AND LIKE OBJECTS IN ANIMALS. JENS PETER NIELSEN THYGESEN, ANDERS THEODOR SØRENSEN, and NIELS PETER SØRENSEN, Langaa, Denmark. Filed July 7, 1921. Serial No. 483,114. 1 Claim. (Cl. 128—317.)

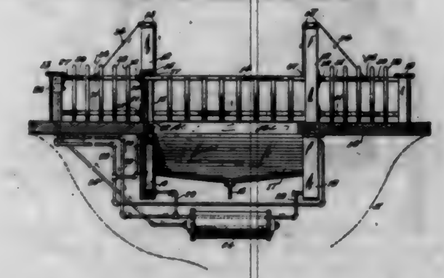
A surgical device comprising two guide tubes integrally connected at their ends and having an enlarged portion at one end; cross pieces connecting said tubes; a handle on the other end of said tubes; and a saw cord carried in said guide tubes and forming a loop adjacent the enlarged end and having adjustable handles at each end of said cord.

1,543,196. CALCULATING MACHINE. FRANZ TRINKS, Brunswick, Germany. Filed Mar. 19, 1924. Serial No. 700,842. 3 Claims. (Cl. 235—73.)



1. In a calculating machine, the combination with revolution counting mechanism comprising numeral wheels, of signalling means, a member rotatable coaxially of the numeral wheels and carrying two operating members for the signalling means spaced from each other a distance corresponding to two values of the numeral wheels of the revolutions counting mechanism, resetting means for said member, and carrying means intermediate the revolutions counting mechanism and said member.

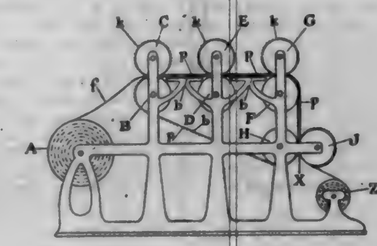
1,543,197. EXPANSIBLE CLAMP. CHRISTIAN D. ULRICH, North Little Rock, Ark. Filed Dec. 1, 1924. Serial No. 753,400. 3 Claims. (Cl. 144—299.)



1. In a device of the class described in combination, a U-shaped housing, a movable bar adapted to fit in the said U-shaped housing, an arm at right angles to the said movable bar, notches at the outer end of the said movable bar, a pin for engaging the said notches, a lower jaw, means for adjusting the position of the said lower jaw, a block having a flange at the bottom of the U-shaped housing, and an adjusting screw in the said arm.

1,543,198. WATER METER. MARION I. WALTERS, Washington, D. C. Filed Sept. 12, 1923. Serial No. 662,289. 1 Claim. (Cl. 73—37.)

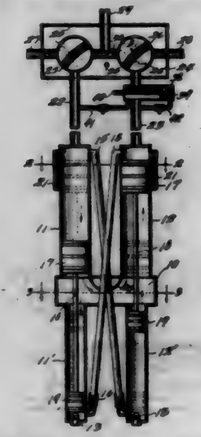
A water meter comprising a horizontally disposed tubular casing open at its ends, said casing having an upwardly projecting housing, said housing having an opening communicating with the interior of the casing, a shaft having pointed ends extending transversely of said housing, adjustable screw bearings having recesses in their ends for receiving the ends of said transverse shaft, a worm wheel fixed to said transverse shaft, said casing having roller bearings at its front end, and a plug in the other end thereof, an adjustable screw bearing mounted in said plug and having a conical point, a propeller shaft, supported at opposite ends by said roller bearing and said point bearing, said propeller shaft having a worm intermediate its ends meshing with said worm wheel, and a propeller for rotating said propeller shaft.



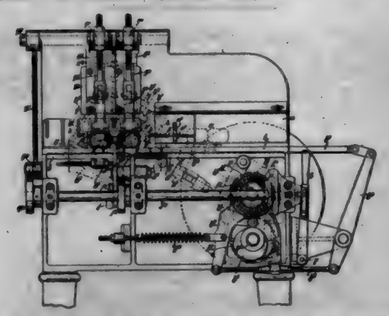
1,543,199. GATE. CHARLES J. WINEBRAKE, Newark, N. J. Filed Oct. 22, 1924. Serial No. 745,186. 6 Claims. (Cl. 39—8.)

1. A gate comprising a main gate, a support for the gate above the roadway, the roadway having a recess into which the gate can descend, side gates pivoted on the support and adapted to collapse toward the support when raised, and a connection between the main gate and side gates whereby the lowering of the main gate opens the side gates.

2. A gate comprising a pair of standards projecting above the roadway, a gate slidable with its ends in the standard, the roadway having a recess to receive the gate, a pressure mechanism under each standard and connected to the sides of the gate to lower and raise the same.



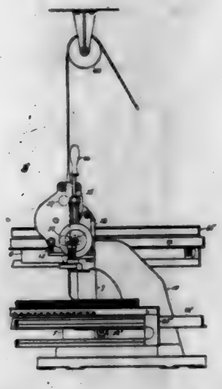
1,543,200. PROCESS AND APPARATUS FOR ORNAMENTING SHEET MATERIAL. JAY OTIS BALL, Bogota, N. J. Filed May 31, 1924. Serial No. 717,067. 2 Claims. (Cl. 101—23.)



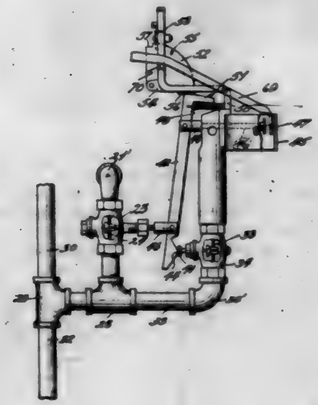
1. In an apparatus for ornamenting sheet material, the combination with printing rollers adapted to apply different colors, of a goffering roller, and an endless belt for feeding said sheet material to said rollers, with recesses in said belt to engage projections on the rollers to prevent lateral movement of the sheet material while it is being subjected to the ornamenting operations, whereby registration of the printing and goffering rollers is secured.

1,543,201. PUMPING APPARATUS. IVAN C. BELL, Dallas, Tex., assignor to The Gulberson Corporation, Dallas, Tex., a Corporation of Delaware. Filed July 21, 1924. Serial No. 727,307. 9 Claims. (Cl. 103—44.)

1. In a balanced fluid column pumping apparatus, a pair of vertical containers connected for displacing fluid intermediate their ends from one to the other and also connected for displacing fluid from the lower end of each to the upper end of the other, and oppositely disposed pistons, one of the pistons being suspended in one container and the other piston being disposed in the other container, said pistons being counterbalanced by the fluid in the containers.

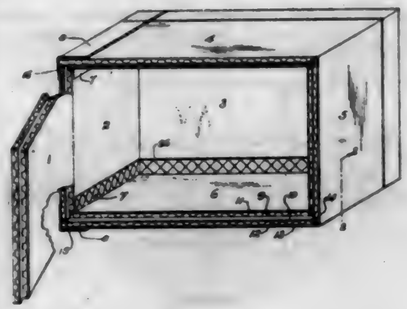


1,543,202. APPARATUS FOR TRIMMING AND SHAPING HOLLOW ARTICLES. GEORGE WILLIAM BERRY, Leeds, England. Filed Mar. 20, 1925. Serial No. 17,002. 34 Claims. (Cl. 29—11.)



34. In apparatus for trimming and shaping hollow articles, a plurality of dies each adapted to receive an article and including a fixed element and a plurality of elements movable relative to the fixed die element, means for conveying articles to said dies first in close formation and subsequently positioning the articles in spaced relation relative to said dies, means for transferring the articles from the conveying means to the dies, cutters for simultaneously trimming the edges of the articles on said dies, a carrier for said cutters, means for moving said cutter carrier in one direction to trim one part of the articles and then in reverse direction to trim the remainder, means operative in sequence with the cutters for simultaneously shaping parts of said articles on the same dies, co-operating tools operative to shift the movable elements of the dies and the articles relative to the fixed element of the dies during the shaping operation and while maintaining the articles firmly on the dies, and means normally contained within a portion of the fixed die element engaging in the articles and extending through the dies operative for removing articles from the dies after trimming and shaping, said removing means acting also to shift the articles on the dies between the trimming and shaping operation.

1,543,203. AUTOMATIC CUTTING MACHINE. LORENZ KONRAD BRAREN, Munich, Germany. Filed Apr. 11, 1922. Serial No. 551,706. 34 Claims. (Cl. 164—42.)



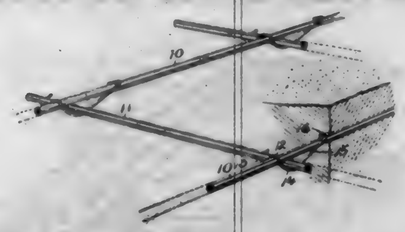
1. In a cutting machine means for feeding the material through the machine, form cutting means for cutting the material into strips according to the design, a transverse cutting mechanism for cutting the material off crossways, a reciprocating pattern table with a master pattern thereon for guiding the said form cutting means and means for actuating these mechanisms.

1,543,204. FLUID-DISPENSER-SUPPLY CONTROL. JOHN J. CATRON, Bonham, Tex., assignor to Catron Manufacturing Company, Bonham, Tex., a Corporation of Texas. Filed Sept. 1, 1923. Serial No. 660,480. 10 Claims. (Cl. 221—100.)

1. In a fluid dispenser control, the combination of a compressed air supply pipe, an air supply valve connected with the supply pipe, a trapped air release pipe, an air release valve connected with the air release pipe, and a common operating means for the valves fulcrumed to initially close the air release and subsequently to change its fulcrum point and open the air supply valve.

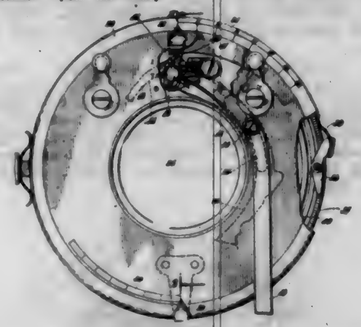
1,543,205. NONPILFERING SHIPPING CONTAINER. CHARLES H. CROWELL, Brooklyn, N. Y. Filed Nov. 13, 1920. Serial No. 423,839. 8 Claims. (Cl. 229—28.)

1. The paper board shipping container having joints formed by the edges of the different blanks and double gummed non-pilfering holding strips formed with a distinctive transferable design comprising aniline coloring matter in the gum coating thereon arranged between the edges of said blanks and adhesively secured thereto.



1,543,206. TROLLING SPOON. GEORGE H. DOBBINS, Brooklyn, N. Y. Filed Sept. 8, 1923. Serial No. 661,623. 6 Claims. (Cl. 43—45.)

1. A trolling spoon comprising a body portion provided with an eyelet near one end and with a slot at a substantial distance from the said eyelet, a line ring through said eyelet, a line swivel connected to said ring, a hook, and flexible means connecting the hook to the line ring said connecting means passing through the said aperture whereby the hook will be on the opposite side of the spoon body from the hook connection with the line ring.

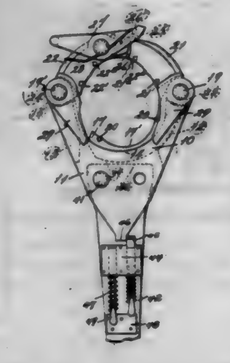


1,543,207. CLIP FOR JOINING CROSSBARS. JOHN EBB, Newark, and ADOLPH MONTAN, West Orange, N. J., assignors to Eastern Tool & Manufacturing Company, Bloomfield, N. J. Filed June 10, 1922. Serial No. 567,330. 1 Claim. (Cl. 72—122.)

A clip comprising a wire bent to form an arched part with its ends bent to form open loops disposed at right angles to and facing in the opposite direction to the arched part, the wire being extended a material distance

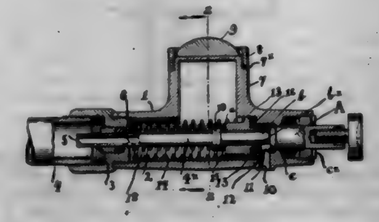
beyond the open loop on one side, the end of said extension being bent to lie substantially opposite the arched part and inclined downwardly relative thereto.

1,543,208. EXPOSURE DEVICE FOR PHOTOGRAPHIC CAMERAS. SHERMAN MILLS FAIRCHILD, Oneonta, N. Y. Filed Aug. 14, 1919. Serial No. 317,425. 6 Claims. (Cl. 95—10.)



1. In exposure-devices for photographic cameras, in combination, a shutter having speed-varying mechanism and adjustable diaphragm mechanism, a rotatively adjustable ring outside of the shutter and connected with the speed-varying mechanism to adjust the same and thereby vary the exposure time, a rotatively adjustable ring outside of the shutter and connected with the diaphragm mechanism to vary the working aperture, and means operatively connecting the two rings whereby adjustment of one produces a compensating adjustment of the other, said means being releasable at will to permit adjustment of one of said mechanisms independently of the other.

1,543,209. MEDICINE CONTAINER AND SPOON. CLAUDE VICTOR FULTON, Hyde Park, South Australia, Australia. Filed Mar. 17, 1920. Serial No. 366,611. 1 Claim. (Cl. 128—222.)

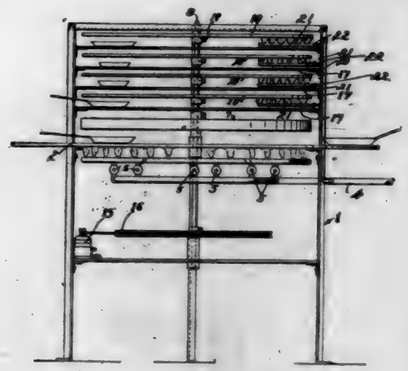


A medicine glass comprising a container having an open and a closed end and a straight wall tapered outwardly toward the open end, a segment of said wall being continued in a straight plane beyond the plane of the open end to provide an open spout, said segment being tapered towards the spout, and having a V shaped lip, substantially as described.

1,543,210. WRENCH. JOSEPH W. KAOUGH, Dallas, Tex., assignor to The Guiberson Corporation, Dallas, Tex., a Corporation of Delaware. Filed Nov. 8, 1923. Serial No. 673,609. 6 Claims. (Cl. 81—66.)

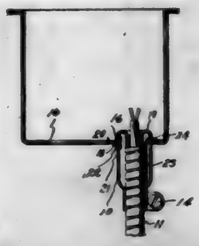
1. In a wrench, the combination of a head having a seat, an arcuate gripping jaw swinging through the seat, means including a handle for displacing the gripping jaw into grippling position, a pair of self latching clamping jaws pivoted on the head, and jaw closing fingers carried by the clamping jaws.

1,543,211. DISPENSING VALVE. LOUIS KOOPERSTEIN, New York, N. Y., assignor to West Disinfecting Company, New York, N. Y., a Corporation of New York. Filed Nov. 26, 1923. Serial No. 676,882. 1 Claim. (Cl. 221—102.)



In a dispensing device, in combination, a casing formed with a chamber extending longitudinally therein and a second chamber closed at its upper end and extending transversely of the first chamber in communicating with the latter, and a valve device for controlling the admission to and the discharge of liquid from the casing, the liquid being permitted to flow to the second chamber via the first chamber whereby air is trapped in said second chamber above the liquid, for the purpose described.

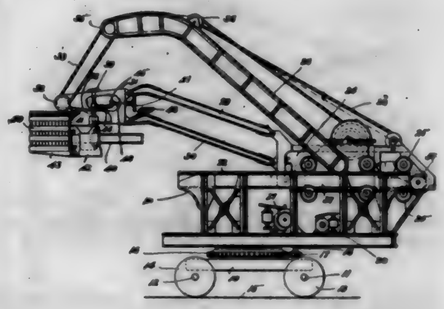
1,543,212. COOKING STOVE. THEODORE KURRELL, HEINRICH SCHNEIDER, and JOHN U. FISCHER, San Francisco, Calif. Filed Apr. 12, 1924. Serial No. 706,077. 10 Claims. (Cl. 126—34.)



1. A cooking stove comprising a stand, a stationary cooking plate supported by the stand, a burner beneath the cooking plate, said plate having an opening therein, a burner beneath said opening arranged to direct flames

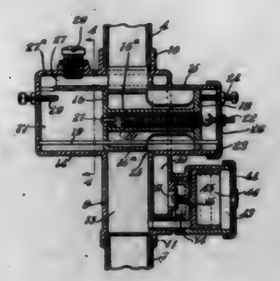
above the plate and a revolvable heating member mounted above and in upwardly spaced relation to said plate in position to have the flames from the second named

burner directed against the under side thereof, the cooking being done between the plate and revolvable heating member.



1,543,213. CABLE CONNECTER. ALFRED T. KVARNSTROM, Detroit, Mich., assignor to Samuel Solomon, Detroit, Mich. Filed May 12, 1923. Serial No. 638,468. 2 Claims. (Cl. 247—25.)

1. The combination with a wall having an aperture to receive therethrough a cable, a tubular sheet metal connecter received within the aperture to secure the cable to the wall, said connecter received over the end of the cable and received within the aperture in the said wall and having tongue portions punched from the body thereof held outwardly by the cable extending through the connecter to engage said wall, said connecter body having shoulders punched therefrom engaging said wall on the opposite side, and an annular member receivable within the end of said connecter to partially close such end which annular member has outwardly turned portions engaged in the openings in the body of the connecter formed by the punching therefrom of the said shoulders.

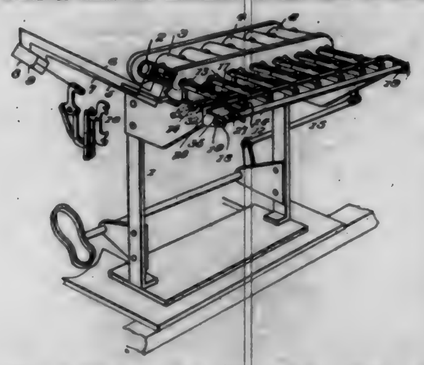


1,543,214. GOOSENECK BOOM FOR BRICKSETTERS. GRAFTON E. LUCE, Chicago, Ill. Filed May 4, 1923. Serial No. 636,675. 2 Claims. (Cl. 214—6.)

1. In a device of the class described, the combination of a platform mounted for longitudinal movement, a frame rotatably mounted on the platform for movement in a horizontal plane, a crowding frame longitudinally movable with respect to said frame, a boom and parallelly arranged arms pivotally mounted on said crowding frame, a frame suspended from the boom and pivotally mounted on said parallelly arranged arms, a rotatably mounted brick carrier on said last

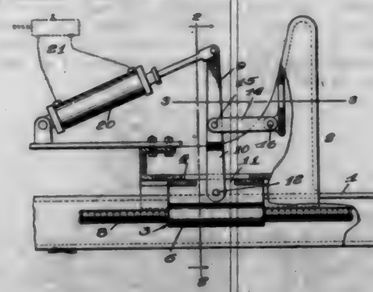
named frame, an operator's seat on said suspended frame, and means on said suspended frame within convenient reach of the operator for rotating said brick carrier.

1,543,215. POWER CONTROLLER FOR PNEUMATIC-DISPATCH SYSTEMS. JAMES G. MACLAREN, Mamaroneck, N. Y., assignor to The Lamson Company, Syracuse, N. Y., a Corporation of Massachusetts. Filed Dec. 3, 1924. Serial No. 753,637. 27 Claims. (Cl. 243—12.)



1. A power control apparatus for a pneumatic dispatch system of the vacuum, minimum flow type having a transmission tube and an exhauster, said apparatus having chambers communicating respectively with the transmission tube and the exhauster, a normally closed valve controlling a passage leading from one of said chambers to the other, a, minimum flow from one chamber to the other being permitted when the valve is closed, and means sensitively responsive to pressure change occurring in the chamber communicating with the exhauster to initiate movement of the valve in one direction.

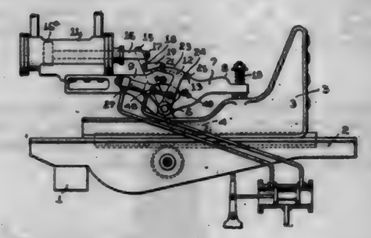
1,543,216. SETTING AND CONTROLLING MECHANISM FOR CONTROLLING MOVEMENT OF DOGS ON SAWMILL CARRIAGES. FREDERICK E. MARTIN, Weed, Calif., assignor to Martin Air Dog Company, San Francisco, Calif., a Corporation of California. Filed June 19, 1922. Serial No. 569,490. 34 Claims. (Cl. 143—125.)



1. Means for controlling and limiting the movement of a dogging device on saw mill carriages, comprising a valve, means for limiting the valve to a full stroke

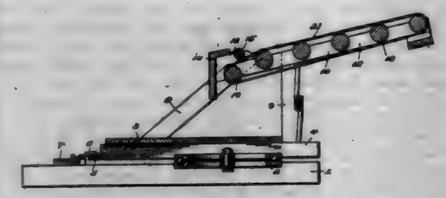
movement to project the said dogging device to their fullest extent, a movable abutment adapted to be positioned to limit the movement of the valve to cause

partial projection of the said dogging device, and manually operable means adapted to automatically and subsequently affect said abutment for positioning same.



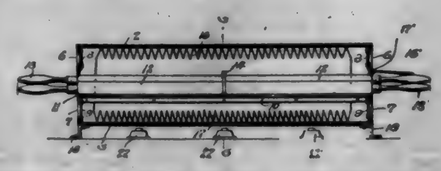
1,543,217. TAPERING MEANS FOR SAWMILL CARRIAGES. FREDERICK E. MARTIN, Berkeley, Calif., assignor to Martin Air Dog Company, San Francisco, Calif., a Corporation of California. Filed Jan. 24, 1923, Serial No. 614,686. Renewed Apr. 10, 1925. 2 Claims. (Cl. 143—120.)

1. A tapering means for saw mill carriages, comprising in combination a knee adapted for sliding movement relative to the head-block, a nut carrier adapted for adjusting movement in a straight line in parallelism with the movement of the knee, a power means, a lever having pivotal connection at the lower end with the nut carrier, whereby said lower end of the lever is movable with the nut carrier at all times in a straight line in parallelism with the knee adjustment, a link connecting the lever above the nut carrier with the knee, and means whereby the power means may operate upon the upper end of the lever in both directions, the relation of the power means and upper end of the lever providing for the sole compensation in the changing vertical distance between the upper and lower ends of the lever as the lever is operated.



1,543,218. TAPERING MECHANISM. FREDERICK E. MARTIN, Berkeley, Calif., assignor to Martin Air Dog Company, San Francisco, Calif., a Corporation of California. Continuation in part of application Serial No. 569,854, filed June 21, 1922. This application filed Nov. 28, 1923. Serial No. 677,489. 55 Claims. (Cl. 143—120.)

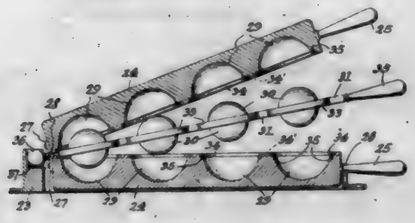
1. In combination, a knee and knee block connected for independent movement of the knee, means for adjusting the knee independent of the knee block, means to limit the adjustable movement of the knee, including teeth and a pawl to cooperate with the teeth, and



means selectively operable at the will of the operator to subsequently establish which tooth the pawl will engage for limiting the adjustable movement of the knee.

1,543,219. PORTABLE LOADING DEVICE. JOSEPH F. MASON, Fulton, Mo. Filed Aug. 20, 1924. Serial No. 733,140. 1 Claim. (Cl. 198—124.)

A loading device of the character described including a base, a platform, a turn table structure between the base and the platform, standards extending upwardly from the intermediate portion of the platform and inclined rearwardly, other standards extending upwardly from the rear end of the platform, a frame having its forward end supported on the first mentioned standards and its intermediate portion on the second mentioned standard so as to be inclined upwardly and rearwardly, a table on the forward end of said frame, an endless conveyor mounted in said frame and extending rearwardly from under said table, and a guide roller in the frame and disposed between the table and said conveyor and rearwardly of the table.

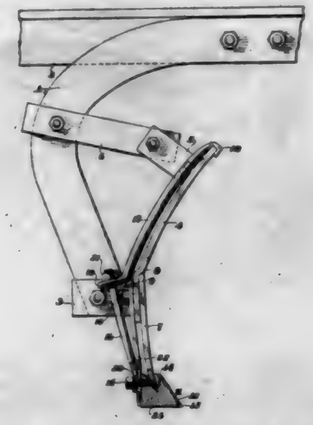


1,543,220. STOVE OR OVEN. FRANCIS G. MATSON, Washington, D. C. Filed Mar. 23, 1923. Serial No. 627,172. 1 Claim. (Cl. 126—39.)

A stove comprising side, end, top and bottom walls, heating elements arranged in the stove adjacent said top and bottom walls, the end walls being provided with

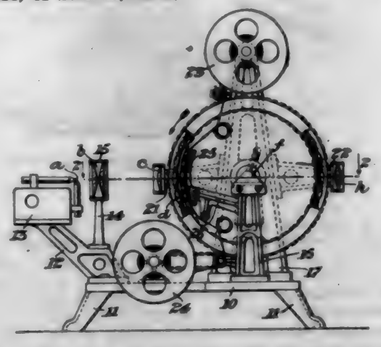
transverse aligned openings intermediate their top and bottom edges, ledges secured to the side walls having their top faces flush with the lower edge of said openings said edges adapted to slidably receive a baking mold, a bar spanning the ledges for limiting the inward movement of the molds on the ledges, and a hinged cover for closing one of the aligned openings when only one baking mold is being used.

1,543,221. DEVICE FOR MOLDING AND BAKING HOLLOW EDIBLE ARTICLES. FRANCIS G. MATSON, Washington, D. C. Filed Jan. 9, 1924. Serial No. 685,265. 2 Claims. (Cl. 107—66.)



1. A device for molding and baking hollow edible artices, comprising a pair of companion female mold members having recesses formed upon their inner faces, said mold members having cut away portions surrounding the recesses and notches between the recesses, a plurality of double male mold elements to enter the recesses in the mold members, a rod carrying the double male mold elements and adapted for insertion within the notches in said mold elements, flanges formed upon the male mold elements to enter the cut away portions, and means to hinge the female mold members together.

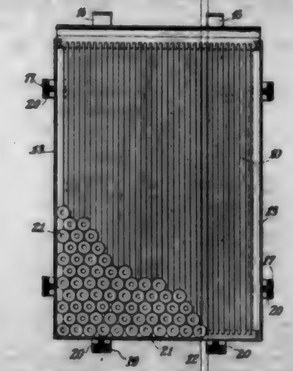
1,543,222. ATTACHMENT FOR ROAD-GRADER BLADES. JAMES HENRY MCVEETY, Memphis, Tenn. Filed Apr. 4, 1925. Serial No. 20,749. 5 Claims. (Cl. 37—179.)



1. A road grader having a moldboard, said moldboard being shaped to form a seat at its lower edge, an angle iron adapted to be secured in the seat, and a cutter having means for connection to the angle iron and provided with a front and rear cutting edge.

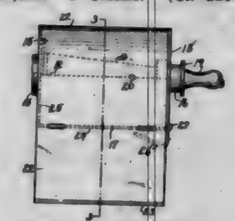
1,543,223. SHOE FOR GRADER BLADES. JAMES H. MCVEETY, Memphis, Tenn. Filed Aug. 25, 1924. Serial No. 734,105. 12 Claims. (Cl. 37—179.)

1. In a device of the class described, a substantially rectangular shoe having a tapered front side extending backwardly from a front cutting edge, and means for operatively securing said shoe to a road grader so as to run on the ground below the grader blade.



1,543,224. MOVING-PICTURE APPARATUS. EMIL MECHAU, Wetzlar, Germany. Filed May 5, 1921. Serial No. 467,122. 6 Claims. (Cl. 88—16.8.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In a moving picture apparatus having a continuously moving picture band, an optical device passing across the path of the light rays in front of the picture band and also behind the same, means for moving the said optical device to deviate the light rays in front of the picture band and to compensate behind the picture band and the movement of the latter, and means for effecting a reversal of image after the light rays are deviated and before the movement of the picture band is compensated.

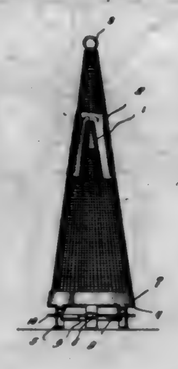


1,543,225. ELECTROLYTIC APPARATUS HAVING FILMED ELECTRODES. RALPH D. MERSHON, New York, N. Y. Filed Oct. 29, 1919. Serial No. 334,176. 11 Claims. (Cl. 175—317.)

9. In an electrolytic apparatus of the kind described, a plurality of filmed anodes arranged side by side; a supporting cage enclosing the plurality of anodes, composed of horizontal and vertical members and strips of insulating material carried thereby, having ribs adapted to engage the anodes on small areas; and spacing devices between the anodes and within said supporting

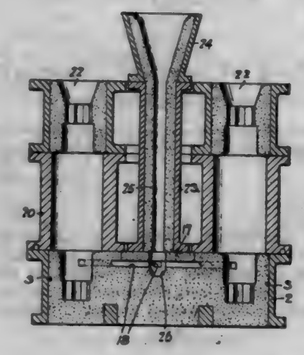
frame, said devices substantially filling the spaces between the anodes but having openings for the flow of current form anode to anode through the electrolyte and leaving the spaces between the folds of the anodes unobstructed.

1,543,226. PENCIL SHARPENER. MILTON D. MEMBOLE, Milford, Conn., assignor of one-half to George M. Hayes, New Haven, Conn. Filed Feb. 25, 1925. Serial No. 11,436. 3 Claims. (Cl. 120—96.)



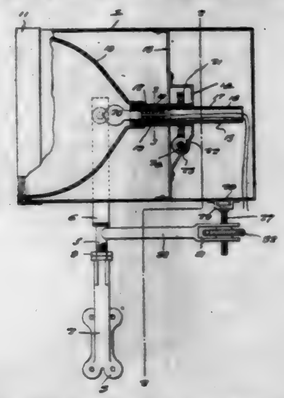
1. A pencil sharpener, comprising a cutter-frame formed from sheet-metal, and comprising front and rear walls, a conical cutter mounted in said walls and provided with a crank, a housing for the reception of said cutter-frame, said housing comprising a floor upon which the cutter-frame rests and a rear wall against which the cutter-frame extends, and means for detachably interlocking the cutter-frame with the housing.

1,543,227. METHOD OF PROTECTING COMMERCIAL PAPER. ISRAEL MINKIN and LOUIS MAGIDSON, Dorchester, Mass. Original application filed Sept. 5, 1924, Serial No. 736,123. Divided and this application filed Mar. 9, 1925. Serial No. 14,088. 4 Claims. (Cl. 101—32.)



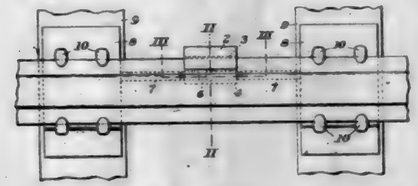
1. The improved process of protecting commercial paper, which consists in perforating a design through the paper, in conjunction with a ribbon to simultaneously color the same.

1,543,228. FLYTRAP. THOMAS A. MORROW, Wilburton, Okla. Filed Oct. 20, 1924. Serial No. 744,805. 1 Claim. (Cl. 43—118.)



A fly trap of the class described comprising an annular base ring having legs depending from its marginal edge, the free ends of said legs being flared outwardly and the intermediate portions of the legs being bent to provide inwardly opening seats, a bait pan having a marginal flange, the peripheral edge of which is removably received in said seats, an inner wire mesh cone connected at its bottom to the base ring, said cone being provided at its top with a restricted opening, and an outer cone surrounding the inner cone in spaced relation, said outer cone being provided at its bottom with a ring and said ring being provided with circumferentially spaced clips to take over the aforesaid base ring.

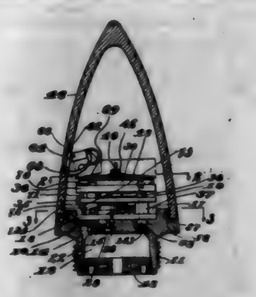
1,543,229. PATTERN FOR MAKING ROLLS. WILLIAM H. NICHOLS, Wilkinsburg, Pa. Original application filed Nov. 1, 1922. Serial No. 598,360. Divided and this application filed Mar. 13, 1924. Serial No. 699,043. 7 Claims. (Cl. 22—162.)



1. Molding apparatus comprising a pattern member and a second pattern member adapted to be laid upon said first-named pattern and to project beyond said first-named pattern member, and a wall-forming block adapted to be inserted into the recess formed by the first-named pattern member, upon removal of the pattern members, to form a wall for the recess produced by the said second pattern member.

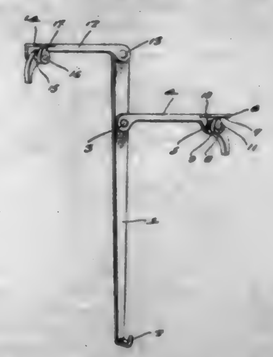
1,543,230. ADJUSTABLE HEADLIGHT. MARTIN M. O'LEAR, Brackenridge, Pa. Filed May 21, 1924. Serial No. 714,869. 2 Claims. (Cl. 240—44.)

1. A headlight comprising a casing open at its forward end, a bracket for pivotally supporting said casing, a reflector mounted in said casing, a lamp supported in the casing and extending within the reflector, means for moving the lamp longitudinally in the casing with respect to the reflector comprising a sleeve supported at its forward end in the rear portion of the reflector, a bracket in the casing for supporting the rear end of the sleeve, a tubular member extending longitudinally in the sleeve, a lamp socket in the forward end thereof for supporting the lamp, said tubular member being externally threaded and provided with a longitudinally extending slot on the outer face thereof, a projection carried by the sleeve and operating in said groove for preventing the rotation of the tubular member in the sleeve, a gear wheel supported by the rear end of the sleeve and threaded for engagement with the threaded tubular member, and means for actuating said gear wheel whereby the tubular member is moved longitudinally within the sleeve.



1,543,231. ANTICREEPER. ALPHONSO T. PALMER, Chicago, Ill. Filed July 22, 1924. Serial No. 727,433. 15 Claims. (Cl. 238—315.)

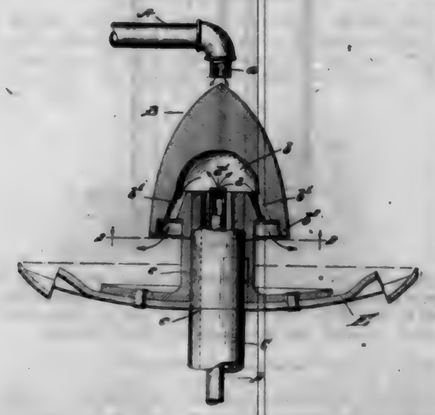
1. A rail anti-creeper, comprising a rail gripping element adapted to grip one edge only of a rail base intermediate adjacent ties, and means cooperating with said element to transmit loads therefrom to the tie plates on said ties to prevent creeping in either direction.



1,543,232. FUSE. CHARLES H. PEARSON, Brookline, and FREDERICK W. BOLD, Chelsea, Mass.; said Bold assignor to said Pearson. Filed Oct. 25, 1920. Serial No. 419,371. 9 Claims. (Cl. 102—36.)

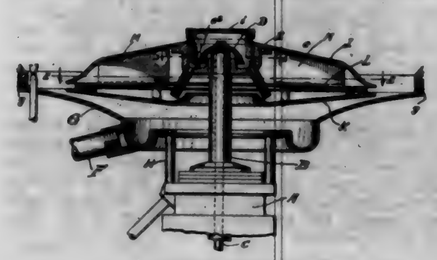
1. In a time fuse, the combination of a base, a timing train mounted thereon, a firing pin controlled in its operation by said timing train, and a primer holding device, normally holding the primer out of the path of movement of the firing pin, means for retaining the said device in said position against accident, said means being operable to release the device on the shock of firing, said device being operable by centrifugal force to move the primer into alinement with said firing pin.

4. In a time fuse, the combination of a base, a timing train mounted thereon, a driving spring for said train, and means for winding said driving spring from both the top and bottom of said base.



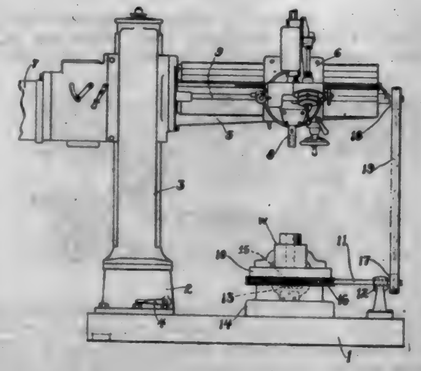
1,543,233. WIRE STRETCHER AND SPLICER. JACOB O. PRESCOTT, Forest City, Iowa. Filed Mar. 17, 1924. Serial No. 699,788. 1 Claim. (Cl. 254—81.)

A wire stretcher of the character described including a lever, a pair of arms pivoted to the lever, a pair of lateral flanges having corrugations on the under sides thereof one flange being formed integral with the free end of each arm, a pivot pin mounted upon each of the arms and spaced from the under side of the flange, a cam member pivoted upon each pin and adapted to clamp the wire against the flange, and an oval-shaped plate independently pivoted on the pivot pin of each arm and on the outer face of the cam member and adapted to bridge the space between the pin and the flange in a manner so as to allow the wire to be enclosed and safely adjusted through the space even though the cam member is out of engagement with the same.



1,543,234. PREHEATING AND DISTRIBUTING DEVICE FOR ROTARY OIL BURNERS. JOHN SCHEMINGER, Jr., Providence, R. I., assignor to Aetna Automatic Oil Burner, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 20, 1923. Serial No. 658,443. 6 Claims. (Cl. 158—77.)

4. In a rotary oil burner, a vertical hollow shaft carrying a spray-plate, a fuel distributor or spreader and pre-heating device mounted on said shaft over said spray-plate; said device consisting of a metal body having a thick upper portion tapering to a pointed end and an enlarged lower portion terminating in a depending marginal extension or flange, and also having a gas receiving chamber therein and gas exit ports leading downwardly from said chamber, for maintaining a pilot light; said extension or flange projecting beyond the delivery end of said gas exit ports, a gas feed pipe

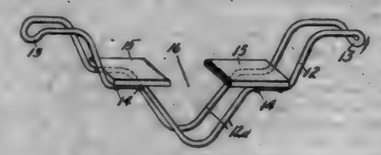


extending through said shaft into said gas receiving chamber, and a fuel feed pipe having its delivery end arranged over the pointed end of said body, whereby fuel delivered by said feed pipe on the pointed end of said body is spread over the surface thereof by gravity and distributed over the surface of said spray-plate by centrifugal force.

1,543,235. OIL-DISTRIBUTING HEAD. JOHN SCHEMINGER, Jr., Providence, R. I., assignor to Aetna Automatic Oil Burner, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 17, 1924. Serial No. 707,267. 5 Claims. (Cl. 158—77.)

5. In combination with a supporting base or standard, a tubular vertical shaft having its bearings in said standard, a feed pipe extending up through said shaft and having secured on the upper end thereof an oil spreader of bowl-shaped form, a distributing head comprising an annular distributing plate having a cup-shaped hub portion mounted on said shaft, a cover plate of substantially dish-shaped form inverted supported upon said cup-shaped hub portion, an annular plate supported between said first named plates and having a central opening therein through which said shaft extends; the peripheral portions of said top and bottom plates terminating in close proximity, and said intermediate plate terminating short of the terminals of said top plate; said cup-shaped hub portion having discharge ports in its bottom and tubes or pipe sections connecting said ports with the space around a central opening in said distributing plate between it and the inner circumference of said intermediate plate.

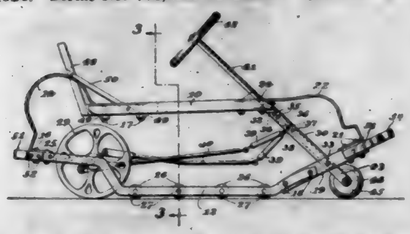
1,543,236. ROTATING TABLE FOR RADIAL DRILLS. WILLARD T. SEARS, Montclair, N. J., assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed July 28, 1921. Serial No. 488,233. 6 Claims. (Cl. 77—28.)



1. In a drilling machine, the combination of a bed, drill supporting mechanism comprising a vertical column on the bed and a horizontal arm supported solely by and movable vertically on the column, drilling mechanism including a drill spindle carried by the arm, a shaft carried by the said suporting mechanism for driving the spindle, power means operatively connected to the shaft for rotating the same, a rotary work support on the bed, a shaft having a worm thereon operatively engaged with a worm wheel on the work support, and means providing an operative connection between the two shafts for continuously rotating the work support at a relatively slow speed.

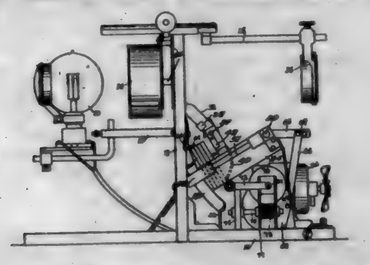
1,543,237. PROCESS FOR IMPROVING THE PHYSICAL PROPERTIES OF ELECTROLYTICALLY DEPOSITED COPPER SHEETS. SHINGO SONODA, Kyoto, Japan. Filed June 12, 1923. Serial No. 644,962. 7 Claims. (Cl. 148—11.)

1. A process for improving the physical properties of an electrolytically deposited copper sheet comprising annealing the sheet at a temperature of from 300° C. to 800° C. for a duration of 5 minutes or more, rolling the same at a circumferential speed of not more than 450 feet per minute, and pickling the sheet with dilute sulphuric acid.



1,543,238. BATHTUB ADJUNCT. DWIGHT C. STURGES, Melrose, Mass. Filed Mar. 3, 1924. Serial No. 696,412. 1 Claim. (Cl. 4—185.)

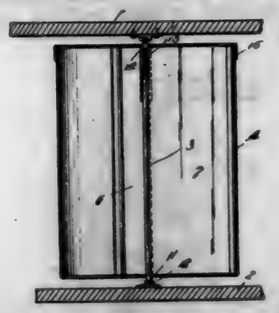
A bath-tub adjunct comprising a bridge composed of a stiff metal rod bent to form parallel elongated stringers and transverse necks connecting the end portions of the stringers, the stringers including end portions formed to bear on opposite edges of the tub, seat-supporting portions offset downward from the end portions, and looped central portions offset downward from the seat-supporting portions; and an interrupted seat composed of two seat sections, fixed to the seat-supporting portions, spaced apart by the looped central portions and separated



from each other and from the looped central portions, by a working space accessible from points below and at opposite edges of the seat sections, the stringers being spaced apart, so that they are adapted to prevent the seat sections from tipping.

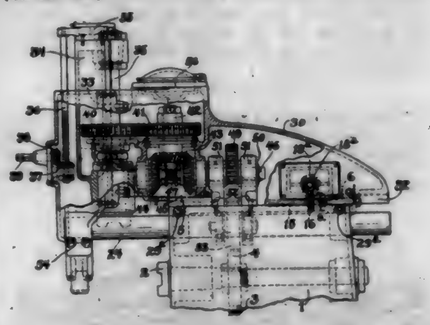
1,543,239. COMBINED SLED AND VELOCIPEDE. MARTIN TATOSIAN, Bridgeport, Conn. Filed Oct. 28, 1924. Serial No. 746,284. 4 Claims. (Cl. 208—113.)

1. A sled of the character described, comprising spaced apart metallic runners each consisting of a pair of spaced apart strips having rollers between them, upper rails having a seat, metallic springs supporting said upper rails upon said metallic runners, rear wheels mounted in said metallic runners, means whereby said rear wheels can be rotated, a steering column supported from said upper rails, a front wheel upon said steering column, and means for adjusting said steering column upwardly and downwardly with respect to said upper rails, whereby said front and rear wheels and said rollers can engage the ground, or said rollers can be adjusted above the plane defined by the lower edges of said front and rear wheels.



1,543,240. AUTOMATIC PICTURE-DISPLAY APPARATUS. HARRY TEETER, Spokane, Wash., assignor of one-third to Edmund D. Beeman and one-third to George M. Denham, both of Spokane, Wash. Filed June 4, 1923. Serial No. 643,236. 4 Claims. (Cl. 88—28.)

1. An automatic picture display apparatus, comprising a magazine with curved walls whereby the slides rest on a rearward angle, means for supporting the slides at a point of display, means for successively elevating the slides from the magazine to the point of display, means for elevating a slide to the point of display and to the rear of a slide already at the point of display, and means for discharging the slide first at the point of display after the succeeding slide has been placed at the point of display, and means for returning the same to the magazine by steps or interruptions including a table for receiving the same from the point of display and conveying them in the fall to the magazine.



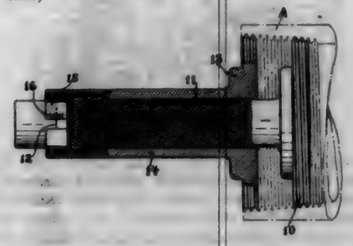
1,543,241. FLOUR BIN. ATTIE WRIGHT, Marshfield, Wis. Filed Apr. 30, 1923. Serial No. 635,750. 1 Claim. (Cl. 211—6.)

A bin adapted to be supported between bearings applied to fixed objects comprising a body of general cylindrical form and having a flat side section which extends from end to end of the body, a cover for the body, the shaft section fixed centrally in the body and adapted to

engage in one of the bearings, a pivot member alined with the shaft and passing through the cover and adapted to engage in the other bearing, and a spring interposed between the shaft and the pivot member.

1,543,242. MILLING MACHINE. FREDERICK C. ALLEN, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Jan. 14, 1922. Serial No. 529,333. 18 Claims. (Cl. 90—16.)

1. In a milling machine, the combination of a column and a cutter supporting overarm construction comprising a main overarm mounted on the column and a plurality of bracing elements therefor, the said elements being secured to the column, extending outwardly therefrom beneath the overarm and secured to the outer end of the overarm.



1,543,243. SHOCK ABSORBER FOR MOTOR CARS AND OTHER MOTOR ROAD VEHICLES. FULLERTON GEORGE GORDON ARMSTRONG, Beverley, England. Filed Oct. 1, 1923. Serial No. 666,013. 2 Claims. (Cl. 267—10.)

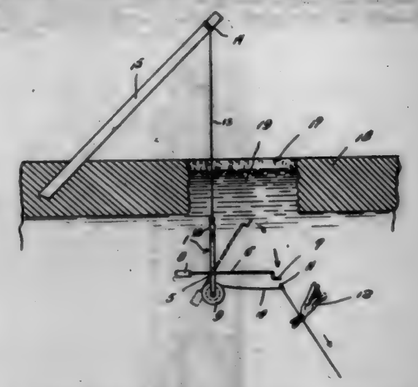
1. A shock absorber comprising a stationary drum having a pin which projects on one side of it, said drum having also a circumferential slot, a pivoted arm which projects through the slot, a flexible connection secured

to the projecting end of the arm and bearing on the drum, a spring arranged in the drum and secured to the said arm, a plate for adjusting the strength of the spring provided with a series of holes for engaging with the said pin, and means for securing the plate to the drum.

1,543,244. TAPER GAUGE. BRYANT H. BLOOD, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 29, 1922. Serial No. 547,829. 10 Claims. (Cl. 33—199.)

1. A gauge for bodies having conical surfaces comprising in combination, a gauge member adapted to contact with a portion of the conical surface being gauged, a second gauge member adapted to contact with another portion of said surface axially spaced from said member, said members being relatively rotatable while in operative position, and means to indicate the relative positions of said gauge members when in gauging positions.

1,543,245. VARIABLE-TEMPERATURE METHOD OF CURING AND TREATING TOBACCO. ALFRED CHARLES BUDNSOD, New York, N. Y. Filed Mar. 14, 1917, Serial No. 154,843. Renewed Nov. 21, 1924. 8 Claims. (Cl. 131—6.)



6. A method of curing and treating tobacco which consists in subjecting it in darkness, for a sufficient time, to air currents having a temperature of from 70° to 80° F. and a relative humidity of from 78% to 82%, then gradually raising the temperature of the air to from 90° to 100° F., while maintaining the relative humidity thereof as before, until the surplus food content in the leaf has been consumed and the cells have died, then continuously increasing the temperature of such air currents until the temperature reaches a point between 120° and 130° F., while still maintaining the same percentage of relative humidity thereof, and then lowering the temperature of the air to from 75° to 85° F. and raising the relative humidity thereof to from 80% to 85%, until the necessary moisture content has been supplied for avoiding breakage in handling or for further treatment.

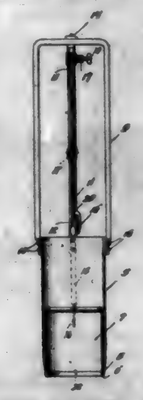
1,543,246. SNAP CATCH FOR HOOKS. PETER E. BURNS, Syracuse, N. Y., assignor of one-half to Frank L. Morse, Ithaca, N. Y. Filed June 7, 1924. Serial No. 718,441. 3 Claims. (Cl. 24—238.)

1. A fastening link terminating in a hook which forms an eye and means for closing the eye comprising a clip formed with a sleeve slidable on the bill of the hook and a resilient portion extending at an angle from the sleeve and at an angle to the bill of the hook across the open side of the hook and frictionally engaging the shank of the hook opposite the bill.

1,543,247. FISHING DEVICE. EDWARD J. CARPENTER, Port Ewen, N. Y. Filed Feb. 18, 1925. Serial No. 10,072. 3 Claims. (Cl. 43—17.)

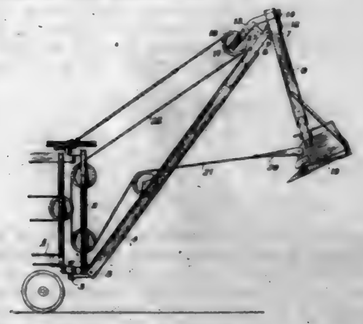
1. A fishing device of the class described comprising a supporting member, a suspension cable connected to said member, a frame carried by said suspension member, a reel carried by said frame, a signalling member, a fishing line wound upon said reel, said signalling member being carried by said line, and a counterbalanced weighted rod mounted upon said frame and serving to maintain said signalling member in a readily visible position.

1,543,248. COMBINATION GARMENT HANGER. CLEON A. CHEESMAN, Lake Placid, N. Y. Filed June 7, 1924. Serial No. 718,624. 1 Claim. (Cl. 45—13.)



A garment hanger comprising a single piece of metal embodying a relatively wide portion forming a stationary jaw, and a relatively narrow portion joined to said wide portion, said narrow portion including a vertically disposed part, a laterally bent horizontal part, and a downwardly bent second vertical part disposed in spaced parallelism to said first named vertical part, said last named vertical part constituting an attaching bracket, the aforesaid wide portion being indented across its lower end to form a clamping rib; a coacting movable jaw pivoted upon said relatively narrow portion of the aforesaid piece of material, said movable jaw being provided on its lower edge with depending projections and a channel for reception of the rib, and yieldable means for normally maintaining said movable paw engaged with said stationary jaw.

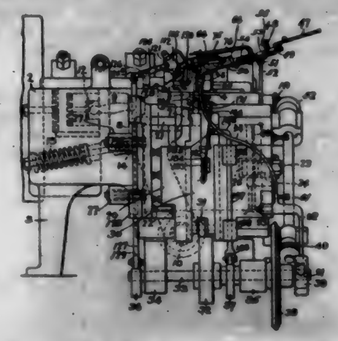
1,543,249. CARTON FILLER. WILLIAM H. CRAVEN, Phillipsburg, Pa. Filed Sept. 3, 1924. Serial No. 735,020. 1 Claim. (Cl. 226—19.)



A carton filled of the class described comprising an open ended comparatively long cylinder provided at its bottom with cutting edge and an internal shoulder, said cylinder being adapted to receive the carton to be filled, a U-shaped bail, the arms of which are attached to the

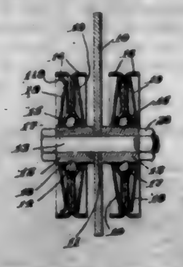
upper end of said cylinder, a tubular and slotted guide secured at its lower end to the cylinder and having its upper end directed laterally inward and connected to the intermediate part of the bight of said bail, a rod slidably mounted in said guide, said rod being provided at its

lower end with a pointed spur intended to penetrate the bottom of a carton, said spur being connected to the rod through a laterally directed part movable in the slot of said guide, and retaining means carried by the upper end of the rod and slidably mounted upon the guide for holding the rod in said positions.



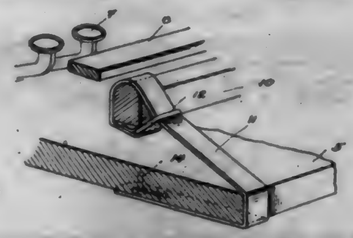
1,543,250. EXCAVATING MACHINE. ROBERT REX DOWNIE, Beaver Falls, Pa., assignor to Keystone Driller Company, Beaver Falls, Pa., a Corporation of Pennsylvania. Filed Jan. 8, 1925. Serial No. 1,278. 10 Claims. (Cl. 214—138.)

1. In an excavating machine, the combination of a boom mounted to move upwardly and downwardly, a member pivotally connected to the outer end of the boom, a scoop carried by said member, a hoisting line, means connecting the hoisting line to the scoop carrying member at a point above the pivotal connection of the latter to the boom, and means automatically preventing relative motion of said connecting means and the scoop carrying member during a certain part of the operating cycle.



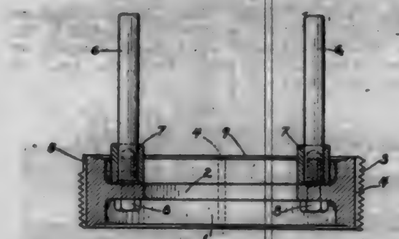
1,543,251. MECHANISM FOR FEEDING BLANKS AND THE LIKE. CHARLES FARRINGER, Carrick, Pa., assignor to Oliver Iron & Steel Corporation, Pittsburgh, Pa., a Corporation of Pennsylvania. Original application filed Sept. 7, 1923, Serial No. 661,425. Divided and this application filed July 22, 1924. Serial No. 727,587. 9 Claims. (Cl. 10—165.)

1. Feeding mechanism comprising an inclined feed table, means for gaging blanks upon said table, means for releasing blanks one by one from the lower end of said table, a carrier adapted to receive said blanks as



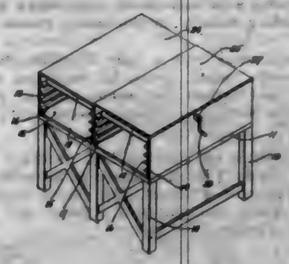
released from said table, and means associated with said carrier for again gaging the said blanks while being transported by said carrier.

1,543,252. ANTIFRICTION BEARING. CLAUD E. FULLER, New York, N. Y. Filed Jan. 11, 1923. Serial No. 612,014. 1 Claim. (Cl. 64—22.)



An improved anti-friction roller comprising a stationary hub, cone shaped dust and dirt excluding discs mounted on said hub and converging inwardly at their peripheries to define a substantially circular cone shaped chamber, and a wheel having its body portion lying in the substantially circular cone shaped chamber and having its periphery lying in a cylinder and housing the periphery of the dust excluding cones.

1,543,253. SECURING MEANS FOR TYPEWRITERS. WALTER H. GERWIG, Parkersburg, W. Va. Filed July 9, 1924. Serial No. 725,029. 1 Claim. (Cl. 46—52.)

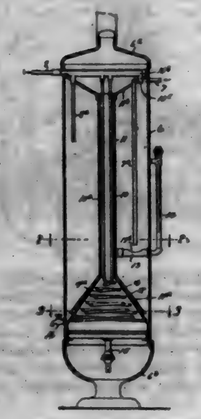


A securing device for attaching a typewriter to a support or the like, comprising a body portion, one end of which is curved to pass over the front bar of the typewriter, and the opposite end of which is return bent whereby it is adapted to pass around and coact with the front edge of the said support.

1,543,254. THREAD GAUGE AND METHOD OF MAKING THE SAME. CLARENCE L. GOODRICH, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed May 28, 1921. Serial No. 473,328. 4 Claims. (Cl. 33—190.)

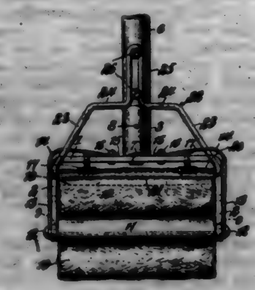
1. A large thread gauge comprising an integral ring of steel which has been toughened by heat treatment to have a Brinell reading of approximately 285, the gauging surface of the ring being provided with unground screw threads cut therein after the said heat treatment.

1,543,255. ICE-CREAM OVEN. LOUISE GORDON, New York, N. Y. Filed July 14, 1924. Serial No. 726,054. 1 Claim. (Cl. 126—275.)



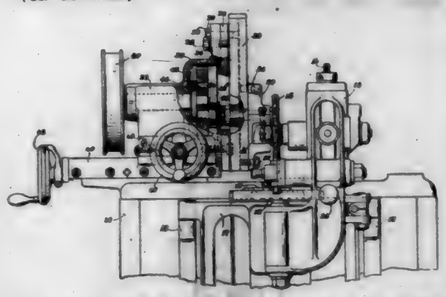
In an oven for roasting ice cream comprising a base having walls forming seperate compartments, ledges on said walls, and sliding doors covering said oven, sleeves on the side walls of said oven, threaded studs passing into said oven and being rotatable in said sleeves and a crank for rotating said stud, an ear on each door having a threaded opening therein, said ear receiving the stud threadably therein, said stud when rotated being adapted to move said door in either direction.

1,543,256. VEHICLE FUEL-TANK FILLER-CAP LOCK. HERBERT M. GRANT, San Diego, Calif. Filed Mar. 14, 1922. Serial No. 543,621. 4 Claims. (Cl. 220—24.)



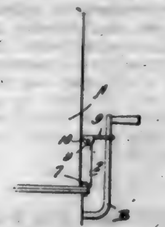
1. In a device of the class described, the combination with a vehicle fuel tank of a filler cap, a flexible cable secured to said cap, a collapsible ring secured to the free end of said cable and a float secured to said collapsible ring.

1,543,257. STAND BOILER. MAX GREENBERG, Cleveland, Ohio, assignor of one-half to Herman S. Kanton and one-half to Sadie Greenberg, both of Cleveland, Ohio. Filed Nov. 8, 1922. Serial No. 599,671. 1 Claim. (Cl. 122—18.)



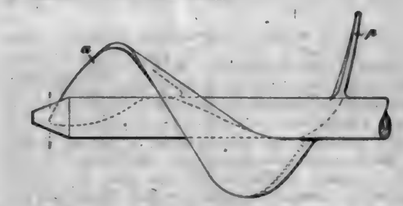
A stand boiler having a tank with a central flue, provided with conical sections at the top and bottom, a transverse header in the upper conical section of the flue, a water heating pipe connected at opposite ends to the header and to the tank, and extending downwardly thru the flue and formed into a coil in the lower conical section, a burner under the coil, a connection between the header and the top of the tank, and another connection between the header and the tank, the latter connection extending downwardly into the tank below the first mentioned connection, said connections being independent of the water heating pipe.

1,543,258. COMBINED MOP AND WRINGER. JACOB H. HARRISON, Falls City, Nebr. Filed Sept. 6, 1924. Serial No. 736,339. 2 Claims. (Cl. 15—119.)



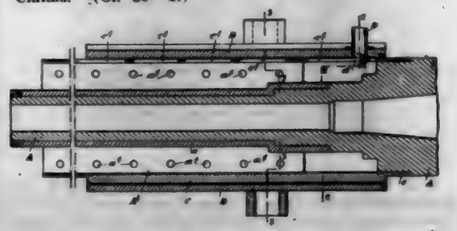
1. A mop and wringer comprising a handle, a transverse bar attached to the handle and having terminal, arms provided with longitudinal slots in their terminals, a roller having trunnions mounted to slide in said slots, opposite angular leaf-springs secured to the said transverse bar and having their free ends engaging the trunnions to force the same into the slots, set screws mounted in the bar to bear against the under sides of said springs to adjust the tension of the same, and a stationary roller mounted between the arms above the first roller and adapted to co-act therewith to wring a mop cloth.

1,543,259. CONTOUR TOOL GRINDER. JOHN HARTEN, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 10, 1922. Serial No. 551,240. 16 Claims. (Cl. 51—100.)



1. A tool grinding machine comprising in combination, a base, means on the base to reciprocate the tool in an oblique plane, grinding means movably mounted on said base and adapted to contact with a surface of said tool, and a former and former pin respectively on said base and grinding means whereby said grinding means may be guided to grind a predetermined contour on said tool.

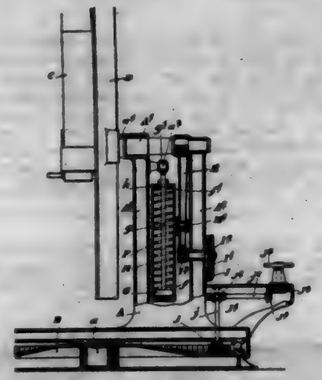
1,543,260. STARTING-CRANK HOLDER. PAUL E. HERR, Watseka, Ill. Filed Jan. 22, 1925. Serial No. 4,046. 2 Claims. (Cl. 74—33.)



1. A device of the class described comprising a bracket, the same being secured at its lower end on the front of a radiator of a motor vehicle directly behind the usual starting crank, a pair of rearwardly extending ears provided on the upper end of said bracket, a yoke member, downwardly extending ears formed on the inner end thereof cooperating with the aforementioned ears, a pin extending through said ears for pivotally supporting the yoke member at its inner end on the upper end of the bracket, said yoke member adapted to rest on the upper edge of the bracket when disposed in an operative position, the forward end of the yoke member being provided with a cut out portion for receiving the upper portion of the starting crank for holding the latter in an upright inoperative position.

1,543,261. PROPELLER. PAUL HICKMANN, Chemnitz, Germany. Filed June 4, 1924. Serial No. 717,863. 2 Claims. (Cl. 170—156.)

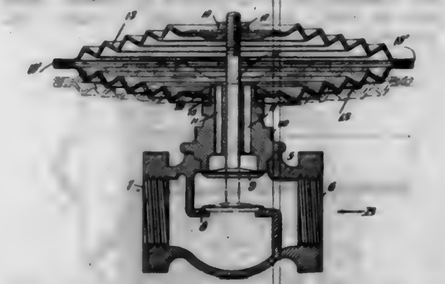
1. A propelling screw having a blade of a diameter decreasing in length from the front to the rear end with its generatrix at the front end approximately perpendicular to the axis of the shaft and adopting a gradually increasing inclination towards the rear end thereof, whilst the pitch increases from the front end towards the rear end.



1,543,262. QUICK-FIRING GUN. NICOLAS EMILIEN METHLIN, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint Stock Company of France. Filed Jan. 3, 1925. Serial No. 429. 10 Claims. (Cl. 89—1.)

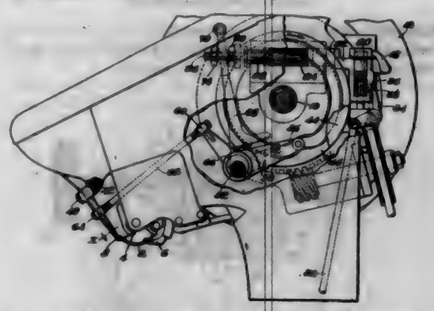
3. A device of the class described comprising a cradle provided with horizontal and vertical grooves, a sleeve having ribs slidably engaging said grooves, the vertical ribs having vertical clearance and the horizontal ribs having horizontal clearance in said grooves, a gun secured to said sleeve, a hoop surrounding said gun and provided with radially extending cooling members having engagement with said sleeve, and means for admitting the cooling medium to the spaces formed between said ribs.

7. In combination with a pair of alternating recoiling gun barrels, rotary means for supplying a cooling medium to said barrels and means utilizing the recoil energy of the barrels for actuating said rotary means.



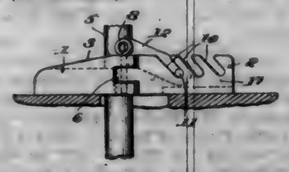
1,543,263. PIECE OF ARTILLERY. NICOLAS EMILIEN METHLIN, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint Stock Company of France. Filed Jan. 3, 1925. Serial No. 430. 9 Claims. (Cl. 89—37.)

1. A piece of artillery comprising a carriage having a pair of side plates, a pivoting shaft journaled in said plates, an overhung gun cradle secured to the pivoting shaft, a gun carried by said cradle, an elevating sector secured to said shaft, elevating mechanism mounted on the carriage and operatively engaging said sector, and means secured to said pivoting shaft for balancing the force of gravity opposing the elevation of the gun.



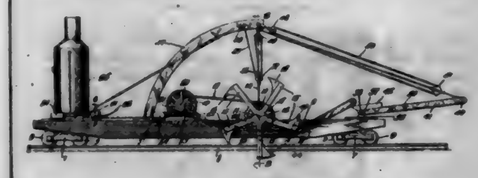
4. A piece of artillery comprising a carriage, a shaft journalled therein, conjugated guns secured to the opposite ends of said shaft, and elevating mechanism operatively engaging said shaft.

1,543,264. VACUUM-CONTROLLED REGULATOR. PORTER A. MORGAN, Bartlesville, Okla. Filed Sept. 21, 1923. Serial No. 664,062. 2 Claims. (Cl. 137—153.)



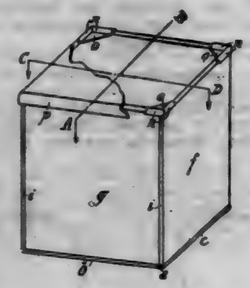
2. A vacuum controlled valve including a body portion having a valve seat, a plug in the valve body and having openings, a diaphragm supported by the valve body, a valve in the valve body and having connection with the diaphragm, and adapted to seat on the valve seat to restrict the passage of fluid through the valve body, and said valve adapted to normally close the openings in the plug.

1,543,265. INSEAM-SEWING MACHINE. ALFRED R. MORRILL, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 9, 1918. Serial No. 249,088. Renewed Dec. 9, 1919. Serial No. 343,646. 19 Claims. (Cl. 112—35.)



1. A chain stitch inseam sewing machine having, in combination, stitch forming mechanism including a hook needle and a looper, and means acting automatically as the machine is stopped to bring the needle to rest out of engagement with the work at the end of the last cycle of operations and to cause the looper to be shifted during that cycle so as to render its operation ineffective to lay the thread in the needle hook.

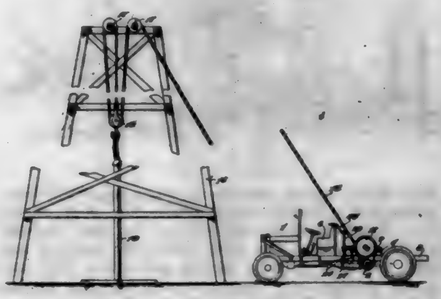
1,543,266. CLAMP. DANIEL D. POWELL, Seagraves, Tex. Filed Jan. 2, 1924. Serial No. 684,018. 2 Claims. (Cl. 24—249.)



1. A pipe clamp comprising a fixed section and a movable section, means pivotally securing the sides of the movable section to the sides of the fixed section, said fixed section, between its sides having a jaw portion, and a removable and adjustable jaw trunnioned between the sides of the movable section, for the purpose set forth.

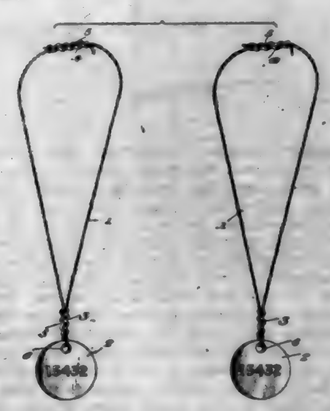
1,543,267. DITCH-FORMING MACHINE. LOUIS O. SJOSTROM and MYRON D. SPENCER, Meyers Falls, Wash. Filed May 7, 1923. Serial No. 637,248. 1 Claim. (Cl. 37—96.)

In a ditch forming machine, a wheel supported body, a curved arm extending upwardly from the body, a vertically adjustable shaft mounted on the body, digging elements carried by the shaft, means for rotating the digging elements, a cable having connection with the arm and having connection with the axle for raising and lowering the digging elements, and means for transmitting movement to the axle to rotate the digging elements.



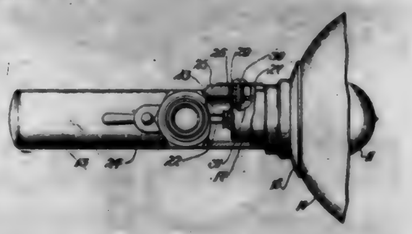
1,543,268. COLLAPSIBLE PACKING CASE OR THE LIKE OF SHEET METAL. ANNA DORA THIEME, Hannover, Germany. Filed Aug. 2, 1924. Serial No. 729,916. 1 Claim. (Cl. 220—6.)

A collapsible packing container of sheet metal including a bottom and side walls, upwardly and inwardly rolled beads continuing from two opposite edges of the bottom, upstanding flanges continuing from the two remaining opposed edges of the bottom, inwardly, downwardly and upwardly rolled beads continuing from the lower edges of the two opposed side walls for lateral sliding engagement with the beads on the bottom for connecting the said side walls to the bottom, inwardly extending flanges continuing from the lower edges of the remaining side walls for contacting engagement with the bottom, interengageable rolled beads continuing from the lateral edges of all of the side walls and adapted for vertically slidable engagement with each other, the beads on the lateral edges of two opposed side walls extending inwardly, outwardly and thence inwardly between the first two folds while the beads on the outer edges of the remaining opposed side walls extend inwardly and outwardly adjacent the main portion so that the parts will be interlocked subsequent to the said vertical sliding engagement, inwardly rolled beads continuing from the upper edges of the side walls, angle clamps for clamping the upper corners of the side walls forming the box, including angularly disposed beaded portions for overlapping engagement with the



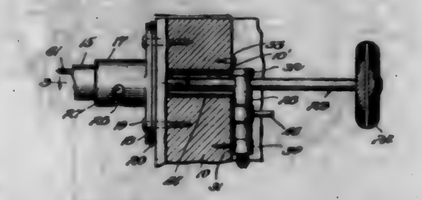
beads on the side walls, and a bridging portion connecting said beaded portion and a flanged cover for frictional engagement with the upper portion of the side walls for closing the container.

1,543,269. WELL PULLING MACHINERY. WILLIAM E. WENTWORTH, San Antonio, Tex. Filed Dec. 7, 1923. Serial No. 679,216. 2 Claims. (Cl. 254—166.)



1. In combination with a motor truck, a drum shaft mounted thereon, sprockets loosely fitted upon the drum shaft and adapted to be operatively connected with the power plant of the truck, clutches mounted upon the drum shaft and adapted to lock the sprockets thereto, levers supported for oscillation in advance of the drum shaft and controlling the clutches, a vertically disposed rock shaft supported upon the truck between said levers, means whereby the said shaft may be rocked from the seat upon the truck, and link connections between the said levers and the said shaft.

1,543,270. MOTHER AND CHILD IDENTIFICATION MEANS. JOHN V. ARSONSKI, Philadelphia, Pa. Filed Feb. 25, 1921. Serial No. 447,762. 2 Claims. (Cl. 40—10.)

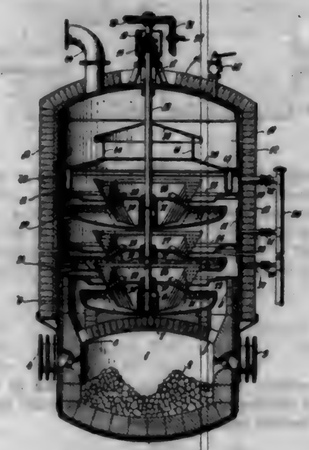


1. Means for identifying a mother with her infant and vice versa from the birth of the infant, comprising two devices, each device being made up of a disk having near its edge an aperture, a chain passed through the aperture of the disk, a seal sleeve receiving the stretches of the chain and arranged adjacent to the edge of the disk and crimped at intervals in its length, and a second seal sleeve receiving the end portions of the chain and crimped at intervals in its length.

1,543,271. FOCUSING DEVICE FOR ELECTRIC LAMPS. ERNST G. K. ANDERSON, Chicago, Ill., assignor, by mesne assignments, to Appleton Electric Co., Chicago, Ill., a Corporation of Illinois. Filed May 31, 1921. Serial No. 473,647. 1 Claim. (Cl. 240—41.)

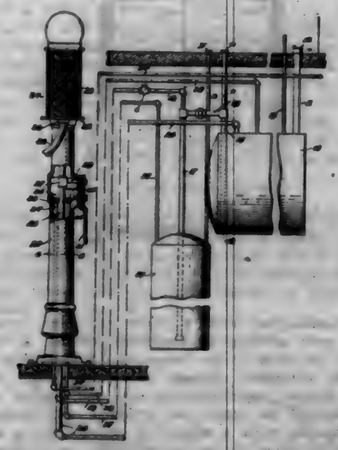
A focusing device for electric lamps comprising, in combination with the reflector of a lamp, a tubular member coaxial with the focal axis of the reflector having an intermediate depending pivotal support dividing said member into a forward lamp supporting portion and a rearward handle portion, a focal adjustment member telescopically slidable in the end of said forward portion and provided at its inner end with means for the attachment to a lamp socket, said forward portion being provided with an elongated slotted boss, a laterally flanged plate forming a cover over said slotted boss, and an adjustable locking device passing through said cover plate and extending through said slot into said focal adjustment member.

1,543,272. SPOTLAMP MOUNTING. ERNST G. K. ANDERSON, Chicago, Ill. Filed July 15, 1922. Serial No. 575,364. 10 Claims. (Cl. 240—61.)



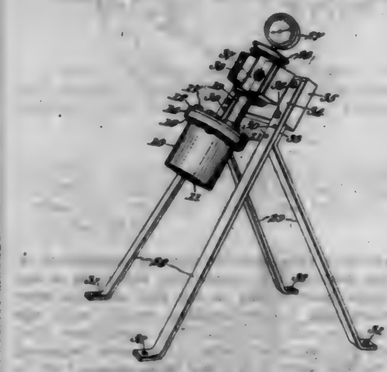
1. A spot lamp mounting for closed body vehicles comprising, in combination with a rocking tubular lamp supporting member, having means of support on a car body wall in line with an opening in said wall, a lamp operating shaft adapted to extend through said tubular supporting member, and said wall opening, an adapter fitting adapted to the inside of the said body wall and disposed at an angle to said shaft, and having an opening through which the shaft extends, and adapters to attach said member to the inner face of said wall, embracing means at the ends of the fitting, angularly and independently adjustable on the axis of the fitting to adapt said fitting to wall faces of varying configurations and to maintain said shaft in line with said supporting member.

1,543,273. POWER FLUID AND METHOD OF PRODUCING SAME. MARK BENSON, New York, N. Y., and FREDERICK H. WAGNER, Baltimore, Md.; said Wagner assignor to said Benson. Filed Apr. 2, 1921. Serial No. 457,903. 5 Claims. (Cl. 60—45.)



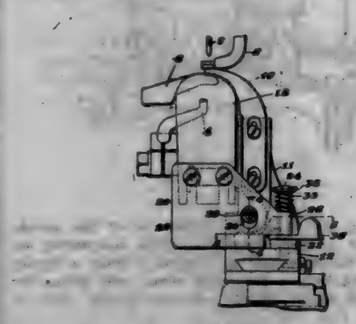
1. In an apparatus for producing a power fluid, the combination of a combustion chamber for burning a fuel under high pressure, a heat insulated compartment in communication with the said combustion chamber, an

open vessel in the said compartment adapted to receive a liquid to be vaporized, a means for continuously supplying the said open vessel with fresh liquid, a means for withdrawing the liquid from the said open vessel



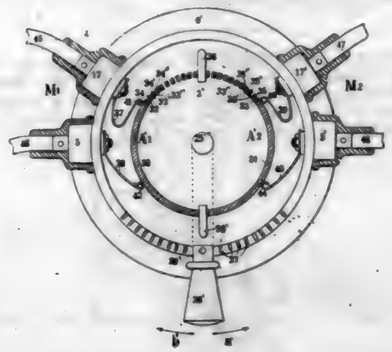
and completely atomizing it, thereby effecting its intimate contact with the products of combustion and causing its instantaneous vaporization, and an outlet for the mixture of vapors and the products of combustion.

1,543,274. LIQUID-DISPENSING APPARATUS. AUGUSTUS BOWERS, deceased, late of Fort Wayne, Ind., by Coite H. Bolens and Charles S. Fair, administrators, Fort Wayne, Ind. Filed Jan. 25, 1921. Serial No. 439,883. 1 Claim. (Cl. 221—74.)



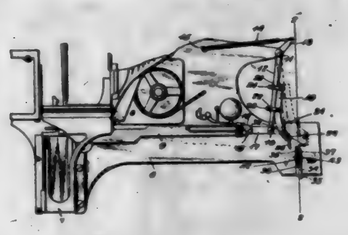
Dispensing apparatus of the class described, including in combination a reservoir, an auxiliary tank and an automatic siphon construction for supplying the latter from the former, a dispensing head including a stand, a supply pipe leading up within said stand connecting said auxiliary tank and head, means for alternately supplying air pressure to the liquid in said auxiliary tank to force it up to said head and releasing said pressure and allowing it to exhaust through said reservoir, comprising a valve casing in said stand, an air inlet pipe extending up within said stand connected thereto at one end, an air outlet pipe leading down said stand to said auxiliary tank connected thereto at the other end, an exhaust pipe connected thereto at a third point near said air inlet connection and leading to said reservoir, and a longitudinally movable valve in said casing normally leaving said air outlet and exhaust pipe in communication but when operated by a longitudinal movement closing that communication and connecting the air inlet and outlet pipes.

1,543,275. AUTOCLAVE OR THE LIKE. J ALLINGTON BRIDGMAN, Owego, N. Y., assignor to The Wilbur White Chemical Company, Owego, N. Y., a Corporation of New York. Filed Apr. 3, 1924. Serial No. 704,076. 8 Claims. (Cl. 23—290.)



1. In combination, a reaction vessel, means for supporting the vessel in an inclined position, and means for revolving the vessel about an axis parallel to but noncoincident with the axis of the vessel.

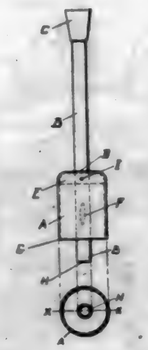
1,543,276. WORK GUARD FOR SEWING MACHINES. CHARLES H. COOK, Gardiner, Me., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 8, 1919. Serial No. 336,654. 11 Claims. (Cl. 112—40.)



1. A shoe sewing machine having, in combination, a work support and a presser foot arranged to receive the projecting edge of a shoe sole between them, stitch forming devices including a curved hook needle and a looper located on opposite sides of the work support, a guard located between the looper and the work mounted to swing about a vertical axis into and out of operative position, and means for locking the guard in operative position.

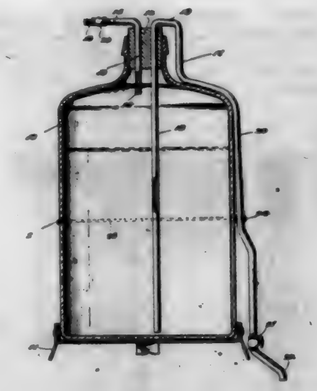
1,543,277. RESTORER OF NORMAL IGNITION FOR DUAL-IGNITION APPARATUS OF INTERNAL-COMBUSTION ENGINES. JULES COURTIER, Paris, France. Original application filed July 31, 1923, Serial No. 654,879½. Divided and this application filed Dec. 11, 1923. Serial No. 680,000. 2 Claims. (Cl. 123—148.)

1. An auxiliary apparatus for internal combustion engines having dual ignition, comprising two pairs of conducting organs inserted one in the first and the other in the second high tension ignition circuit; each pair of conducting organs consisting of a continuous blade and a blade divided into a series of contacts separated by gaps; the two sets of contacts being mounted on an insulating support, a control organ to operate this support; fixed brushes bearing on each set of contacts.



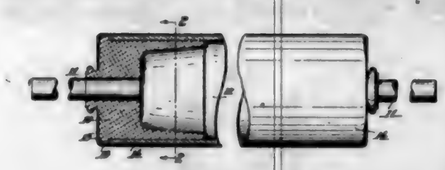
1,543,278. INDICATOR FOR TYPE-CASTING MACHINES. ALBERT M. CRABTREE, Duncan, Okla. Filed Dec. 26, 1922. Serial No. 609,069. 9 Claims. (Cl. 199—30.)

1. Indicating means for the movement of the assembling slide of a type casting machine comprising an arm adapted for reciprocation with said slide, a tappet carried by said arm, a reversible signal and means for mounting said signal on the machine in the path of said tappet.



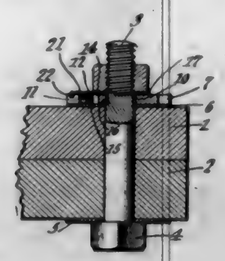
1,543,279. BUBBLE BLOWER. MARTIN R. CROSSMAN, Boston, Mass. Filed Sept. 4, 1923. Serial No. 660,734. 3 Claims. (Cl. 46—31.)

3. A bubble blower comprising a blow pipe having a bubble-forming orifice at one end and a lateral opening spaced inwardly of the bubble-forming orifice, and a bubble-forming base consisting of an outer bowl-shaped element presenting a relatively large bubble-forming orifice and an inner bracing element of cork centrally apertured to fit onto and frictionally engage the said blow pipe for positioning the said bowl-shaped



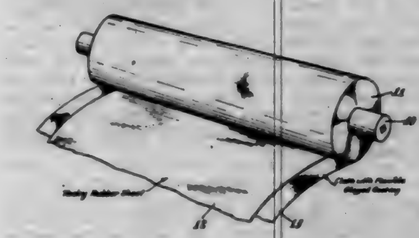
element relative to the bubble-forming end of the blow pipe, said bracing element engaging the blow pipe above the said lateral opening thereof.

1,543,280. SIPHON AND SUPPORTING MEANS FOR THE SAME. JOHN J. DARRAGH, Memphis, Tenn. Filed Feb. 26, 1923. Serial No. 621,378. 1 Claim. (Cl. 137—20.)



The combination with a liquid receptacle having a reduced neck defining a shouldered portion, a stopper fitted in the neck of the receptacle, a relatively short vent tube extending through the stopper and having one end thereof communicating with the interior of the receptacle and its other end provided with means for communication with a source of air supply, a siphon including an inner leg passing through the stopper and extending to a point near the lower end of the receptacle and an outer leg connected therewith and bent to conform to and resting on the shouldered portion of the receptacle, the lower end of the outer leg of the siphon being offset and extended downwardly, a valve secured to the lower end of the outer leg and provided with a discharge nozzle, and a supporting band encircling the receptacle and provided with a loop through which the outer leg of the siphon extends near its offset portion for holding said outer leg in contact with the shouldered portion of the receptacle.

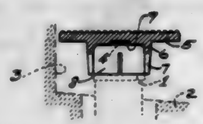
1,543,281. TABLE ROLL FOR PAPER MACHINES. ERNEST N. DAULTON, Fitchburg, Mass. Filed Jan. 26, 1925. Serial No. 4,663. 1 Claim. (Cl. 92—44.)



A table roll comprising a pair of heads, journals for said heads, a relatively heavy cylinder permanently secured to said heads, and a relatively thin metal tube mounted on said cylinder and having its end portions forced inward over the ends of said cylinder heads, said tube forming the outer wearing surface of said roll.

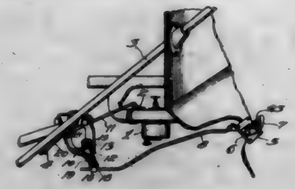
1,543,282. LOCK WASHER. EDGAR BURDETTE DE LOE, Sapulpa, Okla. Filed July 12, 1924. Serial No. 725,646. 3 Claims. (Cl. 151—47.)

1. In a device of the class described, a bolt, a washer on the bolt and having an opening, a locking member in the opening and engaged at one of its angles with the bolt, and a nut on the bolt and cooperating with the locking member to advance the locking member into the opening and into engagement with the bolt, the locking member being in the form of an equilateral triangle, to the end that any one of its angles may be presented to the bolt, and means for coupling the nut to the washer.



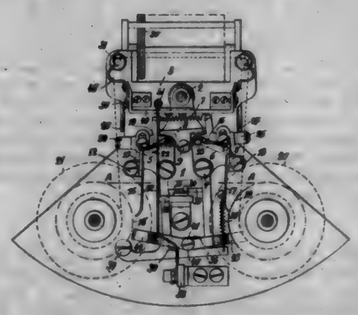
1,543,283. NONSTICKING LINER FOR SHEET RUBBER. ABRAM E. FALOR, JOHN B. DICKSON, and FRED H. AMON, Akron, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Dec. 19, 1921. Serial No. 523,431. 11 Claims. (Cl. 91—68.)

1. The combination of an article having a sticky surface of the nature of unvulcanized rubber, and a separable liner thereon comprising woven fabric coated with a composition forming a non-tacky, glazed surface, in contact with the sticky surface, having substantially the hardness and flexibility of oil-softened pyroxylin.



9. A protective liner for tacky sheet-material comprising woven fabric glazed with oil-softened pyroxylin having an air-pocketing surface conforming to the weave of the fabric.

1,543,284. EXTENSION FOR ELECTRIC STARTER BUTTONS. CHARLES L. FORD, Memphis, Tenn. Filed Mar. 12, 1925. Serial No. 15,125. 2 Claims. (Cl. 74—61.)



1. In an extension for a starter button, an enlarged disk, having an annular hub projecting downward therefrom and separated into a plurality of tongues.

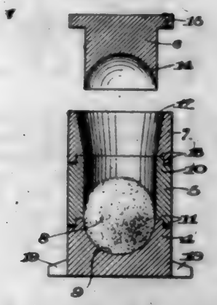
1,543,285. ACCELERATOR FOR AUTOMOBILE ENGINES. CLAYTON E. FREDERICKSON, Chicago, Ill. Filed Aug. 20, 1923. Serial No. 658,222. 8 Claims. (Cl. 74—39.)

1. In an accelerator mechanism of the type described, the combination of an intermediate bell crank, a hanger bracket formed with upper and lower pivot ears adapted to fit opposite sides of the bell crank, a pivot pin extending through said ears and bell crank and having an upper extension forming a supporting post and a coiled spring encircling said post and having end extensions engaging the bell crank and the bracket respectively.

1,543,286. STENOGRAPHIC MACHINE. MARC GRANDJEAN, Paris, France. Filed Jan. 6, 1923. Serial No. 611,001. 2 Claims. (Cl. 197—151.)

1. In a stenographic machine, the combination of two ribbon reels adapted for loose rotation, a toothed wheel mounted upon each reel, a carriage adapted to swing upon the machine frame and to be maintained

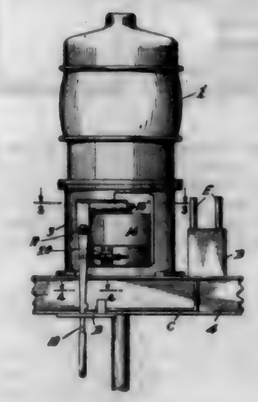
in two different positions between the said reels, an oscillating disk disposed at either side of the said carriage, a reaction spring connecting the said disks together, a stop-piece for said disks, a support pivoted to each disk, a reaction spring for each support, a metal strip disposed upon each support and serving as a pawl for the control of one of the said toothed wheels, and means for transmitting the motion of the keys to the said disks.



1,543,287. PHARMACEUTICAL COMPOUND. HANS HAHL, Elberfeld, Germany, assignor to Farbenfabriken vorm. Friedr. Bayer and Co., Leverkusen, near Cologne-on-the-Rhine, Germany. Filed Dec. 18, 1924. Serial No. 756,819. 2 Claims. (Cl. 260—150.)

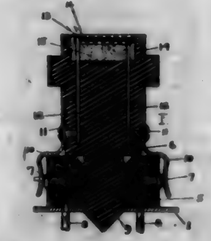
2. The herein described new diethylaminoethyl-hydroquinone-monomethyl ether having the formula:

being an oil forming a white crystalline hydrochloride melting at 121—122° C.; and being useful in the treatment of heart diseases, substantially as described.



1,543,288. DIE. ALFRED LAUKHUFF, Shorewood, Wis., assignor to Albert O. Trostel, Milwaukee, Wis. Filed June 12, 1922. Serial No. 567,765. 1 Claim. (Cl. 18—42.)

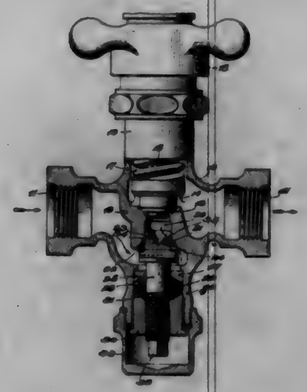
In a die, the combination of a base section provided with a hemispherical cavity, a tubular section having an interlocking connection with the top of said base section, a plunger section having a hemispherical cavity in its front end cooperating with the cavity in the base section to form a spherical cavity, said plunger being slidably mounted in said tubular section and contacting with the inner wall thereof throughout its length and having an external flange abutting against the top of said tubular section to limit its movement, and means for holding the plunger section and tubular section to the base section comprising clamps engaging the plunger section and the base section.



1,543,289. CENTRIFUGAL MACHINE. BRUNO C. LECHLER, Philadelphia, Pa., assignor of one-half to Fletcher Works, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 15, 1921. Serial No. 437,485. 2 Claims. (Cl. 210—72.)

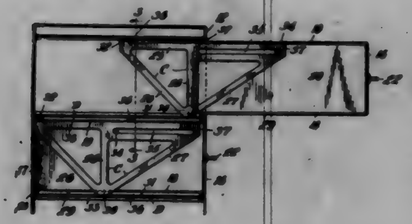
1. In combination, a constant-speed prime mover, a centrifugal, a clutch intermediate the prime mover and centrifugal, an unloader, said clutch comprising two members movable relatively to each other, a centrifugally operated member carried by each of said clutch members and means for controlling the position of one clutch member relatively to the other whereby the torque transmitted by the centrifugally operated members from the

prime mover to the centrifugal will be varied to drive the centrifugal at one time at the same speed as the prime mover and at another time at an unloading speed due to the drag of the unloader.



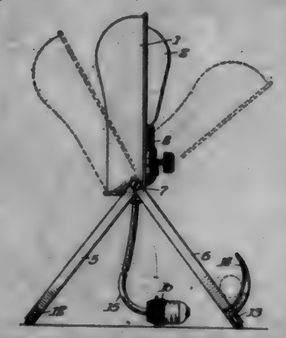
1,543,290. CIGAR LIGHTER. BENJAMIN L. METZGER and THOMAS D. SHEELY, Toledo, Ohio. Filed Mar. 26, 1924. Serial No. 701,925. 1 Claim. (Cl. 219—32.)

In a cigar lighter, a source of electric current, a removable rotatable member, an electrical heat element located in the end of the rotatable member, contacts located on the rotatable member and connected to the electrical heat element, a stationary member for receiving and rotatably supporting the said rotatable member and having contacts for making contact with the contacts of the rotatable member when the rotatable member is rotated to a certain point, the said contacts opened by rotating the said rotatable member to another point, the contacts of the stationary member connected to the source of current.



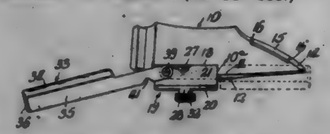
1,543,291. STREAM REGULATOR FOR COCKS. PHILIP MUELLER, Decatur, Ill., assignor to Adolph Mueller, trustee, Decatur, Ill. Filed Mar. 27, 1920. Serial No. 369,287. 3 Claims. (Cl. 277—68.)

2. The combination with a cock having an inlet and an outlet, of a diaphragm having a thickened section provided with a valve seat on one side thereof, a controlling valve for said seat, a valve seat on the opposite side of said section and a chamber extending upwardly from said seat, the wall of said chamber having an annular groove in the lower end thereof, a regulating valve adapted to fit said second seat, said regulating valve



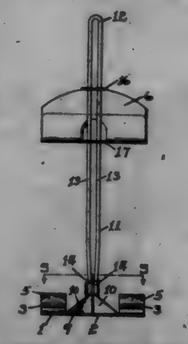
having a recessed extension fitting the wall of said chamber and provided with a substantially V-shaped water passage in its side wall leading to said recess, said passage adapted to direct the flow of the liquid from an upward to a transverse direction, and disposed so as to permit flow only after the regulating valve has moved an appreciable distance from its seat.

1,543,292. BOOK-FILING CABINET. MAX MURDOCK, Streator, Ill. Filed Dec. 18, 1920. Serial No. 431,739. 3 Claims. (Cl. 45—77.)



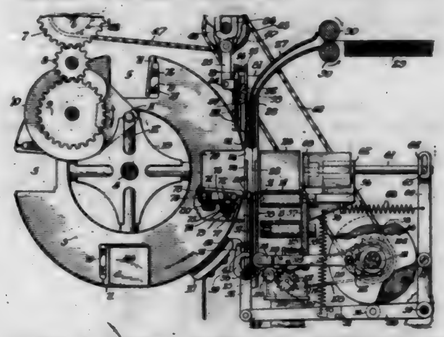
1. A filing cabinet of the character described, the combination with a supporting frame; of a drawer horizontally slidably mounted on said frame, said drawer having a horizontal bottom wall, a horizontal top wall, a vertical front wall, a vertical rear wall and a centrally disposed, vertical longitudinally extending hollow partition between the front and rear walls, said partition having an opening in one of its edges; and means co-operable with the supporting frame adapted to be housed partly within said hollow partition, for assisting in supporting the drawer in extended position.

1,543,293. FOLDING LAMP. THEODORE J. NELSON, Chicago, Ill., assignor to Colonial Lamp & Fixture Works, Chicago, Ill., a Corporation of Illinois. Filed Aug. 11, 1922. Serial No. 581,048. 5 Claims. (Cl. 240—52.)



1. In a portable lamp, the combination of a shade, socket and a pair of supporting members, all pivoted together on a common pivotal axis arranged diametrically of the socket and each independently adjustable.

1,543,294. MOUTHPIECE FOR SAXOPHONES. JULIUS J. NEUMANN, Chicago, Ill. Filed Aug. 10, 1923. Serial No. 656,681. 8 Claims. (Cl. 84—383.)

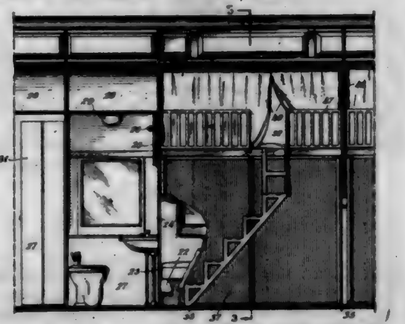


1. The combination with the mouthpiece body of a musical instrument having a flat lay surface for a reed and having longitudinally parallel faces at each side of said lay surface, a housing to receive the butt end of said reed, said housing having side walls adapted for engagement with said faces, means for securing said housing directly to the mouthpiece with its side walls against said faces, a clamping plate in said housing for engaging said butt end of the reed to hold it against the lay surface, and means extending through the bottom wall of said housing for operating said clamping plate.

1,543,295. ADJUSTABLE CARD HOLDER. WILLIAM H. PARKER, Toledo, Ohio. Filed Oct. 18, 1924. Serial No. 743,245. 3 Claims. (Cl. 40—11.)

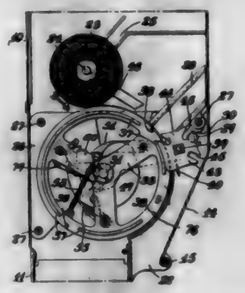
1. In a card holder, a clamp having elastic clamping parts, an elastic wire loop member pivotally connected to the clamp and an easel member adjustably supported on the wire loop member and secured in position by the elasticity of the wire loop member.

1,543,296. WRAPPING MACHINE. FRANK M. PETERS and WARREN H. HUNGERFORD, Chicago, Ill., assignors to Peters Machinery Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 16, 1920. Serial No. 431,085. 8 Claims. (Cl. 93—2.)



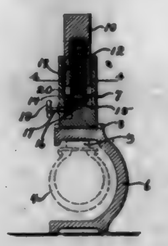
1. In a wrapping machine, the combination with mechanism for folding a wrapper around an article of a pair of spaced guides for holding the wrapper in wrapping position, and reciprocable means for closing the gap between the guides as the wrapper is fed into position.

1,543,297. TIRE-LINER CLEANER. EDWIN E. ROBINSON, Akron, Ohio, assignor to American Radiator Company, Chicago, Ill., a Corporation of New Jersey. Filed Oct. 27, 1920. Serial No. 420,067. 2 Claims. (Cl. 15—15.)



1. In a device of the character described, the combination with a tubular member having an elongated slot therein with opposite angular edges, of removable means secured to said tubular member for guarding said edges, said means including portions extending over and conforming in shape to said member at opposite sides of said slot and rounded edge portions extending inwardly into said slot and embracing said edges to provide curved guards therefor to prevent damage to the material engaged.

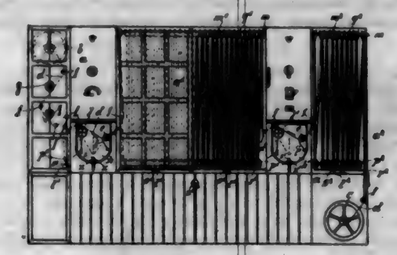
1,543,298. SLEEPING CAR. AGNES R. ROSSMAN, Scotch Plains, N. J. Filed Nov. 13, 1924. Serial No 749,577. 14 Claims. (Cl. 105—323.)



10. In a sleeping car construction, a set of berths, a compartment individual thereto and divided into sections corresponding in number to the number of berths in said set, doors through which access may be had directly from each berth to one of said sections, and other doors for the compartment affording access to said sections from the aisle of the car.

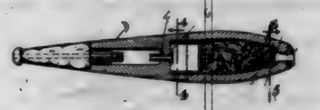
1,543,299. PAPER-TOWEL-VENDING MACHINE. EDGAR E. SHELLEY, Newark, N. J., assignor to The Economy Paper Company, Newark, N. J., a Corporation of New Jersey. Filed July 21, 1922. Serial No. 576,431. 14 Claims. (Cl. 211—33.)

1. A machine of the class described comprising a suitable casing, a drum rotatably mounted in said casing and provided with an elongated aperture, a rotatable cutter device mounted in juxtaposition to and longitudinally of said drum and adapted to cooperate with the aperture of said drum, means involving a crank lever for controlling the rotation of said drum, means for normally holding said drum against rotation, coin controlling means for moving said last named means into inoperative position to permit of the rotation of said drum, and means for imparting a sudden rotary movement to said drum and said cutter device in the passage of said cutter device into and out of the aperture in said drum.



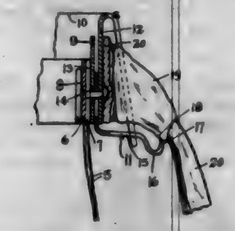
1,543,300. JACK DEVICE FOR AUTOMOBILES. CHARLES H. SIMERSON, West New York, N. J. Filed Nov. 5, 1921. Serial No. 513,005. 4 Claims. (Cl. 254—94.)

1. A jack device comprising a shoe portion having an inner part adapted to rest against the inner side of the felly of a wheel, a clamp portion having a screw revolubly mounted therein in a bearing adapted to prevent any axial movement of said screw, an internally threaded clamp projection adapted to cooperate with said screw and to be axially moved by the revolution of said screw, and means including a shaft projecting laterally from said clamp portion and connected to said screw adapted to cause the revolution of said screw.



1,543,301. METHOD OF REGENERATING WORN CINEMATOGRAPHIC FILMS. FRIEDRICH JOHANN JACOB STOCK, Munich, Germany. Filed Apr. 24, 1923. Serial No. 634,249. 7 Claims. (Cl. 88—19.5.)

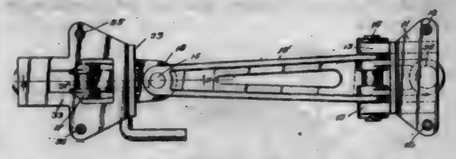
1. The method of regenerating worn or aged films which consists in applying a solvent to the damaged side of the film band adapted to penetrate and swell the material, superficially liquefying the swelled material



by the action of hot fluid, and finally drying and thereby rehardening the film.

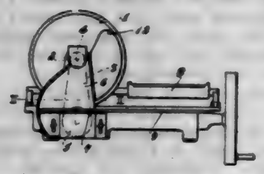
1,543,302. PIPE. DAVID SWERDLOW, Brooklyn, N. Y., assignor to Safety Pipe, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 25, 1924. Serial No. 739,751. 2 Claims. (Cl. 131—22.)

1. A cigar-shaped pipe embodying a bowl with a longitudinal orifice, a pipe body having a chamber provided with a transverse partition near its inner end and having an aperture and a shoulder, a metal collar in the end of the body abutting against said shoulder, a drain tube extended through the aperture in said partition and having a flange bearing against said shoulder, and a mouthpiece in the other end of the body having a contracted member extended into the chamber of the body.



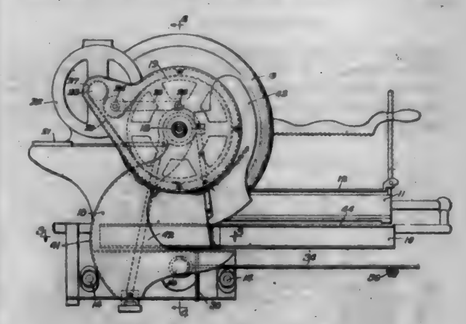
1,543,303. NECKTIE SUPPORT. WILLIAM P. TALBOT, Millbrook, N. Y. Filed Mar. 23, 1925. Serial No. 17,580. 2 Claims. (Cl. 24—16.)

1. A necktie support comprising a flat ring portion, the opening therein being adapted to fit over the shank of a collar button, a horizontally extended portion formed integrally with the ring portion, a hook at the end of said extended portion, the hook being sharply pointed on the inside of its inner end whereby it will hold the tie when the same is pressed thereagainst.



1,543,304. COUPLER. CHARLES H. TOMLINSON, Mansfield, Ohio, assignor to The Tomlinson Coupler Company, Mansfield, Ohio, a Corporation of Ohio. Filed July 12, 1920. Serial No. 395,544. 16 Claims. (Cl. 280—33.44.)

1. In combination, a pair of coupling members for vehicles, means rigidly fixed to said vehicles for supporting said coupling members intermediate the ends thereof for vertical pivotal movement, means on one end of each of said members for engaging the other of said members, and means on the other end of each of said members for yieldingly maintaining said coupling mem-

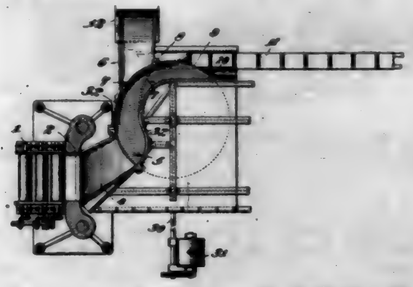


bers against vertical pivotal movement in one direction, while permitting free vertical, pivotal movement thereof in the opposite direction.

1,543,305. MEAT-SLICING MACHINE. WILHELMUS ADRIANUS VAN BERKEL, Rotterdam, Netherlands, assignor to U. S. Slicing Machine Company, La Porte, Ind., a Corporation of Indiana. Filed Nov. 6, 1922. Serial No. 599,457. 9 Claims. (Cl. 146—102.)

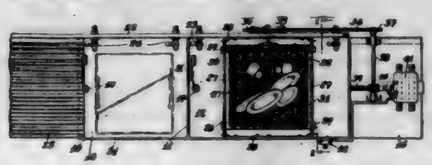
1. In a slicing machine, a rotary knife, a table arranged to reciprocate at one side of said knife to present material thereto, a horizontal slice receiving table located at the oposite side of said knife from said reciprocating table, said receiving table extending past the vertical center of said knife, and a support for said knife interposed between said receiving table and said knife.

1,543,306. SLICING MACHINE. WILHELMUS A. VAN BERKEL, Rotterdam, Netherlands, assignor to U. S. Slicing Machine Company, La Porte, Ind., a Corporation of Indiana. Filed Dec. 8, 1922. Serial No. 605,549. 11 Claims. (Cl. 146—162.)



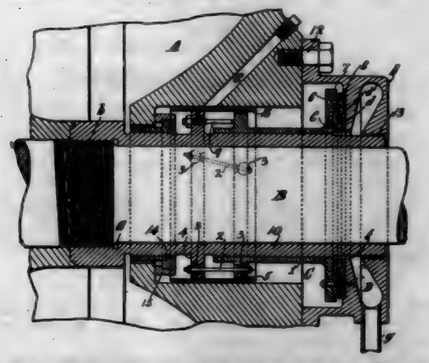
1. In a slicing machine, a rotary knife, a horizontal spindle for said knife, a support for said spindle comprising an open shell, and a slice receiver positioned in said shell.

1,543,307. MILL APPLIANCE. TOM WILSON, Johnstown, Pa. Filed Aug. 13, 1921. Serial No. 491,935. 9 Claims. (Cl. 198—25.)



1. A mill appliance comprising the combination with a conveyor, of a scrap chute, and a rotatable turn-table, means for delivering heavy and hard billets to the upper surface of the turn-table, said turntable having a guide

near the periphery thereof, another guide within and spaced apart from same, and a switch gate adapted to form an opening in the outer guide as desired, whereby material may be delivered in either of two directions by said turntable.

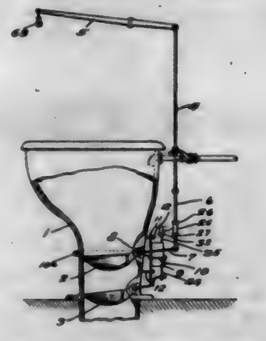


7. In a mill appliance, a rotatable turntable provided with a guide near the periphery thereof, another guide within and spaced apart from same, and a switch gate adapted to form an opening in the outer guide as desired, whereby material may be delivered in either of two directions by said rotating turntable.

1,543,308. DISHWASHING MACHINE. GAETANO ALBANESE, Brooklyn, N. Y. Filed May 1, 1922. Serial No. 557,707. 4 Claims. (Cl. 141—9.)

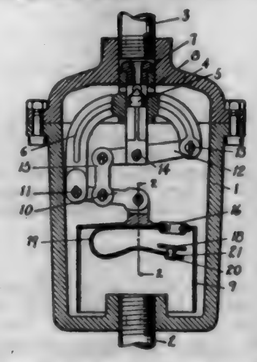
1. A machine of the class described comprising a tank, two crank members rotatably mounted in the tank at spaced intervals, a frame mounted on said cranks and supported thereby and a drive crank independent of the first named cranks and mounted in connection with the frame.

1,543,309. SHAFT PACKING. ROBERT W. ALLERTON, South Orange, N. J., assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Mar. 3, 1921. Serial No. 449,304. 8 Claims. (Cl. 286—7.)



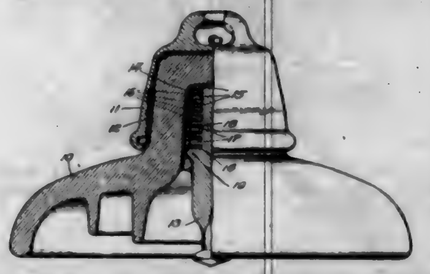
1. A packing for centrifugal pumps and the like, comprising a member rotated by the shaft, a sealing plate carried by said member co-acting under pressure with a second sealing plate, and link connections between the shaft and said member for moving the latter longitudinally of the shaft and against such pressure to separate the sealing plates on excessive friction between them.

1,543,310. PROCESS FOR THE PRELIMINARY TREATMENT OF CELLULOSE PRIOR TO ESTERIFICATION. JEAN ALTWEGG, Lyon, France, assignor to Societe Chimique des Usines du Rhone, Paris, France. Filed Oct. 3, 1924. Serial No. 741,403. 2 Claims. (Cl. 260—101.)



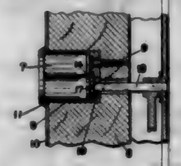
1. A process for rendering cellulose more easily esterifiable, consisting in treating it with a quantity of pure acetic acid such that it forms, with the water moisture retained by the cellulose, an acetic acid of concentration 60 to 90%.

1,543,311. AUTOMATIC CONTROL FOR TOILETS. HARRY GUY ANDERSON, Chicago, Ill. Filed May 22, 1924. Serial No. 715,100. 8 Claims. (Cl. 4—85.)



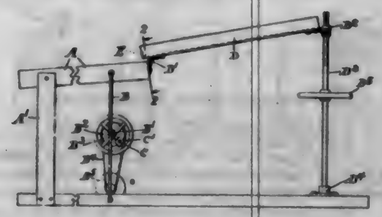
1. In automatic controls for two-pan train toilets, a trip lever for one of said pans operable positively with the toilet flushing lever, a second trip lever for the remaining pan connected to said first named trip lever and yieldingly actuated thereby, and automatic control mechanism associated with said second trip lever whereby the functioning of said lever is made dependent upon the movement or lack of movement of the train.

1,543,312. TRAP. ADAM ARMSTRONG, Three Rivers, Mich. Filed July 23, 1923. Serial No. 653,226. 4 Claims. (Cl. 236—62.)



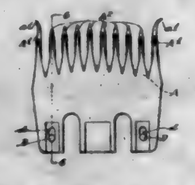
1. In a trap, the combination of a casing provided with an inlet at the bottom and a discharge valve at the top, a float open at its lower end disposed above said inlet and having operative connections to said discharge valve, said float having a port in the top thereof and a relatively small vent, a valve for said float port, and a U-shaped support therefor of thermostatic metal mounted within said float and adapted when heated to close said valve for said float port.

1,543,313. INSULATOR. ARTHUR O. AUSTIN, Barberton, Ohio, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Dec. 6, 1920. Serial No. 428,440. 15 Claims. (Cl. 173—318.)



1. An insulator comprising a dielectric member and a metallic fitting therefor, said fitting having yielding metallic projections arranged thereon the extremities of which are connected with said dielectric member for transmission of stress from one of said members to the other, and additional projections on said fitting interposed between said first-mentioned projections but unconnected with said dielectric member.

1,543,314. SECURING MEANS FOR LOCK HOUSINGS. FRANK ELLISON BEST, Seattle, Wash., assignor to Frank E. Best, Inc., Seattle, Wash., a Corporation of Washington. Filed June 7, 1923. Serial No. 643,961. 5 Claims. (Cl. 70—46.)

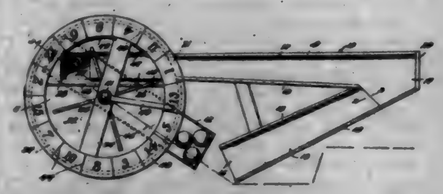


1. In a lock, a lock housing having an internal recess for the reception of locking mechanism and a screw arranged to be inserted through the bottom of said housing to secure said housing to a support the head of said screw being accessible only through said recess.

1,543,315. SPREADER. JOHN BLAND, Chicago, Ill. Filed May 19, 1924. Serial No. 714,203. 16 Claims. (Cl. 198—220.)

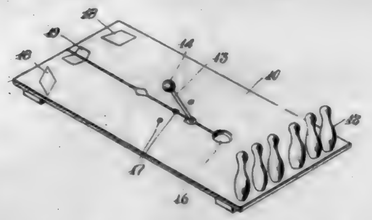
5. A spreader including in combination a chute adapted to receive material and a baffle plate across said chute so shaped that as the material flows upon the chute it will flow over the baffle in a sheet of uniform thickness throughout its width.

1,543,316. COMB AND FIXED CUTTER FOR SHEEP SHEARS. FRANCIS GEORGE WILLIAM BRISTOW, Sydney, Australia, assignor to Michael W. McArdle, Chicago, Ill. Filed June 4, 1923. Serial No. 643,157. 6 Claims. (Cl. 30—1.)



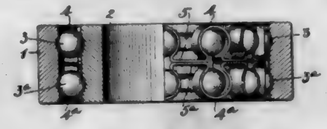
1. A comb and fixed cutter for a sheep shear and the like, comprising a supporting blade and a cutting blade, the supporting blade having comb teeth provided at their points with guard lips projected up at both sides and the cutting plate seated flat on the supporting plate having teeth with shearing lateral edges and having terminal points entered between the guard lips of the corresponding teeth of the supporting plate, and means for engaging the two plates with each other against relative movement in the plane of their contact.

1,543,317. HOLDER FOR SLICING MACHINES. OSCAR BROWNSEY, Laporte, Ind., assignor to U. S. Slicing Machine Company, Laporte, Ind., a Corporation of Indiana. Filed May 9, 1921. Serial No. 467,964. 12 Claims. (Cl. 146—217.)



1. In a device for holding material to be cut by a slicing machine, the combination with a support holding members arranged in spaced relation on said support and movable relative thereto, means for operating said members, and a yieldingly acting brake for preventing accidental operation of said members.

1,543,318. BALL GAME. MATTHEW CARDOSA, New Bedford, Mass. Filed July 28, 1924. Serial No. 728,790. 7 Claims. (Cl. 273—141.)

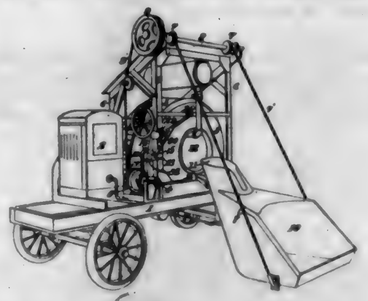


1. In a game apparatus in combination a platform, a pivot mounted thereon, radial arms on said pivot above the surface of said platform, an enclosing wall adjacent the ends of said arms and means to project a ball thru said wall and along the surface of said platform to strike said arms and rotate said pivot.

1,543,319. GAME. WILLIAM A. CARTER, Yonkers, N. Y. Filed Apr. 23, 1924. Serial No. 708,522. 2 Claims. (Cl. 273—40.)

1. A game comprising an elongated board and a plurality of loose pieces to be set up at one end of said board, a ball, and an elastic cord having one end attached to the ball and the other end attached to the board adjacent its center, said board having a series of hazards adjacent the point of connection of the elastic cord to the board.

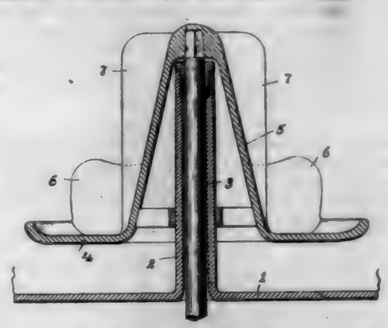
1,543,320. DOUBLE-ROW BALL BEARING. PETER COFRANCESCO and WILLIAM P. THIEDE, New Britain, Conn., assignors to The Fafnir Bearing Company, New Britain, Conn., a Corporation of Connecticut. Filed Nov. 3, 1924. Serial No. 747,450. 1 Claim. (Cl. 308—195.)



The method of applying ball spacers to the balls in a double row ball bearing of the unit handling type, comprising forming two separate spacers, each spacer being fluted to form reversely arranged inner and outer arched portions, applying such spacers to the ball bearings with the inner arches confronting each other, then applying pressure to the outside of both of said spacers to crowd them toward each other to simultaneously flatten and spread certain of the adjacent inner arches of the opposed spacers by mutual contact.

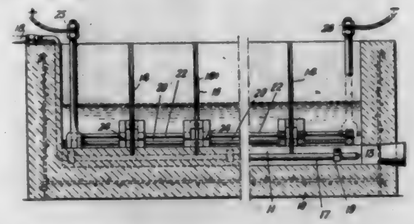
1,543,321. PROCESS FOR PRODUCING METALS AND ALLOYS. SVEN DAGOBERT DANIELI and BO MICHAEL STURE KALLING, Trollhattan, Sweden, assignors to Aktiebolaget Ferrolegeringar, Stockholm, Sweden, a Joint Stock Company Limited of Sweden. Filed Dec. 17, 1923. Serial No. 681,126. 5 Claims. (Cl. 75—17.)

1. Process for the production of metals or alloys of low carbon and silicon content by silico-thermic reduction which comprises oxidizing an alloy having a relatively high silicon content with a metal oxide to produce a silicate slag relatively low in metallic oxides and a metallic silicide low in carbon and relatively high in silicon, thereafter treating said metallic silicide with a metallic oxide to produce a metal relatively low in carbon and silicon and a silicate slag relatively high in metallic oxide, and separating the metal thus formed.



1,543,322. SAFETY STOP AND LOCK FOR LOADING SKIPS. NORRIS K. DAVIS, San Francisco, Calif. Filed Aug. 5, 1924. Serial No. 730,195. 2 Claims. (Cl. 214—130.)

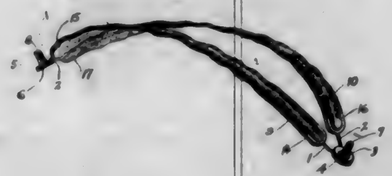
1. In a concrete mixer, a movable skip; means for operating the same including a clutch and a brake; a spring controlled lever for simultaneously throwing the clutch into function and the brake out of function and vice versa; an operating lever; a toggle connection interposed between said operating lever and said clutch and brake lever adapted by its flexing to opposite sides



to hold said levers in adjusted positions; and means dependent upon the movement of the skip for actuating the operating lever.

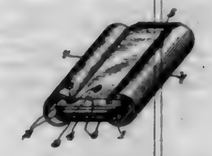
1,543,323. WASHING MACHINE. OTTO T. DEHLE, Watertown, Mass. Filed Sept. 6, 1924. Serial No. 736,308. 5 Claims. (Cl. 259—128.)

1. A dolly for washing machines, comprising an oscillating table having radial ribs thereon, and a central post rising therefrom, said post having vertical ribs whose radial dimension is larger at their upper ends than below.



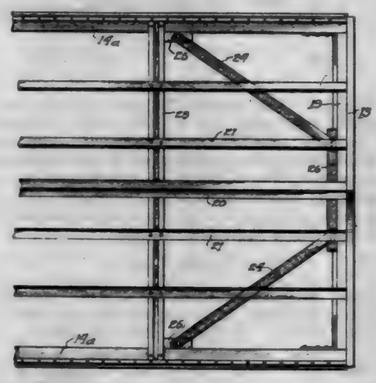
1,543,324. PROCESS FOR TREATING TRADE WASTE WATERS TO CLARIFY AND STERILIZE THE SAME AND TO EXTRACT FATS THEREFROM. ADHÉMAR JEAN DE RAEVE, Sydney, New South Wales, Australia. Filed Mar. 20, 1922. Serial No. 545,393. 8 Claims. (Cl. 87—6.)

8. A process for treating wool scour waters, consisting in introducing lime in quantity sufficient to convert the carbonate of soda in said waters into caustic soda and to precipitate calcium carbonate, heating the mass to the boiling point whilst fresh, separating the sludge



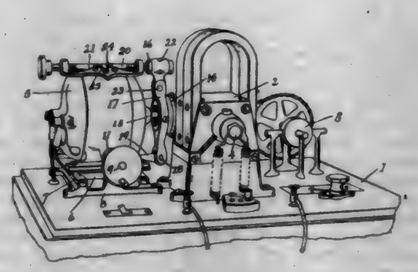
from the liquor, treating the liquor at a temperature below 35° C. with chlorine in proportion to the combining equivalent of the alkali present, thereby to produce chloro-proteins and alkali hypochlorites acidifying the liquor to neutralize the alkali hypochlorites, and removing the floated fats.

1,543,325. HEADBAND FOR TELEPHONE HEAD SETS. FREDERICK DIETRICH, Flushing, N. Y., assignor to C. Brandes, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 8, 1923. Serial No. 679,383. 4 Claims. (Cl. 179—156.)



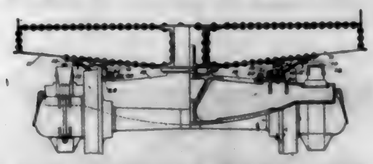
1. A headband for telephone headsets, comprising in combination a pair of central circular core members substantially arcuate in contour and joined at opposite ends, a strip of seamless fabric webbing material having a substantially solid woven body carried by each of said central circular core members, said core members passing longitudinally through a bore in said seamless fabric webbing, means at opposite ends of said webbing whereby said webbing is maintained substantially flat at said ends, said webbing being free to revolve about said central circular core throughout its length and arranged to assume various contours by independent flexure of the webbing intermediate the ends thereof.

1,543,326. CONDENSER AND CLAMP THEREFOR. WILLIAM DUBILIER, New York, N. Y., assignor to Dubilier Condenser & Radio Corporation, a Corporation of Delaware. Filed Feb. 7, 1921. Serial No. 442,945. 1 Claim. (Cl. 250—41.)



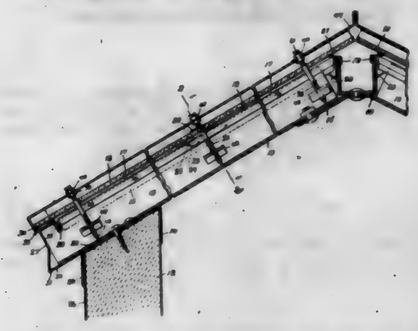
An electrical condenser comprising a stack of conducting and dielectric sheets, bearing members engaging the opposite faces of said stack, each of said members having open-ended grooves in its outer face along its opposite edges, and clamps for holding said members and said stack together, said clamps having opposed edges and being disposed at opposite sides of the condenser, the edges of each clamp engaging the grooves in the bearing members at each side of the condenser, each clamp having cutaway corners at the ends of its opposed edges, to enable it to be forced upon the condenser in gripping position.

1,543,327. CAR-ROOF CONSTRUCTION. IRA EVERETT, Sayre, Pa., assignor, by mesne assignments, to Kennoway Manufacturing Company, a Corporation of Delaware. Original application filed Oct. 16, 1917, Serial No. 196,939. Divided and this application filed May 27, 1918. Serial No. 236,914. 11 Claims. (Cl. 108—5.5.)



1. A car framing construction comprising, in combination, an external metallic end plate, an internal wooden end plate, two side plates and diagonal tie members connecting both end plates to said side plates.

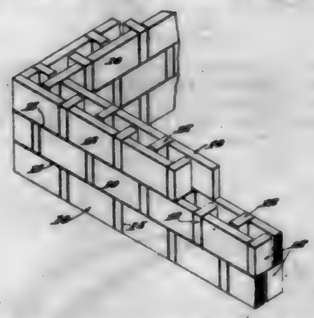
1,543,328. VARIABLE-SPEED DRIVING GEAR FOR MOTORS. NORRIS E. GOODRICH, Battle Creek, Mich., assignor to Sanitarium and Hospital Equipment Company, Battle Creek, Mich. Filed July 16, 1924. Serial No. 726,327. 5 Claims. (Cl. 74—26.)



5. The combination of a supporting base provided with ways, a motor slidable on said ways provided with an axially movable driving gear, a driven friction gear disposed with its axis transverse to the axis of said driving gear to coact therewith, a bearing for supporting said driving gear in driving engagement with said driven gear, an adjustable support for said bearing, an adjusting screw for said bearing support mounted on said motor whereby said driving gear is adjustably supported in coacting relation to said driven gear, and an adjusting screw for said motor whereby the motor may be adjusted on said ways to vary the position of the driving gear relative to said driven gear for changing the speed of said driven gear.

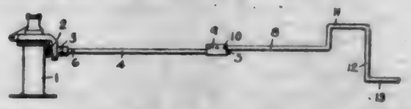
1,543,329. SIDE BEARING. ERNEST G. GOODWIN, New York, N. Y., assignor, by mesne assignments, to Goodwin Side Bearing Co., Inc., Wilmington, Del., a Corporation of Delaware. Filed Sept. 20, 1922. Serial No. 589,376. 4 Claims. (Cl. 308—226.)

1. In a roller side bearing for railway cars, the combination of upper and lower bearing plates, a cylindrical roller between said plates, a roller positioning device, said device being pivoted at one end on the truck bolster and extending through the roller and across the lower bearing plate and said plate being wholly under said device, and a guide on the car bolster in which the other end of said device is loosely received.



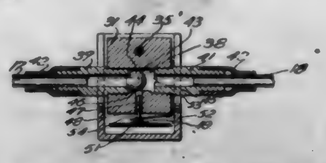
1,543,330. SKYLIGHT CONSTRUCTION. JOSEPH N. GRENIER, Brooklyn, N. Y. Filed Mar. 30, 1922. Serial No. 548,079. 1 Claim. (Cl. 108—16.)

A skylight construction comprising a ridge-bar, a plurality of downwardly inclined bars secured to and extending in opposite directions from said ridge-bar angular trough-like members engaging over the edges of each second named bar and formed to provide a hook-shaped retaining portion, a gutter portion extending outwardly of the second named bar and an upwardly and outwardly inclined portion constituting a cushion strip, sheets of glass resting upon said cushion strips with the joint over the second named bar, a cap plate extending over the joint, clamping means engaging through the cap plate and engaging the second named bar whereby to hold the glass securely, an angular trough-member associated with each edge of the ridge-bar and formed to provide a gutter portion and an upwardly and outwardly extending portion constituting a cushion strip engaging against the underside of the glass, and a cap plate extending longitudinally above the ridge-bar and engaging said first named cap plates, said last named cap plate being formed with holes engaging upon the uppermost ones of said bolts.



1,543,331. BUILDING CONSTRUCTION. THEODOR E. HORNEMANN, Boston, Mass., assignor to Thermo-Wall Construction Company, Boston, Mass., a Corporation of Massachusetts. Filed May 5, 1921. Serial No. 466,979. 10 Claims. (Cl. 72—102.)

1. A building construction comprising two walls each made up of a plurality of courses of blocks arranged alternately, longitudinally and transversely the wall, the transverse blocks of each course being staggered in relation to the transverse blocks of the adjacent courses and the blocks in each course in one wall being staggered in relation to the blocks in the corresponding course in the other wall, each of said transverse blocks extending

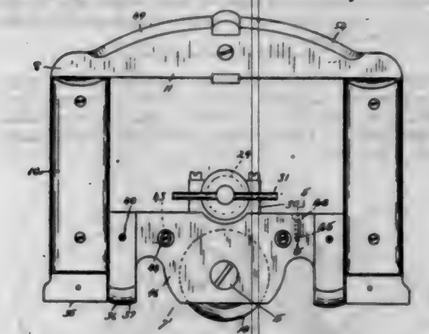


inwardly from the wall in which it is set partially toward the inner surface of the other wall and being in each case opposite the center of a longitudinal block in said other wall and leaving an air space between the inner end of the transverse block and the opposite wall.

1,543,332. CRANK FOR LIFTING JACKS. ARTHUR C. HOPKINS, Niles, Mich., assignor to National Standard Company, Niles, Mich. Filed Aug. 16, 1924. Serial No. 732,580. 3 Claims. (Cl. 74—38.)

1. A crank of the class described comprising an inner shaft section of rectangular cross section provided with stop lugs adjacent its ends, an outer shaft section of circular cross section disposed at the side of said inner section, and a slide secured to the inner end of said outer section to slidably embrace said inner sections between said stops, the outer end of said outer section having an offset therein providing a crank, the outer arm of said offset being extended beyond the plane of the said shaft and turned outwardly to provide a second crank, the said arm being bent longitudinally permitting it to slide over the said inner section when the outer section is telescoped therewith.

1,543,333. THERMOSTATIC VALVE DEVICE FOR RADIATOR SHUTTERS, ETC. FRANK J. IRVING, Buffalo, N. Y., assignor to Pines Winterfront Company, Chicago, Ill., a Corporation of Delaware. Filed Dec. 31, 1924. Serial No. 758,976. 21 Claims. (Cl. 236—35.)

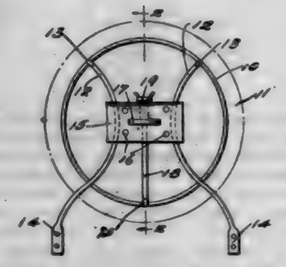


1. The combination with a radiator shutter having an expansible and contractible chamber for operating said shutter, of a thermostatic element, a valve housing enclosing a valve and valve port, said valve controlling a conduit communicating with said chamber, said conduit preventing rotation of said valve housing, means actuated by said thermostatic element for operating said valve, and means for supporting said valve housing for adjustment relative to said thermostatic element.

1,543,334. BATHROOM WALL CONSTRUCTION. LAURENCE M. LOEB, New Rochelle, N. Y. Filed Dec. 21, 1923, Serial No. 681,952. Renewed Nov. 22, 1924. 4 Claims. (Cl. 4—173.)

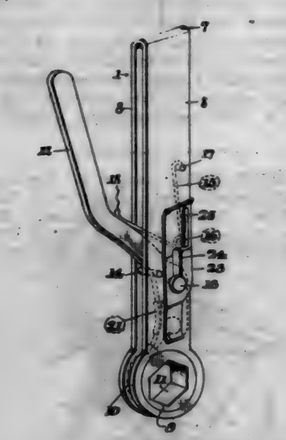
1. In combination with a bath room wall having an opening therein to admit of access being had to the interior of the wall, a metallic frame fitted within said opening, a panel removably fitted within said frame and having its outer face flush with the outer face of said wall and means mounted on the panel for frictionally engaging the frame for securing said panel in position.

1,543,335. TOOL FOR FORCING FASTENER-CONCEALING STRIPS IN PLACE ON DRIP MOLDINGS OF VEHICLE BODIES. HERMAN C. MAISS, Detroit, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed June 11, 1923. Serial No. 644,690. 27 Claims. (Cl. 29—84.)



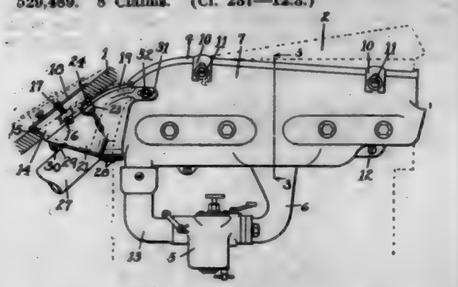
1. A tool having a bar, means carried by said bar for forcing a member into fixed position upon drip molding for concealing the securing means therefor, and means carried by said bar for detachably holding the means aforesaid in engagement with said concealing member.

1,543,336. ANTIKICKING DEVICE. FRANCIS M. McINTIRE, Mullikin, Mich. Filed July 2, 1924. Serial No. 723,760. 1 Claim. (Cl. 119—128.)



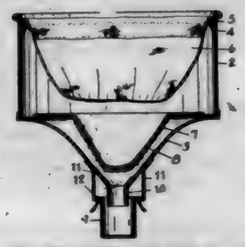
An anti-kicking device comprising an elongated strap having one end thereof bent back upon itself to provide a limb encircling loop, a buckle secured to said strap adjacent the looped portion and engaging the end of the looped portion, an auxiliary strap looped intermediate its end to provide an additional limb encircling loop, one of the ends of said auxiliary strap being bent back upon itself to provide a loop to receive a buckle, the bent back end of the auxiliary strap being again bent back upon itself and secured to the auxiliary strap to provide an additional loop for receiving an additional buckle, the last mentioned buckle adapted for engagement with the opposite end of the auxiliary strap, and the aforementioned buckle of the auxiliary strap being adapted for engagement with the free end of the first mentioned strap.

1,543,337. SPARE RIM AND TIRE CARRIER. FERDINAND F. MILLER, Clasoil, Mont. Filed Oct. 11, 1923. Serial No. 667,863. 5 Claims. (Cl. 224—29.)



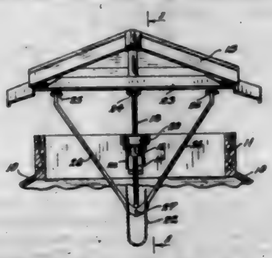
1. A spare rim and tire carrier, comprising spaced supporting members, guide plates attached to said supporting members, a circular member carried by said guide plates, the supporting members having their upper ends bifurcated for engaging the tire rim, said circular member having an aperture therein, an adjustable pin engaging the apertured circular member, the lower end of said pin being bifurcated for engaging the bottom of the rim for holding the same snugly upon the carrier.

1,543,338. RATCHET WRENCH. LOUIS NEAL and MATTHEW L. CLARK, Carbondale, Pa., assignors of one-half to said Neal, one-fourth to said Clark, and one-fourth to Thomas Cosgrove, Scranton, Pa. Filed Sept. 19, 1924. Serial No. 738,663. 4 Claims. (Cl. 81—61.)



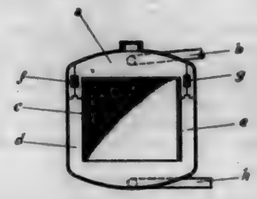
3. A ratchet wrench comprising a handle, a member having ratchet teeth on its periphery carried at the end thereof, a lever pivoted to the handle, a pawl carried by the lever and engaging the ratchet teeth, and slidable spring plates carried by the handle and adapted to hold a nut and washer when unscrewed by the wrench.

1,543,339. AUTOMOBILE HEATER. LEWIS D. NELSON, Coldwater, Mich. Filed Jan. 16, 1922. Serial No. 529,489. 8 Claims. (Cl. 237—12.3.)



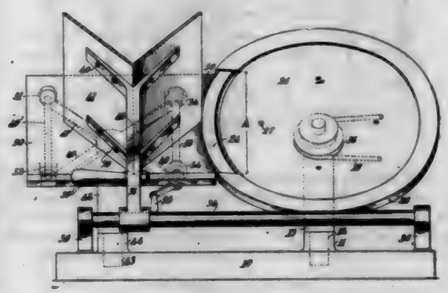
1. In a structure of the class described, the combination of a housing for the exhaust manifold of an internal combustion engine, a register box adapted to be inserted in the foot board of a motor vehicle, a conduit secured to said register box and having an opening in the bottom thereof through which the exhaust pipe of an exhaust manifold may be disposed, said conduit being disposed in telescoping relation with the rear end of said housing and having a forwardly projecting slotted arm adjacent the upper side thereof, and a bolt on said housing engaging said slot.

1,543,340. COFFEE URN. JOHN A. NEWBERRY, Allegan, Mich. Filed Dec. 31, 1924. Serial No. 759,028. 4 Claims. (Cl. 53—3.)



4. The combination with a coffee urn, of a receptacle adapted to constitute a cover for said urn; said receptacle having a funnel shaped bottom, a seal receptacle arranged with its upper edge in a plane above the end of the bottom, and a coffee sack suspended within said receptacle.

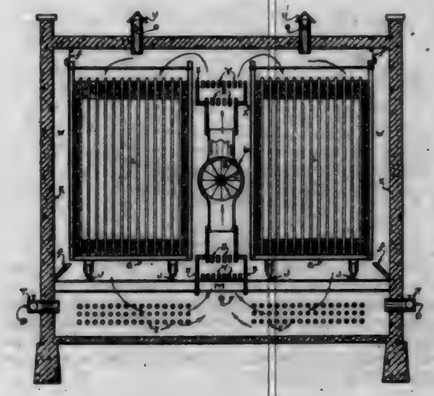
1,543,341. TRUSS LIFT. ADOLPH G. PITZ and OTTO X. SAUR, Bridgeport, Conn., assignors to Park City Cornice Works, Incorporated, Bridgeport, Conn., a Corporation of Connecticut. Filed Nov. 6, 1923. Serial No. 673,108. 14 Claims. (Cl. 268—20.)



2. The combination with a movable closure, of means connected therewith for lifting the same, a stationary bracket, means carried by the bracket adapted to coact with the lifting means for raising and lowering the same, and one or more trusses secured to the lifting means below the bracket and also to the closure at a distance from the connection of said lifting means therewith.

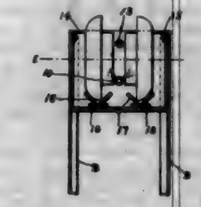
1,543,342. RADIATOR FOR INTERNAL-COMBUSTION ENGINES. FERDINAND PORSCHE, Stuttgart-Unterturkheim, Germany, assignor to Daimler-Motoren-Gesellschaft, Wurttemberg, Germany, a Corporation of Germany. Filed Jan. 14, 1925. Serial No. 2,455. 3 Claims. (Cl. 236—35.)

1. A cooler or radiator for internal combustion-engines comprising, in combination, a cooler casing having hollow side-parts adapted to serve for the conduction of a part of the cooling-water; the usual cooling pipes in said casing and located between said side-parts, and a thermostatic valve arranged in said hollow side parts to directly control the flow of water through the said side-parts, as set forth.



1,543,343. SLICING MACHINE. PETER SIVERTSEN, New York, N. Y., assignor to Globe Slicing Machine Co. Inc., New York, N. Y., a Corporation of New York. Filed Aug. 22, 1919. Serial No. 319,059. 34 Claims. (Cl. 146—105.)

1. The combination, in a slicing apparatus, of a cutting mechanism comprising a rotary knife edge, the plane of which is inclined to the horizontal and means for guiding the object to be sliced past the knife edge to effect the cutting operation, the guiding means being reciprocative in a rectilinear direction.



1,543,344. REVERSIBLE-CIRCULATION INTERNAL-FAN KILN. ROLF THELEN, Madison, Wis., dedicated, by mesne assignments, to The People of the United States. Original application filed Apr. 19, 1924, Serial No. 708,323. Divided and this application filed Mar. 7, 1925. Serial No. 14,424. 4 Claims. (Cl. 34—46.) (Granted under the act of Mar. 3, 1883, 22 Stat. L. 625.)

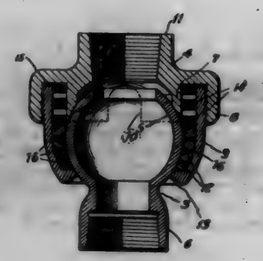
1. In a double track dry kiln arranged for edge stacking: a series of fans mounted between the two rows of lumber piles; a shaft on which the fans are mounted for rotation; means for rotating said shaft in either direction to cause reversal of the circulation of air and vapor in said kiln; and an air distributing system com-

prising fan housing and partition for each fan, two main air distributors, and two sets of diffusers for each main air distributor.

1,543,345. CAN-COVER STERILIZER. GEORGE G. THOMPSON, New York, N. Y., assignor to Wiener Manufacturing Company, New York, N. Y., a Corporation of New York. Filed Mar. 22, 1921. Serial No. 454,462. 1 Claim. (Cl. 141—7.)

In a sterilizing device for milk can covers, the combination with a tank having a downwardly inclined base, of a plurality of angular guideways extending along the length of the base and parallel to one another, said guideways being adapted for receiving a plurality of can covers simultaneously, a fluid pipe disposed between and above said guideways, said pipe being positioned parallel to the base and adjacent to the lowest path of movement of the rims of the can covers, a plurality of openings along the length of said pipe, said openings being formed in the upper segments on each side of the pipe whereby to form a plurality of angularly and upwardly distributed liquid sprays, a guide rod positioned above and parallel to said pipe, and co-operating with the guideways below and on each side thereof for maintaining the covers on their edges in a vertical position and for preventing the plurality of covers, one on each side of the fluid pipe from being displaced inwardly and contacting with one another, and bracket means on each side of and adjacent the guide rod and co-operating with said guide rod for maintaining the can covers in vertical alinement throughout their passage along the guideways.

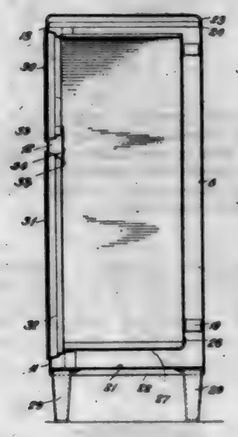
1,543,346. HEADGEAR FOR EXERCISERS. HENRY W. TITUS, New York, N. Y. Filed Oct. 29, 1923. Serial No. 671,401. 1 Claim. (Cl. 272—82.)



A head gear for exercisers comprising a head band having a buckle therein and a loop secured thereto and a second band having a plurality of loops upon said first mentioned band said loops being formed one at each end of said second band and both said loops being adjustable on said first band.

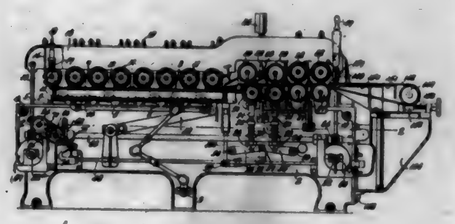
1,543,347. IGNITION MAGNETO. ERNEST O. TURNER and EDWARD B. TUPPEN, Birmingham, England, assignors to The British Lighting and Ignition Company, Limited, Birmingham, England, a British Company. Filed Dec. 21, 1922. Serial No. 608,180. 14 Claims. (Cl. 171—209.)

1. A magnet rotor for an ignition magneto, said rotor comprising a rotary magnet, separate pole shoes for said magnet, said pole shoes comprising a plurality of iron laminations, and interleaving plates inserted at suitable intervals between the said iron laminations.



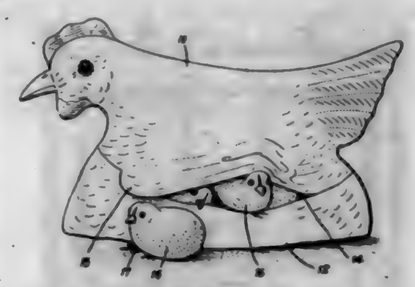
1,543,348. FLEXIBLE PIPE JOINT. FREDERICK VENTON, Chicago, Ill. Filed Dec. 8, 1922. Serial No. 605,603. 7 Claims. (Cl. 285—95.)

1. A flexible pipe joint comprising a ball section, a socket section including a body provided with an inner annular wall opposed to the ball, and a tapered sleeve detachably connected with the body and forming in conjunction with the ball an exteriorly tapered packing containing chamber of substantially uniform width surrounding the ball, said sleeve having at its outer end a



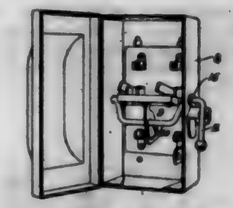
flange between which and said annular wall the ball is loosely clamped, packing in said chamber, and means for yieldingly urging said packing toward the flanged end of said chamber.

1,543,349. REFRIGERATOR. SHERIDAN A. WALKER, New York, N. Y. Filed Dec. 5, 1921. Serial No. 520,196. 5 Claims. (Cl. 220—0.)



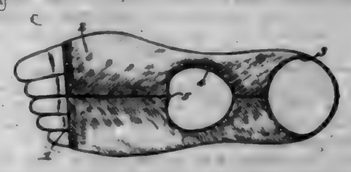
1. In a refrigerator, inner and outer wall sections, stiles, and rails, separate spaced top and bottom closures for the respective outer and inner wall sections, said stiles having side plates adapted to be connected to said outer and inner wall sections and the upper rail between said stiles having an upward flange therefrom, and the top closure of the outer wall section being adapted to frictionally connect with said outer wall section and said upper rail.

1,543,350. COLLAR-IRONING MACHINE. CHARLES E. WARHAM and ALBERT J. DREHER, Norwood, Ohio, assignors to The American Laundry Machinery Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Jan. 26, 1923. Serial No. 615,038. 6 Claims. (Cl. 68—9.)



1. An ironing machine, comprising padded pressure rolls and heated ironing rolls, a power source, separate trains of gearing therefrom to the pressure rolls and to the ironing rolls, a heated ironing chest adapted to receive work from said ironing rolls, and a gang of padded pressure rolls rotating at the same speed as said first named pressure rolls for feeding the work along said chest for drying the same.

1,543,351. FIGURE TOY. ZAIDA B. WEBB, Astoria, N. Y., assignor to Averill Manufacturing Corporation, New York, N. Y., a Corporation of New York. Filed Nov. 12, 1923. Serial No. 674,132. 3 Claims. (Cl. 46—40.)



1. A toy comprising a body portion made to simulate a bird or fowl, having an internal pocket in the lower part thereof with an entrance thereto on each side of said body portion, and wings arranged to drop over and conceal the pocket entrances.

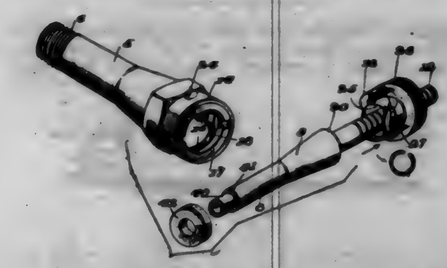
1,543,352. INCLOSED-SWITCH CONSTRUCTION. FRANK T. WHEELER, Plainville, Conn., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn., a Corporation of Connecticut. Filed July 3, 1922. Serial No. 572,432. 6 Claims. (Cl. 200—172.)

1. In an enclosed switch a box having a bearing seat in one side and an elongated closed sided slot in the other side, a switch mounted in said box, an operating crank having an integral handle with bearing portions, one end of said crank being supported in said seat, an integral sheet metal plate having a flanged bearing formed from it and projecting into one end of said slot and forming a bearing for said crank and covering said elongated slot, said crank being insertible through said slot, and means for securing said plate to the side of said box to cover said slot.

1,543,353. HOSE. HARRY S. WOLFF, New Rochelle, N. Y. Filed Aug. 21, 1924. Serial No. 733,270. 4 Claims. (Cl. 2—61.)

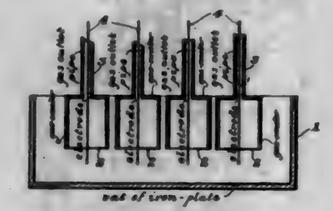
1. Underhose including a foot portion having a fashioned forward end extending forwardly beyond the ball of the foot and over the sesamoid bone, said forward end being open at its extremity to permit projection of the toes, said forwardly extending end entirely surrounding the corresponding portion of the foot, the said forward end converging forwardly to hold the material snugly to the foot.

1,543,354. FOLDING MACHINE. FRED T. ZACHER, St. Louis, Mo. Filed June 28, 1924. Serial No. 722,975. 3 Claims. (Cl. 270—68.)



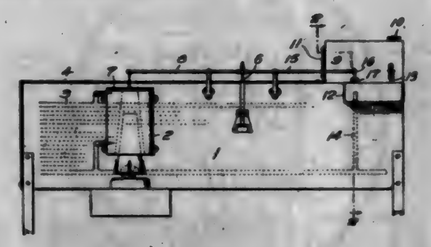
1. In a machine of the character described, the combination with a lower and an upper buckling roll, the latter of which has a circumferential groove, and devices for feeding sheets between said rolls, of a disc supported above said devices in line with said groove, a receptacle, means for conducting adhesive material from said receptacle to the periphery of said disc, and means for rotating said disc and thereby applying a line with said adhesive material to the sheets in line with said groove.

1,543,355. CLOSURE SEAL. EUGENE W. ZIPP, Minera Ridge, Ohio. Filed May 5, 1922. Serial No. 558,688. Renewed May 16, 1925. 2 Claims. (Cl. 220—39.)



1. In combination, a container having a threaded opening therein, a threaded closure in engagement with the opening, a strip of metal extending across the top of the closure, members extending upwardly from the container on each side of the closure and projecting through said strip, said members being permanently attached to the strip whereby the turning of said closure automatically ruptures said strip.

1,543,356. HOSE COUPLER. MATTHEW HARKWOOD ARNOLD, Los Angeles, Calif. Filed Nov. 23, 1923. Serial No. 676,611. 6 Claims. (Cl. 285—174.)

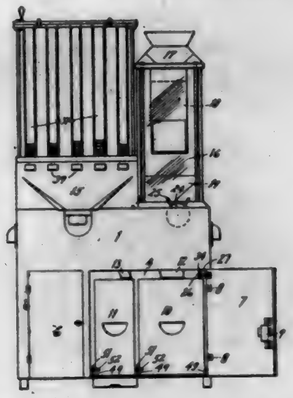


1. A coupling comprising inner and outer sections, the outer section being provided at its rear end with an annulus, a ring-nut threaded into said annulus and co-operating with the rear end of the outer section in defining an annular groove, a locking spring arranged in said annular groove and having bowed portions constituting locking devices, the inner section being provided intermediate its ends with a gradually enlarged portion defining an annular shoulder adapted to be engaged by said locking devices.

1,543,357. PROCESS FOR THE RECOVERY OF HYDROGEN AND OXYGEN BY ELECTROLYSIS. EMIL BAUR, Zurich, Switzerland. Filed Sept. 2, 1921. Serial No. 498,034. 1 Claim. (Cl. 204—1.)

A process or method for the recovery of hydrogen and oxygen, which consists in electrolysing with high current-densities molten caustic soda or potash or mixtures of the same, containing water in solution and restoring the water, decomposed by electrolysis, substantially as described.

1,543,358. AUTOMATIC CONTROL FOR HOT-WATER INCUBATORS. PAUL BAUR and ROBERT E. LAUCK, Taylor, Tex. Filed July 6, 1922. Serial No. 573,209. 2 Claims. (Cl. 236—4.)



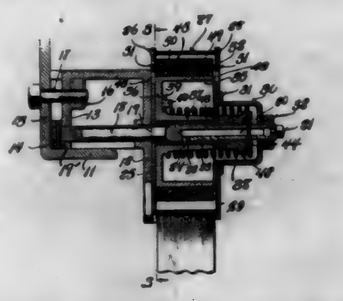
1. In the combination of an incubator having a hatching chamber, tubes for heating the chamber, a main water supply tank, and a thermostatic control, of an automatic water feeding device, comprising a stationary auxiliary water tank, a rigid supply pipe extending from the main tank to the auxiliary tank for maintaining the water in said auxiliary tank to a predetermined level, a pipe fixed to and extended through the auxiliary water tank slightly below said predetermined level, and a loosely mounted and thermostatically controlled valve for permitting water from the auxiliary tank to enter the heating tubes within said hatching chamber.

1,543,359. FARE-BOX APPARATUS. SAMUEL J. BELL, Springfield, Mass., assignor to Bell Register, Inc., Woonsocket, R. I., a Corporation of New York. Original application filed Oct. 4, 1921, Serial No. 505,433. Divided and this application filed July 12, 1923. Serial No. 651,190. 19 Claims. (Cl. 232—15.)

1. In a fare-box apparatus, a casing having a movable member, as a door, a fare-box mounted on said

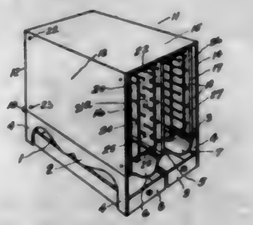
casing, and provided with a discharging member, operating means for said discharging member, and means, interposed between said first-named member and said

first-named means, automatically to open said discharging member when said first-named member is moved in one direction.



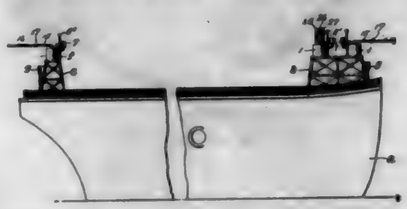
1,543,360. CLUTCH. HANS CHRISTIAN BJERRING, Gjovik, Norway, assignor to A/S. Autoslaede, Christiania, Norway. Filed May 26, 1924. Serial No. 716,019. 6 Claims. (Cl. 64—100.)

4. An elastic clutch for power driven vehicles, comprising, a driving member, a driven member, line contacting rigid power transmitting elements in the driving and the driven members, means permitting a progressive variation in the pressure between the said elements, said elements being arranged so that their lines of contact progressively shift to increase the torsion moment therebetween accordingly as the pressure between said elements increases, the drive changing from resilient to rigid as said lines of contact reach the position of maximum displacement.



1,543,361. SHOCK ABSORBER. WILLIAM M. BORNING, Manitowoc, Wis. Filed Sept. 30, 1922. Serial No. 591,671. 8 Claims. (Cl. 267—10.)

1. The combination of an inner casing portion, an outer casing portion, a spindle, a pulley rotatable thereon, a band secured at one end to said pulley and wound thereabout and adapted to rotate said pulley, and a flexible member extending between windings of said band for exerting frictional resistance to move-

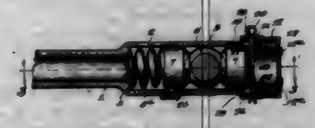


ment thereof, said flexible member being positioned between said casing portions and movable in its entirety inwardly and outwardly.

1,543,362. ELECTRIC COOKING DEVICE. ROSARIO BOLETIXO, Vancouver, British Columbia, Canada. Filed Jan. 17, 1924. Serial No. 686,845. 6 Claims. (Cl. 219—19.)

1. An electric cooking device comprising a longitudinally troughed plate supported on feet to provide a space below it, a casing hingedly connected at its rear end to the rear end of said plate and covering the same, said casing being open at the bottom and the front end, and a pair of electric heating elements substantially rectangular in formation secured in said casing adjacent the opposite sides of the same and adapted for connection to an electric circuit, said elements being superposed edgewise along the opposite sides of the said trough.

1,543,363. MEANS FOR DISSIPATING FOG. PACIFICO BORRA, West Hoboken, N. J. Filed Dec. 19, 1924. Serial No. 757,025. 4 Claims. (Cl. 114—0.5.)

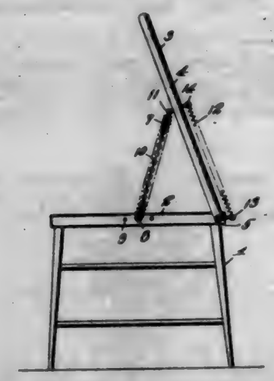


1. The combination with a ship, of means at the forward end of the ship for projecting a flame forwardly, and means immediately at the rear of said first mentioned means for projecting a flame upwardly.

1,543,364. STEERING REACH ROD. ALFRED B. BREEZE, Cincinnati, Ohio, assignor to The Cincinnati Ball Crank Company, Oakley, Cincinnati, Ohio, a Corporation of Ohio. Filed Sept. 3, 1920. Serial No. 408,024. 6 Claims. (Cl. 287—90.)

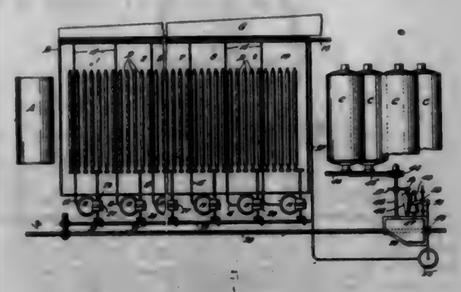
1. A ball joint including a tubular casing having an open end and a ball arm aperture in the side wall thereof and having diametrical apertures formed in the walls thereof adjacent said open end, a joint ball within the casing, means in the casing for engaging the ball for universal movement therein including an abutment member screw threaded into the one end of the bore of the casing, said abutment member having a diametrical aperture therein in registry with said diametrical apertures of the casing, a pin engaging the diametrical apertures of the casing and abutment member, and a collar engaging about the periphery of said casing covering the ends of said pin to retain it in aperture engaging position, said collar having an inturned flange at one end engaging over the end of said casing and abutment member.

1,543,365. REACH ROD. ALFRED B. BREEZE, Cincinnati, Ohio, assignor to The Cincinnati Ball Crank Company, Oakley, Cincinnati, Ohio, a Corporation of Ohio. Filed Feb. 16, 1922. Serial No. 537,101. 1 Claim. (Cl. 287—90.)



A closure and reenforcement cap for a tubular socket comprising two cylindrical cups, one of said cups attached concentrically at the interior of the other, said concentrically attached cup diametrically equal to the interior diameter of the tubular socket to which it is to be attached, and designed to engage, support, and reenforce the walls of said socket when said closure cap is positioned to close the end of said socket, and alignable apertures in said cups, and in said hub, traversible by a pin, for locking said cap.

1,543,366. SECURITY MEANS FOR CHECKS. RICARDO CANDRIANI, Buenos Aires, Argentina. Filed Dec. 20, 1921. Serial No. 523,761. 8 Claims. (Cl. 283—9.)

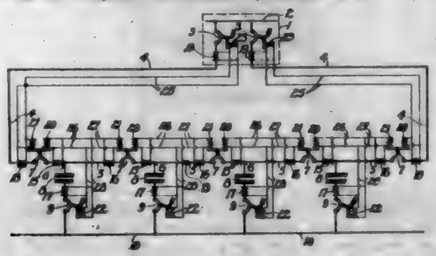


1. A check or other order for the payment of a sum of money, comprising three groups of figures, each group having the figures in consecutive order and each group having appropriate headings adapting it to have a figure thereof treated to indicate, in one group one figure of the amount of the check, in another group another figure of the amount of the check, and in the remaining group the total number of figures of the integer of the amount of the check.

1,543,367. ADJUSTABLE CHAIR BACK. WILLIAM CARR, Melvern, Kans. Filed Jan. 25, 1924. Serial No. 688,515. 2 Claims. (Cl. 155—164.)

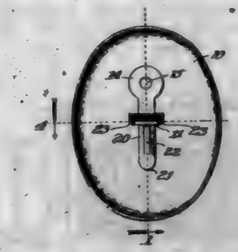
1. In a chair the combination of a seat, a back pivotally connected at its lower end with the rear portion of said seat, coiled springs connected at one end to the side members of said back, substantially midway the length of said back and at their other ends to the side edges of said seat intermediate the length of the seat, chains extending through said springs and also connected at their ends to said back and seat, said chains being of a length sufficient to permit the back to tip to a predetermined point against the tension of the spring and a coiled spring connecting the rear edge of the chair seat with the upper portion of the chair back whereby said back is held against tipping forward beyond a predetermined point.

1,543,368. SPEED CONTROLLING MEANS FOR PAPER-DRYING MACHINES. WILLIS H. CARRIER, New York, N. Y., assignor to Carrier Engineering Corporation, New York, N. Y. Filed Sept. 20, 1920. Serial No. 411,524. 22 Claims. (Cl. 34—48.)



19. In a paper drying machine, the combination of a device for propelling the paper web, means for drying the travelling web, drive means for said propelling device including a differential gearing for changing the speed of said device, a pair of oppositely arranged cone pulleys, one of which is driven by the driven gear of said differential gearing, a shiftable member for transmitting motion from said pulley to the other pulley, said other pulley being connected with said differential gearing for changing the speed of the driven gear thereof, and means controlled by the tension of the paper web for shifting the shiftable member on said cone pulleys to regulate the speed of said device.

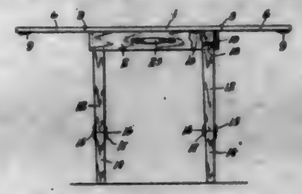
1,543,369. PROCESS OF PRODUCING A PHENOLIC CONDENSATION PRODUCT. CARNIB B. CARTER and ALBERT E. COXE, Pittsburgh, Pa., assignors to S. Karpen & Bros., Chicago, Ill., a Corporation of West Virginia. Filed Aug. 23, 1922. Serial No. 583,914. 10 Claims. (Cl. 260—4.)



1. The process of producing a phenolic condensation product which comprises: causing a reaction between an aldehyde dichloride, a phenolic body and ammonia, the ammonia being present in sufficient quantity to combine with substantially all of the chlorine liberated in the reaction.

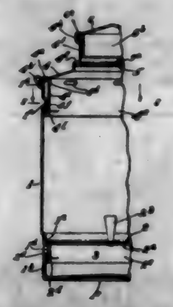
1,543,370. ELECTRIC DISTRIBUTION SYSTEM. PHILIP H. CHASE, Bala, Pa. Filed July 1, 1924. Serial No. 723,518. 18 Claims. (Cl. 175—294.)

16. An electric distribution system comprising circuit-interrupting devices, a feeder section adapted to be connected through said circuit-interrupting devices to a plurality of sources of power and to a tap to a load; and a balance protective system associated with each power-supply-circuit-interrupting device and with the tap, and adapted upon an unbalance in the protective system to isolate the feeder section from its sources of power and from the load.



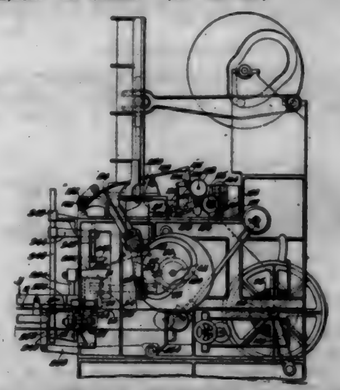
1,543,371. MEDALLION MOUNTING. JOSEPH A. DEDOUCH, Oak Park, Ill. Filed Jan. 19, 1925. Serial No. 3,530. 4 Claims. (Cl. 40—20.)

1. In combination, a plate having a depression on its under side, a bar secured thereto within said depression, a yieldable member adapted to pass between said bar and plate and to be fastened to a surface to which it is desired to secure said plate, and means on said member for locking said member on said bar when said member has been forced therethrough a predetermined distance.



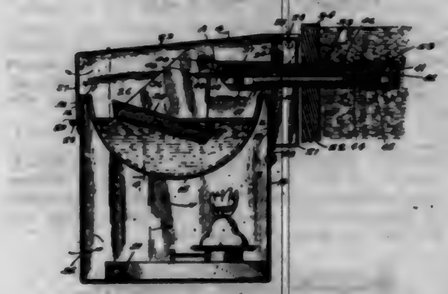
1,543,372. FOLDING CAMP TABLE. CHRISTOPHER ANDREAS DIDRICKSEN, Harvey, N. Dak. Filed Apr. 21, 1923. Serial No. 633,678. 3 Claims. (Cl. 190—11.)

1. An extension table comprising open-sided rectangular boxes, the bottom of each box being hinged along one side edge to one side edge of a strip of like length, said bottoms and strip having hinged to opposite end edges thereof sections adapted to fold out flush with the outer surfaces of said bottoms and strip to form a flat surface, and collapsible legs secured to the inner side of said bottoms and adapted to be disposed therein and collapsed, said boxes having a depth equal to substantially half the width of said strip so as to fold together thereon to form a closed case and the adjacent sides of said boxes having



slots in their edges adjacent said bottoms and a plate adapted to be disposed across said strip and snugly fit in said slots so as to engage the inner surfaces of said bottoms to hold the same and said strip in extended position.

1,543,373. COOKING UTENSIL. LORAN F. DORR, Cleveland, Ohio. Filed Feb. 26, 1923. Serial No. 621,213. 4 Claims. (Cl. 53—1.)

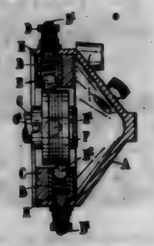


1. A cooking receptacle provided with a discharge opening and having a handle terminating in a plane with said discharge opening whereby said vessel may be supported by said handle in an inverted position for drainage.

1,543,374. PACKAGING MACHINE. ARTHUR CLARENCE EVERETT, Boston, Mass., assignor to Pneumatic Scale Corporation, Limited, Quincy, Mass., a Corporation of Massachusetts. Filed Mar. 26, 1924. Serial No. 702,153. 40 Claims. (Cl. 93—36.)

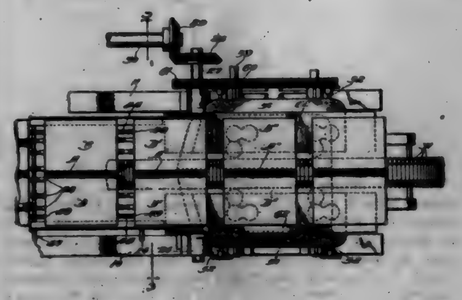
1. In a machine of the character described, in combination, means for conveying successive articles into an operating position in the machine, means for operating upon the articles including web feeding mechanism, means for discharging the articles from the machine, means for controlling the operation of the machine, having provision for rendering it inoperative when an abnormal condition arises in the discharge of the articles from the machine, and for automatically rendering the machine operative again when such abnormal condition is removed.

1,543,375. STOCK FOUNTAIN. FRANK F. FILER, Marshalltown, Iowa. Filed Apr. 2, 1923. Serial No. 629,842. 5 Claims. (Cl. 119—73.)



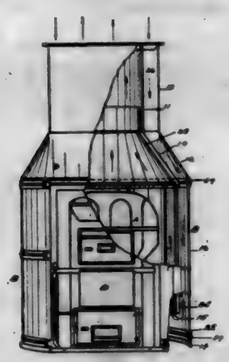
4. In a device of the class described, a casing, a trough slidably mounted thereon and forming a compartment therewith, a movable cover having walls arranged to project into said trough to coact with the trough for forming a compartment, an intake pipe extended into said second compartment, a float, means for pivotally supporting said float on the intake pipe for permitting the float to be tilted out of the way when the cover is moved from its normal position, so that the float will not interfere with the free sliding movement of the trough, and an auxiliary compartment communicating with the first and second compartments and surrounding the intake pipe adjacent to the trough for providing direct passage of heated air from the first compartment to the intake pipe and thence to the second compartment.

1,543,376. LEVEL. ORA L. FITCH, Point Marion, Pa. Filed Apr. 12, 1924. Serial No. 706,128. 2 Claims. (Cl. 33—215.)



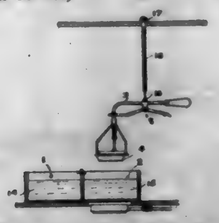
1. A level comprising a stock having a central circular opening, a segmental member supported in the lower portion of said opening, said segmental member being substantially of inverted V-shape in cross section and having graduations on the outer faces thereof, a pair of plates secured on opposite sides of the stock and arranged adjacent said opening, a weighted pendulum pivoted at its upper end between the lower ends of said plates and extending downwardly in said opening, the lower end of the pendulum being bifurcated to cooperate with the graduation on the segmental member, means associated with said plates for holding the same in adjusted position, said means comprising a pair of aligned cooperating lugs extending inwardly from said plates respectively adjacent the lower ends thereof, and a bolt extending through one of said plates and an opening provided in the lug carried thereby and threaded into the lug carried by the opposite plate.

1,543,377. IGNITION DISTRIBUTOR. HARRY FORD and GEORGE HENRY TAYLOR, Staffordshire, England. Filed Sept. 27, 1924. Serial No. 740,161. 1 Claim. (Cl. 200—26.)



A distributor for electric ignition, comprising a rotatable cylinder of insulating material, an electrical conducting means for securing the cylinder to a shaft, a metallic contact strip imbedded transversely in the outer face of the cylinder, an electrical conducting means connecting the strip with the securing means for the cylinder, a plurality of sleeves arranged radially and in separate planes and having open ends terminating adjacent the rotatable cylinder, a spring pressed contact ball in each sleeve adapted to successively engage the metallic strip and to follow a separate track on the rotatable cylinder, and a ring adjacent the open end of each sleeve for preventing the balls from being discharged from the sleeves by the springs when the rotatable cylinder has been removed.

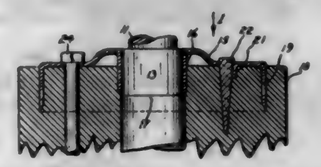
1,543,378. BOOKBINDING MACHINE. PHILIP FRASER and RAYMOND E. ACKLEY, Chicago, Ill., assignors to R. R. Donnelley & Sons Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 12, 1923. Serial No. 674,242. 7 Claims. (Cl. 1—4.)



1. In a book binding machine having a continuously traveling belt having means to grip unbound books at regular intervals and hold them with their back edges in alignment, means for feeding a cover to the back edge of each book, said book and cover traveling together at the same speed, and means supporting the cover and traveling continuously at the same speed as the book and at the same time pressing said cover into contact with said book.

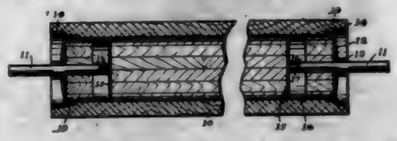
1,543,379. SECTIONAL FURNACE CASING. GEORGE HARMS and ROY C. WALKER, Peoria, Ill. Filed Nov. 25, 1921. Serial No. 517,470. 6 Claims. (Cl. 126—114.)

1. A hot air furnace having in combination a heater unit, a register, a casing spaced from and surrounding the heater unit to form a hot air passage, the said casing including a plurality of section units detachably secured together, each section unit comprising an outer wall substantially coextensive in height with the heater unit, an inner wall parallel to said outer wall and terminating above the lower edge thereof, and an intermediate wall coextensive in length with the inner wall and spaced therefrom to form an insulating compartment for the hot air passage, a passageway connecting the register with the passage formed by the outer and intermediate walls of the casing whereby cool air is circulated downwardly through the casing, and a passageway connecting the register with the space between the inner wall of the casing and the heater unit whereby the cool air is carried past the heater unit and heated thereby.



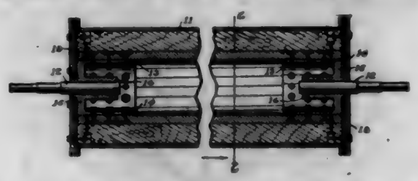
1,543,380. MEANS FOR FORMING AND BAKING PASTRY CRUSTS. GEORGE F. HARRELL, Oakland, Calif. Filed June 9, 1923. Serial No. 644,358. 3 Claims. (Cl. 53—7.)

1. In a device for making pastry crusts, the combination with a source of pastry supply, of a pastry mold, means for heating said mold, a handle for said mold, a supporting guide for said handle whereby the mold may be moved to and fro from said source of pastry supply, and means carried by said handle and operating against the exterior of said mold for removing the pastry crust formed thereon



1,543,381. FLANGED ROLL CAP. CARL C. HARRIS, Orange, Mass., assignor to Rodney Hunt Machine Company, Orange, Mass., a Corporation of Massachusetts. Filed Nov. 9, 1923. Serial No. 673,788. 8 Claims. (Cl. 92—47.)

4. The combination with a roll consisting of a single piece of wood and a stud extending from the end thereof, of a pressed steel plate located on the end of the roll and having a central circular flange projecting inwardly therefrom into the end of the roll and fitting said stud and provided with an integral circular flange at its circumference extending at right angles and driven into the end of the roll, said plate



having a series of rectangular projections cut out on three sides and the metal bent inwardly at right angles on the fourth and driven into the end of the roll for receiving wedges therethrough to be driven into the roll.

1,543,382. END SUPPORT FOR HOLLOW ROLLS. CARL C. HARRIS, Orange, Mass., assignor to Rodney Hunt Machine Company, Orange, Mass., a Corporation of Massachusetts. Filed Nov. 9, 1923. Serial No. 673,789. 4 Claims. (Cl. 92—47.)

1. The combination with a wooden roll having a bore in the end thereof with a sheet metal disc having a cylindrical peripheral flange driven into the bore and having a central perforation, a stud centered in said perforation and projecting inwardly and outwardly from it, a second sheet metal disc having an external cylindrical flange supported in the roll at a distance from the first disc, and an integral central cylindrical flange provided with a central bore for receiving at the end of the stud.

1,543,383. REEL. CARL C. HARRIS, Orange Mass., assignor to Rodney Hunt Machine Company, Orange, Mass., a Corporation of Massachusetts. Filed Nov. 9, 1923. Serial No. 673,790. 3 Claims. (Cl. 92—47.)

3. As an article of manufacture, a wooden drum for the purpose described having a bore extending all the way from one open end to the other, a cast metal head having a cylindrical portion located in the end of the bore and bolted to the drum around its circumference and having a central hub, and a stud fixed in said hub and projecting beyond the end of the head and drum.

1,543,384. PROCESS OF DISSOLVING SUBSTANCES WITH THE AID OF EMULSIONS OF WOOL FAT. OLIVER HERZOG, Berlin-Dahlem, Germany. Filed Jan. 29, 1925. Serial No. 5,665. 7 Claims. (Cl. 87—9.)

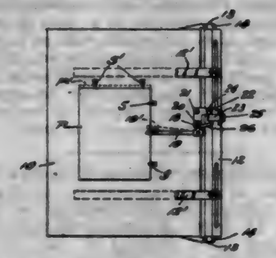
4. The method of making aqueous emulsions of liquids insoluble in or but slightly soluble in water, which comprises emulsifying such a mixture with either the waxy or the oily wool fat fraction and its sulphonated product.

1,543,385. PAPER CLIP. ORAMEL ERNEST HIBBARD, Greenwich, Ohio. Filed Oct. 26, 1923. Serial No. 670,925. 1 Claim. (Cl. 24—138.)

A paper fastener consisting of a fastening pin and a sheet metal guide arched to provide inclined sides permitting the formation of a slight depression in the papers to be fastened, the said guide having an upturned portion at one end provided with a central opening to receive the shank of the fastening pin and having portions at its opposite end turned inwardly to provide a tubular sleeve for the reception of the point of the said pin.

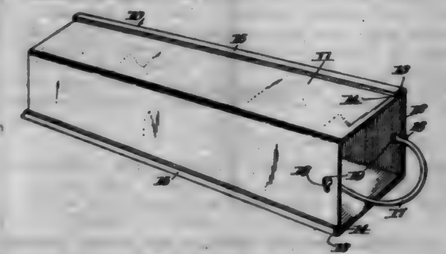
1,543,386. RAZOR-BLADE SHARPENER. JOHN HOLTZMAN, New York, N. Y. Filed Feb. 15, 1922. Serial No. 536,715. 3 Claims. (Cl. 51—40.)

1. In a razor blade sharpener the combination of a casing with an opening in each side wall thereof, a journal bearing supported in each of said openings, flexible means bearing on the journal bearings, a blade holder journaled in said bearings, means to clamp a blade to the blade holder, a pair of spindles supported in the casing below the blade holder, a sharpening roll mounted on each spindle, and means to simultaneously actuate the sharpening rolls and coacting means between the sharpening rolls and the blade holder to actuate the latter.



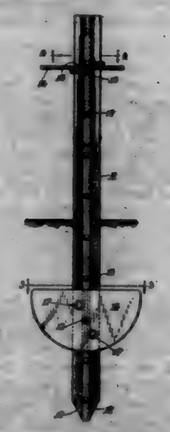
1,543,387. SAFETY RAZOR. KARL KAWALLE, Manitowoc, Wis. Filed July 3, 1922. Serial No. 572,685. 1 Claim. (Cl. 30—12.)

A power driven razor comprising a body portion, a driving shaft extending through said handle into said body portion, a worm extending at right angles to said driving shaft and operatively coupled thereto, a rotor having a plurality of spirally arranged cutting teeth meshing with said worm, and a guard plate having an aperture therein and cooperating with said rotor.



1,543,388. SHEET-POSITIONING DEVICE FOR PRINTING PRESSES. CARROLL M. KIRKLAND, Seattle, Wash., assignor to Miller Saw Trimmer Company, Pittsburgh, Pa. Filed Mar. 2, 1923. Serial No. 622,208. 3 Claims. (Cl. 101—414.)

1. A register device for a platen press comprising a sheet carrier disposed on the platen and arranged for reciprocatory movement laterally thereof, said carrier having a blade element engageable against the underside



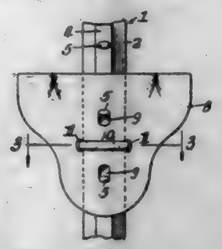
of a sheet of paper and a spring pressed ball engageable against the upper side of the sheet.

1,543,389. MOLD. CHARLES HENRY KNIGHT, Louisville, Ky. Filed Apr. 9, 1924. Serial No. 705,333. 4 Claims. (Cl. 100—57.)

1. In a mold of the class described, a body composed of relatively sidable sections, and a bail of stiff material to support said sections detachably connected to one of the sections and normally preventing relative movement of the sections.

1,543,390. FENCEPOST. ROBERT V. FUNK, Chicago Heights, Ill., assignor, by mesne assignments, to Inland Steel Company, Chicago, Ill., a Corporation of Delaware. Filed Oct. 20, 1922. Serial No. 595,739. 2 Claims. (Cl. 189—29.)

2. A metal fence post adapted to be driven into the ground, comprising in combination, a metal post T-shape in cross-section having its stem full width its entire length and its flanges oppositely beveled to facilitate

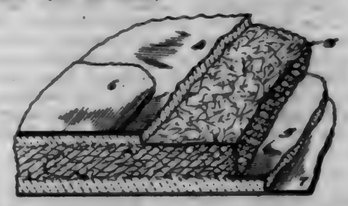


the entrance of the post into the ground, said post having lugs integral therewith outstanding therefrom and spaced apart lengthwise the post, and a substantially semi-circular anchor-plate riveted to a face of said post with its curved edge downward, said plate having a substantially central aperture receiving one of said lugs to assist in holding the plate in position on the post during the sinking of the latter into the ground, one or more of said lugs being designed to cooperate with the fence wire or wire to support the latter.

1,543,391. FENCEPOST. RAYMOND C. KNOPKE, Wheaton, Ill., assignor, by mesne assignments, to Inland Steel Company, Chicago, Ill., a Corporation of Delaware. Filed Nov. 18, 1922. Serial No. 601,711. 1 Claim. (Cl. 189—29.)

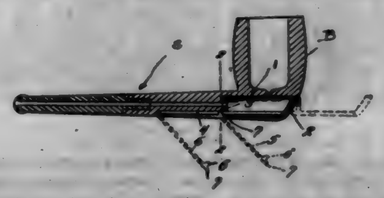
A metallic fence post having a flat surface provided with a row of integral studs spaced at intervals lengthwise of the post, a ground anchor plate having a single aperture for accommodating one of said studs so the plate may lie flatwise against said surface, and arranged on the post with the adjacent studs at the upper and lower edges of the plate and means for holding the plate in contact with the post.

1,543,392. FENCEPOST. RAYMOND C. KNOPKE, Glen Ellyn, Ill., assignor, by mesne assignments, to Inland Steel Company, Chicago, Ill., a Corporation of Delaware. Original application filed June 4, 1923, Serial No. 643,142. Divided and this application filed July 25, 1923. Serial No. 653,626. 1 Claim. (Cl. 189—29.)



A metal fence post, comprising a front flange having a plurality of lugs or studs projecting outward therefrom, said lugs being spaced apart lengthwise of said post, and flattened out transversely thereof, an anchor plate applied against the front face of said flange, said plate having holes therein for the lugs to pass through, and a clip applied against the front face of said plate between said lugs, said clip having its ends extending through holes in said plate on opposite sides of said flange and clinched or bent over the same to hold the plate on said post.

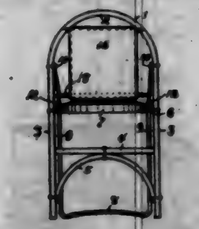
1,543,393. LAUNDRY-TRAY FAUCET. JOHN T. KNOTT, Peru, Ind. Filed Aug. 25, 1924. Serial No. 733,909. 4 Claims. (Cl. 137—111.)



1. In a faucet, a faucet body having integral legs spaced apart each having a foot with side walls and a pendant jaw, there being a chamber form in the foot by said walls and opening through the back thereof; a movable jaw for each foot having an overhanging extension position in the chamber of the foot and held alined therein between the side walls of the foot; and a screw extending through the front of each foot and into the extension of the corresponding movable jaw.

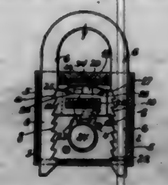
1,543,394. COMPOSITION BOARD AND PROCESS OF MAKING THE SAME. JOHN E. PARSONS, Los Angeles, Calif. Filed Dec. 28, 1922. Serial No. 609,546. 5 Claims. (Cl. 18—47.5.)

1. A process of making a composition board consisting in, first immersing a flexible fibrous sheet of material in a heated liquid composed of glue, shellac, resin and water, until the fibrous material becomes saturated with the liquid, second, removing the saturated fibrous material, third, partly drying the material, forming the saturated material by applying pressure thereto, and fourth, coating the material with a plastic paste composed of glue, commercial whiting, resin and shellac.



1,543,395. SMOKING PIPE. NELS PAULSEN and MERTON A. COLAN, Chicago, Ill. Filed July 2, 1924. Serial No. 723,749. 2 Claims. (Cl. 131—12.)

1. A smoking pipe comprising a body including a tobacco receiving bowl and a bored stem extending laterally therefrom, said stem and bowl being recessed, an open ended cylinder fitted into said recess, a plunger



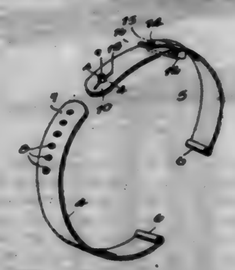
slidably mounted in said cylinder and provided at its opposite ends with heads closing the opposite ends of the cylinder, one of said heads being provided with a central aperture in alignment with the bore of said stem, and a pivotally mounted lever having connection with the plunger for sliding it in or out of said cylinder.

1,543,396. FOLDING CHAIR. WILLIAM C. RASTETTER, Fort Wayne, Ind. Filed May 10, 1924. Serial No. 712,424. 1 Claim. (Cl. 155—142.)

In a folding chair, a main frame formed of a wooden strip bent in its middle to form a loop with contiguous parallel straight legs, there being a brace connecting the legs in spaced relationship with each other; a seat pivotally supported between the legs; a U-shaped prop pivoted at the ends of its respective arms in the frame at a point therein above the pivotal support of the seat; a stop fixed on each arm of the prop; an eyebolt at each side of the seat at the back thereof through the head of which said side arms loosely extend respectively, said eyebolts having sliding movement on said arms limited in their upward movement by the corresponding stops; and a flexible back secured at its upper end in the main frame, and having a pocket along its lower end and a close coil spring secured at its respective ends to the corresponding arms of the prop and extending through the pocket in the back.

1,543,397. PADLOCK. CHARLES S. SCHROEDER, Stamford, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed July 29, 1924. Serial No. 728,903. 6 Claims. (Cl. 70—108.)

1. In a padlock, the combination with a casing and a shackle, of relatively movable bolts to engage the shackle legs, yielding dead-locking means to engage said bolts, each of said bolts having means normally holding said dead-locking means out of dead-locking relation to the bolts but permitting said dead-locking to move into dead-locking relation to one bolt when the other bolt is moved out of locking relation with one of the shackle legs by surreptitious attempt to open the lock.

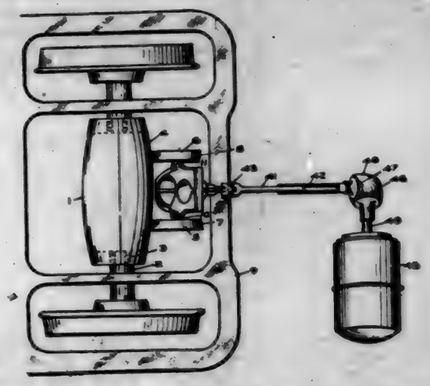


1,543,398. FILAMENT SUPPLIER FOR SILK-REELING MACHINES. SHICHIRO SENGA, IWANE KAWATA, and RYOICHI NAITO, Kobe, Japan, assignors to Kanegafuchi Boseki Kabushiki Kwaisha, Tokyo, Japan. Filed Apr. 18, 1923. Serial No. 633,002. 1 Claim. (Cl. 19—3.)

A filament supplier for silk reeling machines comprising a main wheel, a shaft supporting said wheel having an opening therethrough adapted to receive filaments of cocoons, said wheel having a plurality of curved recesses extending from the periphery to a point adjacent the opening in the shaft and defining a series of correspondingly curved teeth, a second wheel, means rotatably supporting the second wheel in such position that it partially overlies the first mentioned wheel, and a plurality of teeth carried by the second mentioned wheel curved in the direction of curvature of the teeth of the first

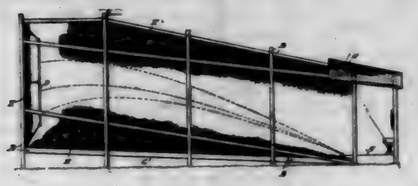
mentioned wheel, the teeth of the second mentioned wheel being adapted to engage and guide the filament of a cocoon into the path of oppositely moving teeth of the first mentioned wheel and said latter teeth being adapted to cause the filament to be guided into contact and united with filaments passing upwardly through the opening in said shaft, said filament being broken due to increased tension thereon incident to further movement of the wheels.

1,543,399. WRIST-WATCH BAND. HERBERT KEMP SMITH, New Orleans, La., assignor to Merle Powe Smith, New Orleans, La. Filed Sept. 26, 1922. Serial No. 590,666. 6 Claims. (Cl. 224—4.)



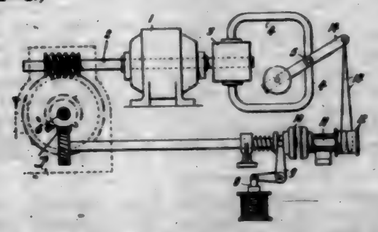
2. A band for securing wrist watches in position comprising a pair of members adapted to be pivotally connected to a wrist watch at their inner ends, the free end of one of the members being provided with a plurality of spaced perforations, a split lug mounted on the free end of the other member, the free end of the said second member being provided with a slotted portion in alinement with the space between the split portions of said lug whereby the split portions of the lug will be located in expanded relation with each other, said split portions of the lug adapted to be contracted and forced through one of the perforations in the free end of the first member with the split portions of the lug expanding within the perforations and locking the free ends of the two members together, and means slidable on the second member and engageable with the split lug for aiding in maintaining said lug in a perforation in the first member.

1,543,400. POWER-TRANSMITTING DEVICE. JOHN BAPTIST STARKEY, Montreal, Quebec, Canada. Filed Mar. 30, 1923. Serial No. 628,780. 18 Claims. (Cl. 105—104.)



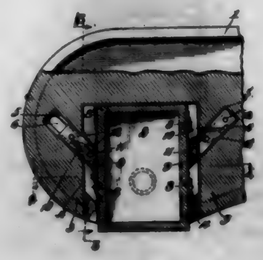
1. In a power transmitting device, a friction drive having a roll mounted on a car axle and formed with a wide face arc-shaped in longitudinal section and con-

centric with the swing of the axle and movable over the faces of a pair of friction wheels suitably mounted and journalled and a transmission shaft and gearing, in-



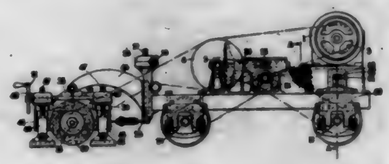
clusive of a differential group of gears, communicating the motion of said friction wheels to the device to be driven.

1,543,401. GOLF-PRACTICE APPARATUS. JOSEPH A. STEINMETZ, Philadelphia, Pa. Filed Mar. 2, 1922. Serial No. 540,598. 5 Claims. (Cl. 273—35.)



1. The combination with a narrow upwardly open runway upwardly inclined from a player's stand to its own distant opposite end, of a large netting tube open below and having its marginal portion upwardly inclined in opposite directions and continuous with the corresponding margins of the runway, a sheet closing said distant end, and means for holding the netting in proper position.

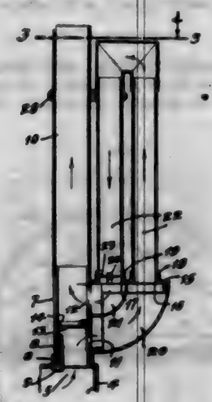
1,543,402. HYDRAULIC BRAKING DEVICE FOR SHAFT-OPERATED LIFTS. PERCY HERBERT STEVENS, Northampton, England, assignor to Smith, Major & Stevens Limited, Northampton, England. Filed July 14, 1924. Serial No. 725,902. 3 Claims. (Cl. 192—2.)



1. In shaft-operated lifts; an hydraulic braking device, a valve capable of being progressively closed coacting with said hydraulic braking device, means to cause the gradual and complete closure of the valve of said braking device when the lift cage reaches a point in predetermined relationship to a floor at which it is desired to stop, a clutch to connect and disconnect said valve operating means to and from the driving mechanism of the lift, and means to cause the engagement of said clutch to operate the closure of said valve when the lift cage reaches a point in predetermined relationship to the floor at which it is desired to stop.

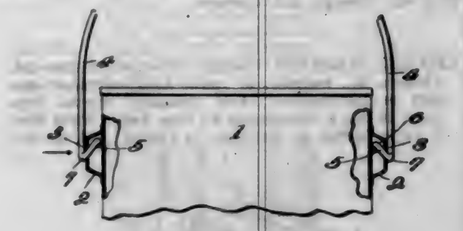
1,543,403. RAILWAY-CAR TRUCK. HARRY C. STICKEL, Dawson, Pa. Filed Jan. 10, 1925. Serial No. 1,609. 4 Claims. (Cl. 105—220.)

1. Means for holding journal boxes in car trucks, comprising a side frame having spaced pedestal jaws provided in their opposed faces with vertical grooves and chambers communicating with said grooves, a journal box adapted to fit between said jaws and having ribs slidably engaging said grooves, said ribs being provided with seats, and dogs loosely mounted in the chambers and adapted to gravitate into said seats to hold the journal box in position.



1,543,404. RAIL-DRESSING MACHINE. HARRY POTTS STOKES, Plymouth, and JOSEPH WILLIAM EUNSON, London, England. Filed Oct. 27, 1922. Serial No. 597,891. 8 Claims. (Cl. 51—178.)

1. A machine for dressing rails on the track comprising a motor truck, a twin grinding attachment mounted upon the forward end of the truck frame, means for driving said truck and grinding attachment, lateral balancing means for the rear portion of said truck frame, and vertically adjustable shoes at both sides of said grinding attachment.

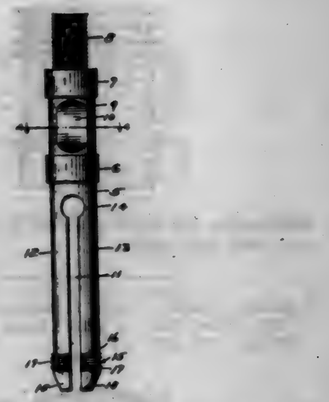


1,543,405. AUXILIARY HEATER. HERMAN C. SWENSON, Houston, Minn. Filed Aug. 24, 1923. Serial No. 659,126. 5 Claims. (Cl. 257—177.)

3. An auxiliary heater comprising a smoke pipe section having outlet and inlet ports, outlet and inlet elbows communicating respectively with said outlet and inlet ports, a damper in said base section between said two ports, a plurality of return pipes connecting said two elbows, and simultaneously operative dampers for the return pipe at the inlet elbow, said damper in the smoke pipe base section being gravity-held in either of

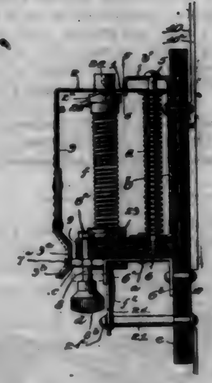
its two extreme positions and the dampers for the return pipes having means for holding the same in predetermined positions.

1,543,406. BAIL FOR PAINT CANS OR THE LIKE. JOHN C. TALIAFERRO, Jr., Baltimore, Md., assignor to Continental Can Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed July 20, 1923. Serial No. 652,815. 1 Claim. (Cl. 220—95.)



A wire bail for cans or the like having perforated ears, said bail having its ear engaging portions bent inwardly and upwardly into open spiral supporting hooks when the bail is in vertical or raised position, the free end of the bail at the terminal of the spiral being tapered to a point to form an entering wedge adapted when the end of the bail is sprung into the opening in the ear to engage the inner wall of the ear so that a turning of the bail when the bail is in lowered position will cause the spiral end thereof to screw into the opening in the ear and be permanently held attached to the can.

1,543,407. FISHING TOOL. DAVID S. TANDY, Walters, Okla. Filed Oct. 17, 1923. Serial No. 669,082. 1 Claim. (Cl. 294—99.)



A tool of the character described formed of a single piece of metal and spaced annular guides formed thereon for engagement with the sides of the well tubing, said tool provided with a reduced screw threaded end for engagement with an operating rod, a pair of spaced resilient gripping arms formed on the tool, the ends of said arms being tapered, an enlarged annular collar formed on the gripping arms adjacent their ends, said enlarged

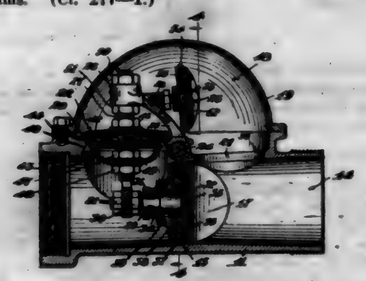
collar provided with screw threads for engagement with the internal threads of a well cage, said enlarged collar forming a shoulder to engage under and hold a ring or

leather against displacement when said arms have been forced therethrough, said tool provided with flattened portions to be engaged by a wrench.

1,543,408. THERMALLY-OPERATED CIRCUIT CONTROLLER. GEORGE H. WHITTINGHAM, Baltimore, Md., assignor to Monitor Controller Company, Baltimore, Md., a Corporation of Maryland. Filed Aug. 29, 1922. Serial No. 584,939. 11 Claims. (Cl. 200—122.)

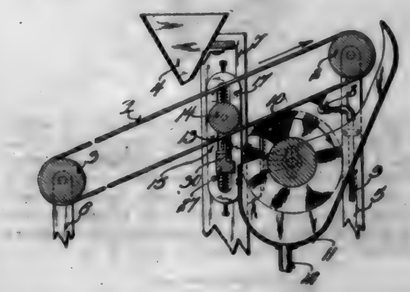
1. In a thermally operated circuit controller, a switch lever, a spring tending to rock said lever in one direction and a plurality of thermostats for rocking said lever in the opposite direction, each thermostat comprising a closed chamber containing an expansible liquid and having a tubular annularly corrugated wall adapted to bear against said lever, and means for adjusting said chambers independently toward and from the lever.

1,543,409. EXPANSIBLE PISTON. OTTO WIGGERS and JOHN WIGGERS, Walla Walla, Wash. Filed Jan. 22, 1923. Serial No. 614,259. 2 Claims. (Cl. 74—108.)



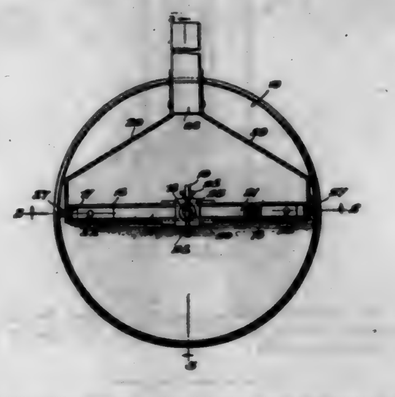
1. In an expansible piston, a slotted skirting, a slotted reinforcing rib within said skirting, the slots

thereof providing for equal expansion, wedgeshaped projections one on each side of the slot in the interior of



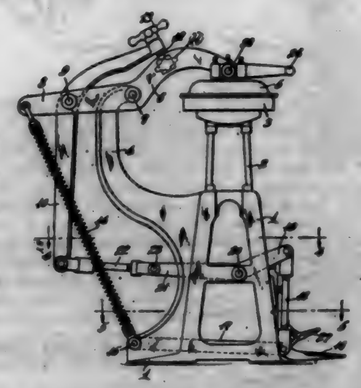
said skirting, and means to expand said projections and with them said skirting.

1,543,410. VALVE. JOHN L. WILLIAMS, Los Angeles, Calif. Filed Sept. 11, 1923. Serial No. 662,028. 10 Claims. (Cl. 277—1.)



1. In a valve, a valve casing having a main passage and a by-pass passage communicating at its ends with the main passage, a valve adapted to open and close the main passage at a point between the communications of the by-pass passage, a valve adapted to close one of the communications to the by-pass passage when the main passage is closed, the valve in the main passage being adapted to close said last named communication when said valve is in its fully open position, and a valve adapted to close the other by-pass passage when the main passage is open.

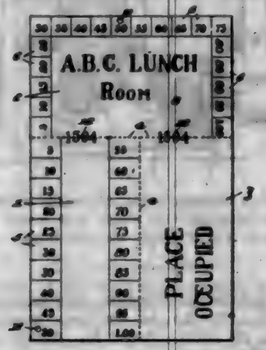
1,543,411. PICKING TABLE FOR PEA VINERS AND CLEANERS AND THE LIKE. ALVIN C. WITTIG, Hartford, Wis. Filed Feb. 16, 1925. Serial No. 9,556. 2 Claims. (Cl. 130—18.)



1. The combination of a traveling belt, means for spraying liquid against the under side of said belt, a rotary brush positioned rearwardly of said means, means engaging the under side of said belt, a scraping blade mounted rearwardly of said brush and below said belt, adjustable means for yieldingly pressing said knife into engagement with said belt, a roller mounted above said knife, and adjustable means for yieldingly pressing said roller downwardly into contact with said belt to hold said belt in engagement with said knife.

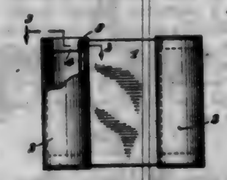
1,543,412. WAX-APPLYING AND POLISHING DEVICE. GEORGE H. WOOD, Roanoke, Va. Filed Aug. 7, 1923. Serial No. 656,262. 22 Claims. (Cl. 91—43.)

1. In a wax-applying device, the combination of a plate having a relatively long narrow aperture extending therethrough, a wax receptacle on said plate in communication with said aperture, means for positively feeding the wax from said receptacle through said aperture, and a wax-distributing fabric on the bottom of said plate supplied with wax through said aperture.



1,543,413. GARMENT PRESS. WILLIAM E. ANDERS, Chicago, Ill., assignor, by mesne assignments, of one-half to Metropolitan Trust Company, trustee, New York, N. Y., a Corporation of New York. Filed Nov. 8, 1919. Serial No. 336,575. 13 Claims. (Cl. 68—8.)

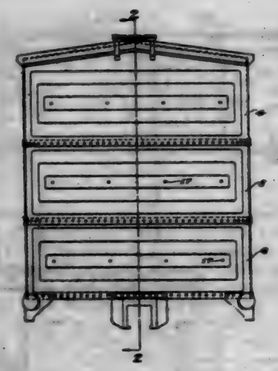
1. A garment press comprising a frame, a garment support thereon, a pressing head, a swinging lever carrying said head and having a depending arm movable back and forth with said lever and without motion relative thereto during movements of the head, a treadle, a two-armed lever pivoted in the frame at substantially the level of the lower end of said depending arm, a



link connecting a first arm of said lever to said treadle, and a second link connecting a second arm of said lever to said depending arm, said second second link and second arm being arranged to operate as a toggle mechanism during closing movement of the press.

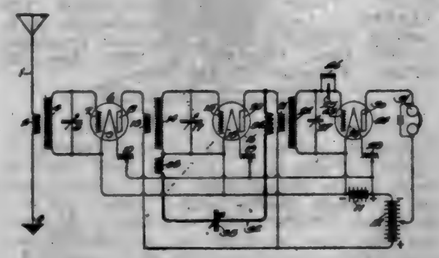
1,543,414. DISCOUNT LUNCH AND PREMIUM CHECK. SETRAK ASATURIAN, Babylon, N. Y. Filed Nov. 19, 1923. Serial No. 675,668. 3 Claims. (Cl. 283—60.)

3. A lunch check having three separable coupons, one of said coupons bearing seat reserving indicia, and the other two coupons having means for indicating the amount of the purchase thereon, one of said latter coupons also having means for indicating a percentage discount to be allowed on said purchase.



1,543,415. SPRING-HINGE MEMBER. EMIL BOMMER, Brooklyn, N. Y. Filed July 21, 1923. Serial No. 652,924. 3 Claims. (Cl. 16—183.)

1. A spring-hinged member comprising a single thickness web section and a single thickness barrel section formed integral with each other, a thimble having a cylindrical flange engaging the inner surface of the end of said barrel section and a laterally extending flange overlapping the end of said barrel section and a part of the single thickness web section, and also the joint between the free end of said barrel section and said web section, and means permanently and fixedly joining the barrel section with the thimble, for strengthening the barrel section with respect to the web section, through the intermediary of the thimble and prevention of shift of the parts.

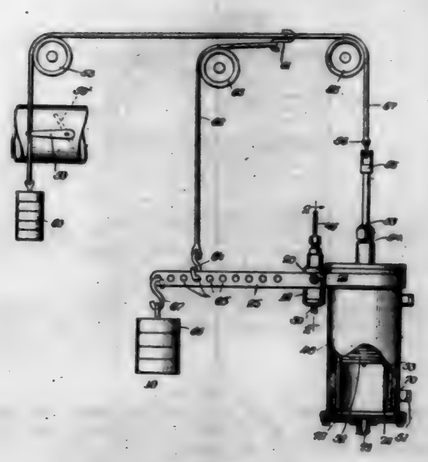


1,543,416. CAR WALL STRUCTURE. CHARLES D. BONSALL, Parnassus, Pa., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed July 24, 1922. Serial No. 577,035. 25 Claims. (Cl. 105—410.)

4. A sheet metal structure for car walls having an embossed panel pressed from the plane of the sheet with flat margins surrounding said panel and an embossed panel pressed from the first mentioned panel with flat

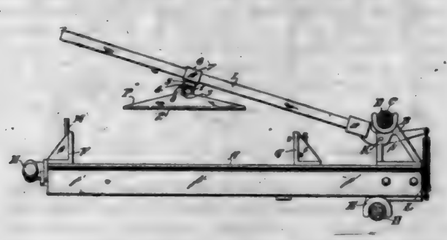
margins surrounding the last mentioned panel, the margins at the sides of the panels being wider than the margins at the ends of the panels.

1,543,417. SYSTEM OF RADIOCOMMUNICATION. HARRY A. BREMER, Chicago, Ill., assignor to Bremer-Tully Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 1, 1924. Serial No. 753,147. 3 Claims. (Cl. 179—171.)



1. In a radio system of communication, the combination with a thermionic valve having an input circuit and an output circuit; of an input transformer having a secondary in said input circuit; an output transformer having a primary in said output circuit; a bridge connecting said circuits and including two coils, one being in inductive relation to the said input transformer secondary and the other being in inductive relation to said output transformer primary, the first coil operating through the input transformer secondary to oppose the feed back effect of the output circuit upon the input circuit and the second coil deriving potential from the output transformer primary and supplying it to the first coil for this purpose; and adjustable capacitance in said bridge.

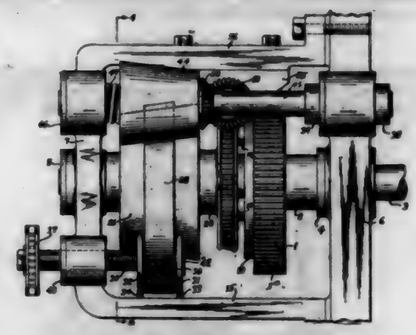
1,543,418. REGULATOR FOR HIGH-PRESSURE SYSTEMS. KENNETH J. BUDLONG, Chicago, Ill., assignor to National Regulator Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 12, 1921. Serial No. 500,195. 17 Claims. (Cl. 236—85.)



1. In a regulator, the combination with a cylinder; a piston operating therein; and a source of fluid pressure of means for utilizing said pressure to regulate

the movement of said piston, said means comprising a check valve adjustable to open at a predetermined

fluid pressure; rotatable means for varying the adjustment of said valve; and means for utilizing the movement of said piston to rotate said rotatable means.



1,543,419. PRESSURE-FOOT ATTACHMENT FOR CLAMPS. RAYMOND W. BURNS, Poughkeepsie, N. Y., assignor to James L. Taylor Mfg. Co., a Corporation of New York. Filed Mar. 24, 1923. Serial No. 627,270. 8 Claims. (Cl. 144—289.)

1. The combination with a clamp having a work supporting body, and a pressure foot rod, of a pressure foot to engage work on said body, and a support on said rod for permanently supporting said pressure foot and having a plurality of seats to selectively receive said pressure foot to accommodate work of different thicknesses while so permanently supported.

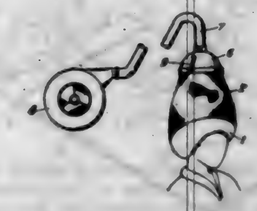
1,543,420. SPEED-CONTROLLING MECHANISM. ELLIS W. COOPER, New York, N. Y. Filed Mar. 4, 1922. Serial No. 541,152. 8 Claims. (Cl. 74—34.)

1. A speed varying and controlling mechanism, comprising a driven shaft, a driving gear freely rotatable on the shaft and having external gear teeth for receiving a driving force, and also having internal gear teeth, a worm wheel loosely mounted on the shaft, a planetary pinion mounted on the worm wheel meshing with the internal gear teeth on said gear wheel, a gear wheel fixed to rotate with the shaft and meshing with the pinion, a shaft perpendicular to the driven shaft and

having a worm meshing with the worm wheel, and connections for rotating the worm and worm wheel proportionately to the rotation of said shaft.

1,543,421. CROWN-MOUNTED PORCELAIN-FACING ELEMENT. HAROLD A. COTTLER, Brooklyn, N. Y. Filed Sept. 26, 1924. Serial No. 739,978. 3 Claims. (Cl. 32—29.)

1. In artificial teeth, a metal crown adapted closely to embrace and enclose a prepared natural tooth, the labial portion of said crown being formed with opposed laterally spaced undercut flanges faced towards each other approximately along the lengthwise profile edges of said crown and forming on said crown a virtual keyway open at both ends, in combination with a tooth facing keying between said flanges in said keyway and free at its gum end to be adjusted relatively to said crown and the gum line.

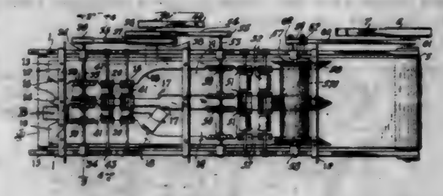


1,543,422. LEVER. WILBUR J. COULTAS, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed July 5, 1923. Serial No. 649,414. 1 Claim. (Cl. 74—31.)

In a lever, the combination of an upper and a lower section, the lower section pivotally mounted on a support, and the upper section pivotally attached intermediate its ends to the lower section and having a rearward recess at its lower end, said sections normally in alinement and when the lever is moved in one direction, an arcuate rack on the support, a detent pivotally mounted intermediate its ends on the lower section, its lower end engaging with said rack and its upper end

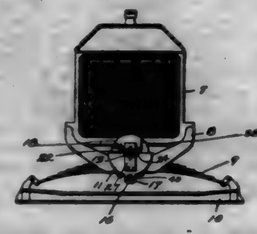
in constant contact with said upper section within the recess therein, and a spring coiled about the pivot of said detent having one of its ends connected to said detent below the pivot thereof and its opposite end bent to engage with the forward edge of the lower section whereby said detent is held in operative position relative to the upper section of the lever and the arcuate rack.

1,543,423. HAIR-DRYING APPARATUS. FELIX COUNE, Chicago, Ill. Filed Aug. 21, 1924. Serial No. 733,274. 7 Claims. (Cl. 34—26.)



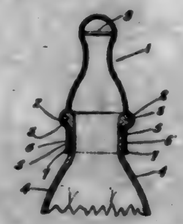
1. An article of manufacture comprising a member of substantially oval cross section for fitting about the head and for fastening thereto at or below the hair, said member terminating slightly above the hair with an open end for permitting access to the hair either for treatment thereof or for attaching the member to an upper section of a hood adapted for use with a hair drying apparatus.

1,543,424. LIGHT-SOURCE COVERING. CLIFFORD W. COWLES, New Britain, Conn., assignor to Groundulet Company, Newark, N. J., a Corporation of New Jersey. Filed Jan. 9, 1924. Serial No. 685,096. 11 Claims. (Cl. 40—131.)



10. The improved covering for light sources concealed thereby, which comprises minute tinsel hairs having reflecting surfaces and arranged in the form of a substantially continuous winding constituting a fabric-like structure, said hairs being opaque but spaced apart in said winding sufficiently to permit passage of light therethru by way of said spaces and said reflecting surfaces of the opaque hairs.

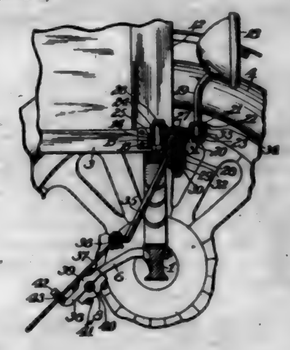
1,543,425. TILE-FETTLING MACHINE. ANTHONY W. CRISTIANI, Red Bank, N. J. Filed Dec. 15, 1922. Serial No. 607,053. 11 Claims. (Cl. 25—104.)



1. A machine for fettling tile before they are fired, comprising a support to receive tile and a plurality of tile fettling devices relatively positioned to cause successive fettling engagements of said fettling devices with the edge of said tile upon relative movement of said support and said fettling devices, the said fettling device first engaged by said tile removing the major portion of the surplus material from the edge of the tile and the others of said fettling devices smoothing and finishing said edge, and means for producing said relative movement of said support and said fettling devices.

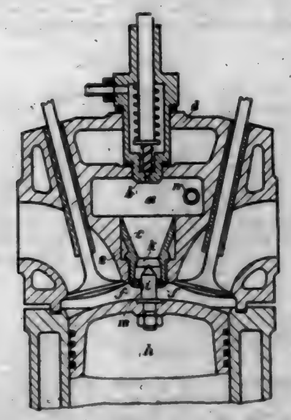
1,543,426. POWER ATTACHMENT FOR MOTOR VEHICLES. THOMAS H. CUMMINGS, St. Louis, Mo. Filed Dec. 27, 1921. Serial No. 524,839. 5 Claims. (Cl. 180—53.)

1. A power device for motor vehicles, comprising in combination with a motor vehicle and its engine a housing secured to said vehicle, a shaft slidably mounted in said housing, a pulley slidably mounted on said shaft and rotatable therewith, means for sliding said shaft for engaging and disengaging said shaft with the engine of said vehicle, and a sheave wheel mounted in said housing below and at right angles to said pulley.



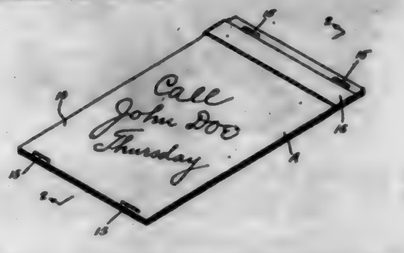
1,543,427. NIPPLE. CARROLL K. DENNEY, New York, N. Y. Filed Aug. 6, 1924. Serial No. 730,357. 1 Claim. (Cl. 128—262.)

A nipple having a body portion of uniform thickness throughout, said body portion having a conforming ring therein to fit the lip of a nursing bottle, a collar below said conforming ring adapted to fit the neck of said bottle, a vacuum ring formed in said collar portion, said collar portion terminating in a bevelled edge



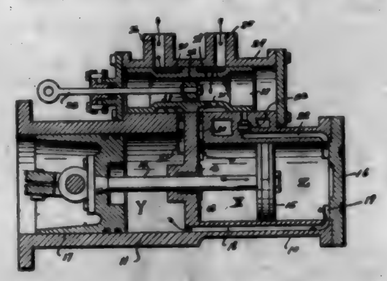
to permit of rolling back of said collar conforming ring portion of said body and a ring formed in said body portion above said conforming ring to form a base for said nipple when said nipple is placed upon said bottle to be rolled into position.

1,543,428. AUTOMATIC DIRIGIBLE AUTOMOBILE HEADLIGHT. JOHN L. DRAKE, Indianapolis, Ind. Filed Aug. 16, 1924. Serial No. 732,466. 2 Claims. (Cl. 240—62.)



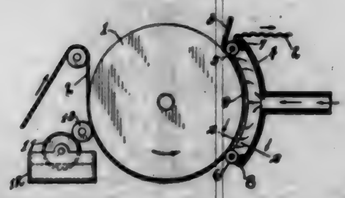
1. A lamp mounting and controlling apparatus including a plurality of head bars having each a base portion and a pivot portion, each base portion having a securing bolt therein, a plurality of lamp-supporting arms pivotally connected to the pivot portions of the head bars respectively and having each a bore to receive a lamp standard, each arm having a lever arm fixed thereto at an inclination relatively to the bore, a yoke pivoted to the lever arms and having a lateral lug finger rigidly fixed thereto, and a coupler comprising a clamp having a lug ear loosely receiving the lateral lug finger of the yoke.

1,543,429. INTERNAL-COMBUSTION ENGINE. KURT ELTZE, Mannheim-Kafertal, Germany, assignor to Benz & Cie., Rheinische Automobil- u. Motoren-Fabrik Aktiengesellschaft, Mannheim, Germany, a Corporation of Germany. Filed Dec. 16, 1924. Serial No. 756,211. 3 Claims. (Cl. 123—33.)



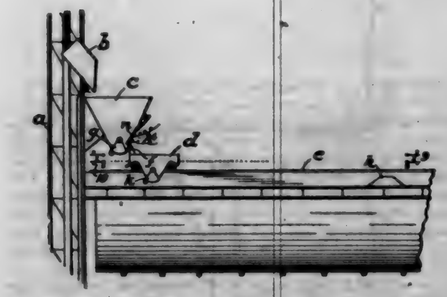
1. An internal combustion engine comprising a cylinder, a plunger movable in said cylinder, a cylinder head, a combustion chamber, an ignition chamber, a passageway between said chambers, a nozzle mounted in the wall of the ignition chamber and adapted to inject fuel into the same and said passageway, an igniting bushing mounted in said passageway and having a tapering bore, means forming a plurality of orifices at one end of said bushing, and means for closing one of said orifices during the injection of fuel into said passageway.

1,543,430. PERPETUAL MEMORANDUM PAD. HOWARD L. FISCHER, St. Paul, Minn., assignor to Brown & Bigelow, St. Paul, Minn., a Corporation of Minnesota. Filed May 14, 1923. Serial No. 638,708. 10 Claims. (Cl. 35—10.)



1. A memorandum pad including, a transparent sheet, a tissue sheet, a waxed-like carbon sheet, means for securing said sheets together to hold the same in close proximity and against separation at their ends and means for separating the tissue sheet from the carbon sheet to erase the memorandum written upon said pad.

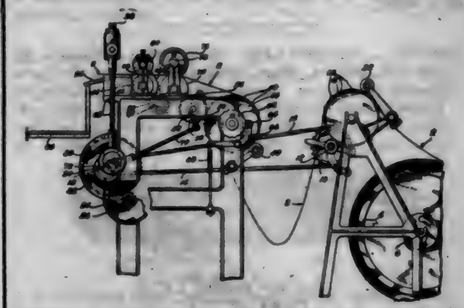
1,543,431. COMBINED COMPOUND AND DIRECT-ACTING STEAM ENGINE. PETER FREIBERG, Lithonia, Ga. Filed May 19, 1923. Serial No. 640,141. 3 Claims. (Cl. 121—105.)



1. In a steam engine, a pair of aligned cylinders, one smaller than the other and separated by a partition, connected pistons operating in the cylinders, said pistons defining movable walls for a high pressure chamber and two low pressure chambers, means for causing the steam to enter the high pressure chamber and act directly on the small piston therein and including a valve and a duct leading into the high pressure chamber and for exhausting the steam from the high pressure chamber into the low pressure chambers and including said valve, and ducts operatively connecting the high pressure chamber with the low pressure chambers, said means then acting at the end of the stroke of the pistons in one direction to cut off the inlet and exhaust of steam and permit steam in the low pressure chambers to act expansively, and manually controlled means whereby live steam may be admitted to the high pressure and the low pressure chambers when the stroke of the piston under the direct action of steam in the high pressure chamber has been completed.

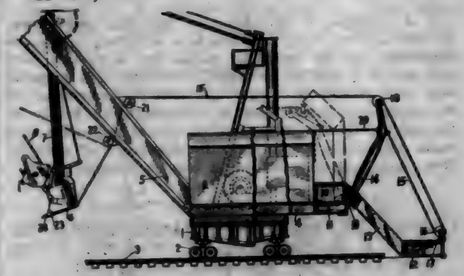
1,543,432. APPARATUS FOR MAKING CRINKLED PAPER. NICHOLAS M. GOODLETT, New York, N. Y. Original application filed Dec. 19, 1918, Serial No. 267,430. Divided and this application filed Jan. 22, 1925. Serial No. 4,050. 8 Claims. (Cl. 92—69.)

1. In an apparatus for making crinkled paper, a supporting surface for the paper, crinkle forming means cooperative with said surface, and means located wholly external of said surface for holding the paper adherent thereto by fluid pressure.



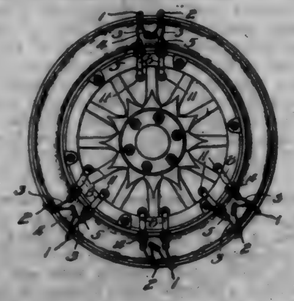
1,543,433. SYSTEM FOR HANDLING COAL, ASHES, AND THE LIKE. WILLIAM E. HALE, Fort Washington, Pa., assignor to R. H. Beaumont Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 9, 1923. Serial No. 673,693. 2 Claims. (Cl. 214—40.)

1. A system for handling coal, ashes and the like including in combination a skip hoist, a car, a track on which the car runs and which is provided with car dumping means, a hopper adapted to receive material from the skip hoist and to store it and to dump it into the car, control circuits for running the car out and in on the track, and a contact responsive to the supply of coal in the hopper and interposed in and adapted to interrupt the outgoing control circuit with the car in loading position.



1,543,434. CARD-FORMING MACHINE. PETER HARDMAN, Willimantic, Conn., assignor to The American Thread Company, Jersey City, N. J., a Corporation of New Jersey. Filed Mar. 31, 1924. Serial No. 703,046. 12 Claims. (Cl. 164—49.)

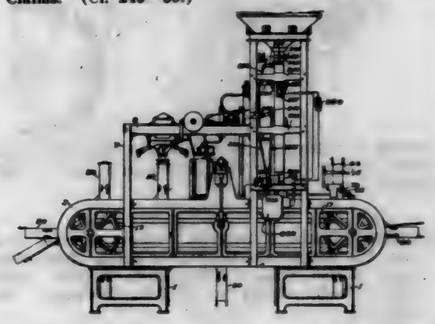
1. In an apparatus of the character described, the combination of a knife, means for reciprocating the same, rolls for feeding a web of paper thereto, yielding means for driving said rolls, and a registered roll



adapted to intermittently retard said web behind the normal feeding rate of said feeding rolls and in timed relation to said knife.

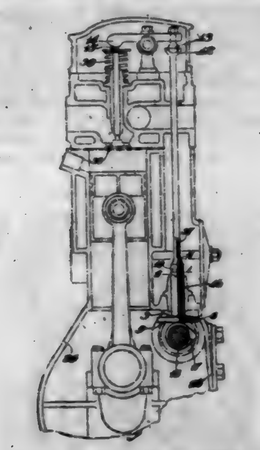
1,543,435. COALING DEVICE. GRANT HOLMES, Danville, Ill., assignor to The Marion Steam Shovel Company, Marion, Ohio, a Corporation of Ohio. Filed Sept. 7, 1923. Serial No. 661,345. 9 Claims. (Cl. 214—77.)

1. In a steam shovel or the like, the combination with a frame adapted to support a power plant, and a coal bin carried by said frame, or a coal box, a chute connecting said coal box with said bin and having a hinged connection with said frame, and power operated means to elevate said coal box and cause its contents to be discharged through said chute into said bin, said chute and said coal box being so arranged that they will be retained in their elevated positions by gravity.



1,543,436. SINGLE-UNIT TIRE CHAIN. CALVIN T. HOON, Chicago, Ill. Filed Dec. 15, 1924. Serial No. 756,135. 4 Claims. (Cl. 152—14.)

1. A single unit tire chain comprising two closed flexible loops adapted to extend loosely about a tired wheel rim on opposite sides of a wheel spoke, and flexible

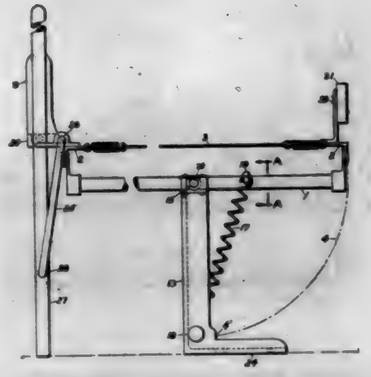


connections between said loops at points that are located on opposite sides of said rim when the device is on a wheel.

1,543,437. BAG-FILLING MACHINE. CHARLES H. HOWARD, Saugus, Mass., assignor to Paper Products Machine Company, Boston, Mass., a Corporation of Massachusetts. Original application filed Oct. 26, 1918, Serial No. 259,882. Divided and this application filed Dec. 3, 1920. Serial No. 427,986. 50 Claims. (Cl. 249—59.)

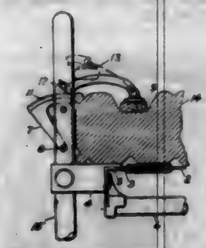
1. A machine of the character described, comprising, in combination, weighing means, a weighing receptacle supported by the weighing means for movement into and out of a bag or container, means to feed material into said receptacle, means for effecting movement of the receptacle into a bag or container and nearly to the bottom thereof to deposit the material therein, and valve means for controlling the discharge of material from said receptacle into said bag or container.

1,543,438. SILENT VALVE-OPERATING MECHANISM. ALBERT E. HUTT, Ardmore, Pa. Filed Sept. 4, 1924. Serial No. 735,755. 3 Claims. (Cl. 123—90.)



1. In a device of the character stated, a valve, a cam follower, an operating train intermediate said valve and cam following, a spring take up in the latter, tending to produce the clearance within said cam follower only, in combination with a cam coacting with said cam follower and having a contour which brings the whole operating train to a standstill before producing said clearance, so that the spring take up will have to overcome the weight of the train alone and not the inertia forces.

1,543,439. RENEWABLE SIGN PLATE. VICTOR E. JOHNSON, Chicago, Ill. Filed May 15, 1922. Serial No. 560,970. 3 Claims. (Cl. 40—125.)

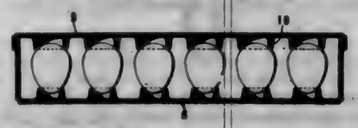


1. A sign including a main frame, posts, a co-inciding supplemental frame carrying a sign plate, and beams supported by said posts and arranged above and below said frames, the main frame being fixed to said beams and the sign plate being disposed between said frames and behind said main frame, and said main frame constituting a margin for said sign plate.

1,543,440. WALL BED. BURRELL L. JONES, Oakland, Calif. Filed Dec. 19, 1922. Serial No. 607,813. 2 Claims. (Cl. 5—164.)

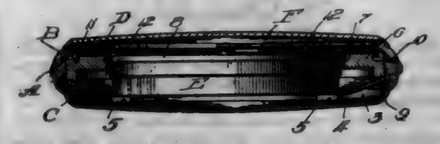
1. In a wall-bed structure, a pair of legs of channel form having trunnion bearings on the extreme top thereof for supporting one end of the bed when the latter is in a horizontal position, and for supporting the entire bed when the same is in an upright position, each of said legs adapted to support and house a pair of springs, one end of the springs being fixed to the side rails of the bed in advance of said bearings and the opposed end of the springs being secured to the lower end of said legs, the channels of the legs adapted to conceal the springs from view when the bed is in an upright position, the said trunnion bearings being substantially flush with the top surface of the bed side rails when the bed is in a horizontal position, and the bottom surface of said side rails being substantially flush with the front face of the channel legs when the bed is in an upright position.

1,543,441. MATTRESS CLAMP. BURRELL L. JONES, Oakland, Calif. Filed Sept. 29, 1923. Serial No. 665,556. 4 Claims. (Cl. 5—320.)



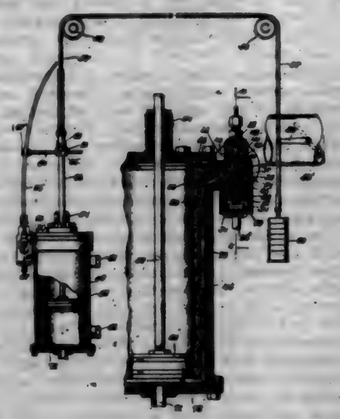
1. A mattress clamp comprising a pair of spaced arms pivotally supported at one end thereof to the foot-rail of a bedstead, and a pressure-bar pivotally supported at the other extremity of said arms, the first-named pivot permitting the said bar to assume its repose position at all times.

1,543,442. EXTENSION TABLE. EDWARD PETER KOKESCH, Primate, Saskatchewan, and WILLIAM FRANK SAUMER, Hayter, Alberta, Canada. Filed May 29, 1923. Serial No. 642,331. 4 Claims. (Cl. 45—9.)



1. In a collapsible table in combination a middle frame; a leg-provided end section co-operatively associated with each end of said middle frame, one of said end sections having a hinged leaf; a pair of extension leaves pivotally associated at each side of said middle frame; means carried by said leaf-provided end section to actuate said pivoting means for said extension leaves to raise and lower said leaves; means pivoted to said middle frame and to the actuating means for one of said extension leaves and adapted to raise the leaf of one of said end sections to prevent interference between same and the adjacent extension leaf; means carried by the other of said end sections and adapted to lock said middle frame in position when either or both of said extension leaves have been raised or lowered, and means co-operatively associated with the pivoting means of one of said extension leaves to unlock said locking means prior to the closing of the table.

1,543,443. CONTAINER FOR EGGS OR THE LIKE. MORRIS KOPPELMAN, Brooklyn, N. Y., assignor, by direct and mesne assignments, to Holed Tite Packing, Inc., a Corporation of Delaware. Filed Oct. 28, 1921. Serial No. 511,082. 5 Claims. (Cl. 229—29.)



1. A box-like container for eggs or the like, having egg receiving portions of cup-like conformation integral with and extending from an interior wall of the box, and a member having similar cup-like egg receiving portions overlying and in registry with the first named egg receiving portions.

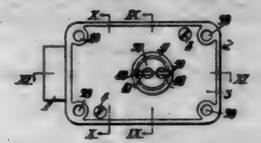
1,543,444. WATCHCASE. ROY JOHN KRADER, Elgin, Ill., assignor to Illinois Watch Case Company, Elgin, Ill., a Corporation of Illinois. Filed Jan. 26, 1925. Serial No. 4,790. 4 Claims. (Cl. 58—88.)

1. A watch case having an inwardly extending ring flange providing a duplex seat, a movement seated within the flange, a ring surrounding the movement formed to provide a seat therefor and itself seated upon the case flange, and means whereby the movement and ring as a unit are held to their seats, substantially as described.

1,543,445. REGULATOR FOR HIGH-PRESSURE SYSTEMS. JOHN M. LARSON and VERNON G. LEACH, Chicago, Ill., assignors to National Regulator Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 12, 1921. Serial No. 499,931. 10 Claims. (Cl. 236—85.)

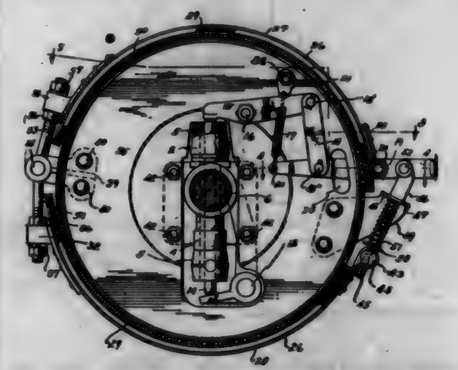
1. In a regulator, the combination with a cylinder; a piston operating therein; and a source of fluid pressure, of means for utilizing said pressure to regulate the movement of said piston, said means comprising a valve adjustable to open at a predetermined fluid pressure; and actuating means utilizing the movement of said piston to vary the adjustment of said valve, said actuating means comprising an oscillatory arm; and reciprocatory means operatively connected with said piston and slidably engaging said arm for oscillating the same, said reciprocatory means being adjustable for varying the amplitude of oscillation of said arm with respect to the movement of said piston.

1,543,446. COLLAPSIBLE SANITARY FISH CREEL. ANTONE REUBEN LUNDSTROM, Salt Lake City, Utah, assignor of one-half to Eli J. Marshall, Salt Lake City, Utah. Filed Jan. 16, 1925. Serial No. 2,732. 2 Claims. (Cl. 43—31.)



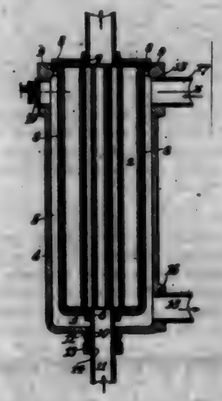
1. A fish creel comprising a fabric sack having a reinforced upper edge; longitudinally and laterally disposed leather strips sewed on one face of said fabric

having ventilating holes therein and through the fabric to the interior of said sack; a reinforced cover hinged to said sack and having elongated openings therein; a bait



pocket within said sack and with its mouth surrounding one of said openings; a hinged cover for each of said openings; and a sanitary lining for said fabric sack and having an open pocket sewed therein.

1,543,447. CHANGEABLE COMBINATION KEY LOCK. EDWARD WILLEY MARVEL, Philadelphia, Pa., assignor, by mesne assignments, to The Mosler Lock Company, Covington, Ky., a Corporation of Ohio. Filed Jan. 5, 1922. Serial No. 527,063. 21 Claims. (Cl. 70—70.)



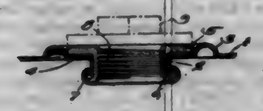
1. In a changeable combination key lock, the combination with a casing; of a locking bolt having a stump; a rotary key hub with a main keyway and a guard keyway; main tumbler mechanism arranged to detain and release said bolt in accordance with the position thereof, including a series of counterpart pivoted main tumblers, each having a sectoral series of gear teeth at its free end and each adjustable, at its free end, to change the combination; a series of counterpart rotary fences having respective sectoral series of gear teeth arranged to mesh with the gear teeth on said respective main tumblers; each of said fences having a gating adapted to receive said locking bolt stump; a change plate, carrying said tumblers and movable in said casing to disengage said tumblers from said fences and permit said tumblers to be changed; guard tumbler mechanism arranged to detain and release said bolt in accordance with the position thereof, including a guard lever having a detent arm arranged to detachably engage said locking bolt, and having a portion adapted to be encountered by a guard key to disengage said detent arm from said locking bolt, and having a crank pin arranged to cooperate with auxiliary lock mechanism, and a series of pivoted guard tumblers arranged to hold and release said guard lever in accordance with the position thereof, and controllable by said guard key; auxiliary lock mechanism, in said casing, including a reciprocatory bolt adapted to normally prevent movement of said change plate, a lever fulcrumed in said casing, in cooperative relation with said auxiliary bolt, and a bell crank latch pivoted to said auxiliary bolt lever and having one arm extending in position to be operated by an auxiliary key, inserted in said guard keyway, to unlock said auxiliary bolt, and another arm adapted to engage said casing and hold said auxiliary bolt in unlocked position, subject to automatic release by said crank pin; said auxiliary lock bolt being movable by said auxiliary key, to release said change plate and permit the combination of said tumblers to be changed; whereby a guard key and a main key are required to be successively inserted in the respective keyways in said hub to turn the latter to open the lock, and said main tumblers are pivotally adjustable with respect to said change plate, to change the lock, by manipulation of said auxiliary lock mechanism with an auxiliary lock key inserted in said guard keyway, to be operated by different main keys while subject to operation by the same guard key.

1,543,448. VEHICLE BRAKE. HOWARD E. MAYNARD, Detroit, Mich., assignor to Maxwell Motor Corporation, Highland Park, Mich., a Corporation of West Virginia. Filed Apr. 20, 1923. Serial No. 633,381. 1 Claim. (Cl. 188—194.)

In combination, a wheel having a spindle connected with an axle by means of a pin so as to make said wheel freely movable, a second pin extending through said first pin and adapted to be moved therein irrespective of the position of the wheel, a brake drum on said wheel, a two piece brake band around said drum, one end of each band being secured to a member mounted adjacent said drum and the other end of each being connected at different points to a somewhat U shaped member, a spring on the latter end of one of said members, whereby movement of said U shaped member will cause one of said bands to tighten on the drum while the spring on the other said band will be compressed until the first said band is tightened on said drum, when the second said band will be caused to tighten on said drum, and connections between said second pin and said U shaped member, whereby movement of the former will cause movement of the latter.

1,543,449. WATER HEATER. ROBERT R. RUST, New York, N. Y. Filed Aug. 22, 1922. Serial No. 583,534. 4 Claims. (Cl. 257—216.)

1. A water heater comprising an inner shell for the water to be heated, an outer shell arranged about the inner shell and providing a chamber for the heating medium therebetween, the outer shell and inner shell being connected at one end by a differentially tapered

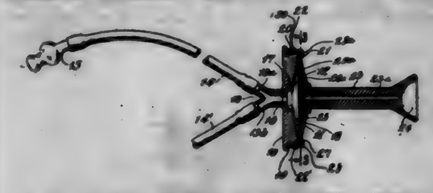


joint and at the other end by means for drawing the said differential joint into tight engagement, the two shells being free from other connecting parts, said shells each having an inlet and an outlet.

1,543,450. POWDER PUFF. THEODORE W. SCHRAMM, Bay City, Mich. Filed June 25, 1924. Serial No. 722,264. 4 Claims. (Cl. 132—73.5.)

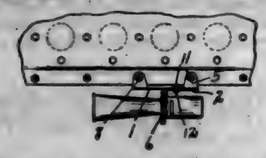
1. A flexible powder puff, the entire outer surface of which is formed of a suitable powder applying material, said puff being stitched across its face to form individual flaps, and pockets in said flaps.

1,543,451. BUSHING STRUCTURE. MORRIS SCHWARTZ, Chicago, Ill., assignor of one-half to Winnifred B. Parish, Chicago, Ill. Filed Dec. 10, 1923. Serial No. 679,795. 1 Claim. (Cl. 220—39.)



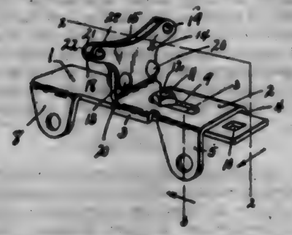
The combination with a body having a tubular portion projecting therefrom and surrounding an opening formed therethrough; of a bushing within the tubular portion and formed with a flange which is curled over the terminating end of the tubular portion against the outer side of the tubular portion, the curling of this flange being continued to terminate outside of the circle of the tubular portion to form a bead which presses, at its mid portion, against the side of the body of the tubular portion.

1,543,452. VEHICLE AXLE. WILLIAM J. SEITS and CALVIN B. SEITS, Detroit, Mich. Filed Nov. 17, 1924. Serial No. 750,491. 4 Claims. (Cl. 105—215.)



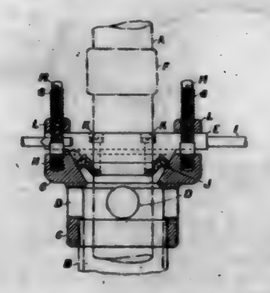
2. A vehicle axle construction comprising an axle construction, an axle rotatably mounted therein, and two sets of wheels, one set adapted to run on rails and the other set adapted to run on roadways, said axle being formed with two alined offset portions on which one set of said wheels are mounted eccentric to the other set of wheels, and means to rotate the axle to elevate one set of said wheels and to lower the other set.

1,543,453. STETHOSCOPE. JACQUES SMITHLINE, Brooklyn, N. Y. Filed Aug. 25, 1923. Serial No. 659,246. 3 Claims. (Cl. 181—24.)



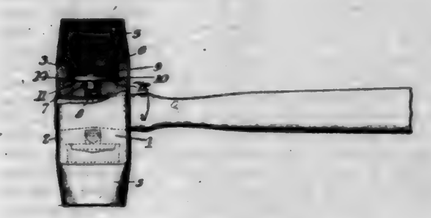
1. In a stethoscope, in combination with a drum head having a diaphragm fastened thereon, means secured to said head for muffling the sounds transmitted by the diaphragm, said means being removable independently of said diaphragm fastening and including another diaphragm disposed in non-contactual relation opposite said first mentioned diaphragm and having greater inertia than the latter.

1,534,454. BRACKET. WILLIAM SPARKS, Jackson, Mich., assignor to The Sparks-Withington Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 19, 1922. Serial No. 589,121. 1 Claim. (Cl. 248—20.)



A horn bracket comprising an elongated strip of sheet metal, a comparatively short strip of sheet metal adjustable longitudinally with respect to the elongated strip, means for securing said strips in various positions of adjustment, the comparatively short strip being formed at its inner end with a horn-attaching flange positioned at an intermediate point along the other strip extending at substantially right angles to the strip and having an arcuate edge portion and bolt openings adjacent said edge, and one of said strips being formed in a channel adapted to receive the other, and a bolt receiving flange carried by each strip, each bolt-receiving flange extending at substantially right angles to its respective strip.

1,543,455. BRACKET. WILLIAM SPARKS, Jackson, Mich., assignor to The Sparks-Withington Company, Jackson, Mich., a Corporation of Ohio. Filed Dec. 22, 1924. Serial No. 757,510. 1 Claim. (Cl. 248—20.)

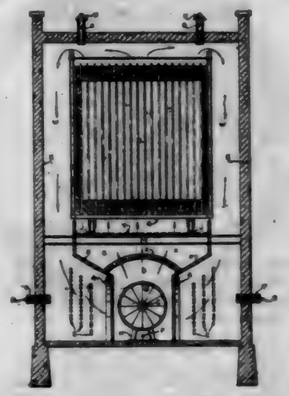


A bracket comprising two parts adjustable longitudinally with respect to each other, means for securing said parts in various adjusted positions, one of said parts formed with a laterally-extending flange, a pair of spring-plates disposed upon opposite sides of said flange and secured to the flange and having their outer edges of arcuate shape, and formed at opposite ends with aligned bolt-receiving openings for securement to a horn, and a spacing member between the outer portion of said spring plates and having openings aligned with the bolt-receiving openings through the plates.

1,543,456. APPARATUS FOR CONTROLLING OIL WELLS. ROBERT STIRLING, Dormans Park, England. Filed Apr. 26, 1924. Serial No. 709,100. 6 Claims. (Cl. 285—22.)

1. A blow-out preventer for oil-well casings comprising sections carrying joint-making packing for co-acting with the inner casing, said sections being hinged at one end on means fixed to the outer casing, being adapted to abutably engage and disengage other means also fixed on said outer casing, and being slidable longitudinally of, and over, both said means; and devices operatively positioning said sections relatively to said means.

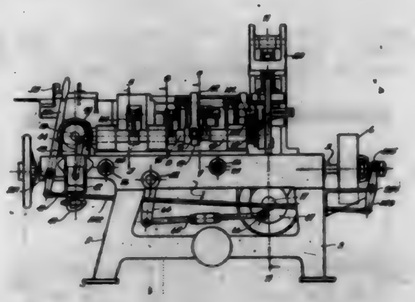
1,543,457. HAMMER. CHARLES O. SWANGREN, Maywood, Ill. Filed Aug. 17, 1923. Serial No. 657,841. 3 Claims. (Cl. 145—36.)



2. A hammer having a hard metal body formed with a socket having adjacent its bottom an undercut locking face and also formed with an orifice communicating with the central inner portion of said socket, a hard metal plug arranged centrally within said socket adjacent the locking face of such socket, and a soft metal striking head seated in said socket and seating against said plug, said plug being provided on its outer side with inclined spreading faces adapted to spread said striking head into locking engagement with said locking face of the socket and also being exposed to a drift pin through said orifice.

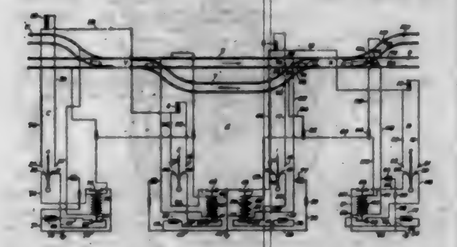
1,543,458. STARCH-FREE BRAN AND METHOD OF MAKING THE SAME. JOKICHI TAKAMINE, Jr., Clifton, N. J., assignor to Takamine Ferment Co., New York, N. Y., a Corporation of West Virginia. Filed Sept. 14, 1922. Serial No. 588,186. 6 Claims. (Cl. 99—11.)

1. A bran deprived of such of its constituents as would form sugars when taken into the human digestive system and retaining such of its constituents as have a laxative action in the human digestive system.



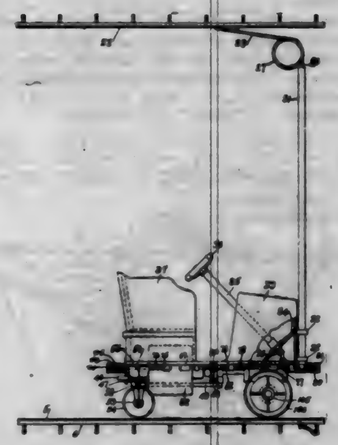
5. The method which consists in cooking bran until the starch cells thereof have been opened, mixing diastatic enzyme with said bran to convert the starch into dextrine and sugars, and washing the bran to remove the said dextrine and sugars.

1,543,459. REVERSIBLE-CIRCULATION INTERNAL FAN KILN. ROLF THELEN, Madison, Wis., dedicated, by mesne assignments, to the Citizens of the United States of America. Filed Nov. 7, 1923. Serial No. 673,340. 11 Claims. (Cl. 34—19.) (Granted under the act of Mar. 3, 1883, 22 Stat. L. 625.)



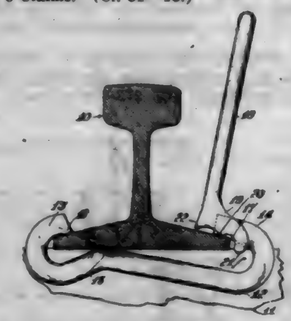
2. In a single track dry kiln arranged for edge stacking: a series of fans; a shaft on which the fans are mounted for rotation; means for rotating said shaft in either direction to cause reversal of the circulation of the air and vapor in said kiln; dampered air inlet flues and dampered air outlet flues; means for heating the kiln and its contents; and an air distributing system comprising side deflecting partitions, a main air distributor, and two sets of diffusers.

1,543,460. CAN-BODY-FORMING MACHINE. NELSON TROYER, Seattle, Wash., assignor of one-half to Seattle Astoria Iron Works, Seattle, Wash. Filed Jan. 26, 1922. Serial No. 531,885. 14 Claims. (Cl. 113—11.)



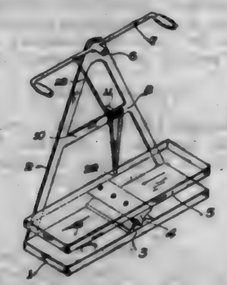
1. In a can body forming machine, the combination with a guideway along which can body forming blanks may be intermittently advanced and mechanism for operation on the blanks when in different positions along the guideway, of reciprocally movable means, fingers on said means for engaging the blanks to advance them successively and intermittently along the guideway and stop members operating synchronously with the advancing means from and into the path of said blanks to position them properly to be operated on.

1,543,461. CONTROL OF RAILWAY TRAINS. WALTER JOHN UNDERWOOD, London, England. Filed July 12, 1923. Serial No. 650,984. 4 Claims. (Cl. 246—36.)



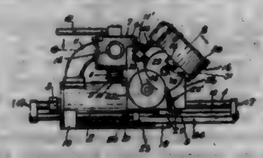
1. For controlling the traffic on single track railways, the combination with the single track section and a signalling station at each end of the same, of an electrically controlled track device at each station governing the movement of the trains from the station on to the single track section, an operating circuit for each said track device comprising a line conductor connecting the two track devices, means for energising one at a time the operating circuits to enable a train to move from one station on to the single track section, an electromagnet at each station controlling the operating circuits, a connection to the track at each station for de-energising the corresponding electromagnet on a train passing from the station on to the single track section, and a connection from the electromagnet through a second line conductor to the arrival track at the other station enabling the circuit of the said electromagnet to be again closed by the train on its arrival at the said other station.

1,543,462. AMUSEMENT DEVICE. AUREL VARSIN, Dayton, Ohio. Filed Mar. 24, 1923. Serial No. 627,800. 7 Claims. (Cl. 191—13.)



1. In an amusement device, a contact floor, a contact roof, a vehicle adapted to move on said floor and have a portion in contact with said roof, a motor mounted on said vehicle deriving its source of current through the contact of said roof and said floor contact, and a portion of said floor adapted to move to impart movement to the vehicle independent of its own motive power.

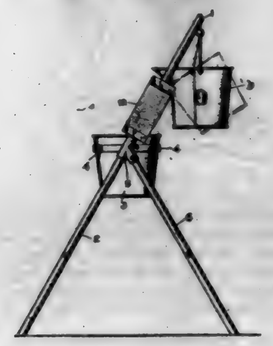
1,543,463. RAILWAY-TRACK IMPLEMENT. HAROLD G. WARR, Park Ridge, Ill., assignor to The P & M Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 27, 1923. Serial No. 665,121. Renewed May 16, 1925. 6 Claims. (Cl. 81—15.)



1. An implement for use in removing rail anchors comprising a bar having anchor engaging means and formed with an angular portion providing a fulcrum to bear against the upper surface of the rail base and on which said bar is adapted to rock and with means for limiting said rocking movement.

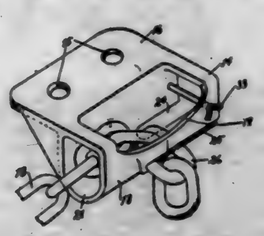
1,543,464. MAN-POWER DEVICE. EDGAR C. WELDORN, Evanston, Ill. Filed June 25, 1921. Serial No. 480,330. 5 Claims. (Cl. 74—54.)

1. In a power device adapted to convert reciprocatory motion into rotary motion, a rigid base and a rigid frame, a rocking foot pedal on said base, a rocking handle bar on said frame, the pivotal axes of said pedal and said bar being in alignment to permit balance operation of these two members, a connection between said pedal and said bar connecting at points on opposite sides of said pivotal axes, and a ratchet mechanism inserted in said connection for receiving the motion of said pedal and said bar and for converting the same into a continuous rotary motion.



1,543,465. LIQUID REGISTER. ARTHUR L. WITHERELL, Wethersfield, Conn. Filed Apr. 7, 1922. Serial No. 550,800. 1 Claim. (Cl. 235—91.)

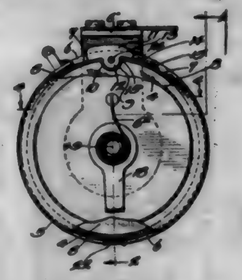
In a liquid dispensing device having a member arranged to move back and forth as liquid is dispensed, a counter, a rack, means connected to and actuated by



said member to reciprocate said rack, a pinion, a ratchet concentric with said pinion, a pair of pawls actuated by said rack, a pair of spring pawls connected respectively with the other pawls for turning said ratchet wheel, a counter and means actuated by the pinion for operating said counter.

1,543,466. TEE STAND. CHARLES C. WORTHINGTON, Dunnfield, N. J. Filed June 21, 1923. Serial No. 646,773. 12 Claims. (Cl. 273—32.)

1. A tee stand comprising a flat easel frame provided with means for supporting it in an inclined position, means for holding a tipping water bucket at the top of the frame and a sand-containing structure joining the side limbs of the frame about midway of its top and bottom in a position to receive water from the bucket when tilted.

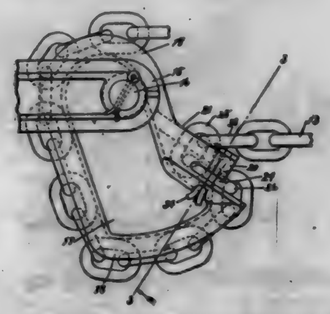


1,543,467. BRAKE MECHANISM. HENRY I. WRIGLEY, Chicago, Ill., assignor to Universal Draft Gear Attachment Co., a Corporation of Illinois. Filed Nov. 28, 1924. Serial No. 752,535. 6 Claims. (Cl. 24—116.)

2. In combination, an anchoring device comprising a casing having an opening therein, one of the walls of said opening being provided with slots of unequal depths, a brake chain in said opening, a link of said chain being adapted to engage either of said slots for securing one end of said chain to said anchoring device.

1,543,468. RESISTANCE-ADJUSTING DEVICE. ERNEST E. YARLEY, Chicago, Ill. Filed May 26, 1924. Serial No. 716,009. 7 Claims. (Cl. 201—55.)

1. A resistance adjusting device including a band of insulation; resistance wire coiled about said band; a support upon which said band and the resistance wire on the band are carried, said band being anchored at its ends to the support and projecting beyond the coiled wire at one end; an element overlying said projecting end of the band; and a switch arm having a contact bearing upon said resistance wire, said arm and support being relatively rotatable, said contact being engageable, at one time, with said element and the adjacent end of the coiled resistance wire and also

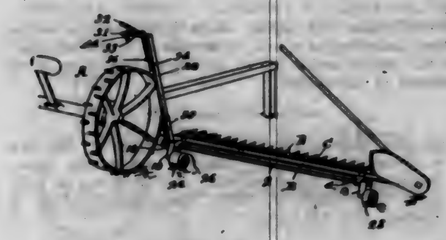


with said element alone, said element being spaced apart from the wire in the direction of relative movement of the arm and wire.

1,543,469. CAR COUPLER. PERCY B. CAMP, Maywood, Ill., assignor to Universal Draft Gear Attachment Company, a Corporation of Illinois. Filed July 19, 1924. Serial No. 726,918. 3 Claims. (Cl. 213—170.)

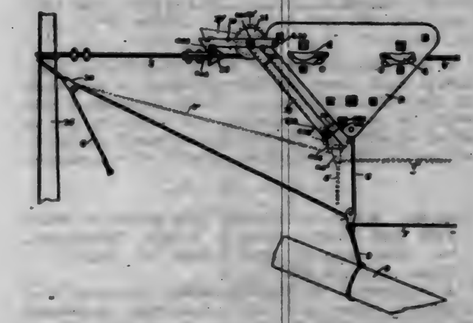
1. In a device of the class described, a coupler, a locking pin having an eye at its upper end, an operating lever including a crank arm having an eye located above the eye of the locking pin, and a rod looped through said eyes and having interlocking reverse bends at its ends.

1,543,470. BRAKE MECHANISM. PERCY B. CAMP, Maywood, and HERBERT E. BARTSCH, Chicago, Ill., assignors to Universal Draft Gear Attachment Co., a Corporation of Illinois. Filed Nov. 17, 1924. Serial No. 750,254. 7 Claims. (Cl. 74—110.)



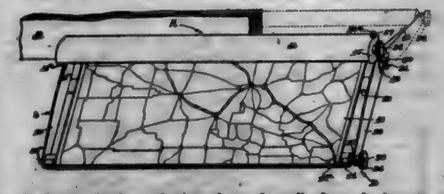
1. In a brake mechanism, a reversible lever having a pivot adjacent one end thereof for forming said lever into a long and a short arm, both arms of said lever being provided with a groove, an operating chain extending about both ends of said lever, and means integral with said lever for adjustably connecting said chain to said lever.

1,543,471. OXYGEN-CONTROL LEVER FOR OXY-ACETYLENE CUTTING TORCHES. CLARENCE J. CONNELY, Los Angeles, Calif., assignor, by mesne assignments, to Purox Company, Denver, Colo., a Corporation of Colorado. Filed June 7, 1923. Serial No. 643,938. 12 Claims. (Cl. 158—27.)



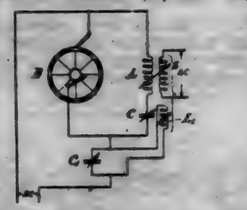
1. In a control lever arrangement of the class described, the combination of: a projection; a control lever having a recess receiving said projection and a slot formed therein passing across said recess and dividing said lever into co-extensive portions adjacent to said recess; an adjustment pin threaded between said co-extensive portions; and a pivot bolt passing through said co-extensive portions and said projection, the tightening of said bolt serving to clamp said co-extensive portions upon said adjustment pin.

1,543,472. ATTACHMENT FOR MOWING MACHINES. CHAS DENTON, Colony, Kans. Filed June 16, 1923. Serial No. 645,837. 2 Claims. (Cl. 56—264.)



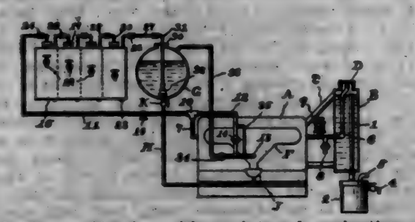
1. In combination with the cutter bar of a mowing machine, bearings fixed thereto, a rock shaft mounted in said bearings, arms secured to said rock shaft, rollers on which said arms are mounted, a ratchet wheel fixed to the rock shaft, and means for turning said ratchet wheel to raise or lower the arms together with the cutter bar, substantially as described.

1,543,473. SKY-LINE LOGGING-CARRIAGE LOCK. GEORGE J. FAYETTE, Blaine, Wash. Filed Dec. 2, 1924. Serial No. 753,444. 1 Claim. (Cl. 212—122.)



In combination, a logging carriage mounted for travelling on a sky-line cable, a latch pivotally connected to the front end of said carriage projecting forward therefrom, a wheel mounted for revolution on said latch adapted to travel on said cable, a catch fastened to said cable adapted to engage said latch, a bar mounted for longitudinal vibration on the front end of said carriage adapted to operate said latch, and a hauling block operably connected to said carriage adapted to operate said bar when in proximity to said carriage whereby said latch is disengaged.

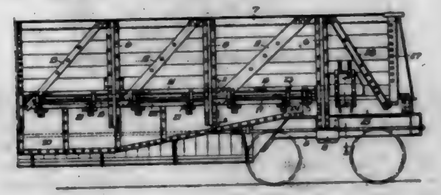
1,543,474. MAP HOLDER. JOHN T. JOHNSON, Lengby, Minn. Filed Mar. 5, 1923. Serial No. 622,844. 7 Claims. (Cl. 40—89.)



2. In a device of the class described, a body structure, a spring actuated roller mounted thereon and adapted to wind in a flexible map and yieldingly permit of the unwinding of the same therefrom, a reel including a frame and a drum thereon to unwind the map from said roller and take in the same, also to pay out said map to said roller, and means for detachably mounting said frame in yieldingly tiltable relation on said body structure.

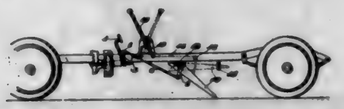
1,543,475. RESONANT CONVERTER. WALTER S. LEMMON, New York, N. Y. Filed Jan. 14, 1920. Serial No. 351,331. 4 Claims. (Cl. 250—36.)

1. An arrangement for producing sinusoidal alternating current comprising a direct current source, inductance and capacitance elements connected in series across the terminals of said source, an interrupter connected across the terminals of said source, and an oscillatory circuit tuned to the frequency of the alternating current to be produced, said oscillatory circuit being connected in series between said source and said elements.



1,543,476. AIR, GAS, AND VAPOR MIXER. EVERETT MCCUTCHEON, Cleveland, Ohio. Filed Nov. 8, 1923. Serial No. 672,682. 9 Claims. (Cl. 123—25.)

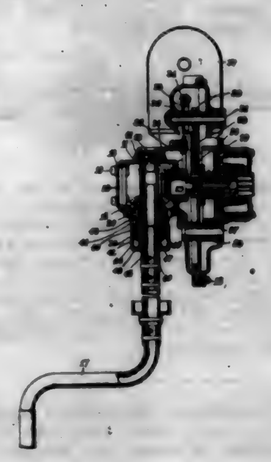
1. The combination with an internal combustion engine and its usual fuel supply tank, of an auxiliary fuel container subdivided by partitions into a plurality of independent compartments, an intake pipe leading to the bottom of each of the compartments, the intake



pipe of an end compartment being in communication with the atmosphere, connections between the upper portions of the compartments and the intake pipes of adjacent compartments, an intake pipe extending downwardly into the fuel supply tank of the engine and connected to the opposite end compartment of the auxiliary reservoir, air or air and gas being adapted to pass downwardly through the intake pipes and bubble upwardly through the liquid fuel, and a mixture pipe leading from the fuel supply tank of the engine to the intake of the engine.

1,543,477. CAR CONSTRUCTION. JOHN O. NEIKIRK, Lombard, Ill., assignor to Rodger Ballast Car Company, Chicago, Ill., a Corporation of Maine. Filed Mar. 13, 1922. Serial No. 543,151. 9 Claims. (Cl. 105—244.)

1. In a dump car, a side truss construction, the lower chord of the truss extending adjacent the car floor and being formed with an outwardly facing recess located within the contour of the car, dump doors, and door opening shafts supported parallel to and adjacent the recess.



1,543,478. MEANS FOR PREVENTING UNCONTROLLED BACKWARD MOVEMENT OF AUTOMOBILES AND THE LIKE. MAURICE NEWBOULD, Peterborough, England. Filed Nov. 30, 1923. Serial No. 677,638. 4 Claims. (Cl. 188—6.)
